HISTORY OF EUROPE

FROM THE COMMENCEMENT OF THE

FRENCH REVOLUTION

IN 1789,

TO THE RESTORATION OF THE BOURBONS

IN 1815.

BY ARCHIBALD ALISON, F.R.S.E.,

ADVOCATE.

IN FOUR VOLUMES.

VOL. III.

NEW-YORK:

PUBLISHED BY HARPER & BROTHERS,

NO. 82 CLIFF-STREET

1844.

"BELLUM maxime omnium memorabile quæ unquam gesta sint me scripturum ; quod Hannibale duce Carthaginienses cum populo Romano gesserè. Nam neque validiores opibus ullæ inter se civitates gentesque contulerunt arma, neque his ipsis tantum unquam virium aut roboris fuit : et haud ignotas belli artes inter se, sed expertas primo Punico conserebant bello ; odiis etiam prope majoribus certarunt quam viribus ; et adeo varia belli fortuna, ancepsque Mars fuit, ut propius periculum fuerint qui vicerunt"—LIV., lib. 21.

CONTENTS OF VOL. III.

CHAPTER XLIX.

PROXIMATE CAUSES OF THE PENINSULAR WAR.

Early formation of ambitious Designs by Napoleon against the Monarchs of the Peninsula.—Which are approved of by Alexander at Tilsit.—Commencement of the French Intrigues at Madrid and Lisbon, as soon as Napoleon returns to Paris.—Character of the leading Political Characters in the Peninsula.—Secret Treaty of Fontainebleau between Napoleon and Charles IV.—Napoleon's perfidious Designs against both the Peninsular Thrones.—Expedition of Junot into Portugal.—Seizure of Lisbon, and Embarcation of the Royal Family there for the Brazils.—Occupation of the whole Country by Napoleon, in defiance of the Treaty of Fontainebleau.—Progress of the Intrigues in Spain.—Arrest of Ferdinand, Prince of Asturias.—Entrance of the French Troops into Spain, and Seizure of its Frontier Fortresses.—The Prince of Peace, seeing himself outwitted, prepares for War.—Tumult at Aranjuez and Abdication of Charles IV.—Continued Advance of the French Troops, and their Entry into Madrid.—Napoleon comes to Bayonne.—Whither, by his Advice, the Prince of Asturias also comes, and is followed by Charles IV., the Queen, and the Prince of Peace.—Treacherous Conduct of the French Emperor to all these Parties.—Ferdinand is forced and Charles IV. induced to resign their Rights to the Spanish Crown.—Tumult at Madrid.—Prodigious Sensation which it excites throughout the Peninsula.—Napoleon confers the Crown of Spain on his Brother Joseph.—Assembly of Notables at Bayonne.—Reflections on the unparalleled Fraud and Duplicity of the French Emperor in these Proceedings.

CHAPTER L.

CAMPAIGN OF 1808 IN SPAIN AND PORTUGAL.

Political Character and Situation of the Spanish and Portuguese Nations, and physical Conformation of the Country they inhabit.—Causes which have led to this peculiar and durable Character.—Church.—Army and Civil Government.—Strength, Discipline, and Character of the French Army at this Period, and of the British.—Spanish and Portuguese.—Commencement of the Insurrection in Spain.—Its universal Character, and partial sanguinary Excesses.—Constitution of Bayonne, and Proceedings of the Spanish Grandees there.—Arrival of Joseph at Madrid.—Debates on the Spanish War in the British Parliament, and universal Joy in the British Isles.—Operations of the French in Castile and Arragon.—Battle of Rio-Seco.—Unsuccessful Siege of Saragossa.—Defeat of Moncey at Valencia.—Surrender of Dupont in Andalusia.—Defeats of the French in Catalonia and at Gerona.—Retreat of Joseph and the French Troops from Madrid and all Parts of Spain behind the Ebro.—Insurrection in Portugal.—Operations of Junot there.—Expedition of Sir A. Wellesley to its Shores.—Action at Rolicia.—Battle of Vimeiro and Convention of Cintra.—Senseless Clamour in Great Britain on the Subject.—Advance of the English Army under Sir John Moore into Spain.—Interview of Napoleon and Alexander at Erfurth.—Its secret Objects.—Vast Forces which he sends into the Peninsula.—Great Conspiration in France.—Arrival of Napoleon on the Ebro.—Win-

ter Campaign in the North of Spain.—Battles of Espinosa, Burgos, Tudela, and Dispersion of the Spanish Armies.—Forcing of the Somo-Sierra Pass and Fall of Madrid.—Napoleon's Arrival there.—Advance of Sir John Moore to Sahagun.—Rapid March of Napoleon to Surround him.—Important Effects of this Movement.—Retreat to Corunna, and Hardships undergone by the Troops during it.—Battle of Corunna and Death of Sir John Moore.—Reflections on the Campaign, and the important Consequence of his Operations.

CHAPTER LI.

BRITISH EMPIRE IN INDIA PRIOR TO LORD WELLESLEY'S ADMINISTRATION.

Geographical, Physical, Moral, and Political State of the British Empire in India.—Character and Qualities of the Sepoy Force.—Early Settlement of the British at Calcutta, Madras, and Bombay.—Early Wars with Hyder Ali.—Impeachment of Hastings.—Mr. Fox's India Bill.—Mr. Pitt's India Bill.—Lord Cornwallis's first Campaign with Tippoo Sultan.

CHAPTER LII.

ADMINISTRATION OF MARQUIS WELLESLEY, AND FIRST APPEARANCE OF WELLINGTON IN INDIA.

Early History and Character of Wellington and Marquis Wellesley.—Principles of Marquis Wellesley's Government in India.—War with Tippoo Sultan and Storming of Seringapatam.—Wellington's first Campaign in India.—Mahratta War and Victories of Lord Blake in Bengal.—Battle of Assaye, and Conquests of Wellington in the Deccan.—War with Holker.—Its early Disasters and ultimate Triumphs.—Causes of the extraordinary Growth of the British Power in India.

CHAPTER LIII.

CAMPAIGN OF ABENSBERG, LANDSHUT, AND ECK MUHL.

Commencement of the Austrian War, and State of Germany at this Period.—Vast Efforts of the Imperial Government.—Commencement of the Campaign.—Battles of Abensberg, Landshut, and Eckmuhl.—Retreat of the Archduke Charles to Bohemia.—Campaign of the Archduke John in Italy.—His early Success and ultimate Discomfiture.

CHAPTER LIV.

CAMPAIGN OF ASPERN.

Advance of Napoleon to Vienna.—Desperate Battle at Ebersberg.—Retreat of the Archduke John from Italy into Hungary.—Battle of Aspern, and Retreat of the French into the Island of Lobau.—Extreme Peril of their Situation there.

CHAPTER LV.

WAR IN TYROL, NORTHERN GERMANY, AND POLAND.

Moral, Political, and Physical Character of the Tyrol.—Character of its Leaders.—Their early and astonishing Success.—Insurrection in the North of Germany, and Suppression of Schill's Revolt.—Operations in Poland.—Early Success of the Archduke Ferdinand.—General Situation of Napoleon at this Period.

CHAPTER LVI.

CAMPAIGN OF WAGRAM.

Vast Forces which Napoleon had collected at Vienna for the Prosecution of the War.—Extraordinary Ability of his Designs for the Preparation for the Passage of the River.—Battle of Raab, and Operations in Hungary.—Advance of Marmont from Illyria, and Actions in Croatia and Carniola.—Recapture of Warsaw by the Poles.—Preparations for the Passage of the Danube at Vienna.—Passage of the River, and Battle of Wagram.—Its varied Successes, and ultimate Retreat of the Austrians.—Tardy Approach of the Archduke John makes them lose the Battle.—Retreat to Znaim, and Armistice there.

CHAPTER LVII.

WALCHEREN EXPEDITION—PEACE OF VIENNA—SECOND WAR IN TYROL—DETHRONEMENT OF THE POPE.

Vast Importance of the Scheldt as a Point of Attack against England.—Walcheren Expedition.—Its early Success, and ultimate Failure.—Causes of these Disappointments.—Characters of Lord Castlereagh, Mr. Canning, and Mr. Perceval.—Negotiations between France and Austria.—Peace of Vienna.—Continuance of the War in Tyrol, and extraordinary Successes of the Peasants in that Province.—Their ultimate Subjugation, and Conclusion of the Contest.—Rupture between France and the Holy See.—Successive Aggressions of the Pope.—His Excommunication of Napoleon, and subsequent Dethronement.—Incorporation of the Roman States with the French Empire.

CHAPTER LVIII.

MARITIME WAR, AND CAMPAIGN OF 1809 IN PORTUGAL AND SPAIN.

War in the Peninsula, and Resolution of the British Government to continue the Contest there.—Battle of Basque Roads, and Character of Lord Cochrane.—Naval Operations in the Mediterranean.—Siege and Fall of Saragossa.—Operations in Catalonia and Arragon.—Siege and Fall of Gerona.—Operations in Galicia and Asturias.—Expedition of Soult into Portugal, and fall of Oporto.—Landing of Wellington, and Expulsion of the French from Portugal.—Advance to Madrid.—Battle of Talavera, and subsequent Retreat of Wellington.—Defeat of the Spaniards at Almonacid and Ocana.

CHAPTER LIX.

CAMPAIGN OF TORRES VEDRAS, AND YEAR 1810.

Divorce of Napoleon, and his Marriage to Marie Louise.—Resignation of Louis Bonaparte, and Annexation of Holland to the French Empire.—Difficult Task of Government in England in conducting the War.—Conquest of Andalusia by Soult.—Wellington's Preparations for the Defence of Portugal.—Invasion of Massena, and Battle of Busaco.—Position of Torres Vedras, and ultimate Retreat of the French.—Capture of Badajoz by Soult.—Battles of Barrosa and Fuentes D'Onoro, and Fall of Almeida.

CHAPTER LX.

DOMESTIC HISTORY OF GREAT BRITAIN FROM 1809 TO 1812.

Character of the Age of George the Third.—Character of the English, French, and German Literature during that Period.—Character of George the Third.—His Mental Alienation.—Proceedings in Parliament on that Event.—Arguments for and against Proceeding by a Bill or by Address.—Ministers are continued in Power.—Negotiation with Lords Grey and Grenville in January, 1812.—Assassination of Mr. Perceval.—Causes which prevented the Return of the Whigs to Office.—Characters of George the Fourth, Lord Liverpool, and Sir Francis Burdett.—Committal of the latter to the Tower, and Riots

on that Event.—General Commercial Distress in 1811.—State of the English Criminal Law, and Character of Sir Samuel Romilly.—Monetary Changes during 1809 and 1810.—Bullion Report, and Debates upon it in the British Parliament.—Character of Mr. Huskisson, and Tendency of his Commercial System.—Debates on the Orders in Council, and their Repeal.—Character of Lord Brougham as a Statesman and an Orator.—Debates in Parliament on the Continuance of the Spanish War.—Budget of 1811 and 1812.—Negotiation for an Exchange of Prisoners with France.—Causes of its Failure.—Expedition against Java, and Completion of the Destruction of the Colonial Possessions of France.

CHAPTER LXI.

PROCEEDINGS OF THE CORTES—WAR IN SPAIN, JANUARY, 1810—FEBRUARY, 1812.

Proceedings in Spain for the Formation of the Cortes.—Causes which led to its extreme Democratic Character.—Constitution of 1812.—Vast Effects which it has had on the South of Europe, and in the New World.—Wellington's Opinion of, and Predictions regarding it.—Negotiations between Napoleon and Joseph for the Partition of Spain.—Forces of France in the Peninsula in Spring, 1811.—Commencement of the Siege of Cadiz, and Operations in Catalonia.—Siege and Fall of Tortosa.—Capture of Figueras by the Spaniards.—Commencement of the Siege of Taragona.—Long-continued and desperate Defence of the Besieged.—It is carried by Assault.—Blockade and Recapture of Figueras by the Spaniards.—Suchet's Advance into Valencia.—Siege of Saguntum.—Battle of Saguntum, and Fall of that Fortress.—Attack on Valencia.—Its Surrender, with the whole Army of Blake.—Reflections on Suchet's Campaigns.

CHAPTER LXII.

CAMPAIGN OF WELLINGTON ON THE PORTUGUESE FRONTIER—1811.

First Siege of Badajoz.—General Description of the relative Forces in the Peninsula at this Period.—Advantages which the English enjoyed.—Immense Forces which were at the Disposal of the French General.—Causes which led to their Want of Success against Wellington.—The precarious and destitute Condition of the King.—Jealousy of the Marshals against each other.—Absurd Division of the Resources of the Country by Napoleon among his Marshals.—Dreadful Severity of the French Military Decrees.—General Spirit of Resistance which they produce throughout Spain.—Wellington's Difficulties.—Imbecility of the Regency at Lisbon, and of the Portuguese Authorities.—Jealousy and Weakness of the Spanish Government.—Extreme Difficulty of getting Supplies in Specie from England.—Battle of Albuera.—Its great moral Results.—Raising of the Siege of Badajoz by Wellington.—Transfer of the Seat of War to the Frontier of Beira.—Operations in the East and North of Spain at this Period.—Wellington's Investment of Ciudad Rodrigo.—Approach of the French Armies to raise the Siege.—Retreat of Wellington, and Action of Elbodon.—Both Armies go into Cantonnements.—Surprise of Gerard at Aroyos di Molinos.—Defeat of the French at Tariffa.—Important ultimate Effects of this Campaign.

CHAPTER LXIII.

FIRST INVASION OF SPAIN BY WELLINGTON—JANUARY TO NOVEMBER, 1812.

Siege and Fall of Ciudad Rodrigo.—Siege of Badajoz.—Dreadful Assault by which it is carried.—Irruption of Marmont into Beira.—Incorporation of Catalonia with the French Empire.—Destruction of the Bridge of Almaraz by General Hill.—Advance of Wellington to Salamanca.—Siege and Capture of the Forts there.—Wellington advances to the Dou

CONTENTS.

ro.—Movements on both Sides.—Retreat of Wellington to Salamanca.—Battle there, and total Defeat of Marshal Marmont.—Advance of Wellington to Madrid.—Raising of the Siege of Cadiz, and Evacuation of Andalusia by Marshal Soult.—Wellington moves towards Burgos.—Unsuccessful Assault of the Castle there.—Retreat of Wellington and Hill to Salamanca, and thence to Ciudad Rodrigo.—Severe Losses sustained during the Retreat.—Reflections on the great Results of this Campaign.

CHAPTER LXIV.

SKETCH OF THE TURKISH EMPIRE—WAR BETWEEN THE OTTOMANS AND RUSSIANS, FROM 1808 TO 1812.

Distinguishing Features of Oriental and European Civilization.—System of Oriental Government.—Manners, Habits, Virtues, and Vices of the East.—Causes which have counteracted the manifold Evils of their Civil Institutions.—Physical Description and Statistical Details of the Turkish Empire.—Ottoman Mode of carrying on War, and Natural Strength of their Frontier towards Russia.—Dethronement and Death of Sultaun Selim, and Accession of Mustapha to the Throne at Constantinople.—A Second Revolution, and Deposition of Mustapha.—A Third Revolution, and Accession of Sultaun Mahmoud.—Negotiations between the Russians and Turks in 1808.—Campaign of 1809, and Annexation of Wallachia and Moldavia to the Russian Empire.—Campaign of 1810, and Advance of the Russians to Schumla.—Their unsuccessful Operations before that Place.—Siege of Roudschouck.—Dreadful Repulse of the Assault on that Place.—Battle of Battin, and Capture of the Turkish Camp.—Capitulation of Roudschouck, and Conclusion of the Campaign.—Draught of half of the Russian Army from the Danube into Poland.—Campaign of 1811 on the Danube.—Battle of Roudschouck, and Evacuation of that Fortress by the Russians.—Blockade of the Turkish Army near that Place.—Its Surrender.—Treaty of Bucharest.—Character of Sultaun Mahmoud, and Reflections on the Possibility of Regenerating the Turkish Empire.

CHAPTER LXV.

ELEVATION OF BERNADOTTE TO THE THRONE OF SWEDEN, AND CAUSES WHICH LED TO THE WAR BETWEEN FRANCE AND RUSSIA IN 1812.

Description of the Swedish Peninsula.—Character and Institutions of the Swedes.—Invasion of Finland by the Russians.—Fall of Sweaborg.—Dethronement of Gustavus, and Appointment of the Duke of Sudermania as his Successor.—Renewal of the War with Russia.—Disasters of the Swedes, and Peace with that Power.—Character and early History of Bernadotte.—Continued Encroachments of Napoleon in the Centre of Europe.—Commencement of the Differences between France and Russia.—Mutual Grievances and Recriminations on both Sides.—Birth of the King of Rome.—Tyrannical Conduct of Napoleon towards Sweden.—Consequent Alienation of Bernadotte, and his Secret Treaty with Russia.—Ultimatum of that

Power towards France.—Treaties between France, Prussia, and Austria, and Reflections on the Dreadful Contest that was approaching.

CHAPTER LXVI.

ADVANCE OF NAPOLEON TO MOSCOW, JUNE—OCTOBER, 1812.

Immense Preparations of Napoleon for the Russian War.—Forces which he had collected for that Purpose.—Forces of the Russians.—Passage of the Niemen, and Commencement of the Campaign.—Advance of Napoleon to Wilna, and Great Losses sustained by him in the March there.—Operations of Napoleon against Bagrathion's Army.—Operations of Wittgenstein on the Dwina.—Retreat of Barclay de Tolly to the Dwina, and thence to Smolensko.—Junction of the Russian Armies there.—Battle of Smolensko, and Dreadful Losses of the French.—Battle of Valentina.—Continued Retreat of the Russians towards Moscow.—Appointment of Kutusoff to the Supreme Command.—Battle of Borodino, in which the Russians are worsted.—Their continued Retreat to Moscow.—Description of that Capital, and Preparations for Burning it.—Conflagration of Moscow, and Effect it produced on the Russian Army.

CHAPTER LXVII.

RETREAT FROM MOSCOW.

Reflections on the General Conquest of the Southern by Northern Nations.—Admirable Position acquired by Kutusoff on the Road to Kaluga.—Increasing Difficulties of the French at Moscow.—Unsuccessful Attempt at a Negotiation with the Court of St. Petersburg.—Napoleon Resolves to Retreat.—Defeat of Murat at Winkowo.—Commencement of the French Retreat, and Battle of Malo-Jaroslawitz.—The French fall back on the Smolensko Road.—Disasters of the Retreat, and Commencement of the Great Frosts.—Arrival of the French at Smolensko.—Parallel March of Kutusoff with the main Russian Army.—Napoleon Continues the Retreat from Smolensko.—Operations of Wittgenstein on the Dwina.—Storming of Polotsk.—Arrival of Tchichagoff on the Beresina.—Capture of Minsk and Bridge of Borisow.—Battles at Krasnoi, and immense Losses of the French.—Imminent Danger of Napoleon as he approaches the Beresina.—Arrival of Wittgenstein and Tchichagoff.—Napoleon's admirable Plan of Passing the River.—Dreadful Horrors of the Passage, and Losses of the French.—Departure of Napoleon for Paris.—Increase of the Cold, and Destruction of the greater Part of the French Army.—Napoleon's Arrival at Wilna, and Interview with the Abbé de Pradt.—Retreat of the French to the Niemen.—Heroic Conduct of Marshal Ney.—Generous Conduct of the Emperor Alexander at Wilna.—Termination of the Campaign, and Reflections on it.—Errors of the French in ascribing Napoleon's Disasters to the Burning of Moscow or the Severity of the Cold.—Real Causes of his Overthrow.

HISTORY OF EUROPE.

CHAPTER XLIX.

PROXIMATE CAUSES OF THE PENINSULAR WAR.

ARGUMENT.

Ambitious Views of Napoleon on the Spanish Peninsula.—His early Designs against Portugal and the Spanish Monarchy in July, 1806.—The Discovery of these Designs rouses Spain to break with France.—Premature Proclamation by the Prince of Peace, announcing his Designs, in October, 1806.—Napoleon resolves on the Detronement of the Spanish and Portuguese Monarchs.—Measures arranged at Tilsit for this Purpose.—Proofs of the secret Conferences there regarding it.—Steps taken by the Portuguese Government in Consequence.—Origin of the Spanish Intrigues.—Character of the leading Persons there.—The Prince of Peace, Charles IV.—The Queen.—Sketch of the Life of the Prince of Peace.—The Prince of Escoiquiz and his confidential Advisers.—Escoiquiz opens a Negotiation with the Spanish Ambassador, and the Prince of Asturias writes to Napoleon.—Treaty of Fontainebleau between Charles IV. and the French Emperor.—Convention at the same Place by which it was followed.—Napoleon's perfidious Designs both towards Spain and Portugal in acceding to it.—His secret Instructions to Junot in the Invasion of Portugal.—Extreme Difficulties of that General's March across the Peninsula.—Conduct of the Portuguese Government, and Situation of Lisbon at this Crisis.—After great Hesitation, the Court of Lisbon determine to set sail from Brazil.—Proclamation of the Prince Regent on the Subject.—Embarkation of the Royal Family for the Brazils.—Arrival of the French at Lisbon.—The Country is occupied by them in Name of the Emperor, and enormous Contributions levied by their Troops.—The Portuguese Regency is at length dissolved by Junot, and the whole Kingdom seized by the French.—Complete Occupation of the Provinces by their Forces, and Despair of the Inhabitants.—Arrest of Ferdinand, Prince of Asturias, at the Escorial, and Seizure of his Papers.—Proclamation of the King of Spain on the Subject, and Correspondence with Napoleon regarding it.—Letter of Charles IV. to Napoleon.—Cautious Conduct of the latter on receiving it, which leads to the Pardoning of the Prince of Asturias.—Entrance of the French Troops into Spain.—The Prince of Peace does not venture to Remonstrate against this Invasion.—New Levy in France, and treacherous Seizure of Pampeluna by the French, and of Barcelona.—Figueraes and St. Sebastian.—The Emperor speedily Improves upon his Success, and covers the North of Spain with his Troops.—The Prince of Peace at length sees through the real Designs of Napoleon.—His secret Despatch to Isquierdo at this Period.—Napoleon demands the Cession of the Provinces to the North of the Ebro.—Godoy, at length made aware of the Designs of Napoleon, prepares the Flight of the Court to Seville.—Tumult at Arranjuez, and Overthrow of that Minister.—His Fall, and consequent Abdication of Charles IV.—His Proclamation and secret Opinions on the Subject.—Universal Joy of the Spanish People at these Events.—Continued Advance of the French Troops, and Entry of Murat into Madrid.—He declines to recognise Ferdinand, and takes Military Possession of the Capital.—Napoleon offers the Crown of Spain to Louis Bonaparte, who declines it.—His Letter to that Monarch on this Effect.—Savary is sent to Madrid.—His secret Instruction and Object of his Journey.—He arrives at Madrid, and persuades Ferdinand to go to Bayonne.—Journey of Ferdinand to Burgos at that Officer's earnest Desire.—Secret Motives of his Councillors in agreeing to that Step, but it is strongly resisted, and his Council become divided.—At length he prolongs his Advance to Bayonne, in consequence of a Letter from Napoleon.—Guarded, but deceitful Expressions in that Letter.—Energetic Efforts of the Spanish Authorities at Biscay to stop the King.—Godoy, Charles IV., and the Queen, are sent by Murat to Bayonne.—Great Embarrassment experienced at this Time by Napoleon in regard to the Peninsular Affairs.—His admirable Letter to Murat, portraying his Views on the Subject.—Extreme Agitation in Madrid at the approaching Departure of the Rest of the Royal Family.—Commotion and Tumult at that Capital on the 2d of May.—Barbarous Massacre subsequently committed by Murat.—Prodigious

Effect which it produced throughout the Peninsula.—Ferdinand arrives at Bayonne, and is told he must surrender the Crown of Spain.—Subsequent Negotiation between his Councillors and Napoleon.—He sends for Charles IV., and has a private Conference with Escoiquiz.—Its most striking Passages.—The Arrival of Charles IV. solves the Difficulty.—His Reception by Napoleon.—Ferdinand is forced to Resign the Crown in a qualified Manner, but still refuses to make an unconditional Surrender.—Charles IV.'s Letter to his Son.—Napoleon obtains an unconditional Surrender from Charles IV.—Secret Instructions of Ferdinand at this Time to the Regency at Madrid.—The Intelligence of the Events there on the 2d of May extorts an unconditional Surrender from Ferdinand.—Napoleon creates Joseph Bonaparte King of Spain, and convokes an Assembly of Notables at Bayonne.—His Proclamation to the Spaniards.—Reflections on the unparalleled chain of Fraud and Perfidy by which this was accomplished.—His perfidious Conduct towards the Spanish Princes.—Ultimate Consequences of this treacherous Conduct to Napoleon and his House.—Its apparent Wisdom, so far as mere Human Wisdom is concerned.—The Passions of the Revolution were the real Cause of the Disasters both to Europe and France.

No sooner had Napoleon returned to Paris than he began to turn his eyes towards the Spanish Peninsula, and the means of bringing the resources of both its monarchies more immediately under the control of France than they had hitherto been brought, Ambitious views of Napoleon in the Spanish Peninsula. His design on Portugal. even by the abject submission of both courts to his commands. His designs against Portugal had been of very long standing: Lord Yarmouth gained a clew to them while conducting the negotiations at Paris in July, 1806, for the conclusion of a general peace; and so July, 1806 pressing did the danger at that time appear, that government despatched Earl St. Vincent with a powerful squadron to the Tagus, to watch over British interests in that quarter, and afford to the Portuguese government every assistance in his power in warding off the danger with which they were threatened; Lord Rosslyn accompanied the expedition in a political character, and was authorized to offer the Portuguese government assistance in men and money to aid them in repelling the threatened invasion. Nor were these measures of precaution uncalled for; a corps of thirty thousand men, under the name of the "army of the Gironde," was assembling at Bayonne, under the command of Junot, and it was ascertained, by undoubted information, that their destination was Lisbon.* The presence of the British fleet, under Earl St. Vincent, in the Tagus for a period of several months, revived the drooping spirits of the Portuguese government; but after the battle of Jena, their

* "Switzerland," said Talleyrand to Lord Yarmouth at Paris, on the 27th of July, 1806, "is on the eve of undergoing a great change. This cannot be averted but by a peace with England; but still less can we alter for any other consideration our intention of invading Portugal. The army destined for that purpose is already assembled at Bayonne. This is for the consideration of Great Britain."—Lord Yarmouth's Despatch, July 30, 1806; *Parl. Deb.*, viii., 134.

terror of France so far prevailed as to induce them to solicit their dismissal. The march, however, of the French armies to Prussia, postponed, for a considerable period at least, the threatened invasion.*†

At the same period when these preparations, avowedly directed against Portugal, and against Spain, were going forward on the Pyrenean frontier, the cabinet of Madrid discovered, through their ambassador at Paris, that Napoleon was offering to bestow on others, without their knowledge or consent, considerable portions of the Spanish dominions. It has been already noticed that, in his anxiety for peace with England, he offered to cede the Spanish settlement of Puerto Rico; and to obtain Sicily from the British government for his brother Joseph, he proposed to give up the Balearic Isles as a compensation to the dispossessed family of Naples‡. Nor was this all: to make up the measure of indemnity, it was seriously proposed that a large annuity, imposed as a burden forever on the Spanish crown, should be settled on the dislodged family, and stipulations to this effect were inserted in the secret articles of the peace, which M. d'Oubril signed with France on July 19, 1806.§ Nor were these diplomatic arrangements unsupported by warlike demonstrations; on the contrary, the most active measures were taken to put the army on the Pyrenean frontier on the most efficient footing; and on the 19th of July Earl Yarmouth wrote to Mr. Secretary Fox, "There is a considerable army already forming at Bayonne; thirty thousand men are there already; this army is ostensibly directed against Portugal, but it will take Spain also."||

The alarming discovery of the manner in which the French emperor was thus disposing of portions of the Spanish monarchy, with which he was in a state of close alliance at the

time, without ever going through the form of asking their consent to the cessions they were required to make, added to the irritation which the court of Madrid already felt at the dethronement of the Neapolitan branch of the house of Bourbon. It produced the same impression on the cabinet of Madrid which a similar discovery, made at the same time, of the offer of Napoleon to cede Hanover, recently bestowed on Prussia by himself, to Great Britain, as an inducement to that power to enter into a maritime peace did on that of Berlin. Both these powers had for ten years cordially supported France; Spain, in particular, had placed her fleets and treasures at its disposal, and not only annually paid an enormous tribute (£2,800,000) to the expenses of the war, but submitted for its prosecution to the destruction of her marine, and the entire stoppage of her foreign and colonial trade. When, therefore, in return for so many sacrifices, made in a cause foreign to the real interests of Spain, her ministers found not only that the interests of the Peninsula were now regarded by Napoleon in his negotiation with England and Russia, but that he had actually offered the dismemberment of the Spanish monarchy, his tried and faithful ally, to appease the jealousy or satisfy the demands of these his old and inveterate enemies, their indignation knew no bounds. The veil which had so long hung before their eyes was at once violently rent asunder; they saw clearly that fidelity in alliance and long-continued national service afforded no guarantee whatever for the continued support of the French monarch, and that, when it suited his purpose, he had no scruples in purchasing a temporary respite from the hostility of an enemy by the permanent spoliation of a friend. The Prince of Peace, also, was personally mortified at the exclusion of the Spanish minister at Paris from all share in the conferences going on with D'Oubril and Lord Yarmouth for the conclusion of a general peace. Under the influence of such pressing public and private causes of irritation, the Spanish minister lent a willing ear to the advances of the Russian ambassador at Madrid, Baron Strogonoff, who strongly represented the impolicy of continuing any longer the alliance with a conqueror who sacrificed his allies to propitiate his enemies; and a convention was secretly concluded at Madrid between the Span- Aug. 28, 1806.

ish government and the Russian ambassador, to which the court of Lisbon was also a party, by which it was agreed that, as soon as the favourable opportunity was arrived, by the French armies being far advanced on their road to Berlin, the Spanish government should commence hostilities on the Pyrenees, and invite the English to co-operate in averting the dangers with which it was menaced from the Spanish Peninsula.*

The whole of this secret negotiation was made known to Napoleon by the activity of his ambassador at Madrid, and by the intercepting of some of the correspondence in cipher, in which it was carried on. But he dissembled

The discovery of these designs rouses Spain to break with France.

Premature proclamation of Peace.

* Hard., x., 79. Parl. Deb., viii., 134.

† Even so early as this period, the project of partitioning Portugal, and conferring a portion of it on the Prince of Peace, afterward carried into effect by the treaty of Fontainebleau, was formed.* "Lord Rosalyn," says General Foy, "was no sooner admitted to the council of Lisbon, than he announced that it was all over with Portugal; that a French army, assembled at the foot of the Pyrenees, was ready to invade it, and that its conquest was already arranged between the King of Spain and the Prince of Peace. That great project," added he, "has been confided by Talleyrand to Lord Lauderdale during the negotiations at Paris. The ministers of the King of England could not see without uneasiness the peril of their ancient allies; they have flown to their succour. A corps of 12,000 men at this moment is embarking at Portsmouth, and will shortly arrive at Lisbon; meanwhile, the court of Lisbon may draw at pleasure on the treasury of England for the charges consequent on the war."—Foy, ii., 123. The English expedition sailed, but afterward went on to Sicily, as the Portuguese government, relieved of their present danger by the Prussian war, and desirous not to embroil themselves farther with France, not only declined their aid, but prevailed on the English government to withdraw their squadron from the Tagus.

‡ Ante, ii., 432.

§ "M. D'Oubril and Talleyrand have fixed upon Majorca, Minorca, and Ivica for his Sicilian majesty, if they cannot prevail on us to evacuate Sicily."—Lord Yarmouth to Mr. Secretary Fox, July 19 and 20, 1806; Parl. Deb., viii., 122. And again, on the 26th of September, Champagny proposed to Lord Lauderdale "that his Sicilian majesty should have the Balearic Isles, and an annuity from the court of Spain, to enable him to maintain his dignity."—Lord LAUDERDALE'S Despatch to Earl SPENCER, Paris, the 26th of September, 1806; Parl. Deb., viii., 193, 194.

|| Torano, i., 6. Bign., v., 345, 352. Lord Yarmouth's Despatch, Paris, July 19, 1806. Parl. Deb., viii., 122.

his resentment, and resolved to strike a decisive blow in the north of Germany before he carried into effect the views which he now began to entertain for the total conquest and appropriation of both kingdoms in the Peninsula. The imprudence of the Prince of Peace, however, publicly revealed the designs which were in agitation before the proper season had arrived; for, in a proclamation published in the beginning of October at Madrid, he invited "all Spaniards to unite themselves under the national standards; the rich to make sacrifices for the charges of a war which will soon be called for by the common good; the magistrates to do all in their power to rouse the public enthusiasm, in order to enable the nation to enter with glory in the lists which were preparing." This proclamation reached Napoleon on the field of Jena the evening after the battle. He was not prepared for so vigorous a step on the part of one who had so long been the obsequious minister of his will; and it may be conceived what his feelings were on receiving accounts of so decided a demonstration in such a moment of unexemplified triumph. Too skilled in dissembling, however, to give any premature vent to his feelings, he contented himself with instructing his ambassador at Madrid to demand explanation of so extraordinary a measure, and feigned entire satisfaction with the flimsy pretence that it was directed against an anticipated descent of the Moors. Nay, he had the address to render this perilous step the means of forwarding his ultimate designs against the Peninsula; for, by threatening the Prince of Peace with the utmost consequences of his resentment, if the most unequivocal proofs of devotion to the cause of France were not speedily given, he succeeded in obtaining the consent of the cabinet of Madrid to the march of the Marquis Romana, with the flower of the Spanish army, from the banks of the Ebro to the shores of the Baltic, thereby denuding the Peninsula of its best defenders, and leaving it, as he supposed, an easy prey to his ambitious designs.*† At the same time, the court of Lisbon, justly alarmed at the perilous situation in which they were placed by this ill-timed revelation of their secret designs, lost no time in disavowing all participation in a project which all concerned pretended now equally to condemn; and to propitiate the conqueror by an act which they were well aware would be well received, compelled Earl St. Vincent to withdraw with his squadron from the Tagus.

This meditated though abortive resistance of

Spain, however, to the projects of spoliation which he had in contemplation, produced a very great impression on Napoleon. He perceived, in the clearest manner, the risk to which he was exposed, if, while actively engaged in a German or Russian war in front, he were to be suddenly assailed by the monarchies of the Peninsula in rear: a quarter where the French frontier was in a great measure defenceless, and from which the armies of England might find an easy entrance into the heart of his dominions. He felt, with Louis XIV., that it was necessary there should be no longer any Pyrenees; and as the Revolution had changed the reigning family on the throne of France, it appeared indispensable that a similar change should take place in the Peninsular monarchies. By effecting that object, he thought, apparently with reason, that not only would the resources of the kingdoms it contained be more completely placed at his disposal, but his rear would be secured by the co-operation of princes whose existence depended on the maintenance of his authority; and a new family compact, founded on the same reasons of blood connexion and state policy which had rendered it so important to the Bourbon, would, in like manner, secure the perpetuity of the Napoleon dynasty. From the people, either of Spain or Portugal, he anticipated little or no opposition, deeming them, like the Italians, indifferent to political changes, provided that no diminution were made in their private enjoyments. Although, therefore, he dissembled his intentions as long as the war continued in the North of Europe, he had already taken his resolution, and the determination was irrevocable, that the houses of Bourbon and Braganza should cease to reign.*

The peace of Tilsit, however, placed Napoleon in a very different situation, and gave him at once the means of providing in the most effectual manner for the concurrence of Alexander in the dethronement of the Peninsular monarchs, by merely conniving at his advances against the Turkish Empire. It has already been stated, accordingly, that the invasion of Spain was settled at this period, and that the consideration given for that act of injustice was permission to the Czar to drive the Turks out of Europe.† In regard to Portugal,

Napoleon resolves on the dethronement of the Spanish and Portuguese monarchs.

* Las Cas., iv., 200, 201. Londond., i., 22. Hard., x., 81, 82. Thib., vi., 276. † *Ante*, ii., 545.

‡ "I have strong reasons to believe," says Savary, "that the affair of Spain was arranged at Tilsit."

Subsequently, at St. Petersburg, when the troubles in the Peninsula commenced, the emperor seemed no ways surprised at them, and not only expressed no jealousy at the entrance of the French troops into Spain, but never once mentioned the subject. And although Napoleon wrote to me every week from Paris, he never alluded to the subject: a silence which he certainly would not have preserved had everything not been previously arranged, especially considering how much he had at heart at that period to draw closer the bonds of the Russian alliance."—SAVARY, iii., 99: see also THIBAudeau, *Hist. de l'Empire*, vi., 276; ABBE DE PRADT, *Revolutions d'Espagne*, i., 7; and Escoiquiz has preserved a precious conversation which he had with Napoleon himself on that subject: "There is but one power," said he, "which can disturb my views, and I have no fears in that quarter. The Emperor of Russia, to whom I have communicated my projects on Spain, which were formed at that period, approved of them, and gave me his word of honour that he would throw no obstacles in their way. The other pow-

* Hard., x., 79, 81. Southey's *Pen. War*, i., 83. De Pradt, *Sur la Rev. d'Espagne*, 15. Londonderry, i., 21, 22.

† The details now given on the spoliation of Spain, which had been contemplated by Napoleon in the diplomatic conferences with the English government at Paris in July, 1806, and the actual conclusion of a treaty for that spoliation with Russia in that month, are of the highest importance in the development of the remote causes of the Peninsular war, as they demonstrate that the celebrated proclamation of the Prince of Peace on the 5th of October was not, as the French panegyrists of Napoleon represent, an uncalculated act of original hostility on the part of the Spanish government, but a defensive measure merely, rendered necessary by the discovery of Napoleon's previous declared intention of bestowing on strangers, without their consent, considerable portions of the Spanish dominions. This important fact, demonstrated beyond dispute by the State Papers above quoted, appears to be entirely unknown to Southey (*Penins. War*, i., 83); Napier (*Penins. War*); and even Lord Londonderry (*Londond.*, i., 21, 22).

and so desirous of enjoying on a throne the tranquillity of private life, that he surrendered himself on ordinary occasions, without scruple, to the direction of the queen and the Prince of Peace. She was a woman of spirit and capacity, but sensual, intriguing, and almost entirely governed by Don Manuel Godoy, a minister whom her criminal favour had raised from the humblest station to be the supreme director of affairs in the Peninsula. He was not by nature a bad man, and, being endowed with considerable talents, might, under a free constitution, and in a country where greatness was to be attained by integrity of conduct and capacity for the direction of affairs, have preserved an unblemished reputation. Even as it was, his administration, among many grievous evils, conferred some important benefits on his country. But elevated to power by the partiality of a woman, ambitious, vain, and ostentatious, surrounded by a jealous nobility, who regarded his extraordinary influence with undisguised aversion, he had no resource for the preservation of his power but in the same arts to which he had owed his rise; and an inordinate ambition, unsatiated even by the long tenure which he had held of absolute power in the Peninsula, now aspired to a throne, and aimed at the formation of a dynasty which might take its place among the crowned heads of Europe.*†

* Hard., x., 85, 87. Thib., vi., 277, 278. Toreno, i., 9, 12. Nell., i., 3, 4.

† Don Manuel Godoy, born at Badajoz in 1767, of a noble Sketch of the life but obscure family, affords as singular an example of sudden elevation as the history of Europe or the East has recorded. A mere private in the body-guard, he owed the first favour of the queen to the skill with which he sung and touched the lute, so favourite an instrument in that land of love and romance. Rapidly advanced by the royal favour in that dissolute court, he had the singular art, ever since 1793, not merely to lead captive his royal mistress, but to acquire an unlimited sway over the mind of the king, and at the same time live publicly with another mistress (Dona Pepa Tudo), by whom he had several children. His education had been neglected, but he had considerable natural talents, which appeared in an especial manner in the numerous and successful intrigues which he carried on with the ladies of the court, whose rivalry for his favours increased with every additional title he acquired. He was not, however, naturally bad, and never disgraced his administration by acts of cruelty. In five years he rose from being a private in the guards to absolute power, and was already loaded with honours and titles before the treaty of Bâle, in 1795, which procured for him the title of Prince of the Peace. From that time down to the period of the French invasion his ascendancy at court was unbroken, and his influence, both over the king and queen, unbounded. At the special desire of the king, he at length espoused the daughter of Don Louis, brother to that monarch, and his daughter was destined in marriage to the young King of Etruria. He had all the passion for show and splendour which usually belongs to those who are elevated to a rank which they have not held from their infancy; this prodigality occasioned a perpetual want of money, which was supplied by the sale of offices and the receipt of bribes of every description, and under his administration a frightful system of corruption overspread every branch of the public service. Many public improvements, however, also signalized it. The impulse given by the Bourbons to the sciences and arts was continued and increased; greater benefits were conferred on public industry during the fifteen years of his government than during the three preceding reigns. Schools were established for the encouragement of agriculture, the spread of medical information, and the diffusion of knowledge in the mechanical arts. He braved the Inquisition, and snatched more than one victim from its jaws. He arrested the progress of estates held in mortmain, which threatened to swallow up half the land of the kingdom. But he was unfit for the guidance of the state in the trying periods of the Revolutionary wars, and drew on Spain the contempt of foreign powers by the subserviency and degradation of his foreign administration.—See Godoy's *Memoirs*, i., 1, 217; and Fox, ii., 250, 262.

The Prince of Asturias, afterward so well known in Europe under the title of Ferdinand VII., was born on the 14th of October, 1784, and was, consequently, twenty-four years of age when the troubles of Spain commenced. Facile and indolent in general, though at the same time irascible and impetuous on particular occasions, he had fallen entirely under the guidance of those by whom he was surrounded. They were all creatures of the Prince of Peace, with the exception of the virtuous Count Alvarez, whose principles were too unbending to allow him to remain long in the corrupted atmosphere of a despotic court, and the Canon Escoiquiz, an ecclesiastic of remarkable talents, extensive knowledge, and profound dissimulation, who, by his capacity and zeal in his service, had at length acquired the absolute direction of his affairs. The Prince of Asturias had been formerly married to a princess of the Neapolitan house of Bourbon, whose talents, high spirit, and jealousy of the exorbitant influence of the Prince of Peace had fomented the divisions almost inseparable from the relative situations of heir-apparent and ruling monarch in an absolute government. Two parties, as usual on such occasions, formed themselves at the Spanish court: the one paying their court to the ruling power, the other worshipping the rising sun. The Prince of Peace was the object of universal idolatry to the first: Escoiquiz was the soul of the last. The Princess of Asturias, after four years of a brilliant existence, died, universally regretted, in May 21, 1806, leaving the Spanish monarchy, at the approaching crisis of its fate, exposed, in addition to the divisions of a distracted court, to the intrigues consequent on the competition for the hand of the heir-apparent to the throne.*

Godoy saw the advantage which his future rival was likely to derive from his ascendancy over the mind of Ferdinand, and therefore he had long before taken the decisive step of exiling him from Madrid to the place of his ecclesiastical preferment at Toledo. He afterward adopted the design of extending the influence he held over the reigning monarch to the heir-apparent by marrying him to Doña Maria Louisa de Bourbon, sister of his own wife, and even went so far as to propose that alliance to the prince. This project, however, miscarried, and Godoy again returned to his ambitious designs, independent of the heir-apparent, who resumed his relations with Escoiquiz and the malecontent party among the nobility. No sooner, therefore, did Napoleon turn his eyes towards Spain in the spring of 1807, than he opened secret negotiations with him; while, at the same time, Escoiquiz, who, though banished to Toledo, was still the soul of the prince's party, commenced underhand intrigues in the same quarter, and came privately to Madrid to arrange with the Duke del Infantado, the Duke de San Carlos, and the other leaders of the prince's party, the means of permanently emancipating him from the thralldom of the ruling favourite. It was in order to foment and take advantage

* Hard., x., 88, 89. Thib., vi., 277, 278. Cevallos, 12, 13.

The Prince of Asturias, and Escoiquiz, his confidential adviser.

Escoiquiz opens a negotiation with the French ambassador, and the Prince of Asturias writes to Napoleon.

of these divisions that Napoleon sent Beauharnois as his ambassador to Madrid in July, 1807; and that skilful diplomatist was not long of opening secret conferences with the Duke del Infantado, in which it was mutually agreed that, both for the security of the Spanish monarchy and to form a counterpoise to the enormous power and ambitious projects of the Prince of Peace, it was indispensable that the Prince of Asturias should espouse a princess

Sept. 30. of the imperial family of Bonaparte. Beauharnois afterward wrote to Escoiquiz, calling on him to "give a specific guarantee, and something more than vague promises on the subject." Thus encouraged, the

Oct. 11. Prince of Asturias wrote directly to Napoleon a letter, in which, after the most exaggerated flattery, and a declaration that his father was surrounded by evil counsellors who misled his better judgment, he implored him to permit him the honour of an alliance with his imperial family.*†

Beauharnois had warmly entered into these views of the Prince of Asturias, in the hope that, if the proposed alliance took place, the choice of the prince would be directed to a niece of the empress and relation of his own, who was afterward bestowed on the Duke d'Arenberg. But when the letter reached Napoleon he had other views for the disposal of the Spanish throne. By means of Isquierdo, a Spanish agent at Paris, who was a mere creature of the Prince of Peace, he had for some time been negotiating a treaty with Charles IV., the object of which was at once to secure the partition of Portugal, and bestow such a share of the spoils on the Prince of Peace as might secure him to the French interest, and prevent him from opposing any serious obstacle to the total dethronement of the Spanish royal family. This negotiation took place, and the treaty in which it terminated was signed by Isquierdo, in virtue of full powers from Charles IV., without the knowledge of the Prince of Masserano, the Spanish ambassador at Paris: a sufficient proof of the secret and sinister designs it was intended to serve, and of the dark, crooked policy which the Emperor Napoleon had already adopted in regard to Spanish affairs.

By this treaty it was stipulated that, in exchange for Tuscany, which was ceded to France, the province of Entre Douro e Minho, the northern part of Portugal, comprehending the city of

* *Thib.*, vi., 280, 282. *Tor.*, i., 12, 13. *Hard.*, x., 89, 90. *Ceval.*, 13. *Moniteur*, Feb. 5, 1810.

† "The world daily," said he, "more and more admired the goodness of the emperor; and he might rest assured he would ever find in the Prince of Asturias the most faithful and devoted son. He implored, then, with the utmost confidence, the paternal protection of the emperor, not only to permit him the honour of an alliance with his family, but that he would smooth away all difficulties, and cause all obstacles to disappear before the accomplishment of so long-cherished a wish. That effort on the part of the emperor was the more necessary, that the prince was incapable of making the smallest exertion on his own part, as it would infallibly be represented as an insult to the royal authority of his father; and all that he could do was to refuse, as he engaged to do with invincible constancy, any proposals for an alliance which had not the consent of the emperor, to whom the prince looked exclusively for the choice of his future queen."—FERDINAND to NAPOLEON, the 11th of October, 1807; *Thib.*, vi., 281, 282; *Moniteur*, the 5th of February, 1810.

Oporto, should be given to the King of Etruria, with the title of King of Northern Lusitania, to revert, in default of heirs, to his most Catholic majesty, who, however, was not to unite it to the crown of Spain; that the province of Alentejo and Algarves, forming the southern part of the kingdom, should be conferred on the Prince of Peace, with the title of Prince of Algarves; and in default of heirs male, in like manner, and on the like conditions, revert to the crown of Spain; that the sovereigns of these two new principalities should not make war or peace without the consent of the King of Spain; that the central parts of Portugal, comprehending the provinces of Beira, Traz-oz-Montes, and Portuguese Estremadura, should remain in sequestration in the hands of the French till a general peace, to be then exchanged for Gibraltar, La Trinite, and the other Spanish colonies conquered by the English; that the sovereign of these central provinces should hold them on the same tenure and conditions as the King of Northern Lusitania; and that the Emperor Napoleon "should guaranty to his most Catholic majesty the possession of all his states on the Continent of Europe, to the south of the Pyrenees."*

To this secret treaty of spoliation was annexed a convention, prescribing the mode in which the designs of the contracting powers should be carried into effect. By this it was agreed that a corps of 25,000 French infantry and 3000 cavalry should forthwith enter Spain, and march across that country, at the charge of the King of Spain, to Lisbon; while one Spanish corps of 10,000 men should enter the province of Entre Douro e Minho, and march upon Oporto, and another of the like force take possession of the Alentejo and the Algarves. The contributions in the central provinces, which were to be placed in sequestration, were all to be levied for the behoof of France; those in Northern Lusitania and the principality of Algarves for that of Spain. Finally, another French corps of 40,000 men was to assemble at Bayonne by the 20th of November at latest, in order to be ready to enter Portugal and support the first corps, in case the English should send troops to the assistance of Portugal, or menace it with an attack; but this last corps was on no account to enter Spain without the consent of both the contracting parties. As the principal object of this treaty was to give France possession of Lisbon and the maritime forces of Portugal, it was communicated in substance to the Emperor of Russia, and a Russian squadron of eight ships of the line, under Admiral Siniavin, passed the Dardanelles and steered for Lisbon, to support the French army, and prevent the escape of the Portuguese fleet, a short time before Junot broke up from Bayonne for the Portuguese frontier, and long before any rupture had taken place between England and the cabinet of St. Petersburg.†‡

* See the treaty in Foy, ii., 406. *Tor.*, i., 384.

† See the convention in Foy, ii., 411, 412. *Sav.*, iii., 145.

‡ "On reaching Lisbon," says Thiebault, "we found there eight sail of the line and a frigate, under Admiral Siniavin's orders. This fleet, which, in consequence of the alliance between France and Russia, and the war of the latter with England, was to afford us an additional guarantee for the protection of the harbour, gave us in the sequel far more apprehension than security."—THIEBAULT, *Exp. de l'Armée Franc. en Portugal*, 86, 87. The presence of

These treaties were not merely a flagrant act of iniquity on the part of both the contracting powers, by providing for the partition of a neutral and unoffending power, which had even gone so far as to yield implicit obedience by the proclamation of the

20th of October, eight days before they were signed, to all the demands of the partitioning cabinets, but they were yet more detestable from involving a double perfidy towards the very parties who were in this manner made the instruments of the ambitious designs of the French emperor. While Godoy was amused and for the time secured in the French interest by the pretended gift of a principality, his downfall had in reality been resolved on by Napoleon, who had never forgiven the proclamation of the 5th of October, 1806; and this specious lure was held out without any design of really conferring it upon that powerful favourite, merely in order to remove him from the Spanish court, and make way for the great designs of the French emperor in both parts of the Peninsula; while the French force, which was provided for at Bayonne in the end of November, was not intended to act against either the English or Portugal, but to secure the frontier fortresses of Spain for Napoleon himself; and the Spanish forces, which were to be marched into the northern and southern provinces of Portugal, were not designed to secure any benefit for his most Catholic majesty, but to strip his dominions of the few regular troops which, after the departure of Romana, still remained for the defence of the monarchy. So little care was taken to

disguise this intention, that, by a decree soon after from Milan, Junot, the commander of the French invading force, was appointed governor of Portugal, and he was ordered to carry on the administration of the whole in the emperor's name, which was accordingly done.* History contains many examples of powerful monarchs combining iniquitously together to rob their weaker neighbours; but this is perhaps the first instance on record in which the greater of the partitioning powers, in addition to the spoliation of a neutral and unoffending state, bought the consent of its inferior coadjutors in the scheme of iniquity by the perfidious promise of some of those spoils which it exclusively destined for its own aggrandizement.†

It may easily be believed that, when such were the views entertained at this period by the French emperor, the letter of the Prince of Asturias, written at the suggestion of Beaumont, offering his hand to a princess of the imperial family, was not likely to receive a very cordial reception. It was per-

His secret instructions to Junot in his invasion of Portugal.

the Russian fleet, however, is stated by Lord Londonderry, whose means of information were far superior to those of the French military historian, to have been purely accidental.—LONDONDERRY, i., 37.

* By Junot's proclamation, dated the 1st of February, 1808, proceeding on the Milan decree of the 23d of December, 1807, it was declared, "The house of Braganza has ceased to reign in Portugal; and the Emperor Napoleon, having taken under his protection the beautiful kingdom of Portugal, wishes that it should be administered and governed over its whole extent in the name of his majesty, and by the general-in-chief of his army."—See TORENO, i., 49, and Fox, iii., 343.

† Godoy's Mem., i., 55. Introduction, Sav., iii., 246, 247. Hard., x., 91, 92. Tor., i., 19.

mitted, accordingly, to remain without an answer; and meanwhile the march of Junot across the Peninsula was pressed by the most urgent orders from the imperial headquarters. Early in November, General Clarke, the minister of war, wrote, by Napoleon's command, a letter to that marshal, in which he was ordered to advance as far as Ciudad Rodrigo from the 1st to the 15th November, and at latest to reach Lisbon by the 30th. His orders were to proclaim peace to Portugal, and alliance and friendship to its prince regent; but meanwhile to press on with ceaseless activity, and at all hazards get possession of the fleet and fortresses at Lisbon, before they could be reached by the English forces.*† Junot was not backward in acting upon the perfidious policy thus prescribed to him; but in the execution of it he encountered the most serious difficulties; and such was the rapidity of his march, and the state of disorganization to which his corps was reduced by the severity of the weather and the frightful state of the roads, that if any resistance whatever had been attempted by the Portuguese government, he must infallibly have been destroyed. At first he proceeded, by easy marches and in good order, through the north of Spain; but when he reached Ciudad Rodrigo, the orders he received to hasten his march and seize upon the fleet were so urgent,‡ that he deemed it necessary to press his march with the most extraordinary expedition, and disregard everything but the one grand object in view. He accordingly issued a proclamation to the inhabitants,§ in which he disclaimed any hostile

* D'Abr., xi., 27. Hard., x., 97, 98.

† He was specially ordered, "on no account to stop, whether the prince regent did or did not declare war against England; to move on rapidly towards the capital, receiving the propositions of the Portuguese government, without returning any written answer, and to use every possible effort to arrive there as quickly as possible, as a friend, in order to effect the seizure of the Portuguese fleet. Should the Portuguese government have already declared war against England, you are to answer, 'My instructions are to march straight on Lisbon, without halting a single day; my mission is to close that great harbour against England. I would be entitled to attack you by main force, but it is repugnant to the great soul of Napoleon, and to the French character, to occasion the effusion of blood. If you make no assemblages of troops; if you dispose them so as to cause me no disgust; if you admit no auxiliary till the negotiations set on foot at Paris are terminated, I have orders to consent to it.' This is the footing on which you must represent matters; you must hold out that you are arriving merely as an auxiliary; meanwhile, a courier, despatched twenty-four hours after the arrival of the main body of the army at Lisbon, will transmit the real intentions of the emperor, which will be, that the propositions made are not accepted, and that the country must be treated as a conquered territory. It is on this principle that we have acted in Italy, where the property of all Portuguese subjects has already been put under sequestration. By proceeding in this manner, you will, without firing a shot, make yourself master of ten sail of the line and valuable arsenals; that is the grand object, and to arrive at it you must never cease to hold out that you come, not to make war, but to conciliate."‡ The secret instructions of Junot, written by the emperor with his own hand, were of the same tenour: "They enjoined Junot," says the Duches of Abrantes, "to do everything, in order to gain possession, not of the person of the Prince of Brazil, but of certain other persons therein named, and, above all, of the city, forts, and fleet of Lisbon."—D'Abr., xi., 27.

‡ "On no account halt in your march even for a day. The want of provisions could be no reason for doing so, still less the state of the roads. Twenty thousand men can march and live anywhere, even in a desert."—NAPOLEON to JUNOT, Nov. 2, 1807; TORENO, i., 35.

§ "The Emperor Napoleon sends me into your country at

* Hard., x., 97, 98.

intentions, and declared he came only as an ally, and to save them from the hostility of the English.* Two days afterward the army
 Nov. 19. entered Portugal, where they soon gave convincing proofs how little their declared resolution of protecting property and abstaining from every species of outrage was to be relied on. Pillage of every sort was systematically practised by all grades, from the commander-in-chief to the common soldier. Junot faithfully acted up to his instructions to employ the language of conciliation, but act upon the principle of the most decided hostility. Such conduct naturally made the inhabitants fly their approach; and this circumstance, joined to the forced marches the soldiers were compelled to make, the excessive severity of the rains, which fall in that country at that period of the year with all the violence of the tropics; and the rugged, impracticable nature of the roads, or rather mountain paths, which they were obliged to traverse, destitute of bridges and almost impassable for carriages, produced such an effect upon the French army, that in a few days it was as much disorganized as it would have been by the most disastrous defeat. No words can do justice to the hardships which were undergone, and the disorder which ensued, during the march from the frontier to Abrantes; the firmness of the oldest officers, even in the leading column, was shaken by it, and those which followed hurried along without any order, like a confused horde of robbers.† Many battalions subsisted for days together on nothing but chestnuts, and the quantity even of that humble fare was so scanty that they lost several hundred men a day: whole companies and squadrons were washed away in the ravines by the
 Nov. 28. swollen mountain torrents. At length, after undergoing incredible privations, the leading bands of the French army, two thousand strong, approached Lisbon in the end of November, but straggling in such small numbers, and in such deplorable condition, that they resembled rather the fugitives who had escaped from a disastrous retreat than the proud array which was to overturn a dynasty and subdue a kingdom.‡

the head of an army, to make common cause with your well-beloved sovereign against the tyrant of the seas, and save your beautiful capital from the fate of Copenhagen. Discipline will be rigidly preserved, I give you my word of honour for it; but the smallest resistance will draw down the utmost severity of military execution. The Portuguese, I am persuaded, will discover their true interests, and, seconding the pacific views of your prince, receive us as friends; and that the city of Lisbon, in an especial manner, will behold us with pleasure within its walls, at the head of such an army as can alone preserve it from the eternal enemies of the Continent."

* Hard., x., 106, 110. Foy, ii., 335. South., i., 100. Lond., i., 31, 32. Nevis, 190, 200.

† "It is impossible," says Thiebault, an eyewitness, "to give an idea of the sufferings of the army before reaching Sobreira. In truth, if the leading columns were a prey to these horrors, which nothing could alleviate, it may easily be imagined what must have been the situation of those which succeeded them. The army, in truth, was on the verge of dissolution; it was on the point of disbanding altogether; the general-in-chief was within a hair's breadth of being left without an army. Nevertheless, it was indispensable not to halt for a moment; everything required to be risked; we were obliged to succeed, or bury ourselves in the mountains with the whole army."—THIEBAULT, *Campagne en Portugal*, 45.

‡ Thib., 32, 69. Foy, ii., 335, 367. Tor., i., 35, 36. Napier, i., 141. Lond., i., 33. Abr., xi., 25, 26. Nevis, 190, 200.

The elements of glorious resistance were not wanting in the Portuguese capital. Its inhabitants were three hundred thousand; its forts strong, covered with a numerous artillery, and garrisoned by fourteen thousand men; an English squadron lay in the Tagus, with Sir Sydney Smith at its head, whose versatile genius was peculiarly fitted for such an undertaking, and who had shown at Acre what vigour he could infuse into a besieged population. The English sailors longed to see the work of defence begin: Sir Sydney offered to bring his ships abreast of the quay, and there, seconded by the indignant populace, dispute every inch of ground with the invader. But the destitute condition of the French army was unknown; and even if it had been fully understood, both the Portuguese government and the English ambassador, Lord Strangford, were aware that Junot's was but the advanced guard of a great army, which would speedily follow if the first were discomfited; and that any resistance would only serve to give the French emperor an excuse for measures of extraordinary rigour to the Portuguese nation, without affording any reasonable prospect of ultimate success. The great object was to withdraw the royal family and the fleet from the grasp of the invaders, and secure for them a refuge in Brazil till the present calamitous season was overpast. As soon as they saw the danger approaching, therefore, the Portuguese government took every imaginable precaution to disarm the conqueror by anticipating all his requisitions: a proclamation, as
 Oct. 20. already mentioned, was issued, closing the harbours against English vessels, and adopting the Continental system; and as the march of the invaders still continued, this was followed a few days afterward by an-

other, in which the more rigorous step
 Nov. 8. of sequestrating the property, and arresting the persons of such of the English as still remained in Portugal, was adopted; though with the secret design of indemnifying the sufferers as soon as the means of doing so were at the disposal of government. Though this last measure was known to be exceedingly painful to the Portuguese government, and was evidently adopted under the mere pressure of ne-
 Nov. 9. cessity, yet it was a step of such decided hostility, that it compelled Lord Strangford to take down the arms of Great Britain from his house and demand his passports; and soon after, amid the tears of the inhabitants, he followed the English factory to Sir Sydney Smith's fleet.*

Although, however, the relations between the two countries were thus formally broken, yet, as it was well known that the cabinet of Lisbon had yielded only to unavoidable necessity, and as their tardiness in acceding to the demand of Napoleon for the instant seizure of British property had sufficiently demonstrated the reluctance with which measures of severity had been adopted by them, the British ambassador still remained on board the English fleet, ready to take advantage of the

Conduct of the Portuguese government, and situation of Lisbon at this crisis.

After great hesitation, the court of Lisbon resolved to depart for Brazil.

* Ann. Reg., 1807, 280. South., i., 96, 97. Foy, ii., 377, 379.

first opening which should occur for the resumption of more amicable correspondence. Meanwhile everything at Lisbon was vacillation and chaos, and the prince and his council, distracted between terror at the unceasing advance of Junot and anxiety about the loss of their colonies and commerce by a rupture with England, hesitated between the bold counsels of Don Rodrigo de Lousa and the Count Linarès, who strenuously recommended determined resistance to the invaders, and the natural timidity of a court surrounded with dangers and debilitated by the pacific habits of successive reigns. At length, however, such information was received as determined the irresolution of the cabinet. An ominous line appeared in

the *Moniteur*, "The House of Braganza has ceased to reign;" and with the paper containing that announcement of the fate which awaited them, Lord Strangford transmitted to the prince regent copies of the secret treaty and convention of Fontainebleau, by which the portions assigned to each of the partitioning powers were arranged. Intelligence received shortly after of the entrance of the Spanish troops into the Alenteijo and the northern provinces of the kingdom, left no room for doubt that the copies were correct, and that

the treaty was immediately to be acted upon. At the same time, Lord Strangford landed, and promised his royal highness, on the honour of the King of England, that the measures hitherto adopted by the Portuguese court were regarded as mere acts of compulsion, and had noways abated the friendship of her old ally, if he would still avail himself of it. These representations, seconded by the efforts of Sir Sydney Smith, who brought his squadron to the mouth of the harbour, ready alike for hostile operations or pacific assistance, gave such support to Don Rodrigo and the patriotic party, that the court resolved, if the messenger despatched to obtain a stoppage of

Junot's advance were not successful, to embark for the Brazils. He entirely failed in arresting the march of the French general, and orders were therefore given that the fleet should, as speedily as possible, be got ready for sea, and

Nov. 26. Proclamation of the Prince of Peace on the subject.

the prince regent published a dignified proclamation on the following day, in which he announced a resolution worthy of the heroic House of Braganza, and prepared to seek in transatlantic climes "that freedom of which Europe had become unworthy."*†

† "Having tried, by all possible means, to preserve the neutrality hitherto enjoyed by my faithful and beloved subjects; having exhausted my royal treasury, and made innumerable other sacrifices, even going to the extremity of shutting the ports of my dominions to the subjects of my ancient and royal ally, the King of Great Britain, thus exposing the commerce of my people to total ruin, and, consequently, suffering the greatest losses in the collection of the royal revenue, I find that troops of the Emperor of France, to whom I had united myself on the Continent, in the hope of being no more disturbed, are actually marching into the interior of my dominions, and are far on their way to this capital. Desirous to avoid the fatal consequence of a defence, which would be far more dangerous than profitable, serving only to create a boundless effusion of blood, dreadful to humanity, and to inflame the animosity of the troops which have entered this kingdom, with the declaration and promise of not committing any, the smallest hostility; and

The fleet, at first, was in a state but little prepared for crossing the Atlantic, and still less for conveying the motley and helpless crowd of old men, women, and children, who were preparing to follow the court in their migration to South America. By great exertions, however, and the active aid of the British sailors, who, overjoyed at this extraordinary emergency on the part of the prince regent, exerted themselves with unheard-of vigour in their assistance, eight sail of the line, three frigates, five sloops, and a number of merchant vessels, in all six-and-thirty sail, were got ready on the following day, when the royal family prepared to carry their mournful, but magnanimous, resolution into execution. Preceded by the archives, treasure, plate, and most valuable effects, the royal exiles proceeded in a long train of carriages to the water's edge. Never had been seen a more melancholy procession, or one more calculated to impress on the minds even of the most inconsiderate the magnitude of the calamities which the unbounded ambition of France had brought on the other nations of Europe. The insane queen came in the first carriage: for sixteen years she had lived in seclusion, but a ray of light had penetrated her reason in this extremity, and she understood and approved the courageous act; the widowed princess and the Infanta Maria were in the next, with the Princess of Brazil, bathed in tears; after them came the prince regent, pale and weeping at thus leaving, apparently forever, the land of his fathers. In the magnitude of the royal distress, the multitude forgot their own dangers; their commiseration was all for the august fugitives, thus driven by ruthless violence to a distant shore, with the descendants of a long line of kings, forced to seek, in mournful exile, an asylum from the hand of the spoiler. Such was the crowd which assembled round the place of embarkation, that the prince was compelled to force his way through with his own hand. There was not a dry eye among all the countless multitude when they stepped on board; uncovered and weeping, the people beheld, in speechless sorrow, the departure of their ancient rulers. In the general confusion of the embarkation, parents were separated from children, husbands from wives, and both remained ignorant of each other's safety till they landed in the Brazils; while the shore resounded with the lamentations of those who were thus severed, probably forever, from those whom they most loved. It was some consolation to the crowd, who watched with aching eyes the receding sails, to see the royal fleet, as it passed through the British squadron, received with a royal salute from all the vessels: emblematic of the protection of Great Britain now extended to her ancient ally, and an earnest of that heroic support which, through all the desperate conflict which followed, England was destined to afford to her courageous inhabitants. Numbers, however, observed, with su-

Embarcation of the royal family for Brazil, 27th Nov.

knowing, also, that they are more particularly directed against my royal person, and that my faithful subjects would be less exposed to danger if I were absent from the kingdom, I have resolved to retire, with the queen and royal family, to my dominions in America, and establish myself in the city of Rio Janeiro till a general peace."—*Ann. Reg.*, 1807, 776, *State Papers*.

perstitious dread, that at the moment of the salute the sun became eclipsed, and mournfully repeated the words, "The House of Braganza has ceased to reign." Never had a city been penetrated with a more unanimous feeling of grief: the royal family, kindly and warm-hearted, had long enjoyed the affections of the people; the bitterness of conquest was felt without its excitement. In mournful silence the people lingered on the quay from whence the royal party had taken their departure; every one, in returning to his home, felt as if he had lost a parent or a child. The embarkation took place from the Quay of Belem, on the same spot from whence, three centuries before, Vasco de Gama had sailed upon that immortal voyage which first opened to European enterprise the regions of Oriental commerce, and whence Cabral set forth upon that expedition which gave Portugal an empire in the West, and had provided for her an asylum, in the future wreck of her fortune, in the Old World.*

Hardly had the royal squadron, amid tempestuous gales, cleared the bar French at Lisbon. Nov. 30. and disappeared from the shores of Europe, when the advanced guard of Junot's army, reduced to sixteen hundred men and a few horsemen, arrived on the towers of Belem. He came just in time to see the fleet receding in the distance, and in the ebullition of his passion himself discharged a piece of ordnance at a merchant vessel which, long retarded by the multitude who were thronging on board, was hastening, under the walls of that fortress, to join the fleet which had preceded it. Although, however, the French troops were so few and in such deplorable condition as to excite pity rather than apprehension, yet no resistance was attempted; the regency, to whom the prince royal had on his departure intrusted the administration of affairs, wisely deeming a contest hopeless from which the government itself shrank, and regarding their first duty as the negotiating favourable terms for the inhabitants with the invaders. Resistance, therefore, was not attempted, and Europe beheld with astonishment a capital, containing three hundred thousand inhabitants and fourteen thousand regular soldiers, open its gates to a wretched file of soldiers without a single piece of cannon, the vanguard of which, worn out and extenuated, not fifteen hundred strong, could hardly bear their muskets on their shoulders, while the succeeding columns were scattered in deplorable confusion over mountain paths two hundred miles in length. Such was their state of starvation, that, on entering the city, many of the soldiers dropped down in the streets or sunk exhausted in the porches of the houses, being unable to ascend the stairs, until the Portuguese humanely brought them sustenance. It received its new masters on the anniversary of the very day (30th of November) on which, a hundred and sixty-seven years before, the Portuguese had overturned the tyranny of the Spaniards, and re-established, amid universal transport, the national independence †

† Thib., vi., 271. Thieb., 68, 69, 72. Nevis, i., 185, 213. South., i., 116, 117. Foy, ii., 400, 403.

Junot immediately took military possession of the country; the French troops were cantoned chiefly in the capital and the strongholds in its vicinity, while Elvas surrendered to the Spanish general, Salano, and Taranco, with the northern corps of the troops of that nation, took peaceable possession of the important and opulent city of Oporto. The strict discipline maintained by these Peninsular corps afforded a striking contrast to the license indulged to the French soldiers, whose march, albeit through a friendly state, which had as yet committed no act of hostility, was marked by plunder, devastation, and ruin, and hopes began to be entertained by those in the French interest that the independence of their country might still be preserved. But these hopes were of short duration, and Portugal soon experienced, in all its bitterness, the fate of all the countries which, from the commencement of the war, had received, whether as friends or enemies, the tricolour flag. Heavy contributions, both in money, subsistence, and clothing, had from the first been levied by the French troops, and Junot, with almost regal state, was lodged in the now deserted palace; but the first was ascribed by their deluded friends to the necessities and destitute condition of the French troops, and the last was forgiven in an officer whose head, never equal to his valour, appeared to have been altogether carried away by the novelty and importance of the situation in which he was now placed. All uncertainty, however, was soon at an end. A fortnight after Dec. 13. their arrival, a review of six thousand troops in the capital took place; the soldiers were assembled in the principal streets and squares: the infantry in battalions, the cavalry in squadrons, the artillery limbered up and in order for service, and the whole population of the neighbourhood crowded together to witness the spectacle. Suddenly the thunder of cannon from the Moorish fort attracted their attention: all eyes were instantly turned in that direction, and they beheld the ancient flag of Portugal torn from the staff, upon which the tricolour standard was mounted. The magnitude of the calamity now became apparent: Portugal, seized by a perfidious foe, was to be reduced to a province of France. At first a solemn silence prevailed; but soon a hoarse murmur, like the distant roar of the ocean, arose, and the cries "Portugal forever, death to the French!" were heard on all sides. But the principal persons of the city were secured, the populace were unarmed, and the forts and batteries were all in the hands of the invaders. The evening was spent in feverish agitation, but the people, destitute of leaders, were unable to turn the general indignation to any account, and the day closed without any convulsion having occurred.*

This measure, however significant as to the ultimate designs of the conqueror, was yet only a demonstration; and as the police of Lisbon was rigidly enforced by the French, and no other change made in the government but the introduction of two

The country is occupied by Junot in the name of the French, and enormous contributions levied by their troops.

The regency is at length dissolved by Junot, and the whole country seized by the French.

* Nevis, i., 250, 273. Lond., i., 45, 46. Thib., vi., 278, 274. South., i., 123, 125. Foy, iii., 11, 14.

or three of his creatures into the regency, which still administered the laws in the name of the prince regent, hopes began to be again entertained that it would prove only a temporary occupation. But events, which rapidly succeeded, demonstrated that Portugal was destined to drain to the dregs the cup of humiliation before the day of its political resurrection arose. A forced loan of 2,000,000 cruzados (£200,000) was exacted from the merchants, though their fortunes were seriously affected

Dec. 5. by the blockade of the harbour and the entire stoppage of foreign commerce and public credit. The entire confiscation of English goods was next proclaimed, and ordered to be enforced by tenfold penalties and corporeal punishment, while the carrying of arms of any

Dec. 6. sort was strictly prohibited, under the pain of death, over the whole kingdom. Meanwhile, fresh troops daily poured into the capital, and, to accommodate them, the monks were all turned out of the convents, which were forthwith converted into military barracks. Still no indication of a permanent partition of the kingdom had appeared at Lisbon, and Junot

Jan., 1808. seemed chiefly intent on a small squadron which he was fitting out with great expedition in the harbour, apparently against the English, although the Spanish officers at Oporto and in the Alenteijo made no secret of the treaty of Fontainebleau, and had already begun to levy the revenue collected there in the name of the King of Spain. But

Feb. 1. on the 1st of February the mask was at once thrown aside, and it appeared that Napoleon was resolved to appropriate the whole monarchy to himself, without allotting any portion to his confederate in iniquity. On that day Junot went in state to the palace of the Inquisition, where the regency was assembled, and, after a studied harangue, read a proclamation of Napoleon, dated from Milan in the

marched out of the Peninsula—and for the support of the Army of Occupation, now termed the Army of Portugal, imposed a contribution of a hundred millions of francs (£4,000,000), above double the annual revenue of the monarchy, upon its inhabitants, besides confiscating the whole property of the royal family, and of all who had attended them in their flight.*†

* Foy, iii., 15, 23. Lond., i., 47, 49. Tor., i., 41, 42, 49, 50. Neva, i., 263, 288.

† "Inhabitants of Portugal," said Junot's proclamation, "your interests have engaged the attention of the emperor; it is time that all uncertainty as to your fate should cease; the fate of Portugal is fixed, and its future prosperity secured, by being taken under the all-powerful protection of Napoleon the Great. The Prince of Brazil, by abandoning Portugal, has renounced all his rights to the sovereignty of that kingdom; the House of Braganza has ceased to reign in Portugal; the Emperor Napoleon has determined that that beautiful country, governed over its whole extent in his name, should be administered by the general-in-chief of his army." Thus did Napoleon first sign a treaty at Fontainebleau for the entire spoliation of the Portuguese dominions; next, by his perfidious invasion, drive the ruling sovereign into exile, and then assign that very compulsory departure as a reason for the previously concerted appropriation of the whole of his territories to himself.—See both

These orders were instantly carried into effect. The Portuguese arms were everywhere taken down from the public offices and buildings, and those of imperial France substituted in their room. Justice was administered in the name of the French emperor, and by the Code Napoleon; the whole revenue was collected by the French authorities, and the regiments assigned for the foreign army moved towards the frontiers. A universal despair seized all classes at this clear manifestation of the subjugation of their country. The peasants, heartbroken and desperate, refused to sow their fields with grain; the soldiers, wherever they were not overawed by a superior force of the French army, disbanded and returned home, or betook themselves to the mountains as robbers; the higher classes almost all fled from Lisbon, as from a city visited by the plague; and, notwithstanding the presence and influence of the invaders, only three houses were lighted on occasion of the general illumination ordered by the French in honour of the change of government. In the provinces, the general indignation was manifested in still more unequivocal colours: the growing insolence and rapacity of the French soldiers led them into frequent conflicts with the now aroused population; tumults, massacres, and military executions occurred in almost every city, village, and hamlet of Portugal; and Junot, alarmed at the increasing ferment, formally disbanded the whole of the army which had not been ordered to proceed to France.* Meanwhile, plunder was universal, from the highest rank to the lowest, and the general-in-chief set the example of general spoliation by appropriating to himself plate and valuable articles of every description, collected from the churches and royal palaces.†

While the fate of Portugal was thus, to all appearance, sealed by the usurpation of Napoleon, events of still greater importance were in progress in relation to the Spanish monarchy, which, in their immediate effects, precipitated the explosion of the Peninsular war.

What care soever the advisers of Ferdinand may have taken to conceal from the reigning monarch his letter of the 11th of October, proposing, without his father's knowledge, an alliance with the imperial family, so important a step did not long remain unknown to the Prince of Peace. The numerous spies in his employment, who surrounded the heir-apparent, both in the French capital and his palace of the Escorial, got scent of the secret; and Isquierdo transmit-

Arrest of Ferdinand, and seizure of his papers.

the Milan Decree and JUNOT'S Proclamation, in Foy, iii., 313, 345. *Pièces Just.*

* The Portuguese legion thus draughted off for France was at first 9000 strong; but five thousand deserted or died on the march through Spain, and not four thousand reached Bayonne. Napoleon, however, who there reviewed them, said to Prince Wolkowski, "These are the men of the South; they are of an impassioned temperament; I will make them excellent soldiers." They served with distinction, both in Austria and Russia, and were particularly noticed for their good conduct at Wagram in 1809, and Smolensko in 1812. They were faithful to their colours and oaths, though still in their hearts attached to their country, and bore on their standards this striking device,

"Vadimus immixti Danais; haud numine nostro."

—Foy, iii., 40, 41, note.

† Lond., i., 50, 54. South., i., 152, 162. Nevis, i., 240, 249. Foy, ii., 5, 38.

ted from Paris intelligence that some negotiation of importance was in progress, in consequence of which the prince was more narrowly watched; and as the evident anxiety and pre-occupation of his mind seemed to justify the suspicions which were entertained, he was at length arrested by orders of his father, and a seal put on all his papers. He was privately

examined before the Privy Council, and Oct. 29. afterward reconducted as a prisoner, by the king himself, in great state at the head of his guards, to the palace of the Escorial, whose walls, still melancholy from the tragic catastrophe of the unfortunate Don Carlos in a preceding reign, were fraught with the most sinister presages. Among his private papers were found one written entirely by the hand of the prince, blank in date, and with a black seal, bestowing on the Duke del Infantado the office of Governor-general of New Castile, and all the forces within its bounds, in the event of the king's death; a key to the correspondence in cipher formerly carried on by the late Princess of Asturias and the Queen of Naples, her mother; and a memorial of twelve pages to the king, filled with bitter complaints of the long-continued persecution of which the prince had been the object, denouncing the Prince of Peace as guilty of the most wicked designs, even that of mounting the throne by the death of his royal master, and which proposed a variety of steps to secure the arrest of that powerful favourite. A writing of five pages was also discovered, written, like the preceding, by Escoiquiz, detailing the measures adopted by the Prince of Peace to bring about a marriage between the heir-apparent and his wife's sister, the best mode of avoiding it, and hinting at the prospect of an alliance between the Prince of Asturias and a member of the imperial family. In these papers, thus laid open without reserve to the royal scrutiny, there was nothing, with the exception of the first, which had the appearance even of implicating the prince in any design against his father's life or authority, though much descriptive of that envenomed rancour between his confidants and those of the reigning monarch, which the long ascendancy of the Prince of Peace, and the animosity which had prevailed between him and the heir-apparent, were so well calculated to produce. Even the first, though it indicated an obvious preparation for the contemplated event of the king's decease, and fairly inferred an anxiety for that event, could not, when taken by itself without any other evidence, be considered as a legitimate ground for concluding that so atrocious an act as the murder or deposition of the king was in contemplation, since it was equally referable to the anxiety of the heir-apparent, who had given no indications of so depraved a disposition, to secure the succession, menaced, as he conceived it to be, upon his natural demise.*

Revealed, however, to a corrupted court, and falling into the hands of persons actuated by the worst suspicions, because themselves capable of the most nefarious designs, these papers afforded too fair an opportunity to Godoy and his party of ruining the

prince, and at the same time gave a clear indication of the danger which they would themselves run upon his accession to the throne, to be laid aside without being made the foundation of decisive measures. On the very next Oct. 30. day, accordingly, a proclamation was issued from the Escorial by the king, in which the Prince of Asturias was openly charged with having engaged in a conspiracy for the dethronement and death of his father, and the immediate prosecution and trial of all his advisers was announced to the bewildered public.† At the same time, despatches were forwarded to Napoleon, reiterating the same charges, and earnestly imploring his counsel and assistance in extricating his unfortunate ally from the difficulties with which he was surrounded.‡

When Napoleon, however, received this letter, he was no ways disposed to lend any assistance to Charles IV., Cautious conduct of the latter on whose dethronement he was fully resolved, though he was as it yet uncertain as to the particular means or course to be followed in order to effect that object. He determined immediately to keep himself entirely clear from these domestic dissensions, took the utmost care that his name should not in any way be mixed up with them, and resolved only to take advantage of them, if possible, to get quit of both father and son. He said, therefore, on receipt of the letter, "These are domestic concerns of the King of Spain; I will have nothing to do with them;" at the same time Champagny, minister of foreign affairs, wrote to the Prince of Peace, that on no account was his name to be implicated in this affair; § and Talleyrand gave the same

* Tor., i., 23, 24. Nell., i., 4, 5. Thib., vi., 284, 285.

† It was stated in this proclamation, "I was living persuaded that I was surrounded with the love due to a parent by his offspring, when an unknown hand suddenly revealed to me the monstrous and unheard-of conspiracy which had been formed against my life. That life, so often endangered, had become a burden to my successor, who, preoccupied, blinded, and forgetful of all the Christian principles which my care and paternal love have taught him, had engaged in a conspiracy for my dethronement. I was anxious myself to ascertain the fact, and, surprising him in his own apartment, I discovered the cipher which enabled him to correspond with his companions in iniquity. Everything necessary has been done, and the proper orders given for the trial of these guilty associates, whom I have ordered to be put under arrest, as well as the confinement of my son to his own apartments."—*Proclamation, 30th of October, 1807.* TORENO, i., 24.

‡ "Sir, my brother—At the moment when I was exclusively occupied with the means of destroying our common enemy, and fondly hoped that all the plots of the late Queen of Naples were buried with her daughter, I discovered with horror that the spirit of intrigue had penetrated the interior of my palace, and that my eldest son, the heir-presumptive to the throne, had not only formed the design to dethrone, but even to attempt the life of myself and his mother. Such an atrocious attempt merits the most exemplary punishment; the law which calls him to the succession should be repealed; one of my brothers will be more worthy to replace him in my heart and on the throne. I pray your majesty to aid me by your lights and counsel."—CHARLES IV. to NAPOLEON. St. Lorenzo, 30th of October, 1807. SAVARY, iii., 143.

§ "The emperor insists that on no account should anything be said or published in relation to this affair which involves him or his ambassador. He has done nothing which could justify a suspicion that either he himself or his minister has known or encouraged any domestic intrigue of Spain. He declares positively that he never has, and never will, intermeddle with it. He never intended that the Prince of Asturias should marry a princess of France, or Mademoiselle Tascher, long since affianced to another; he will oppose no marriage of the Prince of Asturias with any person he pleases; his ambassador Beauharnois has instructions to take no part in the affairs of Spain."—CHAM-

* Tor., i., 22, 23. Thib., vi., 283, 284. Foy, ii., 99. South., i., 157, 158.

assurances in the strongest terms to Isquierdo, protesting, at the same time, the emperor's fixed resolution to carry into execution the whole provisions of the treaty of Fontainebleau.* Meantime, the storm which threatened such serious consequences blew over in Spain, from a discovery of the party who was at the bottom of the intrigue. The Prince of Asturias, justly alarmed for his life, revealed, in a private intercourse with his father and mother, the letter he had written to Napoleon, proposing his hand to one of his relations, and at the same time disclosed all the parties, not excluding the French ambassador, who were privy to that proceeding. This disclosure operated like a charm in stilling the fury of the faction opposed to the prince: ignorant of the extent or intimacy of his relations with the French emperor, they recoiled at the idea of driving to extremities the heir of the throne, who might possibly have engaged so powerful a protector to espouse his cause. The matter was therefore hushed up; the prince wrote penitential letters to his father and mother, avowing "that he had failed in his duty, inasmuch as he should have taken no step without their concurrence," and throwing himself on their mercy. Upon

Nov. 5. this a decree of the king was issued, declaring, "The voice of nature has disarmed the arm of vengeance: when a guilty party solicits pardon, the heart of a father cannot refuse it to a son. My son has disclosed the authors of the horrible plan which some wretches have put into his head; I pardon him, and shall receive him to favour when he has given proofs of sincere amendment." The trial of the prince's confidants went on, but terminated three months after in their entire acquittal, to the great joy of the nation, who had never attached any credit to this alleged conspiracy, but considered it as a got-up device of the Prince of Peace to ruin his rival Escoiquiz. Nevertheless, that acute counsellor, as well as the dukes of Infantado and St. Carlos, with several others, were kept in confinement or sent into exile; and Napoleon, who, in truth, had not instigated this intrigue, but saw the advantage it would give him in his designs against the Peninsula, was secretly rejoiced to see the father and son thus envenomed against each other, and resolved to dispossess them both.*†

Jan. 20, 1808. It was not long before this resolution to appropriate to himself a part, at least, of the Spanish dominions, without the slightest regard to his recent and solemn guarantee of their integrity in the treaty of Fontainebleau, was acted upon by the French emperor. The force

FAGNY TO THE PRINCE OF PEACE, the 15th of November, 1807. THIBAUDEAU, vi., 291, 292.

* "What chiefly shocked the emperor," said Talleyrand to Isquierdo, on the 15th of November, "was, after the treaty of the 17th of October, to see himself apparently implicated, in the face of Europe, in intrigues and treasons. He has expressed a natural indignation at it, because it affects his honour and probity. The emperor desires only the strict execution of the treaty of Fontainebleau."—THIBAUDEAU, vi., 291.

† O'Meara, ii., 160. Tor., i., 26, 33. Nell., i., 5, 6. Thib., vi., 285, 297. South., i., 187, 191.

‡ "I never," said Napoleon, "excited the King of Spain against his son. I saw them envenomed against each other, and thence conceived the design of deriving advantage to myself, and dispossessing both."—O'MEARA, ii., 160.

of forty thousand men, which had been provided for at Bayonne by that treaty, but which was not to enter Spain except with the consent of the King of Spain, was now increased to sixty thousand; and without any authority from the Spanish government, and though the situation of Portugal noways called for their advance, began to cross the frontier, and take the road, not towards Lisbon, but Madrid. Twenty-four thousand infantry and four thousand horse, with forty guns, under Dupont, first passed the Bidassoa, and moved towards Valladolid, where headquarters were established in the beginning of January. A second army, under Monecy, consisting of twenty-five thousand foot, three thousand horse, and forty pieces of artillery, soon followed; and such was the haste with which they were forwarded to their destination, that they were conveyed across France by post, and rapidly defiled towards the Ebro; while, on the other extremity of the Pyrenees, Duhesme, with twelve thousand infantry, two thousand cavalry, and twenty cannon, entered Catalonia, and took the road to Barcelona.*

Although the operations in Portugal afforded no sort of reason for this formidable invasion, yet so much were the inhabitants of the country in the habit of yielding implicit obedience to the French authorities, in consequence of the submissive attitude of their government for so long a period, that it excited very little attention either in Spain or over the rest of Europe, to the greater part of which it was almost unknown. Public attention followed the progress of the emperor in Italy, and, dazzled by the splendid pageants and important changes which were there going forward, paid little regard to the progress of obscure corps on the Pyrenean frontier. Notwithstanding all their infatuation, however, the cabinet of Madrid were not without anxiety at this uncalled-for and suspicious invasion of their frontiers; but they were deceived by the repeated assurances which they received, both verbally and in writing, from the French ministers, of the determination of the emperor to execute all the provisions of the treaty of Fontainebleau;† and the Prince of Peace was fearful lest, by starting ill-timed suspicions, he might put in hazard the brilliant prospects which he conceived were opening both to the Spanish monarchy and himself from the spoils of Portugal. They were involved in the meshes of guilty ambition, and could not extricate themselves from its toils till they had themselves become its prey.‡

The time, however, was now rapidly approaching when Napoleon deemed it safe to throw off the mask. No sooner had he returned from Italy to Paris than the minister of war transmitted a message to the Senate, requiring the levy of 80,000 conscripts out of those who should become liable to serve in 1809: a requisition which that obsequious body forthwith voted by acclamation, though the peace of Tilsit had, to all appearance, closed the Temple of Janus for a very long period, at least in regard to Continental wars. This war-

like demonstration, though levelled ostensibly at England, yet contained ambiguous expressions which pointed not unequivocally to projects of aggrandizement on the side of the

Spanish Peninsula.* Shortly after, Jan. 14, 1808.

the French forces began, by fraud and false pretences, to make themselves masters of the frontier fortresses of Spain; and the success with which their dishonourable stratagems were crowned was such as almost to exceed belief, and which could not have occurred but in a monarchy debilitated by a long period of despotic misrule. Pampeluna was the first to be surprised. Early in February, General d'Armagnac directed his steps on this perfidious mission through Roncesvalles, the fabled scene of heroic achievement. He first requested leave from the governor of that fortress to lodge two battalions with the Spanish troops in

the citadel; and when this was refused, Feb. 9. remained for some days in the town on the most friendly terms with the Spanish garrison, until they were so completely thrown off their guard that he succeeded in surprising the principal gate of the citadel by means of three hundred men, admitted, one by one, with arms under their cloaks, during the night, into his house, which was within the walls, while the attention of the Spanish sentinels was taken off by his soldiers playing in sport at snowballs with each other close to the drawbridge of the citadel. Next morning a proclamation appeared, beseeching the inhabitants to "consider this as only a trifling change, incapable of disturbing the harmony which ought to subsist between two faithful allies."[†]

Duhesme's instructions were, in like manner, to make himself master of Barcelona; and he was not long of effecting that object. Boldly advancing towards that fortress, under the pretence of pursuing his march to Valencia, he totally disregarded the summons of Conde de Espeleta, the captain-general of the province, who required him to suspend his march till advices were received from Madrid, and so intimidated the governor, by threatening to throw upon him the whole responsibility of any differences which might arise between the two nations from the refusal to admit the French soldiers within the walls, that he succeeded in getting possession of the town. Still, however, Fort Montjuic and the citadel were in the hands of the Spaniards; but the same system of audacious treachery shortly

after made the invaders masters of these strongholds. Count Theodore Lecchi, the commander of the Italian division, assembled his troops as for a parade on the glacis of the citadel.

After the inspection was over, the Italian general came with his staff, on horse-

back, to converse with the Spanish officers, and Feb. 29. insensibly moved forward to the drawbridge; and while still there, so as to prevent its being drawn up, a company of grenadiers stole unperceived round the palisades, and rushing in, disarmed the Spanish guard at the gate, and introduced four battalions, who got possession of the place. Montjuic fell still more easily: Feb. 29.

the governor, though a man of courage and honour, was unable to withstand the peremptory summons of the French general, who audaciously demanded the surrender of that impregnable fortress, with the menace to render him responsible for the whole consequences of a war with France, which would inevitably result from a refusal.* San Fernando de Figueras next fell into the hands of the French. The

governor, on his guard against sur- March 18. prise, was cajoled into permitting two hundred conscripts to be lodged in the citadel, the finest fortification in Spain, under pretence that there was not accommodation for them in the town. Instead of conscripts, chosen soldiers were introduced, who in the night overpowered the sentinels, and admitted four regiments, who lay in the neighbourhood. Finally, St. Sebastians, the key to the great road from Bayonne to Madrid, and the destined theatre of such desperate struggles between the French and English, was obtained on still more easy terms.

By permission of the Spaniards, it had become the dépôt for the hospital of the French regiments which had passed through; but the governor, conceiving disquietude at the visible increase in the number of these pretended patients, and having learned some March 3. indiscreet expressions of Murat as to St. Sebastians being indispensable to the security of the French army, communicated his fears to the captain-general of the province, and also to the Prince of Peace, with an earnest request for instructions.† The prince, too far gone to recede, counselled submission, though his eyes were now open to the treachery of which he had been the victim; and, to his disgrace he it said, the last bulwark of his country was yielded up in consequence of express instructions from him, written with his own hand.‡

* "My soldiers," said he, "are in possession of the citadel; instantly open the gates of Montjuic, for I have the special commands of the Emperor Napoleon to place garrisons in your fortresses. If you hesitate, I will, on the spot, declare war against Spain, and you will be exclusively responsible for all the torrents of blood which your resistance will cause to be shed." The name of Napoleon produced all these marvellous effects; it operated like a charm in paralyzing the resistance even of the most intrepid spirits; many could encounter death; few had the moral courage to undergo the political risk consequent on resistance to his mandates. The Spanish governors at this period also had another excuse: the perfidy with which they were assailed by his orders was so unprecedented as to be inconceivable to men of honour.—See FOX, iii., 80.

† Tor., i., 53, 58. Foy, ii., 78, 85. Nell., i., 10. South., i., 199, 204. Thib., vi., 612.

‡ On the margin of the letter of the Duke de Mahon, captain-general of Guipuscoa, requesting instructions, and fully detailing the danger, was written, in the Prince of Peace's own hand, "Let the governor give up the place, since he has not the means of resisting, but let him do so in an amicable manner, as has been done in other places where

* "There is a necessity," said Clarke and Champagny, "of having considerable forces on all points exposed to attack, in order to be in a situation to take advantage of any favourable circumstances which may occur to carry the war into the bosom of England, to Ireland, or the Indies. Vulgar politicians conceive the emperor should disarm; such a proceeding would be a real scourge to France. It is not enough to have an army in Portugal: Spain is in alarm for Cadiz; Ceuta is menaced; the English have disembarked many troops in the neighbourhood of Gibraltar; they have directed to that quarter those which have been recalled from the Levant or withdrawn from Sicily. The vigilance of their cruisers on the Spanish coast is hourly increasing; they seem disposed to avenge themselves on that kingdom for the reverses they have experienced in the colonies. The whole Peninsula, therefore, in an especial manner calls for the attention of his majesty."—CLARKE and CHAMPAGNY'S Reports, *Moniteur*, 24th Jan., 1808; and FOX, iii., 76, 77.

† Tor., i., 51, 52. South., i., 197, 198. Lond., i., 56. Foy, iii., 81, 84.

Thus were taken, by the treachery and artifices of the French emperor, the four frontier fortresses of Spain; those which command the three great roads by Perpignan, Narbonne, and Biscay, across the Pyrenees, and the possession of which gives an invader the entire command of the only passes practicable for an army from France into the Peninsula. And they were taken not only during a period of profound peace, but close alliance between the two countries, and by a power which, only a few months before, had so solemnly guaranteed the integrity of the Spanish dominions! History has few blacker or more disgraceful deeds to commemorate; and, doubtless, the perpetration of them must have been a subject of shame to many of the brave men engaged in the undertaking, how much soever the better feelings of the majority may have been obliterated by that fatal revolutionary principle, which measures the morality of all public actions by no other test but success. Napoleon, however, who never inquired into the means, provided the end were favourable, was overjoyed at this easy acquisition of the keys of Spain, and was led from it to discard all fears of a serious rupture in the course of his projected changes of dynasty in the Peninsula. With his accustomed vigour, he instantly prepared to make the most of his extraordinary good fortune in these important conquests: fresh troops were instantly poured into the newly-acquired fortresses; their ramparts were armed, their ditches scoured, their arsenals filled; the monks in them were all turned adrift, and the monasteries converted into barracks. Several millions of biscuits were baked in the frontier towns of France, and speedily stored in their precious magazines. The whole country from the Bidassoa to the Douro was covered with armed men; the Spanish authorities in all the towns were supplanted by French ones; and before as yet a single shot had been fired, or any angry note interchanged between the cabinets, the whole of Spain north of the Ebro was already wrested from the crown of Castile.*†

How deeply soever Godoy may have been implicated, by long-established intimacy and recent lures, in the meshes of French diplomacy, he could not any longer remain blind to the evident tendency of the designs of Napoleon. The seizure of Pampeluna first drew the veil in part from his eyes; the successive capture of Barcelona, St. Sebastians, and Figueras, next tore it asunder; finally,

there were even fewer reasons or grounds for excuse than in the case of Saint Sebastians."—*March 3, 1808. TORENO, i., 58.* The general answer returned by the Prince of Peace to the repeated demands which he received from the north, for instructions how to act, had previously been, "Receive the French well; they are our allies; they come to us as friends."—*HARDENBERG, x., 122.*

* *Foy, iii., 85, 87, 89. Tor., i., 59, 60. South., i., 195, 205. Lond., i., 57, 60.*

† General Foy, through a liberal writer, and of the Napoleon school, gives a full detail, much to his credit, of these disgraceful transactions, and draws a veil over none of the dishonourable deeds by which they were accomplished.—*See Foy, iii., 75, 85.* This is the true and honourable spirit of history, and withal the most politic, for it gives double weight to the defence of his country on other points when undertaken by such a champion.

ly, the proclamation of Junot, on the 1st of February, at once dashed to the earth all his hopes of national or individual aggrandizement. The portentous announcement that Junot was to administer the affairs of Portugal in its *whole extent* in the name of the emperor, evinced clearly that all the provisions in the treaty of Fontainebleau in favour either of the Spanish family, who had ceded the throne of Tuscany, or the Prince of Peace individually, were blown to the winds. The private correspondence of that ambitious statesman, accordingly, at this period, evinces the utmost uneasiness at the designs of France.* But the uncertainty of which he so bitterly complained was of short duration. A requisition by Napoleon Feb. 6. for the removal of the Spanish fleet to Toulon, which the cabinet of Madrid were weak enough to comply with, though the rapid succession of events prevented its execution, was soon followed by a formal demand of all Spain to the north of the Ebro, to be Feb. 27. incorporated with the French monarchy. In return, he offered to cede to the Spanish monarchy his newly-acquired realm of Portugal;† but it was readily foreseen that the proposal would prove entirely illusory, as Junot had taken possession of the whole country in the name of Napoleon, and it was not to be supposed he would ever relinquish his grasp of a monarchy so important in his maritime designs against Great Britain.‡

Possession of Spain to the north of the Ebro, including, of course, Catalonia, Godoy, at length made aware of the designs of Napoleon, prepares the flight of the court to Seville. Navarre, the whole frontier fortresses, and passes through the Pyrenees, was, in a military point of view, possession of Spain itself; not a fort existed to arrest the French between that river and the

* On February 9, Godoy wrote to his agent Isquierdo at Paris the following secret despatch: "I receive no news; I live in uncertainty; the treaty is already a dead letter; this kingdom is covered with troops; the harbours of Portugal are about to be occupied by them; Junot governs the whole of that country. We have just received a demand for the remainder of our fleets to co-operate with the French, which must be complied with. Everything is uncertainty, intrigue, and distrust; public opinion is divided; the heir-apparent to the throne was lately involved in a treasonable conspiracy; the French troops live at free quarters on the country; the people are exhausted by their requisitions. You yourself have been to little purpose at Paris; the ambassador there is useless. What the devil is to come of all this? what will be the end of this uncertainty? If you know anything, for God's sake let me know it; anything is better than this uncertainty."—*GODOY to ISQUIERDO, 9th February, 1808; THIBAUDEAU, vi., 311, 313.*

† *Thib., vi., 312, 313. Hard., x., 122, 123. Tor., i., 58, 59. Foy, iii., 109.*

‡ The proposition for the cession of the provinces north of the Ebro was brought to Madrid by Isquierdo, in the form of a procès-verbal of the import of long conferences held at Paris between himself, Duroc, and Talleyrand; they bore: "The emperor is desirous of exchanging Portugal with the Spanish provinces to the north of the Ebro, to avoid the inconvenience of a military road across Castile. A new treaty, offensive and defensive, appears necessary to bind Spain more closely to the Continental system. The repose of his empire requires that the succession to the crown of Castile should be fixed in an irrevocable manner. His majesty is willing to grant permission to the king to bear the title of *Emperor of the Indies*, and to grant his niece in marriage to the Prince of Asturias." Such was the procès-verbal; but Isquierdo, says Foy, was too acute a diplomatist not to see that Napoleon was deceiving all the world; and that he was bent upon getting the entire command of the whole Peninsula, and disposing of it at his pleasure.—*Foy, iii., 109, 110; and ISQUIERDO'S Despatch to PRINCE OF PEACE, 24th March, 1800; SAVARY, iii., 142.*

capital. The intelligence communicated by Isquierdo revealed the alarming fact, that the title of Emperor of the *Indies* was to be given to Ferdinand, and that Napoleon continually reverted to the dependance of the tranquillity of France on the succession to the crown of Spain. In the course of the conferences, the Spanish diplomatist had penetrated the real secret, and distinctly warned the Prince of Peace that the total dethronement of the house of Bourbon was resolved on. The arrival of the Queen of Etruria at Madrid at this juncture, who had been forced to renounce one throne by the French emperor, and since insidiously deprived of the compensation promised her instead in Portugal, enhanced the general embarrassments; and at length the arrival of Murat at Burgos, with the title

March 11. of "Lieutenant of the Emperor," and an immense staff, both civil and military, left no room for doubt that Napoleon was determined to appropriate to himself the whole Peninsula. In this extremity the Prince of Peace, roused to more manly feelings by the near approach of danger, both to the monarchy and his own person, recalled a letter which he had despatched to Paris, consenting to the cession of the provinces north of the Ebro, and counselled the king to imitate the example of the Prince Regent of Portugal, and depart for Seville, with a view to embark for America. Preparations were immediately made

March 15. for the journey; the guards were assembled at Aranjuez, then the royal residence; thirty pieces of cannon were brought from Segovia, and messengers despatched to Gibraltar to bespeak an asylum for the fugitive monarch within its impregnable walls. Meanwhile Napoleon, keeping up to the last his detestable system of hypocrisy, sent the king a present of twelve beautiful horses, with a letter announcing "his approaching visit to his friend and ally the King of Spain, in order to cement their friendship by personal intercourse, and arrange the affairs of the Peninsula without the restraint of diplomatic forms;" while the passage of the Bidassoa by six thousand of the imperial guard, the formation of a new French army, nineteen thousand strong, in Biscay, under Marshal Bessieres, and the increase of the forces in Catalonia to fifteen thousand men,* told but too clearly that if he did arrive, it would be with the pomp and authority of a conqueror.

The Prince of Asturias was offered by the king, either to share the flight of the royal family, or remain at home with the title of lieutenant-general of the kingdom. He at first preferred the former alternative, though his confidants, not yet convinced of the total overthrow of the dynasty contemplated by Napoleon, dissuaded him from the step, and strongly recommended him to throw himself into the arms of Napoleon. Meanwhile, the preparations for a journey by the court, and certain vague rumours of their approaching departure from the kingdom, which had transpired, collected an unusual crowd to Aranjuez, and increased to the very highest pitch the anxiety of

Tumult at Aranjuez and overthrow of the Prince of Peace. The Prince of Peace had escaped by a back passage with a single roll, which was lying on the table, in his hand, and, flying up to the garrets, hid

the people at Madrid, who, notwithstanding the ignorance in which they were kept, had still learned, with dismay, the seizure of the frontier fortresses, and occupation of the northern provinces by the French troops. The French ambassador openly and loudly condemned the projected departure to the south as uncalled for, imprudent, and calculated only to disturb the existing state of amity between the two nations; while Murat, at Burgos, issued a proclamation, which arrived at this period at the capital, in which he enjoined his soldiers "to treat the Spaniards, a nation estimable in so many respects, as they would treat their French compatriots, as the emperor wished nothing but happiness and felicity to Spain." Still the general effervescence continued, and the king, to calm it, issued a proclamation, in which he earnestly counselled peace and submission: an advice which had a precisely opposite effect. As the period of departure approached, the reluctance of Ferdinand to accompany the fugitive monarch became hourly stronger, and his friends gave out that he was resolved to remain at home and stand by his country: a resolution which was loudly applauded by the people, who regarded him as the only hope of the nation, and were worked up to a pitch of perfect fury against the Prince of Peace, whom they regarded as, more than he really was, the author of all the public calamities. A casual expression which dropped from the prince on the morning of the 17th, "This night the court sets out, but I will not accompany them," increased the general ferment, by spreading the belief he might possibly be reluctantly torn away from the kingdom of his fathers. At length, when the royal carriages drew up to the door of the royal palace, and preparations for an immediate departure were made, matters came to a crisis; the people rose in tumultuous masses; a large body took post at the palace, cut the traces of the carriages, and put an entire stop to the intended journey, while a furious mob, composed, in great part, of disbanded soldiers, surrounded the hotel of the Prince of Peace, from whose guards they experienced no resistance, forced open the doors, ransacked the most private apartments in searching for the object of their indignation, who, however, for the time escaped, but, still observing some moderation in their excesses, brought the princess, with all the respect due to her rank, to the royal palace.*†

In the first moment of alarm, the Prince of Peace had escaped by a back passage with a single roll, which was lying on the table, in his hand, and, flying up to the garrets, hid

* Tor., i., 69, 75. Foy, iii., 113, 117. Thib., vi., 321, 322. Lond., i., 64, 65.

† The tumult at the Prince of Peace's palace first commenced from the mob recognising, in the person of a veiled lady who left the palace at dusk on the evening of the 17th, surrounded by the guards, Dona Josefa Tudo, who had so long been the mistress of the favourite. His marriage with the niece of the king no more disturbed their relations than either the one or the other excited any jealousy in the breast of the queen, whose criminal partiality had been the sole cause of his original elevation; and the tumult at Aranjuez found them both residing quietly under the same roof.—Toreno, i., 74; Foy, iii., 116. This is a clear proof that, in some cases at least, the ardour of the sun in a warm climate does not inflame the passion of the green-eyed monster.

* Tor., i., 60, 64. Thib., vi., 313, 318. Foy, iii., 108, 113. Lond., i., 60, 64.

Fall of the Prince of Peace, and abdication of Charles IV. March 18.

himself under a quantity of mats until the first violence of the tumult had subsided. To appease the people, the king issued a decree the following morning, by which he was deprived of his functions as generalissimo and high admiral, and banished from court, with liberty only to choose his place of retreat. This measure, however, was far from restoring general tranquillity; the violence of the public feeling was manifested by the seizure of Don Diego Godoy, a relation of the prince, who was conducted with every mark of ignominy, by his own troop of dragoons, to his barracks, and secret information was received that a new and more serious tumult was preparing for the succeeding night, having for its object a more important change than the overthrow of the ruling favourite. At the same time, intelligence arrived that the guards, when sounded as to whether they would repel an attack upon the palace, answered, "that the Prince of Asturias could alone ensure the public safety;" and, at the same time, that prince waited on the king, and offered, by sending the officers of his household through the crowd, to disperse the assemblage: a proposal which was gladly accepted, but necessarily led to the suspicion that he who could so easily appease, had not been a stranger to the origin of the tumult. The night passed quietly over, but next morning, at ten o'clock, a frightful disturbance arose in consequence of the discovery of Godoy in his own palace. The unhappy victim of popular fury had remained for thirty-six hours undiscovered in his place of concealment; but at length the pangs of thirst became so intolerable as to overcome the fear of death, and he ventured down stairs to get a glass of water. He was recognised by a Walloon sentinel at the foot of the steps, who immediately gave the alarm. A crowd instantly collected: he was seized by a furious multitude, and with difficulty rescued from instant death by some guards who collected around him, and, at the imminent risk of their own lives, dragged him, suspended from their saddles almost in the air, covered with contusions and half dead with terror, at a rapid rate across the Place San Antonio to the nearest prison, amid the most dreadful cries and imprecations. Prevented from wreaking their vengeance on the chief object of their hatred, the mob divided into separate parties, and, traversing the streets in different directions, sacked and levelled with the ground the houses of the principal friends and dependants of Godoy. At length, Ferdinand, to whom all eyes were now turned as the only person capable of arresting the public disorders, at the earnest entreaty of the king and queen, whose anxiety, amid all the perils with which they were themselves surrounded, was chiefly for the life of their fallen favourite, flew to the prison at the head of his guards, and prevailed on the menacing mob by which it was surrounded to retire. "Are you as yet king?" inquired the Prince of Peace, when Ferdinand first presented himself before him. "Not as yet, but I shall soon be so." In effect, Charles IV., deserted by the whole court, overwhelmed by the opprobrium heaped on his obnoxious minister, unable to trust his own guards, and in hourly apprehen-

sion for the life, not only of Godoy, but of himself and the queen, deemed a resignation of the crown the only mode of securing the personal safety of any of the three, and in the evening a proclamation appeared, in which he relinquished the throne to the Prince of Asturias.*†

The prince was proclaimed king under the title of Ferdinand VII., on the day of his father's abdication, and this auspicious event, coupled with the fall of Godoy, diffused universal joy and transport. All ranks and classes of the people shared in it: the surrender of the frontier fortresses; the hundred thousand men in the northern provinces; the approach of Napoleon with his guards, were forgotten, now that the traitors who had betrayed the nation were fallen; the houses in Madrid were decorated, during the day, with flowers and green boughs; at night, a vast illumination burst forth spontaneously in every part of the city. Ferdinand VII. was hailed with enthusiastic applause as the saviour of his country, whenever he appeared in public; while the public fury against the Prince of Peace rose to such a height that the people, in many parts of the kingdom, destroyed the institutions which he had established for the promotion even of agriculture, manufactures, and the arts, from which nothing but unmixed good could have been anticipated.‡

While the Spanish people were thus abandoning themselves to transports of joy at the accession of a new monarch to the throne, Murat, at the head of the French troops, was rapidly approaching Madrid. On

Continued advance of the French troops, and entry of Murat into Madrid.

* Lond., i., 65, 66. Tor., i., 73, 79. Foy, iii., 118, 122. Nell., i., 15, 30. Thib., vi., 321, 323.

† "As my habitual infirmities no longer permit me to bear the weight of the government of my kingdom, and standing in need, for the re-establishment of my health, of a milder climate and a private life, I have determined, after the most mature deliberation, to abdicate the crown in favour of my heir and well-beloved son, the Prince of Asturias, and desire that, my free and spontaneous abdication, should be fully carried into execution in all points."—*Decree, 16th of March, 1808*; Foy, iii., 371. On the day following the king informed Murat of his resignation, with full details of his reasons for so doing, but without alleging any others than those set forth in the public instrument; but on the 21st he wrote a secret despatch to Napoleon, in which he asserted, "I have not resigned in favour of my son, but from the force of circumstances, and when the din of arms and the clamours of my insurgent guards left me no alternative but resignation or death, which would speedily have been followed by that of the queen. I have been forced to abdicate, and have no longer any hope but in the aid and support of my magnanimous ally, the Emperor Napoleon." On the same day he drew up a secret protest, which sets forth, "I declare that my decree of the 19th of March, by which I abdicated the crown in favour of my son, is an act to which I was forced, to prevent the effusion of blood in my beloved subjects. It should, therefore, be regarded as null."—See both documents in Foy, iii., 392, 393; *Pièces Just.* On the other hand, the day after his abdication, Charles IV. said to the diplomatic body assembled at the Escorial, "I never performed an action in my life with more pleasure." The truth appears to be that the abdication, in the first instance, was prompted chiefly by terror for the life of the Prince of Peace, for whose safety throughout the royal pair manifested more solicitude than for their own concerns; and it was an after-thought to protest against it as null, or attempt to recede from the act. Thibaudeau seems to incline to the opinion that the protest on the 21st of March was drawn out subsequent to its date, and after the arrival of Murat, though, doubtless, the resignation of the crown, even if suggested only by terrors for Godoy's life, cannot be considered as a voluntary deed.—See *TORRES*, i., 85, 86. THIBAUDEAU, vi., 328.

‡ Tor., i., 84, 85. Lond., i., 66. South., i., 200, 218. Nell., i., 21, 22.

March 15. the 15th of March, he set out at the head of the corps of Moncey, the Imperial Guard, and the artillery from Burgos, taking the road of the Somo-Sierra. On the same day, Dupont, with two divisions of his corps and the cavalry, broke up for the Guadarama pass; the third division of Dupont's corps remained at Valladolid to observe the Spanish troops which occupied Galicia. No sooner had these forces advanced on the road towards Madrid than their place at Burgos was supplied by the army of reserve under Bessieres. The whole body moved on by brigades, taking with them provisions for fifteen days, and fifty rounds of ball-cartridge each man; they bivouacked at night with patrols set, and all the other precautions usual in an enemy's territory. They everywhere gave out that they were bound for the camp of St. Roque, to act against the English, at the same time belying these pacific declarations by arresting all the Spanish soldiers and posts whom they met on the road, so as to prevent any intelligence of their approach being received. In this way they passed without opposition, and almost without their advance being known, the important range of mountains which separates Old from New Castile; and Murat, having learned at Beytrajo, on their southern side, of the events at Aranjuez, redoubled his speed, and entered Madrid, at the head of the cavalry and Imperial Guards and a brilliant staff, on the day following, and took up his quarters in the hotel of the Prince of Peace. This formidable apparition excited much less attention than it would otherwise have done, in consequence of all

March 23. minds being intent on the preparation for Ferdinand VII. on the following day making his public entry into the capital. He came in, accordingly, accompanied by two hundred thousand citizens of all ranks, in carriages, on foot, and horseback, who had gone out to welcome their sovereign; and Murat, who was an eyewitness to the universal transports which his presence occasioned, failed not instantly to write off to Napoleon intelligence of what he had seen, with many observations on the probable effect of so popular a prince permanently retaining the supreme direction of affairs.*

The first care of Ferdinand, after he ascended the throne, was to transmit to Napoleon a full account of the transactions at Aranjuez, according to his version of the affair; and he anxiously awaited the answer which was to be received from the supreme arbiter of his fate. In the interim, however, he received from the French authorities the utmost reserve; and when he made a visit to Murat, and was announced as King of Spain, he had the mortification of being obliged to return, not only without any of the honours due to his rank, but without having had a single word addressed to him by that officer or his attendants.† As, however, it was of the

utmost importance to the new sovereign that he should be recognised by the French emperor—and his situation without such countenance was not only precarious, but full of danger—no pains were spared to conciliate his favour and win the good-will of the French generals in Madrid. Flattery, caresses, obsequious obedience to every demand, were all tried, but in vain; Murat, aware of the secret designs of his brother-in-law on the throne of Spain, was careful to avoid everything which could have the semblance even of recognising his title to the throne. Meanwhile, Charles IV. and the queen, more and more alarmed for the safety of their fallen favourite, did not let a day pass without reiterating their entreaties to Murat to take him under his protection, and now openly represented the resignation as an involuntary act; while that general, careful, above all, to advance the interests of his master, took military possession of the capital, occupied and fortified the Retiro, reviewed all his forces on the edge of the town, and nominated General Grouchy governor of Madrid. Everything asked by the French authorities was instantly granted; all their requisitions for the support, clothing, or pay of the troops were carefully complied with; and even the ungracious demand for the sword of Francis I., which had hung in the royal armory ever since it had been taken in the battle of Pavia, was also yielded to the desire of Ferdinand to conciliate his much-dreaded ally.* A hint was next given

March 31. that the journey of DON CARLOS, the king's brother, destined to celebrity in future times, to receive the emperor on the frontiers of the kingdom, would be very acceptable: this, too, was instantly acquiesced in, and preparations were made for his departure. Encouraged by such marks of compliance, Beauharnois then insinuated that it would have the best effect upon the future relations of the two potentates if Ferdinand himself were to go at least as far as Burgos to receive his august guest; but the advisers of the Spanish monarch were startled at this demand, especially so soon after the perfidious seizure of the fortresses; and the inhabitants of Madrid, grievously offended at the coldness of the French authorities to their beloved prince, and the unauthorized intrusion of their troops into the capital, were daily becoming more and more exasperated at their imperious allies.†

Napoleon received the account of the events at Aranjuez on the night of the 26th of March at Paris. He instantly took his final resolution, and next morning offered the crown of Spain to his brother Louis. His letter to that prince still exists,

Napoleon offers the crown of Spain to Louis Bonaparte, who declines it.

step to meet him: Ferdinand paused at this unexpected reserve; and the queen, to put an end to so awkward a scene, sat down to the piano and began to play. Neither said a word: at length Ferdinand mechanically drew near to his sister, and stood beside the instrument; Murat never stirred, and soon after, bowing to the queen, retired, without having taken any farther notice of the embarrassed monarch.—Foy, iii., 140, note.

* "It was brought in state from the Armoria Real to the palace of Murat by the Count Altemion. 'It could not,' said he, 'be given up to more worthy hands than those of the illustrious general formed in the school of the hero of the age.'"—Foy, iii., 142.

† Lond., i., 69, 70. Foy, i., 140, 142. Thib., vi., 332. Tor., i., 109.

† "The Queen of Etruria had, unknown to Murat, arranged matters for an interview between him and Ferdinand VII., and, accordingly, he made his appearance, and was announced as King of Spain, when the French general was paying a visit to the Ex-Queen of Tuscany. Murat stood up when he entered the room, but did not advance a

and affords decisive evidence of his views on that monarchy, even at that early period, and of the profound dissimulation, as well as thorough perfidy, by which his subsequent conduct, both to Ferdinand and Charles IV., was characterized.* Louis, however, was not deceived by the specious offer thus held out to him: he had felt on the throne of Holland the chains of servitude and the responsibility of command, and he was thinking rather of resigning his onerous charge than accepting another still more burdensome: he therefore refused. At the same time, Napoleon had a long conversation with Isquierdo at St. Cloud as to the state of public opinion in the Peninsula, and the feelings with which they would regard a prince of his family, or even himself, for their sovereign. Isquierdo replied, "The Spaniards would accept your majesty for their sovereign with pleasure, and even enthusiasm, but only in the event of your having previously renounced the crown of France." Struck with this answer, he meditated much on the affairs of Spain, and, without revealing to him his real designs on the Spanish crowns, sent Savary to Madrid, to carry into execution his intrigues in the Spanish capital; and, foreseeing that the crisis of the Peninsula was approaching, and that it was indispensable that he should get both Charles and Ferdinand into his power, set out himself for Bayonne in the beginning of April.†

* Napoleon's letter to his brother Louis was in these terms: "27th of March, 1808.—The King of Spain has just abdicated; the Prince of Peace has been imprisoned; insurrectionary movements have shown themselves at Madrid. At that instant our troops were still forty leagues distant, but on the 23d Murat must have entered that capital at the head of forty thousand men. The people demand me, with loud cries, to fix their destinies. Being convinced that I shall never be able to conclude a solid peace with England till I have given a great movement on the Continent, I have resolved to put a French prince on the throne of Spain. In this state of affairs I have turned my eyes to you for the throne of Spain. Say at once what is your opinion on that subject. You must be aware that this plan is yet in embryo; and that, although I have 100,000 men in Spain, yet, according to circumstances, I may either advance directly to my object, in which case everything will be concluded in a fortnight, or be more circumspect in my advances, and the final result appear only after several months' operations. Answer categorically—if I declare you King of Spain, can I rely on you?"—NAPOLEON TO LOUIS, the 27th of March, 1808. TORENO, i., 100; and THIBAUDEAU, vi., 334.

† Sav., iii., 162. Tor., i., 100, 101. Thib., vi., 334, 335. Poy., iii., 142, 143.

‡ When Savary received his final instructions for Madrid, Napoleon said to him, "Charles IV. has abdicated; his son has succeeded him, and this change has been the result of a revolution, in which the Prince of Peace has fallen, which looks as if these changes were not altogether voluntary. I was fully prepared for some changes in Spain; but I think they are now taking a turn altogether different from what I intended. See our ambassador on the subject; inquire especially why he could not prevent a revolution in which I shall be forced to intervene, and in which I shall be considered as implicated. Before recognising his son, I must be made aware of the sentiments of the father; nothing will induce me to do so till I see the resignation duly legalized, otherwise a troop of traitors may be introduced into my palace during the night, who may force me to abdicate, and overturn the state. When I made peace on the Niemen, I stipulated that, if England did not accept the mediation of Alexander, he should unite his arms to mine to constrain that power to submission. I would be weak, indeed, if, having obtained that single advantage from those whom I have vanquished, I should permit the Spaniards to embroil me afresh on my weak side, and give that power much greater advantages than they had lost by the rupture with Russia. What I fear above everything is a revolution, of which I neither know the direction nor hold the threads; doubt-

No person could be better qualified than Savary to execute the ambiguous, but important mission with which he was now charged. Devoted in his attachment to the emperor, intimately acquainted with his most secret projects, active, insinuating, skilful, a perfect master of finesse and dissimulation, and wholly unscrupulous in the means employed for the execution of his purposes, he was admirably adapted for conducting that dark intrigue which was intended, without a rupture, to terminate in the dethronement of the entire race of the Spanish house of Bourbon. In the most flagitious, as well as important deeds of Napoleon's life, the murder of the Duke d'Enghien, the Russian negotiations succeeding the treaty of Tilsit, and in those which followed the battle of Austerlitz, he had borne a conspicuous part, and his present situation, at the head of the Gendarmerie d'Elite, gave him the direction of the most important part of the state police. Fully possessed of the secret views of the emperor, and entirely regardless of any breach of faith in carrying them into effect, he spared neither menaces, nor flattery, nor assurances of safety to accomplish the grand object of getting Ferdinand into the hands of Napoleon.* No sooner had he arrived at Madrid than he demanded a special audience of the king, which was immediately granted. He there declared, "I have come, at the particular desire of the emperor, solely to offer his compliments to your majesty, and to know if your sentiments in regard to France are in conformity to those of your father. If they are, the emperor will shut his eyes to all that is past; he will not intermeddle in the smallest particular in the internal affairs of the kingdom, and he will instantly recognise you as King of Spain and the Indies."† This gratifying assurance was accompanied with so many flattering expressions and apparent cordiality, that it entirely imposed, not only on Ferdinand, but his most experienced counsellors; and Savary's entreaties that he April 10 would go at least as far as Burgos to meet the emperor, who was already near Bayonne, on the road to Madrid, were so pressing, that their reluctance to his departure from the capital was at length overcome, and he set out from Madrid,

He arrives at Madrid; persuades Ferdinand to go to Bayonne.

less, it would be a great object to avoid a war with Spain; such a contest would be a species of sacrifice, but I would willingly incur all its hazards if the prince who governs that state is disposed to embrace such a policy. I should thus be in the same situation with Louis XIV. when he engaged, in support of his grandson, in the war of the succession: the same political necessity governs both cases. Had Charles IV. reigned, and the Prince of Peace not been overturned, we might have remained at peace, because I could rely on them, but now all is changed. But if Spain is inclined to throw itself into the opposite policy, I should not hesitate to enter the monarchy with all my forces; for that country, if ruled by a warlike prince, inclined to direct against us all the resources of his nation, might perhaps succeed in displacing by his own dynasty my family on the throne of France. You see what might happen in France if I do not prevent it; it is my duty to foresee the danger, and take measures to deprive the enemy of the resources they otherwise might derive from it. If I cannot arrange with either the father or son, I will make a clean sweep of them both; I will reassemble the Cortes, and resume the designs of Louis XIV. I am fully prepared for all that; I am about to set out for Bayonne; I will go on to Madrid, but only if it is absolutely unavoidable."—SAVARY, iii., 162, 166.

* He admitted to the Abbé de Pradt that his mission was to get Ferdinand to Madrid.—DE PRADT, 73

† Cevallos, 28, 29.

in company with the French envoy, to meet his august protector.*†

The king was everywhere received on his route to the northern provinces with the same enthusiastic joy as at Aranjuez and Madrid, though the simple inhabitants of Castile, not involved in the trammels of intrigue, and influenced by the delusions which were practised on their superiors, beheld, with undisguised anxiety, the progress of their sovereign towards the French frontier. At Burgos, however, the uneasiness of the king's counsellors greatly increased, for not only were they now surrounded by the French troops, but the emperor had not arrived, and no advices of his having even crossed the frontier were received. The matter was warmly and anxiously debated in his council, and opinions were much divided as to the course which should be adopted; Don Pedro Cevallos earnestly insisting that the king should go no farther, and portraying in vivid colours the evident peril with which such an inconsiderate surrender of his person into the hands of so ambitious a potentate would be attended. The other counsellors of the king were more undecided, alleging, for their public justification, that it was utterly inconceivable that Napoleon should entertain any sinister designs against the person of the monarch on the throne of Spain, and thus run the risk, not only of lighting up the flames of a frightful war in the Peninsula, but placing the whole resources of its transatlantic possessions at the disposal of the English government.‡ Cevallos still maintained his opinion, and the ultimate determina-

tion appeared still uncertain, when Savary joined the deliberations. He protested loudly against any change in the king's plans as uncalled for and unnecessary, prejudicial alike to the honour of the French emperor and of himself as his envoy, and likely, more than any other step which could be taken, to embroil the two kingdoms, and destroy that good understanding which was just beginning to arise between their respective monarchs. "I April 14. will let you cut off my head," says he, "if, in a quarter of an hour after the arrival of your majesty at Bayonne, he does not recognise you as the King of Spain and of the Indies. To preserve consistency he will, perhaps, in the first instance, address you with the title of your highness; but in a few minutes he will give you that of your majesty. The moment that is done everything is at an end; then your majesty may instantly return into Spain."*

These words were decisive; the king was surrounded by eight thousand of the French troops, without a single guard to his person. The earnest manner and apparent sincerity of Savary disarmed suspicion. If it had still existed, resistance was hardly possible without a battalion to support it; and the fatal resolution to continue the journey to Bayonne was taken almost from necessity, although the people were so alive to the danger that they everywhere manifested the utmost repugnance to the journey being continued, and rose at Vittoria in menacing crowds to prevent it. At that place a faithful counsellor of the king, Don Mariano de Urquijo, arrived from Bilbao, and not only laid before him a memoir, distinctly foretelling the danger which awaited him from the French emperor, but suggested a plan by which escape in disguise was still possible, and mentioned that both the captain-general of Biscay and a faithful battalion would be at hand at Mondragon to conduct him to Durango, and from thence to the fortified town of Bilbao. Hervaz repeated the same advice; the chief of the custom-house made offer of two thousand of his officers to protect his majesty; the Duke of Mahon, Governor of Guipuscoa, offered to pledge his head that he should escape safely into Arragon, and to accompany him in his flight, observing that it should never be said that a great-grandson of the brave Crillon was wanting in the hour of need to a descendant of Henry IV. So many and such concurring efforts would probably have diverted the king from his design, were it not that at that very moment Savary, who had gone on to Bayonne, and seen the emperor, returned, bringing a letter from Napoleon himself to Ferdinand, dated from that town only two days before. This letter was couched in such encouraging terms, and held out such flattering, though equivocal assurances of an immediate recognition, which were strongly repeated by Savary on his word of honour, that it relieved Ferdinand's counsellors of all their perplexities, and it was finally resolved to continue the journey without

But it is strongly resisted and his council becomes divided.

At length he prolongs it to Bayonne, in consequence of a letter from Napoleon.

Energetic efforts of the Spanish authorities in Biscay to stop the king.

April 17.

* Cevallos, 28, 29. Tor., i., 112, 113. Escoiq., 54. Savary, iii., 181, 182. Foy, iii., 145.

† "I asked permission," says Savary, "to accompany the king on his journey to the north, solely for this reason: I had come from Bayonne to Madrid as a common courier, as was the custom of travelling at that time in Spain. I had scarcely arrived when I was under the necessity of retracing my steps in the same fashion in order to meet the emperor, at the same time that Ferdinand was pursuing the same route. I found it much more convenient to request leave for my carriage to join that of his majesty; I did so, and my carriage, accordingly, made part of the royal cortège."—Savary, iii., 185, 186. It is incredible that this was the real reason which induced Savary to accompany the king back to Burgos. Don Pedro Cevallos says, "General Savary made use of the most pressing instances to induce the king to go to meet the emperor, alleging that such a step would appear infinitely flattering to his imperial majesty; and this he repeated so often, and in such insinuating terms, asserting, at the same time, that the emperor might be hourly expected, that it was impossible to withhold credit from the assertion. When the day of departure was fixed, the French general, in like manner, 'solicited the honour of accompanying his majesty in his journey, which could in no event be prolonged beyond Burgos, according to the positive intelligence he had just received of the approach of his majesty.'"—CEVALLOS, 31.

‡ These, however, were not their only nor their real reasons; in truth, they had gone too far to recede; it had already transpired that Charles IV. had denounced the resignation of Aranjuez to that step. as a forced act, and was doing his utmost to engage the French government in his interest. They were all, with the exception of Cevallos, involved in that transaction, and they thus saw the penalties of treason menacing them in rear; the country was overrun by French troops; a national struggle in defence of Ferdinand appeared hopeless, or, at least, there were no preparations for it; and there seemed no safety even to their lives but in advancing rapidly, and by early submission and adroit flattery winning the powerful protection of the French emperor before the partisans of the late monarch had had time to make any impression. This is the true secret of the majority of Ferdinand's counsellors advising him to go on to Bayonne, after the dangers of it had become so evident as to excite tumults even in the humblest ranks of the people.—See Foy, iii., 146, 147.

* Cevallos, 31, 32. Foy, iii., 147, 149. Escoiq., 44, 54. Sav., iii., 186, 187.

delay to Bayonne.* When the Duke de Mahon wished still to remonstrate, Escoiquiz, who entirely directed the king, interrupted him by the words, "The affair is settled; to-morrow we set out for Bayonne; we have received all the assurances which we could desire." Still the public anxiety continued; and when the horses came to the door the following morning, a vast crowd assembled and cut the traces. A proclamation was immediately issued to calm the general effervescence, in which the king declared "that he was assured of the constant and sincere friendship of the Emperor of France, and that, in a few days, the people would return thanks to God for the prudence which dictated the temporary absence of the king, which gave them so much disquietude;" and the carriage, surrounded by a mournful and submissive, but still unconvinced crowd, took its departure, guarded by the French division of Verdier. Two days afterward Ferdinand crossed the Bidassoa, and, proceeding to Bayonne, finally committed himself to the honour of the French emperor.†

Upon his departure from Madrid, Ferdinand had intrusted the government to a regency, of which the Infant Don Antonio was the head. Murat, however, was the real centre of authority; the presence of thirty thousand French troops gave him an influence

* Napoleon said in this letter, "The affair of Aranjuez took place when I was occupied with the affairs of the North. I am not in a situation to form an opinion concerning it, nor of the conduct of the Prince of Peace; but what I am clear about is, that it is dangerous for kings to accustom their subjects to the shedding of blood and to taking justice into their own hands. The king has no longer any friends. Your highness will have none if ever you prove unfortunate. The people willingly take vengeance for the homage which they in general pay us. As to the abdication of Charles IV., it took place at a moment when our armies covered Spain; and in the eyes of Europe and posterity I shall appear to have sent my troops for no other purpose but to precipitate from the throne my friend and ally. As a neighbouring sovereign, I am called on to inquire into before I recognise that abdication. I declare to your royal highness and to the whole world, if the abdication of King Charles was really voluntary, if he was not constrained to it by the revolt and insurrection of Aranjuez, I will, without hesitation and at once, recognise you as King of Spain. I desire much to converse with you on this subject. The circumstance which for some months I have employed in these affairs, should induce you to rely with the more confidence on me if, in your turn, factions of any sort should disturb you on the throne. Your royal highness has now my whole thoughts. You see that I float between different ideas, and have need to be fixed. You may, however, rest assured that, in any event, I shall conduct myself towards you as I have done towards your father. Rely on my desire to conciliate everything, and on my wish to find occasion to give you proofs of my affection and perfect esteem."—NAPOLEON to FERDINAND, Bayonne, April 16, 1808. When he put this insidious epistle into Savary's hands, Napoleon said to him, "If the Prince of Asturias had followed wise counsels, I should have found him here; but, from what you tell me, I suppose he conceived apprehensions from the preparations of the Grand-duke of Berg (Murat). Return and give him this letter from me; allow him to make his reflections on it. You have no need of finesse; he is more interested in it than I am. Let him do as he pleases. According to your answer or your silence I shall take my line, and also adopt such measures as may prevent him from returning elsewhere but to his father. There is the fruit of bad counsels. Here is a prince who perhaps will cease to reign in a few days, or induce a war between France and Spain." At the same time, he wrote to Murat to save the life of the Prince of Peace, but send him immediately to Bayonne.—SAVARY, iii., 206, 212, 213.

† Ter., i., 115, 119. Cevalles, 31, 33. Escoiq., 52, 56. Foy, iii., 148, 151. Thib., vi., 345, 351. De Pradt, 74. Sav., iii., 210, 214.

which was irresistible. No sooner had the king left the capital than he insisted that the Prince of Peace should be immediately given up to him. Don Antonio refused to do so until he received authority from Ferdinand, to whom he instantly despatched a courier for instructions. Meanwhile the French general continued to insist for the delivery of the important prisoner, threatening, at the same time, to put to the sword, in case of refusal, the six hundred provincial guards intrusted with his custody. At length authority arrived from the king for his surrender, which the infant communicated to the officer in command of the guards, with the simple observation, "that on the surrender of Godoy depended the preservation of the crown of Spain to his nephew." On the same day he set out from Madrid under a strong French escort, and six days afterward arrived at Bayonne. Meanwhile Murat April 26 harassed the regency with repeated and vexatious demands, apparently prompted by no other motive than to disgust them with the cares of an unsubstantial command, and accustom the people to regard the French headquarters as the centre from which all real authority emanated. Soon after he repaired in person to the Escorial, and had long and repeated conferences with Charles IV. and the old queen. The result of their deliberations soon appeared in the transmission to Don Antonio of the ante-dated and secret state paper, already noticed,* in which the king protested against his abdication as brought about by constraint and intimidation; and by the earnest advice of Murat he set out immediately after, in company with the queen, surrounded by French guards, for Bayonne, to lay his grievances at the feet of Napoleon, where he arrived four days after April 30 his fallen favourite. Thus did the French emperor, by the influence of his name, the terrors of his armies, and the astuteness of his diplomatists, succeed in inducing the leaders of all the parties which now distracted Spain, including the late and present sovereign, to place their persons at his disposal; while, at the same time, the communications on his part which brought about this extraordinary result were managed with such address, and enveloped in such mystery, that not only could none of them boast of possessing a distinct pledge of what he intended to do, but all had reason to hope that the result would prove entirely conformable to their interests.†

Meanwhile Napoleon, though possessed of such extraordinary influence, and invested with almost absolute power over the affairs of Spain and Portugal, and the interests of the crowned heads which they contained, was extremely embarrassed how to act: not that he swerved in the slightest degree from his intention of making, as he himself said, "a clean sweep of them" (*maison nette*), but that he perceived, in the brightest colours, the abyss on the edge of which he was placed, and anticipated, with just and sagacious foresight, the incalculable consequences which might result from the lighting of

* Ante, iii., 26.

Great embarrassment experienced by Napoleon in regard to the Peninsular affairs.

the flames of a national war in the Peninsula. Through all the weakness and submission of the last century he still discerned the traces of energy and resolution in the Spanish character. The timidity of its foreign conduct, the abuses of its internal administration, he justly ascribed to the corruption of the nobles or the imbecility of the court. His generals had transmitted daily accounts of the alarming fermentation which seemed to prevail, especially in the lower classes of the community; and he rightly concluded that he would be involved in inextricable embarrassment if, on the side where he had so long been entirely secure, there should arise a contest animated by the indignant feelings of a nation hitherto virgin to revolutionary passions. His instructions to Murat, accordingly, at this period, were to conduct himself with the utmost circumspection; to avoid everything which might excite an angry feeling or provoke a hostile collision; to strengthen his military hold of the country; but do nothing which might disturb the pacific negotiations by which he hoped, without drawing a sword, to obtain, in a few days, the whole objects of his ambition.*†

* Napoleon to Murat, 29th of March, 1808. Say., iii., 168.

† "I fear," said Napoleon, "M. Grand-duke of Berg, that you are deceiving me on the real situation of Spain, and that you deceive yourself also. The events of the 19th of March regarding it, have singularly complicated our affairs; I am in the greatest perplexity; never suppose that you are engaged with a disarmed nation, and that you have only to show yourself, to ensure the submission of Spain. The Revolution of the 20th of March proves that they still have energy. You have to deal with a virgin people; they already have all the courage, and they will soon have all the enthusiasm, which you meet with among men who are not worn out by political passions."

"The aristocracy and the clergy are the masters of Spain; if they become seriously alarmed for their privileges and their existence, they will rouse the people and induce an eternal war. At present I have many partisans among them; if I show myself as a conqueror, I will soon cease to have any. The Prince of Peace is detested, because they accuse him of having given up Spain to France; that is the cry which led to the usurpation of Ferdinand; but first, the popular party would have been the least powerful. The Prince of Asturias has none of the qualities essential for the chief of a nation; that want, however, will not prevent them, in order to oppose us, from making him a hero. I have no wish to use violence towards that family; it is never expedient to render one's self odious and inflame hatred. Spain has above 100,000 men in arms; less would suffice to sustain an interior war; scattered over several points, they might succeed in effecting the total overthrow of the monarchy. I have now exhibited to you the difficulties which are insurmountable; there are others which you will not fail soon to discover."

"England will not let slip this opportunity of multiplying our embarrassments; she sends out forces daily while she keeps on the coasts of Portugal and the Mediterranean; she is making enrolments of Sicilians and Portuguese. The royal family having quitted Spain to establish itself in the Indies, nothing but a Revolution can change the state of that country, and that is the event for which, perhaps, Europe is the least prepared. The persons who see the monstrous state of the government in its true light are a small minority; the great majority profit by its abuses. Consistently with the interests of my empire, I can do infinite good to Spain. What are the best means of attaining that object? Should I advance to Madrid and assume the rights of a protector, by declaring for the father against the son? It is difficult to re-establish Charles IV. His rule and his favourite have become so unpopular they could not stand three months. Ferdinand, again, is the enemy of France; it is because he is so that they have put him on the throne. To keep him there would be to promote the factions who, for twenty-five years, have wished the subjugation of France. A family alliance would be a feeble bond; the Queen Elizabeth and other princesses perished miserably when they wished to sacrifice them to atrocious vengeance. I think we should precipitate nothing, and take counsels from future events."

Murat, however, was not a character to execute with skill the delicate mission with which he was intrusted, and he was too much accustomed to make everything bend to military force, to be qualified to assume at once, in circumstances singularly difficult, the foresight and circumspection of an experienced diplomatist. His precipitance and arrogance accordingly accelerated the catastrophe the emperor was so solicitous to avoid. Already an alarming explosion had taken place at Toledo; cries of "Long live Ferdinand VII." had been heard in the streets from countless multitudes; and when General Dupont was despatched, five days afterward, to restore order, it was only by a well-timed and earnest mediation of the archbishop that a serious conflict was avoided. The fermentation in the capital was hourly increasing, especially since it was known that Ferdinand had crossed the frontier to throw himself into the arms of Napoleon, and that his father and the Prince of Peace had since set out in the same direction. Though the French had hitherto observed tolerable discipline, yet the disorders inseparable from the continued passage of such large bodies of men, accustomed to the license of campaigns, had produced repeated conflicts between them and the inhabitants; blood had flowed in several places, and at Burgos the assemblage had been so alarming, that it required to be dispersed by regular platoons of the French infantry. Irritated at these symptoms of resistance, and trusting to nothing but force for its suppression, Murat wrote in the most menacing terms to Don Antonio, stating that he could permit no concourse of men in the streets; that the anarchy which prevailed was intolerable; that his resolution to suppress it was irrevocably taken; and that, if the govern-

Symptoms of resistance in Spain to the invaders. Arrogant conduct of Murat.

April 21.

April 26.

April 23.

"I do not approve of your taking possession so precipitately as you have done of Madrid; you should have kept the army ten leagues from the capital. Your entry into Madrid, by exciting the alarm of the Spaniards, has powerfully supported Ferdinand. I will write to you what part to adopt in regard to the old king; take care you do not commit me to meet with Ferdinand in Spain, unless you deem it expedient for me to recognise him as King of Spain. Above all, take care that the Spaniards do not suspect what I am about to adopt; you can have no difficulty in doing so, for I have not fixed on one myself."

"Impress upon the nobles and clergy that, if France is obliged to interfere in the affairs of Spain, their privileges will be respected. Say to the magistrates and citizens of towns, and to the enlightened persons, that Spain requires to re-create the machine of government; that it has need of institutions which will preserve it from the weight of feudalism, and protect and encourage industry. Paint to them the present condition of France, despite the wars it has undergone; the splendour of its religion; the importance of a political regeneration; the internal security and external respect which it brings in its train. I will attend to your private interests; have no thought of them; Portugal remains at my disposal. Let the French army avoid every encounter, either with the Spanish army or detached bodies; not a cartridge should be burned on either side. Keep the army always some days' march distant from the Spanish corps. *If war break out, all is lost.*"—NAPOLEON TO MURAT, March 29th, 1808. SAYARY, iii., 168, 171. History does not afford a more luminous example of sagacious foresight than this letter presents; and yet the emperor, soon after, fell headlong into the very dangers which he here so clearly depicted, and was so desirous to avoid! It is remarkable, as a proof of his profound habits of dissimulation, even with his most confidential servants, that, in this letter to his lieutenant at Madrid, he makes no mention of the design to place a relation of his own on the throne of Spain, though only three days before he had offered it to Louis, King of Holland.—*Vide ante*, iii., 25.

ment was not sufficiently strong to enforce obedience to its orders, he would take upon himself to maintain the public tranquillity. The regency issued severe proclamations April 24. against seditious assemblages or meetings, and replied in the most submissive manner to the thundering menaces of Murat; but though no public demonstration had yet taken place, the most alarming reports were in circulation; the French officers publicly gave out that Napoleon would reinstate Charles IV. on the throne; the departure of that sovereign with the Prince of Peace for the Pyrenees seemed to countenance that idea,* and reports were circulated, and greedily credited, that thirty thousand armed Biscayans had fallen on Bayonne, and rescued their beloved prince from his oppressors, while Arragon, Catalonia, and Navarre had risen in a body to cut off the retreat of the French army.

At length, in the beginning of May, matters came to extremities. The government were a prey to the most cruel disquietude, being left in the approaching crisis of the monarchy with the responsibility of command, and without its powers: ignorant which sovereign they were ultimately to obey; fearful of betraying their country, and equally so of precipitating it into a hopeless struggle; actuated, at times, by a generous desire to maintain the national independence and throw themselves on public sympathy for their support, and apprehensive, at others, that in so doing they might mar an accommodation when on the point of being concluded, and incur the pains of treason from a government which they had involved in irretrievable embarrassments; unable to determine on any decided course in the midst of such unparalleled difficulties, they adopted, meanwhile, the prudent step of confining the troops to their barracks, and exercising the most rigid vigilance, by means of the police, to prevent the quarrels, often attended with bloodshed, which were perpetually occurring between the French soldiers and the Spanish citizens. The Imperial Guard, with a division of infantry and brigade of cavalry, alone were quartered in Madrid: the artillery was all in the Retiro, but large bodies of troops, amounting, in all, to above thirty thousand men, were in the immediate neighbourhood, ready to pour in on the first signal. The whole population of the capital was in the streets: business was everywhere at a stand, and in the menacing looks and smothered agitation of the groups might be seen decisive proofs that a great explosion was at hand. Agibatur huc illuc urbus vario turbæ fluctuantis impulsu; completis undique basilicis et templis, lugubri prospectu, neque populi neque plebis ulla vox: sed attoniti vultus, et conversæ ad omnia aures: non tumultus non quies: quale magni metus et magnæ iræ, silentium erat.*

April 29. Matters were in this combustible state when Murat demanded that the Queen of Etruria, and the infants Don Francisco and Don Antonio, should forthwith set out for Boyonne. The government hesitated on this demand, which was, in effect, delivering up the whole re-

mainder of the royal family into the hands of the French emperor: Murat insisted, throwing upon them the whole responsibility of a war in case of refusal; and the minister of war, upon being referred to, drew so gloomy a picture of the military resources of the monarchy, that resistance was deemed impossible, and this last requisition was agreed to, and the hour of their departure fixed for the following morning.*

At ten o'clock on that day the royal carriages came to the door of the palace, and preparations for the departure of the princes took place. The Queen of Etruria, who, from her long residence in Italy, had ceased to be an object of interest to the people, set off first, and was allowed to depart without disturbance, though an immense crowd was collected, and the whole city was in violent agitation. Two other carriages remained, and it was known among the by-standers that they were to convey the infants Don Antonio and Don Francisco: a report soon spread that Don Francisco, who was a boy of thirteen, was weeping in the apartments above, and refused to go away: presently an aid-de-camp of Murat arrived on horseback, and, making his way through the throng, ascended the stairs of the palace; the report instantly flew through the crowd that he was come to force the royal youth from the palace of his fathers. Nothing more was requisite to throw the already excited multitude into a combustion: the French officer was violently assailed, and would have been despatched on the spot, if Don Miguel Flores, an officer of the Walloon Guards, had not protected him at the hazard of his own life. Both would, however, in all probability, have fallen a sacrifice to the fury of the populace, had not a French picquet at that moment come up, which withdrew the officer in safety to his comrades. Murat instantly resolved to punish severely this insult to his authority: a detachment of foot soldiers appeared with two pieces of cannon, and by several discharges with grapeshot, within point-blank range, easily dispersed the crowd which was collected round the palace. But the sound of that cannon resounded from one end of the Peninsula to the other; in its ultimate effects it shook the empire of Napoleon to its foundation; it was literally the beginning of the end. Instantly, as if by enchantment, the city was in a tumult; the Spanish vehemence was roused at once into action; all considerations of prudence, consequences, and probabilities of success were forgotten in the intense indignation of the moment. Everywhere the people flew to arms: knives, daggers, bayonets, were seized wherever they could be found; the gunsmiths' shops ransacked for firearms, and all French detachments passing through the streets surrounded, and in many cases cut to pieces. Such a tumultuary effort, however, could not long prevail against the discipline and skill of regular soldiers: the Spanish troops were locked up, by orders of their government, in their barracks, and could render no assistance; and though the rapid concentration of the French, when the firing commenced, induced the people for a time to imagine that they had driven

Commotion and massacre at Madrid on the 2d of May.

* Tor., i., 127, 135. Foy, iii., 159, 163. Nell., i., 49, 55. Lond., i., 72, 73. Thib., vi., 370, 372.

them from the capital, yet they were soon, and cruelly, undeceived. Re-enforced by the numerous battalions which now poured from all quarters into the city, and supported by the artillery, which on the first alarm had been brought from the Retiro, the French returned to the charge: repeated discharges of grape cleared the streets of Alcala and San Geronymo, while the Polish lancers and Mamelukes of the Imperial Guard followed up the advantage, charged repeatedly through the flying masses, and took a bloody revenge for the death of their comrades. Meanwhile, the Spanish troops, agitated by the sound of the tumult and discharges of artillery, but without any orders how to act, were uncertain what to do, when they were decided by an attack of the French on one of their barracks. Determined by this hostile act, the artillerymen drew out their guns, and placing themselves in front of the people, who had retreated to them for support, fired several rounds with fatal effect into the French columns, which were approaching. By a sudden rush, however, the guns were carried, and great part of the artillerymen bayoneted, among whom were the brave Daoiz and Velarde: illustrious as the first distinguished men who fell in the Peninsular war.* At two o'clock in the afternoon the insurrection was suppressed at all points, and the troops on both sides had returned to their barracks: on the side of the French three hundred had fallen; on that of the Spaniards not quite so many.

Hitherto neither party could be said to have been to blame: the tumult, however deplorable in its consequences, was evidently the result of a collision unpremeditated on both sides; the measures of Napoleon had rendered unavoidable an ebullition of indignation on the part of the outraged Spanish nation; they had burst forth, and could not complain if they met with the usual fate or hazards of war. In repelling the violence with which they were assailed, the French had not exceeded the bounds of military duty: the Spanish ministers, especially O'Farril and Azanga, had thrown themselves into the thickest of the tumult, and earnestly imploring a cessation of the strife, and at the hazard of their own lives, saved great numbers of both nations from destruction. Many deeds of generosity had occurred on both sides, and shed a lustre alike on the French and Spanish character. But at this juncture, after the fighting had ceased and the danger was entirely over, Murat commenced a massacre as unprovoked as it was impolitic, as unjustifiable as it was inhuman. Trusting to the amnesty which had been proclaimed by the chiefs on both sides, the Spaniards had resumed in part their ordinary occupations, or were walking about the streets discussing the events of the day, when great numbers of them were seized by the French soldiers, on the charge of having been engaged in the tumult, hurried before a military commission, and forthwith condemned to be shot. Preparations were immediately made to carry the sentence into execution: the mournful intelligence spread like wildfire

through Madrid, and all who missed a relation or friend were seized with the agonizing fear that he was among the victims of military barbarity. While the people were in this state of anxiety, and when the approach of night was beginning to increase the general consternation, the firing began, and the regular discharge of heavy platoons at the Retiro, in the Prado, the Puerto del Sol, and the Church of Señora de la Soledad, told but too plainly that the work of death had begun. The dismal sounds froze every heart with horror: all that had been suffered during the heat of the conflict was as nothing compared to the agonizing feeling of that cold-blooded execution. Nor did the general grief abate when the particulars of the massacre became known: numbers had been put to death, who were merely found in the streets with a knife on their persons, and had never been in the conflict at all; all were denied the consolation of religion in their last moments. Tied two and two, they were massacred by repeated discharges of musketry: the murders were continued on the following morning; and nearly a hundred had perished before, on the earnest intercession of the Spanish ministers, Murat consented to put a stop to the barbarity.†

This atrocious massacre was as impolitic as it was unjustifiable. The Spaniards, who took up arms with such desperate, though hopeless courage, to prevent the last remnant of their royal family from being torn away from their capital, were not the subjects of the French crown, nor could they be regarded, either legally or morally, as rebels to its authority. Deprived as they were by the fraud and artifices of the French emperor of their lawful sovereign, with their capital in the possession of his troops, and their fortresses perfidiously seized by his directions, they had no resource but in national resistance. To treat a nation so situated, when attempting to assert its rights, like rebels against their own government, and put them to death in great numbers, after the conflict was over, in cold blood, was so glaring an act of cruelty and injustice as could not fail to excite the unanimous indignation of man-

Extreme indignation which this massacre excited in Spain.

* Foy, iii., 171, 172. Thib., vi., 374, 375. Tor., i., 141, 142. Lond., i., 74. South., i., 316, 317. Nap., i., 24, 25.

† "Among those who were shot were many who had never been engaged in the conflict, and whose only crime consisted in being found on the streets with large knives or cutting instruments upon their persons. They were put to death without the assistance of a priest to console their last moments: a circumstance which, in that religious country, added to the horror which the executions excited."—Foy, iii., 172. The honesty and candour of General Foy are as admirable as his talent and eloquence.

"At the distance of twenty years," says an eyewitness, the Spanish historian, "our hair still stands on end at the recollection of that mournful and silent night; the calm of which was only interrupted by the cries of the unhappy victims, or the sound of the cannon and musketry discharged at intervals for their destruction. The inhabitants all retired to their homes, deplored the cruel fate which was then befalling a parent, a brother, a child. We, in our family, were bewailing the loss of the unhappy Oviedo, whose release we had been unable to obtain, when he entered, pale and trembling, into the house. He had been saved by the generosity of a French officer, after his hands were bound, and he was drawn up for execution in the court of the Retiro, who was melted by the energy of his address in that awful moment to break his bands, and set him at liberty. He was hardly out of the limits of the palace when he heard the discharges which terminated the agony of his companions in misfortune. Among the victims were many priests, old men, and persons of the most respectable character."—Toreno, i., 142, 143.

* Tor., i., 135, 139. Nell., i., 53, 55. Nap., i., 23, 24. South., i., 310, 315. Lond., i., 74. Thib., vi., 373, 374. Foy, iii., 163, 170.

kind. Of all people in the world, the French had the least right to object to such a popular effort in defence of the national independence, as it was founded on the principle on which their whole resistance to the coalition of the European powers against their Revolution had been founded, and which they had, on numberless occasions, held up to the admiration and imitation of mankind. The indignation, accordingly, which this massacre excited throughout Spain was indescribable. With a rapidity that never could have been anticipated in a country where so little internal communication existed, the intelligence flew from city to city, from province to province, and awakened that universal and energetic feeling of national resentment which, if properly directed, is the certain forerunner of great achievements. With a spirit hitherto unknown in Europe since the commencement of the first triumph of the French Revolutionary armies, the people in all the provinces, without any concert among each other, or any direction from the existing authorities, began to assemble and concert measures for the national defence. Far from being intimidated by the possession of their capital and principal fortresses by the enemy, they were only the more roused, by the sight of such advantages in the hands of a perfidious foe, to the more vigorous exertions to dispossess him. The movement was not that of faction or party, it animated alike men of all ranks, classes, and professions. The flame spread equally in the lonely mountains as in the crowded cities; among the hardy labourers of the Basque provinces as the light-hearted peasantry of the Andalusian slopes; amid the pastoral valleys of Asturias or the rich fields of Valencia, as in the crowded emporiums of Barcelona and Cadiz. The movement was universal, unpremeditated, simultaneous; and within a week after the untoward tidings reached Bayonne, Napoleon was already engaged in a struggle which promised to be of the most sanguinary character with the Spanish people.*

While the perfidious invasion of Napoleon and the cruel massacres of Murat were thus exciting the flames of a national war in the Peninsula, matters were fast approaching to a crisis at Bayonne. Intimidated by the violence of Murat, and no longer able to withstand the commands which he conveyed to them from his imperial master, the infants Don Francisco and Don Antonio set out, the day after the tumult at Madrid was quelled, for Bayonne, leaving the capital without any native government, entirely at the mercy of the French generals. Before they could arrive at the place of their destination, however, matters had arrived at a crisis between Napoleon and the royal family of Spain. No sooner had Ferdinand taken the fatal step of crossing the Bidassoa, and throwing himself upon the generosity of the French emperor, than he perceived, in the manner in which he was received, such symptoms as inspired the most serious disquietude as to his future fate. The customary marks of respect to a crowned head were wanting; the French authorities addressed him only by the title of "your royal highness,"

instead of "your majesty." His first reception at Bayonne, however, was calculated to dispel these sinister presentiments. Shortly after his arrival there, the emperor came in person on horseback, attended by a brilliant staff, to pay him a visit; Ferdinand went to the end of the street to meet him; the emperor embraced him round the neck, and, though he never used the word majesty, yet treated him with such distinction as inspired the most flattering hopes. On the same day he went to dine at the chateau of Marac, where the imperial headquarters were established; Napoleon sent his own carriages to bring him and his suite to his palace, where he was received by the emperor himself at the foot of the staircase, a piece of attention never paid by sovereigns except to crowned heads. During the entertainment the attention of the emperor to his guest was unbounded; and although he still eluded the decisive word "majesty," yet his manner was such as to inspire both Ferdinand and his attendants with the belief that he was their decided friend, and that every difficulty would speedily be adjusted. But this pleasing allusion was of short duration. After sitting a short time at table, Ferdinand returned to his hotel, while Escoiquiz remained, by special desire, to have a private conference with Napoleon. A few minutes after he arrived there, the Spanish king was followed by Savary, who announced, on the part of the emperor, that his resolution was irrevocably taken, that Ferdinand must instantly resign the throne both of Spain and of the Indies, in both of which the family of the Bourbons was to be succeeded by a prince of the Napoleon dynasty. Should he agree amicably to these conditions, hopes were held out that he might obtain the Grand-duchy of Tuscany as an indemnity. It is remarkable that Napoleon should have chosen for the time of this stunning announcement the very moment when Ferdinand had returned from his gracious reception at the imperial residence; and for the person to convey it the very officer who had been despatched by himself to Madrid to induce him to advance to Bayonne to meet him, and who had offered to pledge his head, not five days before, that the moment he arrived there the Prince of Asturias would be recognised as King of Spain.*

This terrible announcement fell with the more force upon Ferdinand and his counsellors, that they were entirely unprepared for it; the assurances held out by Savary and the letters of Napoleon having inspired them with the belief that all that was wanting to a satisfactory adjustment of affairs was, that Ferdinand should show so much deference to Napoleon as to proceed to Bayonne to meet him. Neither the prince nor his council, however, were overwhelmed by the extraordinary disclosure. Without absolutely committing themselves at first to any decided proposition, they continued the negotiations for nearly a week afterward, both by means of Cevallos and Escoiquiz, who had frequent interviews with Napoleon in person, and Champagny, who had now succeeded Talleyrand as his minister for foreign affairs. These conferences, however, came to

Subsequent negotiations between his counsellors and Napoleon.

* South., i., 334, 336. Lud., i., 74, 76. Tor., iii., 173, 175. Foy, i., 189, 192. Thib., vi., 411, 414.

* Cev., 33, 37. Escoiq., 56, 60. Tor., i., 146, 147. Thib., vi., 356, 357. Foy, iii., 151, 152. South., i., 260, 262.

nothing. On the part of Napoleon and his ministers, it was strongly urged that the interests, not merely of France, but of Spain, imperatively required that the two monarchies should be placed under dynasties belonging to the same family; that Napoleon could not submit, any more than Louis XIV., to have a dubious ally or hidden enemy in his rear while engaged with the forces of Europe in front; that the secret hostility of Spain had been clearly evinced by the ill-timed proclamation of the Prince of Peace immediately before the battle of Jena; that the numberless corruptions and abuses of the Spanish internal administration loudly called for an immediate remedy, and that could never be applied with safety by any other authority but that great conqueror who, educated amid the storms and enlightened by the experience of the Revolution, was now the master of such irresistible power as to be able to give to other states the benefits of liberal institutions suited to the spirit of the age, without the risk of those convulsions which had obliterated so many of their beneficial effects in his own country. It was replied to these specious arguments, which came with additional weight from the mouth of the emperor, by Cevallos and Escoiquiz, that it was as impolitic as unjust to compel a sovereign who had left his own dominions to throw himself upon the honour of another, and that, too, at the special request of that other, to renounce the throne which had descended to him from his ancestors; that if anything was deemed illegal in the resignation of Charles IV. at Aranjuez, that might be a good reason for restoring the throne to the deposed monarch, but could be none for transferring it to the French emperor; that the effort, however, now made to obtain a renunciation of the crown from Ferdinand, evidently showed that the transaction was regarded as legal, and that the title to dispose of the crown was vested in its present holder; that the expedience of a close alliance between France and Spain was indeed indisputable for both monarchies, but that France had already enjoyed it ever since the peace of Bâle, and the way to secure it in future was instantly to recognise the Prince of Asturias, whereby both the monarch and his subjects would be bound by such important obligations as would render the future union between the two monarchies indissoluble; whereas, by wresting from him his sceptre, the most imminent risk would be run of exciting a national war in the Peninsula, and giving the English an advantageous base from which to direct their military efforts against Napoleon, besides the certainty of separating the transatlantic colonies from the mother-country, and throwing those vast and rising states, with their important treasures and commerce, into the arms of the inveterate enemy of the French Empire. To this last argument, the justice of which could not be denied, Napoleon replied that he was well aware of that danger, but that he had provided against it by having sent out frigates to the South American States, who were prepared to receive with thankfulness their transfer to a prince of the Napoleon dynasty. These conferences, as might

April 24 have been expected, led to no result; at a secret meeting of the counsellors

of Ferdinand, held at midnight, it was resolved to decline the propositions of the French emperor, and demand passports for their immediate return to Spain. Napoleon was highly indignant at this resistance to his wishes, and refused the passports, under the pretence that, till the Aranjuez affair was cleared up, he could neither issue passports to Ferdinand as King of Spain, nor permit him to depart from a situation where he was liable to answer for his conduct to his justly-offended parent. At the same time, a decisive report was presented by Champany to the emperor, which was, of course, the echo merely of his private instructions. This state paper set out with his favourite maxim, that "*what state policy required justice authorized;*" that the interests of France and Spain indispensably called for identity, both in the dynasty who governed and the institutions which prevailed among them; that to recognise the Prince of Asturias was to surrender Spain to the enemies of France, and deliver it over to English usurpation; to restore Charles IV. was to renew the reign of imbecility and corruption, and occasion a boundless effusion both of French and Spanish blood; no alternative remained, therefore, but for Napoleon to dispossess them both, and establish in Spain a prince of his own family, with institutions analogous to those of the French Empire.*

Napoleon was greatly perplexed at the steady refusal of Ferdinand to surrender the throne. He had not calculated upon such firmness in any prince of the house of Bourbon. Not that he had the slightest hesitation of persisting in his original plan of entirely dethroning that family, but that he attached the greatest weight to the acquisition of a legal title to their possessions. No man knew better that, although force may subjugate the physical strength, a sense of legal right is generally necessary to win the moral consent of nations; and although Spain seemed prostrated with its fortresses and capital in his possession, yet he deemed his acquisitions insecure till he had obtained, in form at least, the consent of the legal inheritors of its throne. Hoping, therefore, to succeed better with the father than he had done with the son, he reiterated his directions to Murat to send on Charles IV. and the queen to Bayonne as quickly as possible; and in the mean while, in private conferences with Escoiquiz, unfolded, with unreserved confidence, from their very commencement, his views upon the Spanish Peninsula. They took their rise, he stated, from the proclamation of the Prince of Peace on the eve of the battle of Jena. Ever since that important revelation he had been able to see nothing in the Spanish government but secret enemies veiled under the mask of friendship; the proposed marriage of the Prince of Asturias to a relation of his own appeared but a feeble bond to hold together nations now actuated by hostile sentiments; he proposed to give to the Prince of Asturias an indemnity in Portugal or Tuscany, and to place one of his brothers on the Spanish throne. He had now divulged to him, and him alone, the

Napoleon sends for Charles IV., and has a private conference with Escoiquiz.

* Moniteur, 7th Sept., 1808. Thib., vi., 356, 359. Cér., 35, 46. Escoiquiz, 26, 62. Sav., iii., 168, 172. Tor., i., 148, 150. Foy, iii., 152.

whole of his designs in regard to the Peninsula. The conversation in which these determinations were expressed by the emperor is given at full length by Escoiquiz, and is one of the most precious historical documents of his reign.* Though doubtless extended and amplified by the Spanish counsellor, it bears all the marks of his original thought; and Thibaudeau, whose long acquaintance with the emperor in the Council of State had rendered the best possible judge both of his ideas and expressions, has declared that it "bears the signet-mark of truth."†

* Thib., vi., 357, 358. Tor., i., 148, 149. Escoiq., 57, 59.

† "I have long desired, Monsieur Escoiquiz," said the emperor, "to speak to you on the affairs of the Peninsula, with the frankness which your talents and your office with the Prince of Asturias deserve. I cannot, in any situation, refuse to interest myself in the fate of the unhappy king who has thrown himself on my protection. The abdication of Charles IV. at Aranjuez, in the midst of seditious guards and a revolted people, was clearly a compulsory act. My troops were then in Spain; some of them were stationed near the court; appearances authorized the belief that I had some share in that act of violence, and my honour requires that I should take immediate steps to dissipate such a suspicion. I cannot recognise, therefore, the abdication of Charles IV. till that monarch, who has transmitted to me a secret protest against it, shall have voluntarily confirmed it by a voluntary deed when freed from restraint.

"I would say farther, that the interests of my empire require that the house of Bourbon, the implacable enemy of mine, should lose the throne of Spain, and the interests of your nation equally call for the same change. The new dynasty which I shall introduce will give it a good constitution, and by its strict alliance with France preserve Spain from any danger on the side of that power, which is alone in a situation seriously to menace its independence. Charles IV. is willing to cede to me his rights, and those of his family, persuaded that his sons, the Infants, are incapable of governing the kingdom in the difficult times which are evidently approaching.

"These, then, are the reasons which have decided me to prevent the dynasty of the Bourbons from reigning any longer in Spain. But I esteem Ferdinand, who has come with so much loyalty to throw himself into my power, and I am anxious to give him some indemnity for the sacrifices which he will be required to make. Propose to him, therefore, to renounce the crown of Spain for himself and his descendants, and I will give him in exchange Etruria, with the title of king, as well as my niece in marriage. If he refuses these conditions, I will come to an understanding with his father, and neither he nor his brother shall receive any indemnity. If, on the other hand, he does what I desire, Spain shall preserve its independence, its laws, usages, and religion. I do not desire a village of Spain for myself."

Escoiquiz then endeavoured in vain to combat the emperor's reasons for holding the matter at Aranjuez as constrained. He then added, "But suppose they were not so, can you deny that the interests of my house require that the Bourbons should cease to reign in Spain? Even if you are right in all that you say, I should answer, bad policy." Having said these words, he took Escoiquiz by the ear, which he pulled in good-humour. "Come, canon, you are amusing me with real *chateaux en Espagne*. Do you really think that, while the Bourbons remain on the throne at Madrid, I could ever have the security which I would have if they were replaced by a branch of my family? The latter, it is true, might have some disputes with me or my descendants; but so far from wishing, like a Bourbon, the ruin of my house, they would cling to it in moments of danger as the only support of their own throne.

"It is in vain to speak to me of the difficulties of the enterprise. I have nothing to apprehend from the only power who could disquiet me in it. The Emperor of Russia, to whom I communicated my designs at Tilsit, which were formed at that period, approved of them, and gave me his word of honour he would offer no resistance. The other powers of Europe will remain quiet, and the resistance of the Spaniards themselves cannot be formidable. The rich will endeavour to appease the people, instead of exciting them, for fear of losing their own possessions. I will render the monks responsible for any disorder, and that will lead them to employ their influence, which you know is considerable, in suppressing any popular movements. Believe me, canon, I have much experience in these matters; the countries where the monks are numerous are easily subjugated; and that will take place in Spain, especially when the Spaniards shall see that I am providing for the national

From this embarrassment, however, Napoleon was soon relieved by the arrival of Charles IV. and the queen at Bayonne. Such was the impatience of the royal travellers to arrive at the place of their destination, that they wrote from Aranda to Napoleon to inform him of their approach, and testify their anxiety to throw themselves entirely upon his protection. So sensible were the counsellors of Ferdinand of the advantage which the French emperor would derive from the presence of the late monarch, that they were no sooner informed of his approach than they again earnestly solicited passports for Ferdinand to return to Spain, which was refused; and it was soon apparent, from the movements of the police, that he was detained a prisoner in his own hotel. On the 29th there appeared in the Bayonne Gazette the protest of Charles IV. against his abdication, and his letter of the 23d of March to Napoleon: publications which sufficiently evinced the tenour of the reception which he was to experience. On the following day the late king and queen entered Bayonne; ever since passing Burgos they had been received with royal honours; at the Bidassoa they were received by Berthier with great pomp, and at the gates of Bayonne by the whole garrison under arms. Soon after their arrival at the hotel, Napoleon came to visit them in person. The old king met him at the foot of the stair, and threw himself into his arms; Napoleon whispered in his ear, "You will find me always, as you have done, your best and firmest friend." Napoleon supported him under the arm as he returned to the apartments. "See, Louisa," said the old king, "he is carrying me." Never had the emperor's manner appeared more gracious; never did he more completely impose, by the apparent sincerity of his kindness, upon the future victims of his perfidy.*

Immediately after the arrival of Charles IV. Napoleon had a private conference with him, the queen and the Prince of Asturias, in which it was resolved, by the united authority of the emperor and old king, to compel Ferdinand to resign the throne. He rightly judged that, having once overcome that difficulty, it would be a comparatively easy matter to extract the resignation of the crown from the old king when reinstated in his rights. Ferdinand, accordingly, was sent for the next day, and the moment he came into the room, Charles IV. commanded him to deliver to him, before six o'clock on the following morning, a simple and unqualified resignation of the crown, signed by himself and all his brothers. In case of refusal, it was distinctly

independence and benefit of the country, giving them a liberal constitution, and at the same time maintaining their religion and usages. Even if the people were to rise in a mass, I would succeed in conquering them, by sacrificing 200,000 men. I am not blind to the risk of a separation of the colonies; but do not suppose I have been slumbering even on that point. I have long kept up secret communications with Spanish America, and I have lately sent frigates there to obtain certain advices as to what I may expect; and I have every reason to believe that the intelligence which I will receive will prove of the most favourable description."—Escoiquiz, 107, 135. *Pieces Just.*

* De Pradt, 92, 94. Thib., vi., 359, 364. Tor., i., 151, 152. Cev., 50, 51. Escoiq., 61, 64.

intimated that he and all his counsellors would be proceeded against as traitors. Napoleon strongly supported the old king, and concluded with ominous menaces in the event of refusal. Ferdinand endeavoured to speak in his own defence, but he was interrupted by the king, who commanded him to be silent, and the queen soon after broke into the apartment, with such violent and impassionate expressions, that Ferdinand found it impossible to make a word be heard. He retired from the conference overwhelmed with consternation and despair. Similar threats of instant death were conveyed on the same evening by Duroc to the Infants Don Carlos and Don Antonio; and such was the impression produced by these menaces, that it was determined by the counsellors of Ferdinand that no alternative remained but immediate submission. A conditional resignation was

May 1. accordingly written out and signed by them all on the following day, in which Ferdinand renounced the crown, on condition that he and his father should both return to Madrid, where the Cortes should be assembled; and that, if Charles declined to return to Spain to govern himself, he should govern the kingdom in his father's name and as his lieutenant.*

This qualified resignation, however, in which the Prince of Asturias still announced his intention of returning to Madrid as his father's lieutenant, and resuming there, in his name, the royal functions, was far from meeting the views of Napoleon, who was irrevocably set upon obtaining from the young king such an unconditional surrender of his rights as might leave the throne vacant for a prince of his own family. He wrote, therefore, a letter, which was signed by Charles IV. and passed for his own production, though the depth of its thought and the energy of its expression clearly indicated the imperial hand.†

* Cev., 50, 51. Escoiq., 64, 65. Tor., i., 151, 152. Thib., vi., 365, 367.

† "What has been your conduct?" the old king was made to say; "you have spread sedition through my whole palace: you have excited my very bodyguards against me; your own father became your prisoner; my first minister, whom I had raised and adopted into my own family, was dragged, covered with blood, into a dungeon; you have withered my gray hairs and despoiled them of a crown borne with glory by my fathers, and which I have preserved without stain; you have seated yourself on my throne; you have made yourself the instrument of the mob of Madrid, whom your partisans had excited, and of the foreign troops who at the same moment were making their entry. Old, and broken down with infirmities, I was unable to bear this new disgrace; I had recourse to the emperor, not as a king at the head of his troops and surrounded by the pomp of a throne, but as a fugitive, abandoned monarch, broken down by misfortune. I have found protection and refuge in the midst of his camp; I owe him my own life, that of the queen, and that of my prime minister; he is acquainted with all the outrages I have experienced, all the violence I have undergone; he has declared to me that he will never recognise you as king. In tearing from me the crown, it is your own which you have broken; your conduct towards me, your letters, which evince your hatred towards France, have put a wall of brass between you and the throne of Spain. I am king by right of descent; my abdication was the result of force and violence. I can admit the validity of no acts resulting from the assembly of armed mobs; *everything shall be done for the people, nothing by them.* Hitherto I have reigned for the people's good, hereafter I shall still act with the same object; when I am once assured that the religion of Spain, its independence, integrity, and institutions are secured, I shall descend to the grave, imploring pardon for you for the bitterness of my last days. I can agree to no assembly of the Cortes; that is a new idea of the inexperienced persons who surround you."—Letter, CHARLES IV. to FERDINAND, 2d May, 1808.

Ferdinand, however, was still unmoved, and replied, two days afterward, in a letter, in which he vindicated his own May 4, 1808. conduct, and expressed his astonishment at the colour now put upon the Aranjuez resignation, which had not only been uniformly represented by Charles IV. as a voluntary act, but avowedly contemplated for a long time before it took place.* This continued refusal on Ferdinand's part added extremely to the embarrassments of Napoleon, and he was at a loss to perceive any mode by which he could attain his favourite object of gaining possession of the throne of Spain, with the semblance of a conveyance from the legal owner.†

More successful with the father than the son, Napoleon had already obtained Napoleon obtains an unconditional surrender of the throne from Charles IV. May 5. signed on the 5th of May, by Duroc on the part of Napoleon, and the Prince of Peace, in virtue of special powers from their respective masters, contained an unqualified resignation of the crown of Spain, not only for himself and Ferdinand, but all his successors, and a transference of it in absolute sovereignty to the Emperor Napoleon. The only provisions in favour of Spain were, that the integrity of the kingdom should be preserved; that its limits should be unchanged by the prince whom Napoleon might place on the throne; that the Catholic religion should be maintained, and no reformed religion tolerated: the palace of Compeigne was to be assigned to the king, the queen, and the Prince of Peace, during the lifetime of the former, with a pension of thirty millions of reals. At the same time an annuity of 400,000 francs was provided for each of the royal infants of Spain. The only point in this treaty upon which there was any serious discussion was the matter of the pensions; the surrender of the monarchy was agreed to without hesitation by the imbecile old king and his pusillanimous minister. Thus had Charles IV. the disgrace of terminating his domestic dissensions by the surrender of his throne and the liberties of his people into the hands of a stranger; and the Prince of Peace the infamy of affixing his name, as the last act of his ministerial existence, to a deed which deprived his sovereign and benefactor of his crown, and forever disinherited his descendants.‡

Unquestionably it was neither Charles IV. nor the Prince of Peace who penned these vigorous lines. It is curious to observe the sentiment, "everything for the people, nothing by them," in the mouth of the military champion of the Revolution.

* Ferdinand in this letter made the just observation, "that the perpetual exclusion of his dynasty from the throne of Spain could not be effected without the consent of all those who either had or might acquire rights to its succession, nor without the formal consent of the Spanish nation assembled in Cortes, in a situation freed from all restraint, and that any resignation now made would be null, from the obvious restraint under which it was executed."—FERDINAND to CHARLES IV., 4th May, 1808. TORENO, vol. i., App., No. 9. Already the opposing parties had changed sides: Napoleon, the hero of the Revolution, would consent to no assembling of the Cortes; Ferdinand, the heir of the despotic house of Bourbon, appealed for support to that national assembly.

† Tor., i., 152, 153. Thib., vi., 368, 369. Cev., 50, 51. Escoiq., 64, 65.

‡ Tor., i., 404. App., No. 11. Cev., 134, 136.

§ Charles IV. was not destitute of good qualities, but he

On the same day on which this treaty was signed, a secret deputation reached Ferdinand from the provisional government of Madrid, consisting of Zayas, aid-de-camp to the minister of war, and Castro, under-secretary of state. They came to demand instructions chiefly on the points, whether they were at liberty to shift their place of deliberation, as they were subjected to the control of the French army in the capital; whether they should declare war against France, and endeavour to prevent the farther entrance of troops into the Peninsula; and whether, in the event of his return being prevented, they should assemble the Cortes. Ferdinand replied, that "he was deprived of his liberty, and in consequence unable to take any steps in order to save either himself or the monarchy; that he therefore authorized the junta of government to add new members to their number, to remove whoever they thought proper, and to exercise all the functions of sovereignty; that they should stop the entrance of fresh troops, and commence hostilities the moment that he was removed into the interior of France, a step to which he never would consent till forced to it by violence; that the Cortes should be convoked, in the first instance, to take measures for the defence of the kingdom, and then for such ulterior objects as might require consideration." The decrees necessary to carry these instructions into effect were soon after brought to Madrid by an officer destined for distinguished celebrity in future times, DON JOSEPH PALAFOX.*

From the embarrassment arising from the continued resistance of Ferdinand to make the resignation required of him, Napoleon was at length relieved by the receipt of intelligence of the bloody commotion at Madrid, which at once brought to a crisis the affairs of the Peninsula. He received the news of that calamitous event as he was riding out to Bayonne, at five o'clock in the afternoon of the 5th of May, and immediately returned to his chateau, where he sent for Charles IV., the queen, Ferdinand, and the Prince of Peace. The Prince of Asturias was assailed by Charles IV. and the queen with such a torrent of abuse, that Cevallos, who was pres-

ent on the occasion, has declared that he cannot prevail on himself to transcribe it. Napoleon joined in the general vituperation, and the sternness of his manner, and vehemence of his expressions, at once showed that the period had now arrived when submission had become a matter of necessity. He spoke of the outraged honour of the French armies; of the blood of his soldiers, which called aloud for vengeance; of a war of extermination, which he would wage to vindicate his authority.* He concluded with the ominous words, "Prince, you must choose betwixt cession and death." Similar menaces were conveyed by Duroc to the Infants Carlos and Don Antonio, and other members of the royal family. Sensible now that any farther resistance might not only, without any benefit, endanger his own life, but possibly draw after it the destruction of the royal family, Ferdinand resolved upon submission. On the following morning he addressed a letter to his father, in which he announced his intention of unqualified obedience; and four days afterward a treaty was signed, by which he adhered to the resignation by his father of the Spanish crown, and acquired in return the title of most serene highness, with the palace, park, and farms of Navarre, with fifty thousand arpents of woods connected therewith, and an annuity of 600,000 francs a year from the French treasury. The same rank, with an annuity of 400,000 francs, was allotted to the Infants Don Carlos and Antonio. As soon as this treaty was signed Ferdinand and his brothers were removed to Bourdeaux, where these two princes signed a renunciation of their rights to the throne, and Ferdinand was made to affix his name to a proclamation, in which he counselled submission and peace to the Spanish people. The three royal captives were shortly after removed to Valençay, the seat of Talleyrand, in the heart of France, where they continued during the remainder of the war. No indemnity whatever was provided for the Queen of Etruria or her son, who, compelled by Napoleon, in the outset of these transactions, to renounce the crown of Tuscany, had been subsequently amused by the elusory promise of a throne in Lusitania, and was now sent a destitute captive into the interior of France.††

* Napoleon, on this occasion, made it a special subject of reproach to Ferdinand, "that, by flattering the opinion of the multitude, and forgetting the sacred respect due to authority, he had lighted the conflagration now ready to devour the Peninsula."—Foy, iii., 177.

† Cev., 51, 52, 133, 140. Escocq., 64, 65. Thib., vi., 380, 384. Tor., i., 156, 157, 159. Foy, iii., 177.

‡ Napoleon's own account of the Bayonne affair is in all substantial points the same as that above given. "Ferdinand offered, on his own account, to govern entirely at my devotion, as much so as the Prince of Peace had done in the name of Charles IV.; and I must admit that, if I had fallen into their views, I would have acted much more prudently than I have actually done. When I had them all assembled at Bayonne, I found myself in command of much more than I could have ventured to hope for; the same occurred there, as in many other events of my life, which have been ascribed to my policy, but in fact were owing to my good fortune. Here I found the Gordian knot before me; I cut it. I proposed to Charles IV. and the queen that they should cede to me their rights to the throne. They at once agreed to it, I had almost said voluntarily; so deeply were their hearts ulcerated towards their son, and so desirous had they and their favourite now become of security and repose. The Prince of Asturias did not make any extraordinary resistance: neither violence nor menaces were employed against him; and if fear decided him, which I well believe was the case, it concerns him alone."—LAS CASAS, iv., 210, 211

* Thib., i., 377, 378. South., i., 322, 323. Cev., 56, 58. Tor., i., 152, 153.

Having now succeeded in his main object of dispossessing the Bourbon family, and obtaining a semblance of legal title from the ejected owners to the Spanish throne, Napoleon was not long of bringing his other arrangements regarding the Peninsula to an issue. The refusal of his brother Louis to accept the throne had induced him to cast his eyes to Joseph, king of Naples, an arrangement which, besides providing a sovereign, who it was hoped would prove entirely submissive to the views of the emperor in that important situation, was attended with the additional advantages of opening a throne for Murat, who, after holding the almost regal state of lieutenant of the emperor at Madrid, could hardly be expected to descend to any inferior station. To preserve appearances, however, it was deemed advisable that the semblance of popular election should be kept up; and with that view, the moment that the emperor had obtained the consent of Ferdinand to his resignation, he despatched instructions to Murat to obtain a petition from the junta of government and the principal public bodies of Madrid for the conferring of the throne upon the King of Naples. At the same time, to supply any interim defects of title which might be thought to exist in the emperor's lieutenant to act in Spain in civil concerns, a decree was signed by Charles IV. on the very day of his renunciation, and transmitted to Madrid, where it arrived three days afterward, which conferred on Murat the title of lieutenant-general of the kingdom, with the presidency of the junta of government, which in effect put that important body, now reduced merely to the official ministers, entirely at his disposal. This nomination was accompanied by a proclamation of the old king, drawn by Godoy, in which he counselled his former subjects "that they had no chance of safety or prosperity for the Spaniards but in the friendship of the emperor, his ally." This was followed by another, the work of Escoiquiz, from the Prince of Asturias, from Bourdeaux on the 12th, in which he also advised his countrymen "to remain tranquil, and to look for their happiness only in the wise disposition and power of Napoleon." It may easily be believed how readily Murat exerted himself to pave the way for that elevation of Joseph which promised so immediately to promote his own advantage. The most energetic measures were immediately adopted to obtain at Madrid declarations in favour of the new dynasty; and the leading authorities, perplexed and bewildered at the unparalleled situation in which they were placed, and the earnest exhortation to submission which they received from their lawful sovereign, were without difficulty won over to the interest of the rising dynasty. The junta of government, indeed, at first protested against the abdication at Bayonne, and refused to connect themselves in any way with these proceedings: but they were soon given to understand that their lives would be endangered if they continued to uphold the rebel authority of the Prince of Asturias, and at the same time the most flattering prospects were held out to them if they took the lead in recognising the new and inevitable order of things. These ar-

tifices proved successful, and the junta, satisfied with protesting that they in no way recognised the acts of Charles IV. and Ferdinand, and that the designation of a new monarch should in no ways prejudice their rights or those of their successors, concluded with the resolution that the emperor's choice should fall on his elder brother the King of Naples. The municipality of Madrid also presented a petition to the same effect; and Napoleon, satisfied with having thus obtained the colour of public consent to his usurpation, issued a proclamation convoking an assembly of one hundred and fifty notables to meet at Bayonne on the 15th of June following. Joseph, who had no choice but submission, quitted with regret the peaceful and smiling shores of Campania, set out for his new kingdom, and arrived at Bayonne on the 6th of June, where he was magnificently received by Napoleon, and on the same day proclaimed King of Spain and the Indies.*†

Such is a detailed account of the artifices by which Napoleon succeeded in wresting the crowns of Spain and Portugal from their lawful possessors, and placing the first on the head of one of his own brothers, while the second remained at his disposal for the gratification of one of his military lieutenants. Not a shot was fired, not a sword was drawn to effect the vast transfer; the object for which Louis XIV. unsuccessfully struggled during fourteen years was gained in six months; present fraud, the terrors of past victory, had done the work of years of conquest. But these extraordinary successes were stained by as great vices; and perhaps in the whole annals of the world, blackened as they are by deeds of wickedness, there is not to be found a more atrocious system of perfidy, fraud, and dissimulation than that by which Napoleon won the kingdoms of the Spanish Peninsula. He first marched off the flower of its troops into the north of Germany, and by professions of amity and friendship lulled asleep any hostile suspicions which the cabinet of Madrid might have conceived; and then entered into an agreement with Alexander for the dethronement of its sover-

* *Thib.*, vi., 388, 392. *Tor.*, i., 161, 168. *Foy*, iii., 181, 185. *Neill*, 84, 92. *South.*, i., 325, 332.

† On this occasion the emperor addressed the following proclamation to the Spanish people: "Spaniards! After a long agony, your nation was on the point of perishing; I saw your miseries, and hastened to apply a remedy. Your grandeur, your power, form an integral part of my own. Your princes have ceded to me their rights to the crown of Spain. I have no wish to reign over your provinces, but I am desirous of acquiring eternal titles to the love and gratitude of your posterity. Your monarchy is old; my mission is to pour into its veins the blood of youth. I will ameliorate all your institutions, and make you enjoy, if you second my efforts, the blessings of reform, without its collisions, its disorders, its convulsions. I have convoked a general assembly of deputations of your provinces and cities; I am desirous of ascertaining your wants by personal intercourse; I will then lay aside all the titles I have acquired, and place your glorious crown on the head of my second self, after having secured for you a constitution which may establish the sacred and salutary authority of the sovereign, with the liberties and privileges of the people. Spaniards! Reflect on what your fathers were; on what you now are! The fault does not lie in you, but in the constitution by which you have been governed. Conceive the most ardent hopes and confidence in the results of your present situation, for I wish that your latest posterity should preserve the recollection of me, and say, *he was the regenerator of our country.*" —*THIBEAUDEAU*, vi., 390, 391.

eigns, and bought the consent of Russia to that spoliation of the faithful allies of ten years' duration, by surrendering to its ambition the more recent confederates which he had roused into hostility on the banks of the Danube during the desperate struggle of the last six months. He then concluded a treaty with Spain at Fontainebleau, in which he purchased the consent of that power to the partition of his ally Portugal, by promising to the court of Madrid a share of its spoils, and to its minister a princely sovereignty carved out of its dominions; and in return for this forbearance solemnly guaranteed all its possessions. Hardly was the ink of this treaty dry, when he directed his armies across the Pyrenees in such force as to evince an intention not merely of appropriating to himself the whole dominions of his old tributary dependant Portugal, but of seizing upon at least the northern provinces of Spain, while the remaining forces of that monarchy were dissipated in the south and north of Portugal in search of elusory acquisitions at the expense of the cabinet of Lisbon. The sentence, at the same time, goes forth at the Tuileries, "The house of Braganza has ceased to reign," and the royal family at Lisbon are driven into exile to Brazil; while the Queen of Etruria is obliged to resign the throne of Tuscany, on a promise of an indemnity on the northern provinces of Portugal. Scarcely, however, is the resignation elicited under this promise obtained, when that promise, too, is broken; the dispossessed queen, albeit a creation of Napoleon's own, is deprived of her indemnity; the stipulated principality in favour of the Prince of Peace is cast to the winds; and orders are issued to Junot to administer the government of the whole of Portugal in name of the Emperor Napoleon.

Meanwhile, the French armies rapidly inundate the northern provinces of the Peninsula; the frontier fortresses are seized, in the midst of profound peace, by a power in alliance with Spain, and which, only four months before, had formally guaranteed the integrity of its dominions; a hundred thousand men overspread the provinces to the north of the Ebro, and approach the capital. These disastrous events excite the public indignation against the ruling monarch and his unworthy favourite; they are overthrown by an urban insurrection, and the Prince of Asturias, by universal consent, is called to the throne. No sooner is he apprized of this event than Napoleon despatches Savary to induce the new king to come to Bayonne, under a solemn assurance, both verbally and in writing, that he would at once recognise him, if the affair at Aranjuez was explained, and that in a few minutes everything would be satisfactorily adjusted. Agitated between terror and hope, Ferdinand, in an evil hour, and when his capital is occupied by French troops, consents to a step which he had scarcely the means of avoiding, and throws himself on the honour of the French monarch. Napoleon, in the interim, sends for Charles IV. and the Prince of Peace, and between the terror of his authority and the seductions of his promises, contrives to assemble all the royal family of Spain with their confidential counsellors at Bayonne. No sooner are they arrived than he receives and entertains them in

the most hospitable manner, and when they are beginning to indulge the hopes which such flattering conduct was fitted to inspire, suddenly salutes them with the announcement that the house of Bourbon has ceased to reign, and closes this matchless scene of duplicity, fraud, and violence, by extorting, by means of persuasion, menaces, and intimidation, a resignation of the throne from both the father and son, whom he had so recently solemnly bound himself to maintain in their possession! To crown the whole, while alluring, like the serpent, his victims into his power, he is secretly offering their dominions to one of his brothers after another: he is, underhand, holding out promises of support both to the old and the new King of Spain, and he has all the while irrevocably resolved upon the dethronement of both, and the supplanting of the house of Bourbon by that of Napoleon in both the thrones of the Peninsula. He concludes by sending Charles IV. and Ferdinand, with all their family, into state captivity in the interior of France; discarding Godoy without his stipulated principality; cheating the Queen of Etruria out of her promised indemnity; disinheriting at once the regal families of Spain, Portugal, and Etruria, and placing his own brother on the throne of the Peninsula, in virtue of a determination formed, by his own admission, ever since the treaty of Tilsit!

Was, then, such atrocious conduct as successful in the end as it was in the commencement? and did the dynasty of Napoleon reap in its final results benefits or injury from acquisitions obtained by so black a course of perfidy? Let the answer be given in his own words: "*It was that unhappy war in Spain which ruined me.* The results have irrevocably proved that I was in the wrong. There were serious faults in the execution. One of the greatest was that of having attached so much importance to the dethronement of the Bourbons. Charles IV. was worn out; I might have given a liberal constitution to the Spanish nation, and charged Ferdinand with its execution. If he had put it in force in good faith, Spain would have prospered, and put itself in harmony with our new institutions; if he failed in the performance of his engagements, he would have met with his dismissal from the Spaniards themselves. You are about to undertake, said Escoiquiz to me, one of the labours of Hercules, where, if you please, nothing but child's play is to be encountered. The unfortunate war in Spain proved a real wound, the first cause of the misfortunes of France. If I could have foreseen that that affair would have caused me so much vexation and chagrin, I would never have engaged in it. But after the first steps taken in the affair, it was impossible for me to recede. When I saw those imbecilles quarrelling and trying to dethrone each other, I thought I might as well take advantage of it to dispossess an inimical family; but I was not the contriver of their disputes. Had I known at the first that the transaction would have given me so much trouble, I would never have attempted it."*†

Ultimate consequences of this perfidious conduct to Napoleon and his house.

* Las Cas., iv., 204, 205. O'Meara, ii., 167.

† The assertion here made, and which was frequently repeated by Napoleon, that he was not the author of the

The fact thus admitted by Napoleon, and clearly proved by his history, that the Spanish war was the principal cause of his ruin, is one of the most luminous examples which the annals of the world exhibit of the subjection of human affairs to the direction of an overruling power, which makes the passions and vices of men the instruments of their own punishment. So far as mere worldly policy was concerned, and on the supposition that there were no moral feelings in mankind which cannot for a length of time be outraged with impunity, there can be no doubt that he judged wisely in attempting, by any means, the extension of his dynasty over the Peninsula. The reasons of state policy which rendered it essential for Louis XIV. to face the strength of banded Europe to maintain the family compact in the Peninsula, were still more forcibly applicable to Napoleon, as his dynasty was a revolutionary one, and could not hope to obtain lasting support but from sovereigns who rested on a similar foundation. How, then, did it happen that a step recommended by so clear a principle of expedience, and attended by the most unhopèd-for success in the first instance, should ultimately have been attended with such disaster? Simply because it was throughout based on injustice; because it violated the moral feelings of mankind, outraged their national attachments, and roused all classes by the overbearing excitement of the generous emotions into an unreflecting, it may almost be said, an

family disputes between Charles IV. and Ferdinand, but merely stepped in to dispossess them both, was perfectly well founded, and is quite consistent with all the facts stated in the preceding deduction. It is evident, also, that such was the fascination produced by his power and talents, that no difficulty was experienced in getting the royal family of Spain to throw themselves into his hands; nay, that there was rather a race between the father and son which should first arrive at his headquarters to state their case favourably to that supreme arbiter of their fate. That Savary was sent to Madrid and again back to Vittoria to induce Ferdinand to come to Bayonne was admitted by himself,* but he evidently had little difficulty in accomplishing his task. But the real reproach against Napoleon, and from which he has never attempted to exculpate himself, is having first agreed with Alexander at Tilsit to dispossess the house of Braganza and Bourbon; then, to lull asleep the latter power, signed the treaty of Fontainebleau, which guarantied its dominions; then perfidiously seized its fortresses without a shadow of pretext; and finally taken advantage of the family dissensions to attract both the old king and his son to Bayonne, where they were compelled to abdicate.

Long as the preceding narrative of the causes which led to the Peninsular war has proved, it will not by the intelligent reader be deemed misplaced, when the vital importance of the facts it contains, both to the issue of the contest and the character of Napoleon, is taken into view, the more especially as it has hitherto not met with the attention it deserves from English historians. Colonel Napier, in particular, dismisses the whole subject in a few pages, and blames Napoleon, not for attacking Spain, but chiefly, if not entirely, for not attacking it in the interests of Democracy. "There are many reasons," says this energetic and eloquent writer, "why Napoleon should have meddled with the interior affairs of Spain; there seems to be no good one for his manner of doing it. His great error was, that he looked only to the court, and treated the people with contempt. Had he taken care to bring the people and their government into hostile contact first, instead of appearing as the treacherous arbitrator of a domestic quarrel, he would have been hailed as the deliverer of a great people."—NAPIER, i., 22, 23. In energy and fire of military description and ability of scientific disquisition, the gallant colonel is above all praise, but he is far from being equally safe as a guide to political events, or as a judge of the measures of government.

* De Pradt, 73.

instinctive resistance. In the final success of that resistance, in the memorable retribution which it at last brought on the principal actors in the drama which began with such apparently undeserved success, is to be discerned the clearest proof of the manner in which Providence works out the moral government of the world, and renders the guilt and long-continued success of the wicked the instruments of their own ultimate and well-deserved punishment. When the Spaniards beheld Napoleon sending their princes into captivity and wresting from them their crown, from themselves their independence; when they saw Murat in triumph drowning the Madrid insurrection in blood, and securely massacring her gallant citizens after the fight was over, they sank and wept in silence, and possibly doubted the reality of the Divine superintendence of human affairs, when such crimes were permitted to bring nothing but increase of power and authority to their perpetrators. But mark the end of these things, and the consequences of these atrocities upon their authors by a series of causes and effects, every one of which now stands forth shining in imperishable light! Napoleon, who then sent an unoffending race of monarchs into captivity, was himself, by its results, driven into a lasting and melancholy exile. France, which then lent its aid to a perfidious and unjust invasion, was itself, from its effects, subjected to a severe and galling subjugation: Murat, who then with impunity massacred the innocent by the mockery of military trial, signed, in the order for their condemnation, the warrant for his own dethronement and execution not seven years afterward!

In authorizing or committing these enormous state crimes, Napoleon and France were, in truth, acting in conformity to that moral law of the universe which dooms outrageous vice, whether in nations or individuals, to prepare, in the efforts which it makes for its present gratification or advancement, the means of its ultimate punishment. Napoleon constantly said, and said truly, that he was not to be blamed for the wars which he undertook; that he was driven on by necessity; that he was always placed in the alternative of farther triumphs or immediate ruin; that he was, in truth, the head of a military republic, which would admit no pause to its dictator in the career of victory.* There is no one who

The passions of this Revolution the real causes of the disasters both of Europe and France.

* "Throughout my whole reign," said Napoleon, "I was the keystone of an edifice entirely new, and resting on the most slender foundations. Its duration depended on the issue of each of my battles. If I had been conquered at Marengo, the disastrous times of 1814 and 1815 would immediately have come on. It was the same at Austerlitz, Jena, and other fields. The vulgar accuse my ambition of all these wars; but they, in truth, arose from the nature of things, and that constant struggle of the past and the present, which placed me continually in the alternative of conquering, under pain of being beaten down. I was never, in truth, master of my own movements; I was never at my own disposal. At the commencement of my elevation, during the consulate, my partisans frequently asked me, with the best intentions, whither I was tending, and I constantly answered, with perfect sincerity, I did not know. They were astonished, but I said no more than the simple truth. My ambition, I admit, was great, but it was of a frigid nature, and caused by the opinion of the masses. During all my reign, the supreme direction of affairs really lay with the people; in fact, the imperial government was a kind of republic."—LAS CASAS, vi., 41; vii., 125. O'MEARA, i., 405.

attentively considers his career but must admit the justice of these observations, and absolve him individually, in consequence, from much of that obloquy which the spectacle of the dreadful and desolating wars in which he was so powerful an agent has naturally produced among mankind. But that just indignation at the profuse and unprofitable effusion of blood, which has been erroneously directed by a large and influential class in France to the single head of Napoleon, should not on that account be supposed to be ill-founded; the feeling is just, the object only of it is mistaken; its true

object is that selfish spirit of revolutionary aggrandizement which merely changed its direction, not its character, under the military dictatorship of the French emperor; which hesitates at no crimes, pauses at no consequences; which, unsatiated by the blood and suffering which it had produced in its own country, sought abroad, under his triumphant banners, the means of still greater gratification; and never ceased to urge on its remorseless career till the world was filled with its devastation, and the unanimous indignation of mankind was aroused for its punishment.

CHAPTER L.

CAMPAIGN OF 1808 IN SPAIN AND PORTUGAL.

ARGUMENT.

Memorable Events of which the Spanish Peninsula has been the Theatre.—Singular and uniform Character of their Guerilla Warfare.—Physical Conformation of the Country which has led to these Results.—Great Mountain Ranges of Spain and Portugal.—Extraordinary Resolution with which, in every Age, the Spaniards have defended their Cities.—Peculiarities in the civil History of the Peninsula, which have so long rendered its People a divided Community.—Effect of those Circumstances in promoting the Means of internal and separate Defence.—Corruption of the Nobility, and Extent to which Entails were carried.—State of the Peasantry: statistical Details on that Subject.—The Church: its Usefulness, Character, and Sway over the People, and great Influence on the Spanish Contest.—Spain was still unexhausted by revolutionary Passion.—Composition and Character of the French Army at this Period.—Its Discipline, Equipment, and Efficiency; and Numbers.—Force and Character of the British Army.—The Amount of its various Branches.—Admirable Spirit with which it was animated and regarded by the People.—Character and Qualities of the British Soldiers.—Important Effect of their Officers being exclusively taken from the higher Ranks.—Severe Discipline and corporeal Punishments which still subsisted.—General Foy's graphic Contrast of the English and French Soldiers, and of the Officers of their respective Armies.—Difficulty of keeping any considerable Force together in the Interior of the Peninsula.—Military Force of Spain at the Commencement of the Contest.—Military Force and physical Character of Portugal.—Amount, Quality, and Disposition of the French Army at this Period in Spain.—Progress and early Forces of the Spanish Insurrection.—Frightful Disorders which signalized its Commencement in some Cities.—Cruel Massacre with which the Revolution in Valencia began.—Prudent Measures adopted by the Nobles at Seville.—Proceedings of its Junta.—Proclamation which it issued against Napoleon.—Wise Instructions to their Troops.—Capture of the French Fleet at Cadiz.—Insurrections in Asturias, Galicia, Catalonia, and Arragon.—Measures of Napoleon in regard to the Insurrection.—Proceedings of the Notables assembled at Bayonne.—Proclamation of the Grandaes of Spain to their Countrymen.—Degrading Letter of Escociz and the Counsellors of Ferdinand to King Joseph.—Constitution of Bayonne given by Napoleon to the Spaniards.—Proceedings of Napoleon, Joseph, and the Junta of Notables at Bayonne.—Ministry of Joseph.—His Journey to, and arrival and reception at, Madrid.—Honourable Instances of Resistance to the general Torrent of Adulation among the Grandaes in his Favour.—Memorable Answer of the Bishop of Orense to his Summons to Bayonne.—Universal Joy with which the News of the Insurrection is received in England.—Noble Speech of Mr. Sheridan on the Spanish War in Parliament.—Answer of Mr. Canning.—Reflections on this Debate.—English Budget of 1808.—Immense Succours sent out to the Patriots of the Peninsula by the British Government.—Napoleon's first Orders for the Suppression of the Insurrection.—Success of Bessieres over Cuesta in Leon and in Biscay.—Operations of Lefebvre in Arragon.—First Siege of Saragossa.—Its Failure.—Expedition of Moncey against Valencia.—Its Failure.—Progress of the Insurrection, and partial Successes of the Patriots in that Quarter.—Operations of Bessieres against Cuesta and Blake.—Battle of Rio-Secco, and Defeat of the Spaniards.—March of Dupont into Andalusia, and his

early Successes there.—Accumulation of Forces around the Invaders under Castanos.—Battle of Baylen and Surrender of Dupont.—Its prodigious Results both in Spain and over Europe.—Shameful Violation of the Capitulation by the Spaniards.—Departure of Joseph from Madrid, and Concentration of the French Troops behind the Ebro.—Campaign in Catalonia and Siege of Gerona.—Entry of the Spanish Troops into the Capital.—Universal Transports in the Peninsula.—Affairs of Portugal.—Commencement of the Insurrection, and disarming of the Spanish Troops there.—The English Cabinet resolves on sending Succours to that Kingdom.—Sir Arthur Wellesley takes the Command of the Expedition, and arrives off Mondego Bay.—Landing of the British Troops, and Combat of Roliça.—Relative Forces on both Sides.—Battle of Vimeira.—Sir A. Wellesley's Intentions for following up his Success are frustrated by the Arrival of Sir H. Burrard and Sir H. Dalrymple, who supersede him in the Command.—Convention of Cintra.—Its Expediency at that Juncture.—Views with which it was regarded in France by Napoleon.—Senseless Clamour in England on the Subject leads to a Court of Inquiry.—Its Result.—Disgraceful Revelations which are made at Lisbon of the Plunder by all Ranks in the French Army.—British Troops advance into Spain under Sir John Moore.—Deep Impression which these Events make on Napoleon.—His Preparations to meet the Danger.—Interview at Erfurth with Alexander.—Its secret Objects, and Tenour of the Conferences held there.—Conduct of Austria, and Negotiations with that Power and the Princes of the Rhenish Confederacy.—Napoleon's Return to Paris.—Great Levy of Men ordered by the French Government, and Preparations for the Contest.—Forces on both Sides on the Ebro.—Positions and Strength of the English Army.—Napoleon joins the French Army.—Attack on Blake, and his Defeat, at Reynosa and Espinosa.—Battle of Burgos, and Defeat of the Spanish Centre.—Battle of Tudela, and Rout of their Left.—Disorderly and eccentric Retreat of their Troops from the Ebro.—Rapid and concentrated Advance of the French.—Forcing of the Somo-Sierra Pass.—Capture of the Retiro, and prodigious Agitation in Madrid.—Fall of that Capital.—Bold Advance of Sir John Moore to Sahagun on the French Line of Communication.—It instantly paralyzes their farther Advance towards the South.—Rapid March of Napoleon with an overwhelming Force towards the English Troops.—They retreat on the Line of Galicia.—Napoleon returns to Paris.—Gallant Actions of Light Cavalry, and Capture of Lefebvre Desnoettes.—Sir John Moore retires to Lugo.—Offers Battle there, which is declined.—Continues the Retreat to Corunna.—Extreme Severity of the Weather, and Hardships the Troops underwent in the Retreat.—Arrival at Corunna of the Troops and the Transports from Vigo Bay.—Battle of Corunna, and Death of Sir John Moore.—Embarcation of the Troops, and their Return to England.—Extreme Gloom and Despondency which these Events produce in the British Isles.—Reflections on the Campaign.—Its checkered Result, but, on the whole, eminently unfavourable to France.—Reflections on the Effect of Sir John Moore's Movement, and its Consequences on the Issue of the Campaign, and on the Character of the British Soldiers, as now evinced in their first serious Continental Campaign.

THE Spanish Peninsula, in which a frightful war was now commencing, and where the armies of France and England at last found

Memorable events of which the Spanish Peninsula has been the theatre.

a permanent theatre of combat, has been distinguished, from the earliest times, by memorable achievements, and is illustrated by the exploits of the greatest captains who have ever left the impress of their actions on the course of human events. The mighty genius of Hannibal there began its career, and under the walls of Saguntum gave the earliest token of that vast capacity which was soon to shake to its foundation the enduring fabric of Roman power; Scipio Africanus there first revived the almost desperate fortunes of the Republic, and matured those talents which were destined, on a distant shore, to overthrow the fortunes of the inveterate enemy of his country; the talents of Pompey, the genius of Caesar, were exerted on its plains, a severer struggle than that of Pharsalia awaited the founder of the empire on the shores of the Ebro; the desperate contest between Christianity and Mohammedanism raged for centuries amid its mountains, and from their rocks the wave of Mussulman conquest was first permanently repelled. Nor has the Peninsula been the theatre, in modern times, of less memorable exploits: the standards of Charlemagne have waved in its passes; the bugles of Roncesvalles have resounded through the world; the chivalry of the Black Prince, the skill of Gonzalvo, of Cordova, have been displayed in its defence; the genius of Napoleon, the firmness of Wellington, have been exerted on its plains; and, like their great predecessors in the wars of Rome and Carthage, these two illustrious chiefs rolled the chariot of victory over its surface, and, missing each other, severally conquered every other opponent till their mutual renown filled the world, and Europe, in breathless suspense, awaited their conflict on the shore of a distant land.

Uniform and singular character of their guerilla warfare.

From the earliest times the inhabitants of the Peninsula have been distinguished by a peculiarity of military character and mode of conducting war which is very remarkable. Inferior to many other nations in the firmness and discipline with which they withstand the shock of battle, they are superior to them all in the readiness with which they rally after defeat, and the invincible tenacity with which they maintain a contest under circumstances of disaster, when any other people would succumb in despair. In vain are their armies defeated and dispersed, are their fortresses taken, their plains overrun, their capital subdued; singly, or in small bodies, they renew the conflict; they rally and reunite as rapidly as they disperse; the numerous mountain chains which intersect their country afford a refuge for their broken bands; their cities make a desperate though insulated defence; and from the wreck of all regular or organized opposition emerges the redoubtable GUERRILLA warfare. "*Prælio victi Carthaginenses*," says Livy, "in ultimam Hispaniæ oram, ad oceanum, compulsi erant, disparem autem; quod Hispania, non quam Italia modo, sed quam ulla pars terrarum bello reparando aptior erat, locorum, hominumque ingeniis. Gens nata instaurandis, reparandisque bellis, brevi replevit exercitum animosque ad tentandum de integro certa-

men fecit."^{*} It is a singular fact, strikingly illustrative of the durable influence of common descent and physical circumstances on national character, through all the varieties of time, religion, and political condition, that the system of warfare thus deemed peculiar to Spain, of all nations in the world, in the days of Scipio and Sertorius, has continued to distinguish its inhabitants, without any interruption, to the present time; that it was pursued without intermission, for eight hundred years, in their wars with the Moors, formed the leading characteristic of the struggle with Napoleon, and continues, at this hour, to be the leading feature of the savage contest between the aristocratic and Democratic parties which has, for so many years, bathed the Peninsula in blood.

Durable characteristics of this kind attaching for ages to a nation, though its inhabitants have in the course of time become the mixed progeny of many different races of mankind, will invariably be found to arise from some peculiarity in its physical circumstances which has imprinted a lasting impress on all its successive inhabitants. This is in an especial manner the case with Spain and Portugal. Their territory differs in many important particulars from any in Europe. Physically considered, it belongs as much to Africa as Europe: the same burning sun parches the mountains and dries up the valleys of both; no forests clothe their sides; naked they present their arid fronts to the shivering blasts of the north and the scorching rays of a tropical sun. Vegetation, in general, spreads in proportion only as irrigation can be obtained; aided by that powerful auxiliary, the steepest mountain sides of Catalonia and Arragon are cut into terraces and clothed with the most luxuriant vegetation: without it, vast plains, in Leon and the Castiles, are almost entirely destitute both of cultivation and inhabitants. So extensive, in consequence, are the desert tracts of Spain, that the country, viewed from the summit of any of the numerous mountain ridges with which its inland provinces are intersected, in general exhibits only a confused group of barren elevated plains and lofty naked peaks, intersected, here and there, by a few glittering streams flowing in deep valleys, on the margins of which alone are to be seen crops and flocks, and the traces of human habitation. The whole country may be considered as a vast mountainous promontory, which stretches from the Pyrenees to the southward, between the Atlantic and Mediterranean Sea. On the shores of the ridge, to the east and west, are plains of admirable fertility, which, at no distant period, have been submerged by the waves of the sea; but in the interior an elevated assemblage of mountain ridges and lofty desert plains is to be found, in the centre of which Madrid is placed, in an upland basin, at a height of eighteen hundred feet above the level of the sea. The great rivers, in consequence, flow, for the most part, to the east and west in long courses, and are fed by tributary streams which meander at the bottom of ravines of surprising depth, shut in often by precipitous banks or very steep declivities. Three great chaussées only, viz., those

Physical conformation of the country which has led to these effects.

^{*} Liv., xxviii.; c. 13, xxiv., c. 42.

leading from Madrid to Bayonne, by the Somo-Sierra pass, that to Valencia, and that to Barcelona, intersect this great desert central region; in every other quarter the roads are little better than mountain paths, uniting together towns built for the most part on the summit of hills, surrounded by walls environed by superb olive woods, but having little intercourse either with each other or the rest of Europe.*

It may readily be imagined what extraordinary advantages a country of such natural strength and character must afford to insulated and defensive warfare.

In almost every quarter it is intersected by long, rocky, and almost inaccessible mountain chains, which form a barrier between province and province almost as complete, not merely to hostile armies, but even the inhabitants of the country, as that interposed by the Alps or the Pyrenees. Branching out from the great chain which separates France from Spain, one vast mountain ridge runs to the westward, forming in its course the Alpine nests and inaccessible retreats of Asturias and Galicia; while another, stretching to the eastward, covers, with its various ramifications, nearly the whole of Catalonia, and encloses in its bosom the admirable industry and persevering efforts of its hardy cultivators. In the interior of the ridges which descend from the crest of the Pyrenees to the long vale of the Ebro, are formed the beautiful and umbrageous valleys of Navarre and Biscay, where, in mountain fastnesses and amid chestnut forests, liberty has for six hundred years diffused its blessings, and the prodigy has been exhibited of independent privileges and Democratic equality having been preserved untouched, with all their attendant security and general comfort, amid an otherwise despotic monarchy. Beyond the Ebro, one great mountain range, stretching across from the frontiers of Catalonia to the neighbourhood of Lisbon, forms the almost impassable barrier between the valleys of the Tagus and the Douro, and the provinces of Old and New Castile, Leon, and Estremadura: its western extremity has been immortalized in history; it contains the ridge of Busaco, and terminates in the rocks of Torres-Vedras. Another, taking its rise from the high grounds which form the western limit of the plain of Valencia, extends, in a southwesterly direction, to Cape St. Vincent in the south of Portugal, and separates in its course the outlines of the Tagus and Guadiana; a third, also reaching in the same direction across the whole country, forms the boundary between the valleys of the Guadiana and the Guadalquivir, under the name of the Sierra-Morena, divides the province of New Castile from that of Andalusia, and has been immortalized by the wanderings of the hero of Cervantes; while a fourth, detached by itself in the southern extremity of the Peninsula, forms the romantic mountains of Ronda, whose summits, wrapped in perpetual snow, withstand the genial sun which ripens oranges and citrons, and all the productions of Africa on their sides. Two great and rich alluvial plains alone are to be found in Spain, the character of whose inhabitants differs from that

of all the rest of the Peninsula: in the first of which, amid water-melons, luxuriant harvests, and all the richest gifts of nature, the castanets and evening dances of the Valencians recall the unforeseeing gayety of tropical regions; while in the second, the indolent habits, fiery character, and impetuous disposition of the Andalusians, attest, amid myrtle thickets, the perfume of orange groves, and the charms of a delicious climate, the undecaying influence of Moorish blood and Arabian descent.*

Spain has never been remarkable for the number or opulence of its towns: Madrid, Cadiz, Valencia, Barcelona, and Bilbao, the largest of which, after the capital, does not contain above eighty thousand inhabitants, alone deserve the name of cities.† But it has in every age been distinguished, beyond any other country recorded in history, by the unconquerable resolution with which their inhabitants have defended their walls, even under circumstances when more prudent courage would have abandoned the contest in despair. The heart of every classical scholar has thrilled at the fate of Numantia, Saguntum, and Astapa, whose heroic defenders preferred perishing with their wives and children in the flames to surrendering to the hated dominion of the stranger; and the same character has descended to their descendants in modern times.‡ With invincible resolution Barcelona held out for its rights and privileges, after Europe had adjusted its strife at Utrecht, and England with perfidious policy had abandoned her Peninsular allies to the arms of their enemies; the double siege of Saragossa, the heroic defence of Gerona, the obstinate stand at Roses, have put the warriors of Northern Europe to the blush for the facility with which they surrendered fortresses to the invader, incomparably stronger and better provided with arms and garrison; while Cadiz alone of all European towns successfully resisted the utmost efforts of the spoiler, and after a fruitless siege of two years saw the arms even of Napoleon roll back.

The peculiar political constitution of the Spanish monarchy, and the revolutions which its inhabitants have undergone in the course of ages, have been as favourable to the maintenance of a defensive and isolated internal, as they were prejudicial to the prosecution of a vigorous external warfare by its government. Formed by the amalgamation at various times of many different nations of separate descent, habits, and religion, it has never yet attained the vigour and

VOL. III.—F

unity of a homogeneous monarchy. Its inhabitants are severed from each other, not only by desert ridges or rocky sierras, but by original separation of race and inveterate present animosity. The descendants of the ancient inhabitants of the Spanish soil are there mingled with the children of the Goth, the Vandal, and the Roman; with the faithlessness of Moorish, or the fire of Arabian descent. These different and hostile races have never thoroughly amalgamated with each other; for many centuries they maintained separate and independent governments, and kept up prolonged and bloody warfare with each other; and when at length they all yielded to the arms and the fortune of Ferdinand and Isabella, the central government neither acquired the popular infusion nor the inherent energy which is necessary to mould out of such discordant materials a vigorous state. The example of Great Britain, where the various and hostile races of the Britons, the Saxons, the Danes, Scots, and Normans have been at length blended into one united and powerful monarchy, proves that such an amalgamation is possible; that of Ireland, where the Saxon and the Gael are still in fierce and ruinous hostility with each other, that it is one of the most difficult of political problems. Without the freedom of the English Constitution, which unites them by the powerful bond of experienced benefits and participated power, or the crushing vigour of the Russian despotism, which holds them close in the bands of rising conquest, it is hardly possible to give to such a mixed race the vigour of homogeneous descent. In Spain this had never been attempted: the Arragonese were jealous of the Catalonians; the Castilians despised the Valencians; the Galicians even were at variance with the Asturians; and the freeborn mountaineers of Navarre and Biscay had their local antipathies; while all the inhabitants of the north regarded as an inferior race the natives of Grenada and Andalusia, where Moorish conquest had degraded the character, and Moorish blood contaminated the descent of the people; and where, amid orange groves, evening serenades, and bewitching forms, the whole manly virtues were thought to be fast wearing out under the enervating influence of an African sun.

Effect of these circumstances in promoting the means of internal and separate defence.

But while these circumstances were destructive to the external vigour and consideration of the Spanish monarchy, they were, of all others, those best calculated to enable its inhabitants, when deprived of their central government and left to their own guidance, to oppose a formidable resistance to the invader. When deprived of the directions of their sovereign, the provinces of Spain did not feel themselves powerless, nor did they lose hope because it was abandoned by those who were their natural protectors. Society, when resolved into its pristine elements, still found wherewithal to combat; the provinces, when loosened or severed from each other, separately maintained the contest. Electing juntas of government, and enrolling forces on their own account, they looked as little beyond their own limits as the Swiss peasants in former times did beyond the mountain ridges which formed the barriers of their happy val-

leys. If this singular oblivion of external events and concentration of all their energies on local concerns was destructive in the end to any combined plan of operations, and effectually prevented the national strength from being hurled, in organized and concentrated masses, against the enemy, it was eminently favourable, in the first instance, to the efforts of tumultuary resistance, and led to the assumption of arms, and the continuance of the conflict under circumstances when a well-informed central government would probably have resigned it in despair. Defeats in one quarter did not lead to submission in another; the occupation of the capital, the fortresses, the military lines of communication, was not decisive of the fate of the country; as many victories required to be gained as there were cities to be captured or provinces subdued, and like the Anglo-Saxons, in the days of the English heptarchy, they fought resolutely in their separate districts, and rose up again in arms when the invader had passed on to fresh theatres of conquest.

The nobility in Spain, as in all countries where civilization and wealth have long existed, and the salutary check of popular control has not developed their energy and restrained their corruption, were sunk in the lowest state of selfish degradation. Assembled for the most part in the capital, devoted to the frivolities of fashion, or the vices of a court; taught to look for the means of elevation, not in the energy of a virtuous, but the intrigues of a corrupted life, they were alike unfit for civil or military exertion, and alone of all the nation must, with a few brilliant exceptions, be considered as strangers to the glories of the Peninsular war. Not more than three or four of the higher grandes were in the army when the war broke out in 1808; and the inferior noblesse, almost all destitute alike of education, vigour, or active habits, took hardly any share in its prosecution. The original evil of entails had spread to a greater extent, and produced more pernicious consequences, in Spain than in any other country of Europe; a few great families engrossed more than half the landed property of the kingdom, which was effectually tied up from alienation, and of course remained in a very indifferent state of cultivation; while the domains of the cities, or corporate bodies, held in mortmain, were so extensive, and for the most part uncultivated, that a large portion of the arable land in the kingdom was in a state of nature.*

Notwithstanding these unfavourable circumstances, the elements of great political activity and energetic national conduct existed in the Peninsula.

State of the peasantry.

The peasantry were everywhere an athletic, sober, enduring race; hardy from exercise, abstemious from habit, capable of undergoing incredible fatigue, and of subsisting on fare which to an Englishman would appear absolute starvation. The officers in the Spanish armies during the war, drawn from the ill-educated urban classes, were, for the most part, a most conceited, ignorant, and inefficient body; but the men were almost always excellent, and pos-

* Foy, iii., 151, 152. Jovellanos, 164. Laborde, i., 197, 212.

essed, not only the moral spirit, but the physical qualities calculated to become the basis of an admirable army. Colonel Napier has recorded his opinion that the Catalonian miquelets or smugglers formed the finest materials for light troops in the world, and the Valencian and Andalusian levies presented a physical appearance greatly exceeding that of both the French and English regular armies. The cause of this remarkable peculiarity is to be found in the independent spirit and general well-being of the peasantry. Notwithstanding all the internal defects of their government and institutions, the shepherds and cultivators of the soil enjoyed a most remarkable degree of prosperity: their dress, their houses, their habits of life, demonstrated the long-established comfort which had for ages prevailed among them; vast tracts, particularly in the mountainous regions of the North, were the property of the cultivators, a state of things of all others the most favourable to social happiness, when accompanied with a tolerable degree of mildness in the practical administration of government; and even in those districts where they were merely tenants of the nobility, the cities, or the Church, their condition demonstrated that they were permitted to retain an ample share of the fruits of their toil.*†

But the peasantry, hardy and undaunted as they were, would have been unable to have combined in any effective league for their common defence, destitute as they, for the most part, were of any support from their natural leaders the owners of the soil, if it had not been for the weight and influence of a body which, in every age, has borne a leading part in the contests of the Peninsula. This was the Church, the lasting and inveterate enemy in every country of revolutionary innovation. The ecclesiastics in Spain were very numerous, amounting, according to the census taken in 1787, to 22,480 parish priests, and 47,710 regular clergy belonging to monasteries or other public religious establishments.† The influence

The Church. Its usefulness, character, and influence on the people.

* Lord Caernarvon's Spain, ii., 234, 360. Bourgoigne's Espagne, i., 267; ii., 384.

† The general comfort of the Spanish peasantry, especially in the northern and mountainous provinces, is easily explained by the number of them who were owners of the soil, coupled with the vigour and efficacy of the provincial immunities and privileges which, in Catalonia, Navarre, the Basque Provinces, Asturias, Arragon, and Galicia, effectually restrained the power of the executive, and gave to the inhabitants of those districts the practical enjoyment of almost complete personal freedom. So extensive were their privileges, so little did government venture to disregard them, that in many cases they were to be rather considered as Democratic commonwealths, inserted into that extraordinary assemblage of separate states which formed the Spanish monarchy, than subjects of a despotic government. The classification of the population was as follows, which speaks volumes as to the condition of the people and the causes of their prolonged resistance to the French invasion:

Total inhabitants	10,409,879
“ of whom were families engaged in agriculture	872,000
“ Owners of the soil they cultivated	360,000
“ Farmers holding under landlords	502,000
“ Ecclesiastical proprietors	6,216
“ Mendicant friars	43,149
“ Cities, towns, and villages	25,463
“ of whom are free cities or burghs	12,071
“ “ subject to a feudal superior	9,466
“ “ “ to an ecclesiastical superior	3,926

—See HARD., x., 173, 174.

‡ Laborde, iv., 194.

of this great body was immense. Independent of their spiritual ascendancy in a country more strongly attached than any in Europe to the Romish Church, they possessed, as temporal proprietors, an unbounded sway over their flocks. As in all other countries, it had long been felt that the Church was the best and most indulgent landlord; the ecclesiastical estates, which were very numerous and extensive, were much better cultivated in general than any in the hands of lay proprietors; and the tenantry held their possessions under them for such moderate rents, and by so secure a tenure, that they had long enjoyed almost the advantages and consideration of actual landholders. Nor was this all: the charity and beneficence of the monks had set on foot, in every part of the country, extensive institutions, through which, more than any others by which they could be affected, the distresses of the poor had been relieved. They partook in a great degree of the character of the *hospice*, particularly in the northern provinces. To the peasant they often served as banking establishments, where none other existed in the province, and as such essentially contributed to agricultural improvement. The friars acted as schoolmasters, advocates, physicians, and apothecaries. Besides feeding and clothing the poor, and visiting the sick, they afforded spiritual consolation. They were considerate landlords and indulgent masters; peacemakers in domestic broils, a prop of support in family misfortune; they provided periodical amusements and festivities for the peasants; advanced them funds if assailed with misfortune; furnished them with seed if their harvest had failed. Most of the convents had *fundaciones* or endowments for professors who taught rhetoric and philosophy, besides keeping schools open for the use of the poor; they also supplied parochial ministers when wanted, and their preachers were considered the best in Spain. Superficial or free-thinking travellers, observing that the aged, the sick, and the destitute were always to be found in numbers round the convent gates, supposed that they created the suffering which they were so instrumental in relieving, and, in consequence, that the Church was chargeable with the augmentation of pauperism; forgetting that the poor ever will be assembled together round those establishments where their sufferings are relieved; and that to represent such beneficent institutions as the cause of this distress, is just as absurd as it would be to decry fever hospitals because their wards are generally filled with typhus patients, or poor laws in Ireland because a large proportion of its *two millions* of present destitute inhabitants will hereafter infallibly be found in the neighbourhood of the workhouses where parochial relief is about to be dealt out.*

It is observed with surprise by General Foy, that in every age the king, the Church, and the people have combined together in Spain: an alliance utterly inexplicable on the principles of the French Revolutionary school, but susceptible of an easy solution when the benefits which the ecclesiastical bodies conferred both

Its great influence in the Spanish contest.

* Walton's Revolutions of Spain, ii., 374, 376.

on the crown, in standing between it and the encroachments of the nobility, and the peasantry, in averting from them the evils of poverty, are taken into consideration. The whole course of events during the Peninsular war demonstrated that this influence was established on the most durable foundations; everywhere the parish priests were the chief promoters of the insurrection; it was their powerful voice which roused the people to resistance; and many of the most renowned leaders of the desultory bands who maintained the contest when the regular forces were destroyed, came from the ecclesiastical ranks. The clergy, both regular and parochial, early perceived the total destruction of their interests which would ensue from the triumph of the French invasion; they recollected the decrees of the convention against the clergy, and the horrors of the war in La Vendée; and though Napoleon had to a certain extent restored the altar, yet they were well aware that even his powerful hand had been able to do this only in a very ineffectual manner; that religion was tolerated in France, not re-established; and that the indigent curés, who drew a wretched pittance yearly from the public treasury to the north of the Pyrenees, were very different, both in consideration and influence, from the dignified clergy in possession of their own estates, who formerly constituted so important a part of the French monarchy. It was this body, possessed of such influence, and animated with such feelings, who in Spain proved the real leaders of the people; who, in the absence of the government, the nobility, and the army, boldly threw themselves into the breach; and, organizing out of the strength and affections of the peasantry the means of prolonged resistance, rendered the Peninsula the charnel-house of the French armies, and the grave of Revolutionary power.

Most of all, Spain was still a virgin soil. Her people were not exhausted by revolutionary passions; they had not learned by bitter experience the vanity of all attempts to regenerate mankind by any other means than the improvement of their moral and religious principles. Though the monarchy was gray in years, the nobility corrupt and selfish, the government feeble and incapable, the nation as a whole was still untainted; the debility of the Bourbon reign had passed over the state without either weakening the force of popular passion or destroying the fountains of public virtue. The peasants in the mountains, the shepherds in the plains, still inherited, in unmixed descent, the blood of the Cid and Palajo; still were animated by the spirit which sustained the conflict of seven centuries with the Moorish invader. They were free from that last and worst cause of national corruption, which springs from the people having been themselves admitted to a share of power, participating in its passions, feeling its sweets, profiting by its corruptions; they were exempt from that despair and apathy which results from the experienced impossibility, by changing the class which governs, of eradicating either the vices of the governors or the sufferings of the governed. Hence an intermixture in the Peninsular Revolutionary war of passions the most opposite, and usually ranged in

fierce hostility against each other; and hence the long duration and unexampled obstinacy with which it was conducted. While the rural population, at the voice of their pastors, everywhere took up arms, and rushed with inconsiderate zeal into the conflict, to combat under the banners of the cross for their salvation, the indolent urban multitudes were roused not less by temporal ambition to league their forces under the national colours: the dissolution of government, the resolution of society into its pristine elements, had generally thrown political power and the immediate direction of affairs into their hands; revolutionary passion, Democratic ambition, were called into activity by the very necessity which had everywhere thrown the people upon their own resources; the provincial juntas, chosen in the chief towns, soon became so many centres of revolutionary action and popular intrigue; and thus the two most powerful passions which can agitate the human heart, religious enthusiasm and Democratic ambition, usually seen in opposite ranks, and destined to fierce collision in that very realm in future times, were for a season, by the pressure of common danger, brought to unite cordially with each other.

Such was the country which thereafter became the grand theatre of the contest between France and England, and such the eminently favourable battle-field which the unbounded ambition of the French emperor at length afforded to the British arms. They now descended to the conflict on the popular side; they went forth to combat, not merely for the real interests, but the present desires of the people. The forces, indeed, which the contending parties could bring into this great arena were, to appearance at least, very unequal, and even the most sanguine could not contemplate without alarm the enormous preponderance which weighed down the scale on the side of the Emperor Napoleon. He had 600,000 French soldiers, including seventy thousand horse, and at least a hundred and fifty thousand of the allied states at his disposal; but the magnitude of this force, great as it was, constituted the least part of its formidable character.* It was the quality, experience, and spirit of his soldiers which was the real source of their strength. They stood forth to the conflict, strong in the experience of fifteen years of warfare, terrible from the recollection of a hundred victories. The halo of glory which surrounded, the prestige of victory which preceded them, was more difficult to withstand than either the charges of their cuirassiers or the ravages of their artillery. It fascinated and subdued the minds of men; spread universally that belief of their invincibility which was the surest means of real-

Composition and character of the French army at this period.

* The numbers were as follows, all paid by the French government:

Infantry of the line	380,000	And numbers.
Cavalry	70,000	
Swiss, Germans, Hanoverian, and Irish, in French pay	32,000	
Artillery and engineers	46,000	
Gendarmerie, coast guards, veterans.	92,000	
	620,000	

Besides the forces of the Confederation of the Rhine, Italy, Naples, Holland, and the Grand-duchy of Warsaw, at least 150,000 disposable more.—See Fox, i., 52, 53

izing it; paralyzed alike the statesman who arrayed nations and the generals who marshalled armies for the combat; and spread even in the bravest hearts the dispiriting belief that the contest was hopeless, and that to sink honourably was all that remained to gallant soldiers. This feeling especially prevailed at this juncture, after the hopes of Europe, strongly elevated by the strife of Eylau, had been dashed to the earth by the wreck of Friedland, and the reserve of Christendom, on whom so many eyes had been turned in breathless anxiety,* had abandoned the conflict as one apparently striving against the decrees of fate.

Nor was the actual efficiency of this immense army inferior to its imaginative terrors. Though the wars of Germany and Poland had made frightful chasms in the ranks of the veteran soldiers, yet the officers and non-commissioned officers, the bones and sinews of the army, possessed the immense advantage of tried merit and long experience. Such had been the consumption of human life during the late campaigns, that every conscript who survived a few years was sure of becoming an officer; and while this certainty of promotion to the few survivors kept alive the military spirit of the whole population, it ensured for the direction of the army the inappreciable basis of tried valour and experienced skill. Every military man knows that, if the officers and non-commissioned officers are experienced and brave, it is no difficult matter, even out of the most unpromising materials, to form an effective army; the examples of the Portuguese and Hindoos, under British, and the northern Italians, under French officers, were not required to establish a fact illustrated by the experience of every age from the days of the Romans. This advantage appeared not merely in the field of battle: desperate valour, fortunate accident, can sometimes here supply the wants of experience and organization; but in the long run, in undergoing the fatigues of a campaign, in discharging its multifarious duties, and facing its varied difficulties, the superiority of veteran armies, or even new levies incorporated with a veteran frame, soon becomes conspicuous. The Spaniards never were a match for the French, either in the field of battle or the conduct of a campaign; and although the native courage of the English, even in the outset, uniformly gave them the advantage in pitched battles, yet it was long before they became at all equal to their opponents in the general conduct of a campaign. In marching, throwing up fieldworks, enduring famine, conducting sieges, cooking their victuals, procuring provisions, preserving their spirit during retreat, and abstaining when necessary from intoxication, the English soldiers were for long and painfully inferior to their enemies; and it augments our admiration for the illustrious chief and his able lieutenants who ultimately led them to victory under such disadvantages, that they were compelled, not only to lead, but in a manner to educate their troops in presence of the enemy; and that it was while struggling to maintain their ground against superior bands of a veteran foe, that they im-

bibed in many respects even the rudiments of the military art.*

The English army, however, at this period was far from being in the inefficient state, either with respect to discipline or experience, which was generally supposed on the Continent; and the French government, which judged from recent events, and were ignorant of the vast efforts in the military department which had been made since the commencement of the war, were equally mistaken as to the force and capacity of the regular forces, and the extent to which a warlike spirit had imbued the nation. The British army, in the spring of 1808, consisted of no less than one hundred and eighty thousand men, of whom twenty-six thousand were cavalry, besides nearly eighty thousand of the militia, equal in discipline and equipment to the troops of the line, though not bound to serve beyond the British isles, and two hundred and ninety thousand volunteers, of whom twenty-five thousand were cavalry, in a very considerable state of efficiency.† Great part of this immense force, without doubt, was absorbed in the defence of the numerous and extensive colonies which formed part of the British dominions; but the official returns proved that a hundred thousand men, including twenty thousand cavalry, were disposable in the British isles; and in a minute made out by the Duke of York it was proved that, “in 1808, sixty thousand men could have been provided for the campaign in Spain without detriment to any other service.” Of this force it is not going too far to say, that it was all in the highest state of discipline and equipment; and that not only was it equal in a pitched battle to any force of similar amount which could be brought against it, but, if all assembled, was adequate to the encounter of the largest army ever yet collected in a single field under the standards of Napoleon! †

But it was not so much from underrating the numerical strength as mistaking the spirit which animated the British army, and the degree of interest which its exploits excited in the country, that the French government was led to regard too lightly the chances of success which it possessed in a Continental struggle. With all his information and sagacity, Napoleon here fell into the usual error of judging of the present by the past. The English soldiers had achieved so little during the war, that it was generally supposed they were incapable of doing anything; their navy

Admirable spirit with which it was animated and regarded by the people.

* Foy, i., 80, 81. Jom., ii., 36. Hard., x., 157, 158.

† The numbers were, in July, 1807

	Militia.	Volunteers.	
Infantry	156,561	254,544	
Cavalry	26,315	25,342	The amount of its various branches.
	77,996	9,420	
	<u>182,876</u>		289,306
In all,	Regulars	182,867	
	Militia.	77,990	
	Volunteers	289,306	
	In arms	550,163	

Of this force of regulars, 81,000 infantry and 20,000 cavalry were at home in the British isles, and of course disposable. In the muster-rolls of the English army, sabres and bayonets are alone estimated, which is otherwise in the French and Continental services: a peculiarity which made the real strength of the English regular army about 200,000 men.—*Parl. Deb.*, ix., iii., *App.*

† *Parl. Returns*, July, 1607. *Parl. Deb.*, ix., 3d *App.*, and *Napier*, i., 81, *App.*, and *Foy*, i., 210.

* Foy, i., 52, 53.

had done so much, that it was taken for granted the whole interest and pride of the nation was centred on its triumphs. In the interim, however, the general arming of the people, the excitement produced by the threats of invasion, the profound interest kept alive by the Continental war, the triumphs of Maida and Alexandria, had awakened a most extraordinary degree of military ardour, and diffused no inconsiderable amount of military information throughout the people. The warlike establishments which pervaded the country were admirably calculated to foster this growing enthusiasm, and turn it to the best account in augmenting the numbers and increasing the spirits of the regular army. The militia served as an invaluable nursery for the line; the volunteers, changed soon after into local militia, corresponding very nearly to the German *landwehr*, provided a never-failing supply of recruits tolerably instructed in the rudiments of discipline for the militia. Numbers of young men of all ranks, caught by the animation, the idleness, or the dress of the soldiers, embraced the military profession; thenceforward to the end of the war there was no difficulty whatever experienced in finding adequate supplies of recruits for the army, and filling up all the fearful chasms which war and disease made in its ranks. Thus, while the French were deluded with the idea that the English were altogether contemptible at land, they had already made great progress in the formation of a powerful army, and while they were talking about sea-wolves and maritime skill, the spirit was engendered destined to produce the triumphs of Vittoria and Waterloo!*

The vast improvements effected by the Duke of York in the discipline and or-
Character and qualities of the ganization of the army, and the im-
British soldiers. proved military education which the younger officers had now for some years received, had at the same period afforded increased advantages for the successful display of that physical strength and undaunted moral resolution which, in every age, has formed the great characteristic of the British soldiers. This invaluable quality gave them a very great advantage: it is the true basis of a powerful army. Skill, experience, discipline, can be superadded by practice, or acquired by exercise; but if this one moral quality be wanting, all such acquisitions will prove of little avail. How inferior soever to their antagonists in experience, or that skill in the varied duties of a campaign which actual service alone can give, the English soldiers, from the very first, had the animating conviction that they were their equals, possibly their superiors, in actual combat; and that all the advantages of their veteran opponents would be at an end if once they engaged in a regular battle. And so it proved, even from the outset; and it is inconceivable how soon this one quality of *dogged resolution in the field* came to neutralize all the superiority of acquired skill and veteran discipline. The military is essentially a practical art; its wants and necessities are soon brought home by actual experience and suffering to an army in the field. If it possesses the resolution to fight and the discipline to obey, a very short time will

supply the rest; there is no education so rapid and effectual as that which takes place in presence of an enemy. Of various natural and acquired excellence, it is hard to say whether, in the Peninsular war, the British or French soldiers, after a few years, were the most admirable. In the service of light troops; in undergoing with cheerfulness the fatigues of a campaign; in dexterity at making themselves comfortable under privation; in rapidity of firing, care of their horses by the cavalry, and enthusiastic gallantry at the first onset, the French troops for a long period had the advantage: but when the hostile lines actually met, and the national resolution was fairly put to the test, the British soldiers, from the very beginning, successfully asserted their superiority. Splendid in appearance, overflowing with strength, irresistible in a single charge, their cavalry could hardly be said to be equal, at least for general service or the protracted fatigues of a campaign, to that of Napoleon; a remarkable circumstance, when the great attention bestowed on horses in England is taken into consideration: but their artillery, superior to any in the world in the admirable equipment of the guns and ammunition train, was second to none in the coolness and practice of the gunners; and in the steadiness and precision of their fire, the constancy which they displayed under danger, their calmness in anger, and the terrible vehemence of their charge with the bayonet, the British infantry was, beyond all question, the first in Europe.*†

In one important particular the English army was founded upon an entirely different principle from the French. In the latter, the officers formed in no degree a separate class from the soldiers; the equality which was the object of universal desire at the outset of the Revolution, and the conscription, which reached indiscriminately all ranks in its later stages, forbade alike any such line of demarcation; and not only had all the marshals and generals in the service originally entered on the military career in the ranks, but to such as survived the rapid consumption of life in the imperial wars promotion was still certain, from the humblest station to the highest grades in the army. In the former, again, a line, in practice almost impassable, separated the private soldier from the officer; they were drawn from different classes in society, accustomed to different habits, instructed by a different education, actuated by different desires. To the French conscript, glory, promotion, the prospect of ultimate greatness, were the chief stimulants to exertion: in the English army, though the influence of such desires was strongly felt by the officers, yet the efforts of the common men were chiefly excited by a different set of motives; and a sense of military duty, the wish to win the respect of his comrades, an instinctive principle of courage, an anxious desire to uphold the renown of his regiment, a firm determination to defend the cause of Old England, and an undoubting faith in the superiority of

Important effect of their officers being exclusively taken from the higher ranks.

* Foy, i., 226, 227.

† "Le soldat Anglais," says General Foy, "possède la qualité la plus précieuse dans la guerre, le calme dans la colère."—Foy, i., 227

* Foy, i., 210, 212, 220, 221. Hard., x., 158, 159.

its arms, constituted the real springs of military exertion. The great majority of the English soldiers felt no desire to be made officers; to become sergeants and corporals was, indeed, a very general and deserved object of ambition to the meritorious privates, because that elevated them in, without taking them out of, their own sphere in life; but they felt that they would be uncomfortable in the daily society of the commissioned officers, their superiors in birth, habits, and acquirements; and though many in the course of the war, from the force of extraordinary merit, broke through these restraints, and some discharged in the most exemplary manner the duties of the most elevated ranks, who had originally borne a musket on their shoulders, yet in general the situation of privates who had risen to the officers' mess was not so comfortable as to render the change an object of general desire. It may appear paradoxical to assert, but it is, nevertheless, strictly true, that this feeling of the propriety of each class striving to become respectable in itself, without seeking to overstep its limits, is the natural effect of long-established freedom and order; and is much more nearly allied to the genuine spirit of liberty than the feverish desire of individual elevation, which, throughout all its phases, was the mainspring of the French Revolution. Where each class is respectable and protected in itself, it feels its own importance, and often disdains to seek admission into that next in succession; the universal passion for individual exaltation is the offspring of a state of society where the rights and immunities of the humbler ranks have been habitually, by all persons in power, trampled under foot. The clearest proof of this is to be found in daily experience. The men who, throughout so many ages, have maintained the liberties of England, are not those who were striving perpetually to elevate themselves, by a sudden start, above their neighbours, but those who, by a life of unobtrusive, honest industry, rose to comfort or opulence in their own sphere without any desire to leave it; and the strength of the state at present is not to be found in the anxious aspirants after aristocratic favour, or the giddy candidates for fashionable distinction, but in the unheeded efforts of that more numerous but unobserved class which is too proud of its own rank to aspire to any beyond it.*

An iron discipline had given the military force, thus constituted, a degree of firmness and regularity unknown to any other service in Europe. The use of the lash was still frequent; and instances were not uncommon of soldiers, for inconsiderable offences, receiving 500, 800, and even 1000 stripes; but though the friends of humanity beheld with horror this barbarous infliction, so foreign to the spirit of the English Constitution, and disused in the French and several Continental armies, yet the experienced observer, who marked the class from which English recruits were almost exclusively drawn, and the impossibility of giving them the prospect of promotion, which operated so strongly on French conscripts, hesitated as to the practicability of

abolishing this painful but necessary correction; and regarded its disgrace as the price paid by the nation for the economy which denied to the soldiers such a pay as would secure for the ranks of its army a class to whom such inflictions might be unnecessary, or render expulsion from them a sufficient object of dread; and that constitution, which, by confining commissions in the military service to men of family and property, possessed of a permanent interest in the commonwealth, had obtained the best possible security against its force being applied to the destruction of the public liberties.* Better fed, clothed, lodged, and paid than any other in Europe, the English soldier had an attention devoted to his wants, both in health and sickness, and experienced an integrity in the administration of every department of the army, which could be attained only in a country where habits of freedom have long co-existed with those of order, and experience had pointed out the mode of effectually checking the abuses which invariably have a tendency to grow up in every branch of the public administration. Pensions, varying according to the period or the amount of service, secured for the veteran, the maimed, or the wounded, an adequate maintenance for the remainder of life. True, he fought, in the glowing language of Colonel Napier, in the cold shade of aristocracy; true, he could not boast that the rays of imperial favour would be attracted by the helmet of the cuirassier, or the bayonet of the grenadier; but he was sure, from good conduct, of obtaining that respect in his own sphere, and those substantial advantages which were adapted to his situation and his wishes; and experience has abundantly proved that the concentration of government support on those whose only title to power was military distinction, is a sure prelude to unbridled administration, and that, if the soldier would no longer fight in the cold shade of aristocracy, the citizen would pine in the hopeless frost of military despotism.*

* Duke of Wellington, *ut supra*.

† General Foy has left a graphic picture of the different habits of the English and French officers. General Foy's during a campaign in the Peninsular war, graphic contrast of the truth of which every one must, to a certain degree, be convinced. "Behold," French soldiers, says he, "the French battalions, when they arrive at their bivouacs after a long and painful march. No sooner have the drums ceased to beat, than the haversacks of the soldiers, disposed around the piles of arms, mark out the ground where they are to pass the night. They put off their coats: clothed only in their greatcoats, they run to collect provisions, water, and straw. The fires are lighted; the soup is soon prepared; trees brought from the adjoining woods are rudely carved into supports or beams for the huts. Quickly the simple barracks are raised: the air resounds with the sounds of the hatchet: while the soup is preparing, the young men, impatient of their idleness, clean their arms, arrange their knapsacks, clean their gaiters. The soup is soon ready; if wine is wanting, the conversation soon flags, and the noisy multitude is speedily buried in sleep. If, on the other hand, the generous fluid circulates, joyous looks follow the barrels as they are brought on men's backs into the centres of the rings; the veterans recount to the young conscripts the battles in which their regiment has acquired so much renown, and the universal transport when the emperor, mounted on his white charger and followed by his mameluke, suddenly appeared among them."

"Turn now to the English camp: you see the soldiers exhausted and motionless, reclining on the ground: are they waiting, like the Spahis in the Turkish camp, till the slaves prepare their victuals? No! they have made at leisure a very moderate march, and have reached at two in the afternoon the ground they are to occupy for the night."

* Duke of Wellington's Evidence on Military Punishment. Parl. Pro., June, 1836. Foy, i., 226, 227.

Severe discipline. Corporal punishments which still subsisted.

Nor was the inequality of force with which this great struggle was to be conducted so great in its progress as it appeared in the outset. Napoleon, indeed, commenced the contest with a hundred and fifteen thousand infantry and sixteen thousand horse in the Peninsula,* and the possession of all the most important strongholds which it contained; and the force permanently maintained over its surface, after the British troops landed, exceeded two hundred and fifty, and rose at times as high as three hundred and fifty thousand men; while there never were so many as fifty thousand British soldiers in the Peninsula, and the actual force under the stand-

Bread and meat are brought: the sergeant makes the distribution; he tells them where they will find water and straw, and where the trees which are to be felled will be found. When the logs arrive he shows where each is to be placed: he reprimands the unskilful, and stimulates the lazy. Where is the industrious, enterprising spirit of that nation which has outstripped all others in vigour and intelligence? Out of their own routine the soldiers can do nothing: if once the restraints of discipline are broken, excesses of every kind are indulged in, and intemperance prevails to an excess which would astonish the Cossacks themselves. Nevertheless, do not hazard an attack unless you are well assured of success; the English soldier is not brave at times merely; he is so whenever he has ate well, drank well, and slept well. Yet their courage, rather instinctive than acquired, has need of solid nutriment; and no thoughts of glory will ever make them forget that they are hungry, or that their shoes are worn out.*

“Nor is the difference less remarkable in the superior officers. While a French general of division is occupied, during the leisure moments of a campaign, in studying the topography of the country or the disposition of its inhabitants; in attending to the nourishment, drilling, or haranguing of his troops; in endeavouring to persuade the Spanish people to adopt the system of administration, or yield to the political conduct of his country—the English general opposed to him spends his time between the chase, riding on horseback, and the pleasures of the table. The first, alternately governor, engineer, commissary, has his mind continually on the stretch; his daily occupations lead to an enlargement of his mind, and a continual extension of his sphere of activity. The other, as indifferent to the localities of the country in which he makes war as to the language, disposition, or prejudices of its inhabitants, applies to the commissary to supply provisions; to the quartermaster-general for information concerning the country in which he is to act, and the marches he is to perform; to the adjutant-general for any other supplies of which he may stand in need. Unless when employed in a separate command, he seeks to narrow the sphere of his exertions and responsibility. He leads on his troops in battle with the most admirable courage, but in cantonments his habitual exertions are limited to superintending the police of his troops, seeing that their exercises are duly performed, and transmitting reports to his superiors.”—See Foy, i., 231, 235, 256, 257. Notwithstanding his admirable general candour, the French general appears, in this graphic description, to have been somewhat influenced by the prejudices of his country, though the outline of the sketch is undoubtedly correct. But the military is essentially a practical art; and notwithstanding all their riding and hunting, experience soon made the English generals as expert at all the really useful parts of their profession as the more inquisitive and instructed Frenchmen; and they are not the worst soldiers who, without disquieting themselves with the duties or designs of their superiors, are at all times ready with undaunted courage to carry them into effect.

ards of Wellington seldom exceeded thirty, and was generally, for the first three years, not above twenty-five thousand English sabres and bayonets. Still this force formed the nucleus of an army which, with the addition of the Portuguese levies of equal amount, and disciplined and led by British officers, soon became extremely formidable. Its fortunate central position in Portugal, resting on what became, under the tutelary genius of Wellington, an impregnable intrenched position in front of Lisbon, afforded, to a commander of talent, a favourable opportunity of striking serious blows at the enemy before their dispersed forces could collect from different quarters: if they did so, the insurrection burst forth again in the provinces they had evacuated; if they remained long together, famine, in an inland country, so plentifully intersected by arid plains or desert ridges, soon paralyzed any considerable offensive operations. The truth of the old saying, “If you make war in Spain with a small army you are beaten, if with a large one starved,” was never more strongly evinced than in the Peninsular campaigns; and although Wellington frequently experienced this difficulty in the severest manner, when he advanced into the interior of the country, yet his army, in the general case, from the vicinity to the seacoast of Portugal, or the water-carriage of its principal rivers, was, in comparison, abundantly supplied with provisions; and though he was in general inferior in number to the enemy, sometimes to a very great degree, when he hazarded a battle, yet the discrepancy in this respect was never so great as the extraordinary difference in the sum total of the regular forces which the two nations had in the field might have led us to expect.*

The military establishment of Spain, when the contest commenced at the signal of the French cannon in the streets of Madrid, on the 2d of May, was far from being considerable. It consisted, in 1807, of 80,000 troops of the line, including 16,000 cavalry and 30,000 militia; but the ranks were far from being complete, and the total effective force, including the militia, was under a hundred thousand men. From this number were to be deducted sixteen thousand under Romana in Holstein, six thousand in Tuscany, or on the march thence to the north of Germany, and the garrisons of the Canary and Balearic isles; so that the troops that could be brought into the field did not at the utmost exceed seventy thousand, of whom twenty thousand were already partially concentrated in the Alentejo and Oporto, and the only considerable body of the remainder, about ten thousand strong, was in the lines of St. Roque, at Gibraltar. The composition of this force was still less formidable than its numerical amount. Enervated by a long Continental peace, the soldiers had lost much of the spirit and discipline of war; the men, enrolled, for the most part, by voluntary enlistment, and only in case of necessity, and in some of the provinces by conscription, were sober, active, and brave; but the officers were, in most instances, extremely deficient both in the knowledge and proper feelings of their profession. They were,

* Napier, i., 47. Foy, i., 204.

indeed, for the most part, composed of men of family, a certain proof of descent being necessary to obtaining commissions in two thirds of the military offices at the disposal of government; but the restriction afforded no security either for extended information or generous sentiments in a country where four hundred thousand *hidalgos*, too proud to work, too indolent to learn, loitered away an inglorious life, basking in the sun, or lounging in the billiard-rooms or coffee-houses of the great towns. From this ignorant and conceited class the great bulk of the officers of all ranks were taken; not more than three or four of the high nobility held situations in the army when the war broke out. Leading an indolent life in towns, sleeping half the day in uncomfortable barracks, associating indiscriminately with the common soldiers, many of whom were superior in birth and intelligence to themselves, and knowing no enjoyment but idleness, gallantry, and billiards, they were as deficient in the energy and vigour which the Revolution had developed in the French, as in the sentiments of honour and integrity which the habits of a monarchy, tempered by freedom, had nursed in the English army. It was easy to foresee that no reliance could be placed, in a protracted struggle, on this debilitated force; yet such is the importance of discipline and military organization, even in their most defective form, in warlike operations, that the only great success achieved in the field by the Spaniards during the whole war was owing to its exertions.*

Though Portugal had a population of somewhat above three millions, instead of the twelve millions which were contained in Spain, yet it possessed in itself the elements of a more efficient military force than its powerful neighbour. The invaluable institution of *ordenanzas*, or local militia, had survived the usurpation of Spain; and during twenty-seven campaigns which followed the restoration of the independence of the country in 1640, it had rendered more important services to the state than the regular army. By the Portuguese law, every person is legally obliged to join the battalions arrayed in defence of the country, from the age of eighteen to that of sixty years; these battalions consist of 250 men each, under the command of the chief landed proprietors of the district; and such is the native strength of a country so defended, that, with a very little aid from England, it enabled the Portuguese for two centuries to maintain their independence. The physical peculiarities of the country rendered it singularly well adapted for the active operations of an irregular force of this description. Intersected in many directions, but especially to the north of the Tagus, by lofty sierras, terminating in sharp, inaccessible cliffs, which rise, even in that favoured latitude, almost into the regions of eternal snow; destitute, for the most part, of roads, and such as do exist perpetually crossing rivers without bridges, or ravines affording the most favourable positions for a defensive army; covered with Moorish towers or castles perched on the summit of rocks, or villages in general surrounded with defensive walls, inhabited by a bold, active, and independent

peasantry, long habituated to the use of arms, and backed by impregnable mountain ridges washed by the sea, Portugal presented the most advantageous fulcrum which Europe could afford whereon to rest the military efforts of England. But these advantages were all dependant on the physical situation and natural character of the inhabitants, or the consequences of their former and more glorious epochs; for at the period when the Peninsular war broke out, no country could be in a more debilitated state, as far as concerns either political vigour or military efficiency. Corruption pervaded every department of the public service, and to such an extent as to be apparently irremediable; the army, ill fed, worse paid, and overrun by a swarm of titled locusts, who devoured the pay of the soldier for doing nothing, was both an unpopular and inefficient service. Forty thousand men, including eight thousand cavalry, of whom the troops of the line nominally consisted, might have furnished an excellent base whereon, with the addition of the militia and *ordenanzas*, to construct a powerful military establishment; but such were the abuses with which it was infested, and the ignorance of the officers in command, that hardly any reliance could be placed on this force; and it was not till they were recast in the mould of British integrity, and led by the intrepidity of British officers, that the Portuguese arms reappeared with their ancient lustre on the theatre of Europe.*

In the disposition of his forces when the contest commenced, Napoleon had principally in view to overawe and secure the metropolis, conceiving that Madrid was like Paris or Vienna, and that there was little chance of the country holding out for any length of time against the power in command of the capital. The Imperial Guards, with the corps of Monecy and Dupont, were assembled in that city or its immediate neighbourhood; and as this concentration of above fifty thousand men in the heart of the kingdom exposed the communication with the Pyrenees to danger, the emperor was indefatigable in his endeavours to form a powerful corps of reserve at Burgos and Vittoria, under Marshal Bessieres; and with such success were his efforts attended, that by the beginning of June this able officer had twenty-three thousand men under his standards. At the same period, the troops under Duhesme, in the fortresses of Barcelona and Figueras, in Catalonia, was above fifteen thousand men, sufficient, it was hoped, to overawe the discontented in that province. Thus, after making every allowance for the detachments necessary to maintain the capital and frontier fortresses, and keep up the communications, fifty thousand men, including eighty guns, were ready, in the north and centre of Spain, to commence offensive operations; a force amply sufficient, if concentrated, to crush any attempt at resistance which could have been made in the Peninsula. But the composition of these troops was very unequal; and though the Imperial Guard and some of the veteran divisions in the capital were in the finest state of discipline and efficiency, yet this

was by no means the case with the whole army; and though all partook of the admirable organization of the French service, yet the ranks were for the most part filled up with raw conscripts, hardly yet instructed in the rudiments of the military art. Had it not been for the excellence of the skeletons on which they were formed, and the officers by whom they were directed, the difference between them and the insurgent peasantry would not have been very considerable. They were very different from the soldiers of Austerlitz, Jena, or Friedland; the enormous consumption of life in those bloody campaigns had almost destroyed the incomparable army which, disciplined on the heights of Boulogne, had so long chained victory to the imperial eagles.*

Such was the situation of the French army when the insurrection at once broke out in every part of the Peninsula. It burst forth with such force and unanimity in all the provinces, that it could not have been more simultaneous if an electric shock had at once struck the whole population. With the intelligence of the commotion and massacre at Madrid, a convulsive throb ran through every fibre of Spain; the sense of their wrongs, the humiliation of their situation, the thirst for vengeance, burst at once upon the people, and one universal cry to arms was heard from one end of the kingdom to the other. Everywhere the peasantry met together in tumultuous crowds; from town to town, from village to village, from hamlet to hamlet, the news flew with incredible rapidity; and as the French troops, though in possession of the capital and frontier provinces, were by no means scattered over the country, the proceedings of the insurgents hardly anywhere met with molestation. The fever was universal: the young and the old, the feeble and the strong, the shepherds of the mountains and the cultivators of the plains, the citizens of the towns and the peasantry of the country, all joined in the general transport. Arms were quickly sent for and obtained from the nearest depôts in the district; officers and colonels of battalions elected; provisional juntas of government formed in the chief towns to direct the affairs of the provinces; and, in the absence of all central authority, local governments soon sprung up in every part of the kingdom. Spain awoke from the slumber of centuries, and started at once to her feet with the vigour and resolution of an armed man. Passing over, in disdain, the degradation or insignificance of the Bourbon dynasty, the people came forth fresh for the combat, glowing with the recollections of the Cid and Pelajo, and the long struggle with the Moors, and the heroic days of the monarchy. Nor was this extraordinary and unanimous burst of feeling lost in mere empty ebullition; resolving, with a facility peculiar to themselves, into the pristine elements of the monarchy, the different provinces, with unparalleled rapidity, formed separate and independent juntas of government, which early gave a systematic direction to their efforts, and effected the formation of numerous and enthusiastic

legions for their defence. It was easy to foresee how prejudicial to any combined or efficient general operations this unavoidable partition of the directing power into so many separate and independent assemblies must, in the end necessarily prove; but, in the first instance, it tended strongly to promote the progress of the insurrection, by establishing in every province a centre of insulated, detached, and often ill-advised, but still vigorous operations. Before the middle of June, numerous bodies were raised, armed, and to a certain degree disciplined, in all the provinces, and a hundred and fifty thousand men were ready to support the regular army. Even the presence of the French garrisons in the capital and the frontier fortresses could not repress the general effervescence. Almost all the regular soldiers in Madrid escaped, and joined the insurgent bands of New Castile; and even under the guns of their strong castles of Montjuic and St. Juan de Fernando, alarming symptoms of disaffection appeared in Barcelona and Figueras, and their Spanish garrisons almost all made their escape to the enemy.*

In the northern provinces, especially Catalonia, Asturias, Leon, and Galicia, the insurrection took place, and the provincial junta were established in a comparatively regular manner, without any of the usual frightful ebullitions of popular passion; but it was far otherwise in the cities of the south and east of Spain. The usual vehemence and intemperance of the unbridled populace of great towns was there increased by the fiery intermixture of Moorish blood. Frightful atrocities were committed. At Badajoz, the governor, who endeavoured to restrain the furious multitude which surrounded his house clamouring for arms, was dragged out and murdered: numbers were massacred, on the supposition of being agents or partisans of the French, at Carthagena, Granada, Carolina, Cadiz, and other places; and at Cadiz a fearful altercation took place between the governor, Solano, who refused to commence the hostilities which were required of him against the French squadron of five ships of the line, which had lain in the harbour since the battle of Trafalgar, and the ardent populace, who clamoured for an immediate attack. Independently of a secret leaning to the French interest, he naturally hesitated, as an officer of prudence and honour, at taking the decisive step of attacking, without any previous declaration of war or authority from the executive power, a squadron of an allied state which had taken refuge in Cadiz during the hostilities with Great Britain; and he openly expressed an apprehension that, during these dissensions, the English would break in and destroy the fleet of both contending parties. Finding that the popular effervescence was becoming too strong to be openly resisted, he endeavoured to temporize, called a council of war, and gave symptoms of submission to the public wish; but the populace, distrusting his sincerity, broke into his house, and chased him into the house of Mr. Strange, an English merchant, where he was discovered by a bloodthirsty set of assass-

* Napoleon's Notes, App. No. 3. Napier, vol. i. Thiebault, 64, 72. Napier, i., 47. Duhesme's Guerre en Catalogne, 17, 21.

* Tor., i., 173, 175. South., i., 335, 337. Duhesme, 11, 12. Foy, iv., 32, 33. Lond., i., 80, 81. Napier, i., 55.

sins, who dragged him from his place of concealment, notwithstanding the courageous efforts of Mrs. Strange to save his life, and massacred him while on the road towards the gallows. He met his fate with dignity and composure, bidding his heroic supporter, Mrs. Strange, farewell till eternity. Don Thomas Morla, the second in command, was next day nominated to the government of Cadiz by popular acclamation, and immediately entered on the duties of his important office.*

At Valencia, the first burst of popular indignation was accompanied with still more frightful atrocities. Three hundred French merchants or traders had long been established in that city, and when the insurrection broke out there in the end of May, they all, as a measure of precaution, took refuge in, or were sent to the citadel, where they were supposed to be safe from any violence that might arise. An ardent, resolute, and able Franciscan monk, Juan Rico, early acquired, by his powers of public speaking, the lead in the movement; but the junta elected for the government was composed, as in most other instances, of a mixture of persons of noble and plebeian origin. The people, however, early conceived a jealousy of their nobles, and to such a height did that feeling arrive, that the commander of the troops, Don Fernando Saavedra, was massacred before the eyes of

May 29. the Conde Cervellon, a nobleman of the popular side, to whose palace he had fled for safety. This deed of blood was but the prelude to still greater atrocities; and the popular appetite for slaughter being once aroused, the multitude fell, as usual in such circumstances, under the direction of the most worthless and sanguinary leaders. In Valencia there appeared at this period one of those infamous characters who degrade the human race by their cruel deeds, and who is worthy of a place in history beside Robespierre, Collot d'Herbois, and the other political fanatics whose atrocities have forever stained the annals of the French Revolution. P. Balthasar Calvo, a canon of Madrid, denounced the fugitives in the

June 1. citadel to the mob as being in correspondence with Murat for the purpose of betraying that stronghold to the French troops. As invariably ensues in such moments of excitement, strong assertions passed for proofs with the multitude, and no difficulty was experienced in finding persons to undertake the most sanguinary designs. A general massacre of the unfortunate French was resolved on, and its

June 5. execution fixed for the 5th of June. Mingling perfidiously with cruelty, Calvo, on the evening of that day, repaired to the citadel, and told the trembling victims, who already had conceived, from vague rumours, apprehensions of their fate, that their destruction was resolved on, and that their only remaining chance of safety was to avail themselves of the means of escape which, from an impulse of Christian charity, he had prepared for them. Trusting to these perfidious assurances, the unhappy victims agreed to his proposal, and two hundred of them set forth by the wicket

through the walls, which, according to his promise, was left open for them. No sooner had this flight begun, than Calvo, with a band of assassins, hastened to the spot, and spreading the cry that the French were escaping, so worked upon the passions of the populace assembled as to induce them to join his murderers, and they were all massacred on the spot. Wearied with slaughter, and yielding to the solicitations of some benevolent ecclesiastics, who earnestly besought them to desist, the assassins at length agreed to spare those who still survived in the citadel; but no sooner did Calvo hear of this returning feeling of humanity, than he hastened to the spot, and conducted the remaining prisoners outside the walls to a ruined tower called the Tour de Cuarte. There he spread a false report that papers had been found upon them, proving a design to deliver up the citadel to the French, and the mob, again infuriated, fell upon their victims, and despatched them without mercy. Above three hundred French citizens, wholly innocent of the misdeeds of their emperor, perished on that dreadful night; the junta were overawed; the magistrates of the city, elected by popular suffrage, powerless, as might have been expected, in repressing their excesses; and Calvo, drunk with blood, not only despatched his orders from the citadel during the whole massacre, like a sovereign prince, but in the morning was named a member of the junta, at the very moment that Rico was concerting measures for his apprehension, and took his seat, with his clothes yet drenched with gore, at the council-board of government! It affords some consolation to the friends of virtue to know that the triumph of this miscreant was not of long duration. Excited almost to insanity by his execrable success, he openly aspired to supreme power, and had already given orders for the apprehension of the other members of the government, when a sense of their common danger made them unite, like the Convention on the 9th Thermidor, against the tyrant. He was suddenly arrested and sent to Minorca, before the mob, who certainly would have rescued him and massacred the junta, were aware of his seizure. There he was strangled in prison, and the government, having regained their authority by this vigorous act, two hundred of his associates underwent the same fate: a severe but necessary deed of public justice, which at least rescued the nation generally from the disgrace of these atrocious deeds, and indicating a very different standard of public morality from that which prevailed in France during its Revolution, where not only were such crimes almost invariably committed with impunity, but their perpetrators elevated to the highest situations in the state.*†

* Tor., i., 236, 244. Foy, iii., 244, 247. South., i., 363, 370.

† Only one prisoner escaped this hideous massacre. Chance had selected for his murderer a man whom he had frequently relieved in prison; the wretch recognised his benefactor, and though he twice raised his dagger to strike him, yet twice a sense of pity arrested his uplifted arm, and at length he suffered him to escape, in the obscurity of the night, among the populace. An extraordinary instance of presence of mind occurred in the daughter of the Count de Cervellon. The people, distrustful of their leaders, had insisted that the mail from Madrid should be brought to the count, and the letters it contained publicly read: hardly was it opened when one from the *Auerda Real* was discov-

* South., i., 341, 356. Nell., i., 134, 143. Tor., i., 209, 214. Foy, i., 201, 208.

These deplorable disorders sufficiently demonstrated that even the best of causes could not obviate the dangers of popular insurrection, and that, unless the higher orders and holders of property early and courageously exert themselves to obtain its direction, a revolutionary movement, even when called forth by the national defence, speedily falls under the guidance of the most depraved of the people. But by adopting this prudent and patriotic course, the higher classes at Seville succeeded, not only in preserving their own city from servile atrocities, but acquired an ascendancy which was attended with the greatest public benefit, and gave their junta almost the general management of the affairs of Spain. There, as elsewhere in the South, the public effervescence began with murder, and the Count d'Aguila, one of the chief magistrates and most enlightened citizens, who became the innocent object of their suspicion, fell a victim to the ungovernable passions of the populace, who, when too late, lamented the irreparable crime they had committed. Speedily, however, the junta was elected; and, happily, though all ranks were represented, a preponderance of votes in the twenty-three members of which it was composed were in the hands of the nobility. The wisdom of the choice which had been made soon appeared in the measures which were adopted: immediately they despatched couriers to Cadiz and Algeiras to secure the co-operation of the naval and military forces who were there assembled; and by the aid of CASTANOS, the commander of the former, who was at the head of the troops before Gibraltar, in the camp of St. Roche, and who had already entered into communication with Sir Hugh Dalrymple, the governor of that fortress, the entire co-operation of the army was secured. A violent demagogue, named Tap-y-Nunez, who had acquired a great sway over the populace, and who required that the nobility should be expelled from the junta, was arrested and sent to Cadiz, and this necessary act of vigour confirmed the authority of the provisional government. At its head was Don Francisco Saavedra, who had formerly been minister of finance, and P. Gil de Sevilla, who had both been sufferers under Godoy's administration; and the combined prudence and energy of their measures formed a striking contrast to the conceit, declamation, and imbecility which, in many other quarters of the Peninsula, afterward rendered nugatory all the enthusiasm of the people. The regular troops were immediately directed towards the Sierra Morena to secure the passes; a general levy of all persons between the years of eighteen and forty-five was ordered; subsidiary juntas formed in all the towns of Andalusia, the great foundry of cannon at Seville, the only one in the south of Spain, put into full activity, and arms and clothing manufactured; war decla-

red in a formal manner against France, and a manifesto issued, which not only eloquently defended the national cause, but contained the most admirable instructions as to the mode of successfully combating the formidable enemy with whom they had to contend.* This declaration from so great a city, containing ninety thousand inhabitants, and possessing all the nobility of the south of Spain within its walls, was of the utmost consequence, and gave, both in reality and in the eyes of Europe, a degree of consistence to the insurrection which it could never otherwise have obtained.†

* Foy, iii, 201, 203. South., i., 342, 346. Tor., x., 204, 207, 215. Espanol., i., 13.

† In this proclamation, which may be considered as the national declaration of Spain against France, it was not less justly than eloquently observed, "The king, to whom we all swore allegiance with emotions of joy unprecedented in history, has been deceived from us; the fundamental laws of our monarchy have been trampled under foot; our property, customs, religion, laws, wives, and children are threatened with destruction; and a foreign power has done this; done it, too, not by force of arms, but by deceit and treachery; by converting the very persons who call themselves the heads of our government into instruments of these atrocious acts. It therefore became indispensable to break our shackles, and to demonstrate that noble courage with which, in all former ages, the Spanish people have defended their monarch, their laws, their honour, their religion. The people of Seville have assembled, and, through the medium of all their magistrates and constituted authorities, and the most respectable individuals of every rank, formed this supreme council of government. We accept the heroic trust; we swear to discharge it; and we reckon on the strength and energy of the whole nation. We have again proclaimed Ferdinand VII., again sworn allegiance to him; sworn to die in his defence: this was the signal of our union, and it will prove the forerunner of happiness and glory to Spain."

Proclamation of the junta of Seville against Napoleon.

"The abdication, extorted by such detestable artifices from Ferdinand, was void, from want of authority in him who made it. The monarchy was not his to bestow, nor is Spain composed of animals subject to the absolute control of their owners. His title to the throne was founded on his royal descent and the fundamental laws of the realm. His resignation is void, from the state of compulsion in which it was made, from the want of consent in the nation to whom it related, from the want of concurrence in the foreign princes, the next heirs in succession to the throne. The French emperor summoned a few deputies, devoted to himself, to deliberate in a foreign country, and surrounded by foreign bayonets, on the most sacred concerns of the nation; while he publicly declared a respectful letter, written to him by Ferdinand VII. when Prince of Asturias, was a criminal act, injurious to the rights of the sovereign! He has resorted to every other means to deceive us; he has distributed, with boundless profusion, libels to corrupt public opinion, in which, under the mask of respect for the laws and our holy religion, he covertly insults both. He assures us that the supreme pontiff sanctions his proceedings, while it is notorious that he has despoiled him of his dominions, and forced him to dismiss his cardinals, to prevent him from conducting the government of the Church according to its fundamental constitution. Every consideration calls on us to unite and frustrate views so atrocious. No revolution exists in Spain; our sole object is to defend all we hold most sacred against the invader who would treacherously despoil us of our religion, our monarchy, our laws. Let us, therefore, sacrifice everything in a cause so just; and if we are to lose all, let us lose it combating like brave men. Let all, therefore, unite: the wisest and ablest in refuting the falsehoods propagated by the enemy; the Church in imploring the assistance of the God of hosts; the young and active in marching against the enemy. The Almighty will vouchsafe his protection to so just a cause; Europe will applaud our efforts, and hasten to our assistance; Italy, Germany, the North, suffering under the despotism of France, will eagerly avail themselves of the example set by Spain to shake off the yoke, and recover their liberty, their laws, their independence, of which they have been robbed by that nation."

Special and prudent instructions were at the same time given for the conduct of the war. "All general actions are to be avoided as perfectly hopeless and highly dangerous: a war of partisans is what suits both our national character and physical circumstances. Each province should have its junta, its generals, its local government, but there

ered, to Murat, exultating himself from the share he had taken in the insurrection, and demanding troops. The courageous young lady, who was present, instantly seized the letter, and tore it in pieces in presence of the multitude, saying it related to her own private affairs; thereby saving the whole members of the junta from immediate death, though at the imminent hazard of her own life.—See SOUTHEY, i., 367, and TORENO, i., 234, 235.

Prudent instructions to their troops.

The first important blow struck at the French was delivered at Cadiz. The fleet there, consisting of five ships of the line and one frigate, early excited the jealousy of the inhabitants, to whom the French flag had become an object of perfect abhorrence; while Lord Collingwood, at the head of the English fleet, which lay off the harbour, effectually prevented their departure. To withdraw as far as possible from the danger, Rosilly, the French admiral, warped his ships in the Canal of Caracca to such a distance as to be beyond the reach both of the fire of the castles and the fleet; and at the same time endeavoured, by negotiating, to gain time for the arrival of the succours under Dupont, which he was aware were rapidly approaching through La Mancha and the Sierra Morena. Equally sensible, however, with his skilful opponent, of the importance of time in the operation, the Spanish general, Morla, insisted upon an immediate surrender, and constructed batteries in such places as to command the French ships even in their new stations. Lord Collingwood, who, with the English fleet in the bay, was an impatient spectator of those hostile preparations, offered the assistance of the British squadron to ensure the reduction of the enemy; but the offer was courteously declined, from a wish, no doubt, that England might have no ground for any claim to the prizes which were expected. At length, on the 9th of June, a sufficient number of guns being mounted, a heavy fire was opened upon the French ships, which, being in a situation where they could not make any reply, soon produced a sensible effect, and led to a negotiation which terminated June 14. in the unconditional surrender of the whole French fleet five days afterward. Thus was the last remnant of that proud armament, which was intended to convey the invincible legions of Napoleon to the British shores, finally reft from the arms of France, and that, too, by the forces of the very allies who were then ranged by their side for our subjugation.*

In the northern provinces the insurrection spread with much fewer circumstances of atrocity, but an almost equal degree of enthusiasm. Excepting Barcelona, Figueras, St. Sebastian, and a few other places where the French garrisons overawed the people, they everywhere rose in arms against their oppressors. A junta for the Asturias was formed before the end of May at Oviedo, the capital of Asturias, the first which was organized in Spain, and which thus gave to that province a second time the honour of having taken the lead in the deliverance of the Peninsula. The first step of this body was to despatch deputies to England, soliciting arms, am-

munition, and money, whose arrival produced an extraordinary impression, as will immediately be shown, in the British isles. The junta of Galicia, secure behind their almost inaccessible mountains, took the most vigorous measures to organize the insurrection, and May 29. not only arrayed all the regular soldiers of Ferrol and Corunna under its standard, but summoned the Spanish troops, ten thousand strong, to join them without delay: a summons which was immediately obeyed by the whole body, who set out for Galicia by the route of Traz oz Montes, and thus laid the foundation of a powerful force on the flank and rear of the invader's communications. A junta was formed at Llerida, which assumed the general direction of the affairs of Catalonia, and soon arrayed thirty thousand hardy mountaineers under the national colours, while, nothing daunted by the proximity of France, and the alarming vicinity of powerful French corps, the Arragonese proclaimed Ferdinand VII. at Saragossa; and, after choosing the young and gallant Palafox for their commander, who had attended Ferdinand to Bayonne, and escaped from that fortress, issued a proclamation, in which they declared their resolution, should the royal family be detained in captivity or destroyed by Napoleon, of exercising their right of election in favour of the Archduke Charles, as grandson of Charles III. and one of the imperial branch of the Spanish family.*

From the outset, Napoleon was fully impressed with the importance and danger of this contest, and in an especial manner alive to the vital consequence of preserving entire the communications of the army, which had been pushed forward into the very heart of the kingdom, with the French frontier. Murat, after the catastrophe of the 2d of May, had been taken ill and withdrawn from Madrid, and was on his route to take possession of the throne destined for him on the shores of Naples, and he had been succeeded in the general direction of affairs at Madrid by Savary. Napoleon, on his departure from Bayonne, spoke to him in such a way as sufficiently demonstrated his growing anxiety for the issue of the contest, as well as the sagacity with which he had already discerned in what way it was most likely to be brought to a successful issue.† Re-enforcements were poured into Spain with all possible expedition; Burgos, Vittoria, and all the principal towns along the great road to Madrid from Bayonne, were strongly occupied; General Dupont, with his whole corps, was moved from La Mancha towards the Sierra Morena and Andalusia.

* South., i., 337, 341, 372, 378. Foy, iii., 190, 192. Torr., i., 181, 195, 245, 250. Napier, i., 57.

† "The essential point," said he, "at this moment, is to occupy as many places as possible, in order to have the means of diffusing the principles which we wish to inculcate upon the people; but, to avoid the dangers of such a dispersion of force, you must be wise, moderate, and observe the strictest discipline. For God's sake, permit no pillage. I have heard nothing of the line which Castanos, who commands at the camp of St. Roche, will take; Murat has promised much on that head, but you know what reliance is to be placed on his assurances. Neglect nothing which can secure the rapidity and exactness of your communications; that is the cardinal point; and spare nothing which can secure you good information. Above all, take care to avoid any misfortune; its consequences would be incalculable."—SAVARY, iii., 247, 251.

* should be three generals-in-chief: one for Andalusia, Murcia, and Lower Estremadura; one for Galicia, Leon, the Castles, Asturia; one for Valencia, Arragon, Catalonia. France has never domineered over us, nor set foot with impunity in our territory. We have often mastered her, not by deceit, but force of arms; we have made her kings prisoners, and the nation tremble. We are the same Spaniards, and France, and Europe, and the world shall see we have not degenerated from our ancestors."—*Proclamation of the Junta of Seville, June 6, 1808.* SOUTHEY, i., 389, 393.

* Torr., i., 217, 218. Foy, iii., 213, 214. Collingwood, ii., 43.

lusia, in order to overawe Seville and Cordova, and, if possible, disengage the French squadron at Cadiz; and Marshal Moncey detached into Valencia, with instructions to put down, at all hazards, the violent and bloodthirsty revolution which had burst forth in that province.*

But while making every preparation for military operations, the French emperor, at the same time, actively pursued those civil changes at Bayonne to which, even more than the terror of his arms, he trusted for subjugating the minds of men in the Spanish Peninsula. The Assembly of Notables met at that fortress on

the 15th of June, agreeably to the summons which they had received, and they comprised the principal nobility and a large proportion of the leading characters in Spain. Having been selected by the junta of government at Madrid, without the form even of any election by the people, they were entirely in the French interest, and the mere creatures of the emperor's will. Their proceedings formed a singular and instructive contrast to the generous and fearless bursts of indignant hostility with which the resignations at Bayonne had been received by the middling and lower orders through the whole of Spain. Even before the

June 8. assembly had formally met, such of them as had arrived at Bayonne published an address to their countrymen, in which they indulged in the usual vein of flattery to the astonishing abilities and power of the august emperor, and strongly advised them to accept his brother for their sovereign.† The levees of Joseph were attended by all the chief grandees of Spain; every day appeared to add to the strength of the party who were inclined to support his elevation to the throne. All the principal counsellors of Ferdinand, Cevallos, Escoiquiz, and others, not only took the oath of allegiance to the new monarch, but petitioned to be allowed to retain their honours and employments under the new dynasty.‡ The Spanish corps in Holstein took

the oath of allegiance to Joseph, but under a reservation that his appointment was ratified by a free cortes, convened in June 17 Spain according to the fundamental customs of the monarchy. A proclamation was addressed by the new king, in which he June 10

accepted the cession of the crown of Spain made to him by his august brother, Napoleon I., and appointed Murat his lieutenant-general. The consent of Russia was already secured to all the changes in the Peninsula; and, in order to reconcile the other courts of Europe to them, an elaborate circular note was June 24

addressed to all their cabinets, in which it was announced that "the occupation of the kingdoms of Spain and Portugal, the regeneration of these fine nations, the creation of the fleets at Cadiz and the Tagus, would be a mortal stroke to the power of England, and put the finishing hand to the triumph of the maritime system, in which all the Continental powers were so warmly interested." Finally, on the 15th of June, ninety-two deputies, out of one hundred and fifty summoned, assembled at Bayonne, and formally accepted the Constitution prepared for them by the Emperor Napoleon.*

By this constitution it was provided that the crown was to be vested in Joseph Constitution of Bayonne given by Napoleon to the Spaniards. and his heirs-male; whom failing, the emperor and his heirs-male; and in default of both, to the other

brothers of the imperial family, in their order of seniority, but under the condition that the crown was not to be united on the same head with another. The Legislature consisted of a Senate of 80 members, nominated by the king: a Cortes, consisting of 172 members, arranged in the following proportions and order: 25 archbishops and bishops, and 25 grandees on the first bench; 62 deputies of the provinces of Spain and the Indies; 30 of the principal towns; 15 of the merchants and manufacturers; and 15 of the arts and sciences. The first fifty, composing the peers, were appointed by the king, but could not be displaced by him; the second class were elected by the provinces and municipalities; the third was appointed by the king out of lists presented to him by the tribunals and chambers of commerce, and the universities. The deliberations of the Cortes were not to be public; none of their proceedings were to be published, under the penalties of high treason; the finances and expenditure were to be settled by them at one sitting for three years; the colonies were constantly to have a deputation of twenty-two persons at the seat of government to superintend their interests; all exclusive exemptions from taxation were abolished; entails permitted only to the amount of 20,000 piasters, and with the consent of the king; an alliance, offensive and defensive,

goodness and humanity, induce us to hope that, considering the need which these princes have of a continuation of their services in the situations which they respectively held under the old dynasty, the magnanimity of your august majesty will induce you to continue them in the enjoyments of the estates and offices which they formerly held. Assured thus of the continuance of the posts which they have hitherto enjoyed, they will ever prove faithful subjects to your majesty, and true Spaniards, ready to obey blindly even the smallest wish which your majesty may express."—Signed, SAN CARLOS, JUAN ESCOQUIZ, MARQUIS AVERLEB, and others, June 22, 1808. † "An irresistible sense of duty, an object as sacred as it is important, has made us quit our homes, and led us to the invincible emperor of the French. We admit it; the sight of his countrymen, glory, of his power, was fitted to dazzle us; but we arrived here already determined to address to him our reiterated supplications for the prosperity of a monarchy of which the fate is inseparably united with our own. But judge of our surprise when we were received by his imperial and royal majesty with a degree of kindness and humanity not less admirable than his power. He has no other desire but that of our preservation and happiness. If he gives us a sovereign to govern us, it is his august brother Joseph, whose virtues are the admiration of his subjects. If he is engaged in modifying and correcting our institutions, it is in order that we may live in peace and happiness. If he is desirous that our finances should receive a new organization, it is in order to render our navy and army powerful and formidable to our enemies. Spaniards! worthy of a better lot, avoid the terrible anarchy which threatens you. What benefit can you derive from the troubles fomented by malevolence or folly? Anarchy is the greatest curse which God can inflict upon mankind: during its reign, unbridled license sacks, destroys, burns everything; worthy citizens, men of property, are invariably the first victims, and an abyss of horror follows its triumphs."

—Proclamation of the grandees of Spain to their countrymen, dated Bayonne, June 8, 1808. NELLETO, ii., 214, No. 70.

‡ "The subscribers have given the strongest proofs of their fidelity to the former government; they deprecating letter of Escoiquiz and trust it will be considered as the surest Ferdinand's counsellors to Joseph. pledge of their sincerity of the oath which they now take of obedience to the new Constitution of their country, and fidelity to the King of Spain, Joseph I. The generosity of your Catholic majesty, your

'was concluded with France, and a promise held out of the establishment of the liberty of the press within two years after the commencement of the new Constitution.*

Everything was conducted by the junta of notables at Bayonne to the entire satisfaction of Napoleon. The grandees of Spain rivalled his own senate in graceful adulation of his achievements, in obsequious submission to his will. When the

Constitution was read to them, it was received with transport, and adopted by acclamation; thunders of applause shook the hall when the new king made his appearance in his royal robes; when he retired, two medals

July 7. were unanimously voted to record the memorable acts of Bayonne; and the assembly, in a body, hastened to the emperor to lay at his feet the homage of their gratitude for the unparalleled services which he had rendered to their country. There was in the flattery of the Spanish nobles a mixture of studied servility with Oriental grandiloquence, which was novel and agreeable to a sovereign who had exhausted all the arts of European adulation.†

July 9. Two days after, the new king set out for the capital of his dominions; he was accompanied as far as the frontier by his imperial brother in a splendid cortège of a hundred carriages, and crossed the Bidassoa amid the roar of artillery and all the pomp of more than regal

July 20. magnificence. On the 20th, Napoleon himself set out from Bayonne, having first given such instructions to Savary as he deemed sufficient to bring the insurrection, which had now broken out on all sides, to a successful issue; and returned by Pau, where he visited the birthplace of Henry IV., Bourdeaux, La Vendée, the mouth of the Loire, Nantes, and Tours, to St. Cloud, which he reached in the middle of August. Meanwhile, Fer-

Aug. 14. dinand VII., resigning himself to his chains, wrote to the emperor from Valençay, thanking him for his condescension, and requesting permission to meet him on his

July 26. route to lay his homage at his feet,‡

* See Constitution of Bayonne, Thib., vi., 402, 403, and Tor., i., 292, 295.

† "Sire!" said M. Azanza, the president of the notables, "the junta of Spain has accomplished the glorious task for which your majesty convened it in this city. It has accepted, with as much eagerness as freedom, the great charter, which fixes upon a sure foundation the happiness of Spain. Happily for our country, an overruling Providence has employed your irresistible hand to snatch it from the abyss into which it was about to be precipitated. It is well that it was irresistible; for an inexplicable blindness has caused those who ought most to rejoice at this benefit to misapprehend it. But all Spain, sire! will open its eyes. It will see that it required a total regeneration, and that from your majesty alone it could obtain it. Public evil was at its height; the agents of a feeble government devoured the public patrimony, or extended unceasingly the limits of arbitrary power; the finances were a chaos; the public debt an abyss; the period of total dissolution was approaching. To what other power but that of your imperial and royal majesty could it be reserved, not merely to arrest the evil, but entirely to remove it? Such are the wonders, sire, which you have wrought in a few days, and which fill the world with astonishment."—SOUTHEY, i., 436, 437.

‡ "My uncle and brother have been equally charmed with myself at the announcement of the arrival of your imperial and royal majesty at Pau, which brings us nearer your presence; and since, whatever route you choose, you must pass near this, we should regard it as a very great satisfaction if your imperial and royal majesty would per-

which was not granted; and Charles IV., after testifying his entire satisfaction with the palace, parks, and country around Compeigne, requested permission, on account of his health, to pass the winter in a warmer climate, which was graciously accorded, and July 5 and in the autumn he moved to Marseilles, Aug. 1. where he lingered out in ease and obscurity the remainder of his inglorious life.*

The ministry appointed by Joseph, before his departure from Bayonne, was mainly taken from the counsellors of the Prince of Asturias; and this selection, joined to their ready acceptance of their new dignities, throws a deep shade of doubt over

the fidelity with which they had served that unhappy prince during his brief but eventful possession of the throne. Don Luis de Urquijo was made secretary of state; Don Pedro Cevallos, minister for foreign affairs; Don Sebastian de Pinuela and Don Gonzalo O'Farrel, ministers of justice and at war; Don Miguel Azanza obtained the colonies, and Mazaredo the marine. Even Escociquiz wrote to Joseph, protesting his devotion to him, and declaring that he and the rest of Ferdinand's household "were willing to obey his will blindly, down to the minutest particulars." The

Duke del Infantado was appointed June 22, 1808. to the command of the Spanish, and the Prince of Castel-Franco to that of the Walloon Guards. Joseph entered Spain surrounded with the highest grandees and most illustrious titles of Spain. He reached Madrid on the 20th, having

July 20. lingered for several days at Burgos and Vittoria, and received there the oaths of allegiance from the Council of State, the Council of the Indies, and that of the finances. His reception in the capital was melancholy in the extreme; orders had been given that the houses of the inhabitants should be decked out to receive their new sovereign, but very few obeyed the injunction. A crowd assembled to see the brilliant cortège and splendid guards which accompanied the king, but no cheers or applauses were heard. Every countenance bore a mournful expression; hardly any ladies appeared at the windows, notwithstanding the passionate fondness of the Spanish women for such displays. The bells of all the churches rang together, but they resembled rather the dismal toll at the interment of the dead, than the merry chime which announces a joyful event to the living.†

To the honour of Spain and of human nature it must be stated, that in the midst of this humiliating scene of aristocratic baseness, some sparks of an independent spirit were elicited, and some men in high station asserted the ancient honour of the Spanish character. When the Duke del Infantado, at the head of the grandees

Honourable instances of resistance to the general torrent of adulation among the grandees in his favour.

mit us to meet you, and renew in person those homages of sincere attachment and respect which we all feel, if it is not inconvenient."—FERDINAND VII. to NAPOLEON, July 26, 1808; NELLERTO, ii., 262. Napoleon, however, declined the honour, and never saw Ferdinand or any of his family more.

* See the Letter in Nell., ii., 262. Thib., vi., 406, 408. Tor., i., 294, 295.

† Thib., vi., 427. Tor., i., 355. South., i., 482.

of the monarchy, delivered their address to the new sovereign, he concluded it with these words: "The laws of Spain do not permit us to go farther at present. We awaited the decision of the nation, which can alone authorize us to give a freer vent to our sentiments." No words can convey an idea of the anger of Napoleon at this unexpected reservation. Instantly approaching the duke, he said, "As you are a gentleman, you should conduct yourself as such; and instead of disputing here on the words of an oath, which you will doubtless violate as soon as you have an opportunity, you would do better to withdraw at once, put yourself at the head of your party, and combat there openly and honourably. But you may rest assured, that if you take an oath here, and afterward fail in its performance, before eight days you shall be shot." This violent apostrophe intimidated the duke; the address was corrected, and delivered as above-mentioned, by Azanza; but the duke retained his opinions, and ere'long appeared in the ranks of his country. The Council of Castile prefaced their address by the fulsome expression, "Your majesty is one of the principal branches of a family destined by Heaven to reign over mankind;" but they eluded, by alleging want of authority, the simple and unqualified taking of the oath of allegiance. Jovellanos, who had been liberated by the resignation of Charles IV. and the fall of Godoy from his long captivity in the dungeons of Minorca, was offered by Joseph the portfolio of the minister of the interior; but the lengthened sufferings of that incorruptible patriot, under an oppressive government, could not blind him to the injustice now attempted by his deliverers, and he declared his resolution to abide by the fortunes of his suffering countrymen rather than accept wealth and greatness from their oppressors.* The Bishop of Orense, when nominated as one of the junta to proceed to Bayonne by the regency of Madrid,† returned an answer declining the honour in such independent and elevated terms as must forever command the respect of the generous among mankind.‡

* "I am resolved," said he, in reply to the reiterated entreaties of Joseph and his ministers, "to decline the place in the administration which you offer me; and I am convinced that you will strive in vain to overcome the resistance, by means of exhortations, of a people so brave and resolute to recover their liberties. Even if the cause of my country were as desperate as you suppose it, it will never cease to be that of honour and loyalty, and which every good Spaniard should embrace at any hazard."—TORENO, i., 299.

† Tor., i., 281, 299, 413. *Pièces Just.*

‡ "Spain," said this courageous prelate, in his letter to the junta at Madrid, "now sees in the

French emperor the oppressor of its princes and its own tyrant; it feels itself enslaved, while it is told of its happiness; and these chains it owes even less to perjury than the presence of an army which it admitted to its strongholds when in terms of perfect amity. The nation is without a king, and knows not which way to turn. The abdication of its sovereign, and the appointment of Murat as lieutenant-general of the kingdom, all took place in France amid foreign armies, and under the eyes of an emperor who conceived he was bestowing prosperity on Spain by placing on her throne a prince of his own family. The supreme junta has against it a thousand rumours, besides its armed president and the troops which surround it; all which forbid its acts from being regarded as those of a free assembly. The same may be said of the councils and tribunals of justice. What a chaos of confusion, of misfortune to Spain! and will these misfortunes be avoided by an assembly held without the kingdom, convened in a situation where its deliberations

Future ages will find it difficult to credit the enthusiasm and transport with which the tidings of the insurrection in Spain were received in the British islands. The earliest accounts were brought by the Austrian deputies, who reached London in the first week of June; and their reports were speedily confirmed and extended by the accounts from Corunna, Cadiz, and Gibraltar. Never was public joy more universal. As the intelligence successively arrived of province after province having risen in indignant fury against the invader, and boldly hoisted the flag of defiance to his legions, the general rapture knew no bounds. It was evident now, even to the most ordinary capacity, that the Revolutionary ambition of France had brought it into violent collision with the patriotic and religious feelings of a high-spirited and virgin people. "Never," says Southey, "since the glorious morning of the French Revolution, before one bloody cloud had risen to overcast the deceitful promise of its beauty, had the heart of England been affected by so generous and universal a joy." All classes joined in it; all degrees of intellect were swept away by the flood. The aristocratic party, who had so long struggled, with almost hopeless constancy, against the ever-advancing wave of Revolutionary ambition, rejoiced that it had at last broke on a rugged shore; and that, in the insolence of apparently unbounded power, it had finally proceeded to such extremities as had roused the impassioned resistance of a gallant people. The lovers of freedom hailed the Peninsular contest as the commencement of the first real effort of THE PEOPLE in the war. Former contests had lain between cabinets and armies on the one side, and Democratic zeal, ripened into military prowess, on the other; but now the case was changed; it was no longer a struggle for the power of kings or the privileges of nobles; the energy of the multitude was roused into action, the spirit of liberty was enlisted in the cause; the mighty lever which had shaken all the thrones of Europe had now, by the imprudence of him who wielded it, fallen into the hands of the enemy; it would cast down the fabric of imperial, as it had done that of regal power. With honest zeal and fervent sympathy, the great body of the British people united heart and soul with the gallant nation who, with generous, perhaps imprudent enthusiasm, had rushed into the contest for their country's independence, and loudly called on the government to take their station by their side, and stake all upon the issue of so heart-stirring a conflict; while the few sagacious and well-informed observers, whom the general transport permitted to take a cool survey of the probable

Universal joy with which the news of the insurrection is received in England.

can never be regarded as free! And if to the tumultuous movements which menace the interior of the kingdom we add the pretensions and probable pretensions of princes and powers abroad, and the probable intervention of a foreign armed force in the contests of which the Peninsula will soon be the theatre, what can be imagined more frightful or more worthy of pity? Cannot the love and solicitude of the emperor find some other mode of manifesting itself than by such measures as will lead to its ruin rather than its cure?"—Answer of PEDRO, Bishop of ORENSE, to the junta of government at Madrid, which had named him as representative at Bayonne, May 29, 1808; TORENO, i., 413, 414; *Pièces Just.*

issue of the contest, observed with satisfaction that the ambition of the French emperor had at length offered a seagirt and mountainous region for a battle-field, where the numerical inferiority of the British armies would expose them to less disadvantage than in any other theatre of European warfare.*

The first notice taken of these animating events in the British Parliament was on the 15th of June, when the subject was introduced in a splendid speech by Mr. Sheridan, which merely embodied, in glowing language, the feelings which then, with unprecedented unanimity, agitated the British heart. "Never before," he exclaimed, "had so happy an opportunity existed for Great Britain to strike a bold stroke for the rescue of the world. Hitherto Bonaparte had run a victorious race, because he had contended with princes without dignity, ministers without wisdom, or people without patriotism; he had yet to learn what it was to combat a people who were animated with one spirit against him. Now was the time to stand up boldly and fairly for the deliverance of Europe; and if the ministry would co-operate effectually with the Spanish patriots, they should receive from him as cordial a support as if the man whom he most loved† were restored to life. Will not the animation of the Spanish mind be excited by the knowledge that their cause is espoused, not by the ministers merely, but the Parliament and people of England? If there be a disposition in Spain to resent the insults and injuries, too enormous to be described by language, which they have endured from the tyrant of the earth, will not that disposition be roused to the most sublime exertion by the assurance that their efforts will be cordially aided by a great and powerful nation? Never was anything so brave, so noble, so generous, as the conduct of the Spaniards; never was there a more important crisis than that which their patriotism has thus occasioned to the state of Europe. Instead of striking at the core of the evil, the administrations of this country have hitherto gone on nibbling merely at the rind; filching sugar islands, but neglecting all that was dignified and consonant to the real interests of the country. Now, therefore, is the moment to let the world know that we are resolved to stand up, firmly and fairly, for the salvation of Europe. Let us, then, co-operate with the Spaniards, but co-operate in an effectual and energetic way; and if we find that they are really resolved to engage heart and soul in the enterprise, advance with them in a magnanimous way, and with an undaunted step, for the liberation of mankind. Formerly, the contest in La Vendée afforded the fairest chance of effecting the deliverance of Europe; but that favourable chance was neglected by this country. What was then neglected was now looked up to with sanguine expectation; the only hope now was that Spair might prove another La Vendée. Above all, let us mix no little interests with this mighty contest; let us discard or forget British objects, and conduct the war on the great principles of generous support and active co-operation."‡

These generous sentiments, worthy of the real friends of freedom and the leaders of the liberal party in its last asylum, found a responsive echo in the members of administration. Mr. Secretary Canning replied: "His majesty's ministers see, with as deep and lively an interest as my right honourable friend, the noble struggle which the Spanish nation are now making to resist the unexampled atrocity of France, and preserve the independence of their country; and there exists the strongest disposition on the part of the British government to afford every practicable aid in a contest so magnanimous. In endeavouring to afford this aid, it will never occur to us to consider that a state of war exists between this country and Spain. Whenever any nation in Europe starts up with a determination to oppose a power which, whether professing insidious peace or declaring open war, is alike the common enemy of all other people, that nation, whatever its former relation may be, becomes *ipso facto* the ally of Great Britain. In directing the aid which may be required, government will be guided by three principles: to direct the united efforts of both countries against the common foe; to direct them in such a way as shall be most beneficial to our new ally, and to such objects as may be most conducive to British interest. But of these objects, the last will be out of all question compared with the other two. I mention British objects chiefly for the purpose of disclaiming them as any material part of the considerations which influence the British government. No interest can be so purely British as Spanish success; no conquest so advantageous to England as conquering from France the complete integrity of Spanish dominions in every quarter of the globe."§

This debate marks, in more ways than one, an important era in the war, and indicates a remarkable change in the sentiments with which it was regarded by a large portion of the liberal party in the British dominions. There were no longer any apologies for Napoleon or the principles of the Revolution; no deprecation of any attempt to resist the power of France, as in the earlier periods of the war. The eloquent declamations of Mr. Fox and Mr. Erskine in favour of the great Republic—their sophistical excuses for the grasping ambition in which its fervour had terminated—had expired. Experience and suffering, danger and difficulty, had in a great degree subdued even political passion, the strongest feeling, save religious, which can agitate mankind. Mr. Sheridan and Mr. Windham, from the *opposition* benches, earnestly called on the government to engage deeply in the war; they loudly and justly condemned the selfish policy and Lilliputian expeditions of the aristocratic government in its earlier years, and demanded, in the name of public freedom, that England should at last take her appropriate place in the van of the conflict, and, disregarding all selfish or exclusively national objects, stand forth with all her might for the deliverance of mankind. In such sentiments, from such men, none but the vulgar and superficial could see any inconsistency with their former

opinions; whatever others might do, it was not to be supposed that the highest intellects and most generous hearts in the Empire were to gaze all day at the east in hopes of still seeing the sun there. Resistance to French despotism and invasion was not only not inconsistent with, but necessarily flowed from, the real principles of the ardent philanthropists who had formerly opposed the overshadowing what they then deemed the brilliant dawn of the French Revolution; but it had the appearance of change to the numerous class who judge by words instead of things, and are attached, not to abstract principles, but actual parties; and, therefore, the enunciation of such sentiments by any of the Whig leaders not only was an honourable instance of moral courage, but evinced a remarkable change in the general feeling of their party. Not less clearly was the disclamation of interested views or British objects by the ministerial chiefs an indication of the arrival of that period in the contest when the generous passions were at length aroused, and the fervent warmth of popular feeling had melted or overcome that frigid attention to interested objects which, not less than their tenacity and perseverance, is the uniform characteristic of aristocratic governments among mankind.

Animated by such powerful support, from the quarter where it was least expected, the English government made a most liberal provision for its prosecution. The supplies voted for the war-charges amounted to the enormous sum of £48,300,000, to meet which, ways and means, to the value of £48,400,000, were voted by Parliament; and the total income of the year 1808, including the ordinary and permanent revenue, was £86,780,000, and the expenditure £84,797,000. The loan was £10,102,000 for England, and £2,000,000 for Ireland, and the new taxes imposed were only £300,000; the chancellor of the Exchequer having adhered, in a great measure, to the system approved of by both sides of the House in the finance debates of the preceding year, of providing for the increased charges of the year and the interest of the loans, in part at least, by an impignoration, in time of peace, of the war-taxes. A subsidy of £1,100,000 was provided for the King of Sweden. But these sums, great as they are, convey no adequate idea of the expenditure of this eventful year; April 14. the budget was arranged in April, before the Spanish contest had arisen;* and for the vast expenses with which it was attended, and which, not having been foreseen, had not been provided for, there was no resource but a

† The budget was as follows:

War Income.	
Malt and pension duties	£3,000,000
Bank advances	3,500,000
Surplus of consolidated fund	4,226,876
Surplus income of 1807	2,253,111
War-taxes	20,000,000
Lottery	300,000
Exchequer bills	4,500,000
Do. for East India Company	1,500,000
Exchequer bills charged on 1809	1,161,100
Loan*	8,000,000
War income	£48,441,087

* It was afterward, by the vote of credit, extended to 10,100,000.

liberal issue of Exchequer bills, which fell as an oppressive burden upon future years.

The supplies of all sorts sent out during this year to the Spanish patriots, though in great part misapplied or wasted, were on a princely scale of liberality, and worthy of the exalted station which, by consent of all parties, England now took at the head of the alliance. In every province of the Peninsula juntas were established, and to all British envoys were sent, who made as minute inquiries into the wants and capabilities of the district as the circumstances would admit, and received ample powers from government to afford such aid, either in money, arms, clothing, or warlike stores, as they deemed expedient to demand. Supplies of all sorts were, in consequence of these requisitions, sent to Corunna, Santander, Cadiz, Gibraltar, Valencia, Malaga, and other places, with a profusion which astonished the inhabitants, and gave them at least ample means to fit themselves out for the contest in which they were engaged. It may readily be conceived that, amid the enthusiasm and animation of the insurgent provinces, and the universal transport with which the British envoys were received, abundance of room was afforded for misrepresentation or delusion; that the accounts transmitted to government must, in many cases, have been inaccurate; and that, amid the extraordinary profusion with which supplies of all sorts were poured into the country, there were many opportunities afforded to the native authorities of fraud or embezzlement, of which, amid the general confusion, they were not slow of availing themselves. In truth, lamentable experience afterward demonstrated that great part of these magnificent supplies was misapplied or neglected: the money being squandered or secreted, the stores sold or wast-

The increased expenditure arising from the Spanish war, which was not foreseen in the budget, raised the charges to £84,797,000.—See *Parl. Deb.*, xi., 1-15; *Parl. Papers and Ann. Reg.*, 1808, 103-105.

ed, the arms piled and forgotten in magazines, when the patriots in the field were in want of the most necessary part of military equipment. Still, with all these evils, inseparable, probably, from the condition of a country thus driven into a dreadful contest in the absence of any regular government, and unavoidably thrown under the direction of local and recently-elected authorities, alike destitute of the knowledge, unacquainted with the arrangements, and relieved from the responsibility requisite for the faithful discharge of official duty, the prodigal bounty of England was attended with the most important effects upon the progress of the strife. It removed at once the imputation of cautious and prudential policy which the incessant declamations of the French writers, during the former periods of the war, joined to the feeble temporizing measures of preceding cabinets, had so strongly affixed to the British name: it demonstrated the sincerity and energy of a cabinet which thus, with unprecedented profusion, spread abroad in every quarter the means of resistance, and inspired boundless confidence in the resources of a power which, great at all times, seemed capable of gigantic expansion at the decisive moment, and appeared rather to have increased than diminished from a contest of fifteen years' duration.*†

No sooner was Napoleon made aware, by the general progress and formidable character of the insurrection, that a serious contest awaited him, than he set about, with all his usual caution and ability, preparing the means of overcoming its difficulties. Bessières received orders to put Burgos into a state of defence, to detach Lefebvre Desnouettes, with five thousand foot and eight hundred horse, against Saragossa, and to move his main body so as to overawe the insurgents in Biscay, Asturias, and Old Castile. A re-enforcement of nine thousand men was prepared for Duhesme in Catalonia, which, it was hoped, would enable him to make head against the enemy in that quarter; a reserve was organized, under General Drouet, on the Pyrenean frontier of Navarre, which, besides nourishing Bessières with continual additions of force, established five thousand men in the openings of the valleys towards the castle of Jaca, which was in pos-

session of the enemy; another reserve was established in Perpignan, and detachments were stationed in the eastern passes of the mountains. The communications and rear being thus adequately provided for, Marshal Moncey was directed, with part of his corps, to move upon Cuença, so as to prevent any communication between the patriots of Valencia and Saragossa, and subsequently threaten the former city, while Dupont, with two divisions of his corps, ten thousand strong, received orders to proceed across the Sierra Morena towards Cordova and Seville, the remainder of his corps and that of Moncey being stationed in reserve in La Mancha to keep up the communications of the divisions pushed forward, and be in readiness, if necessary, to support either which might require assistance. With so much foresight and caution did this great commander distribute his forces, even against an insurgent peasantry, and an enemy at that period deemed wholly unable to withstand the shock of his veteran legions.‡

The first military operations of any importance were those of Marshal Bessières in Biscay and Old Castile. That able officer was at Burgos, with twelve thousand men, when the insurrection broke out with great violence in all directions

Successful operations of Bessières and Frere in Old Castile and Leon against the insurgents.

around him; and he received advices that a body of five thousand armed men had got possession of the important dépôt of artillery at Segovia, and another assemblage of equal force was arming itself from the royal manufactory of arms at Palencia, while General Cuesta, the captain-general of the province, with a few regiments of regular troops and a strong body of undisciplined peasantry, had taken post at Cabeçon on the Pisuerga. These positions appeared to Savary, who was now the chief in command at Madrid, so alarming, that he detached General Frere with his division, forming part of Dupont's corps, in all haste to Segovia, where he routed the peasantry, and made himself master of all the artillery they had taken from the arsenal, amounting to thirty pieces. Meanwhile, Bessières divided his disposable force into several moveable columns, which, issuing from Burgos as a centre, traversed the country in all directions, everywhere defeating and disarming the insurgents, and reinstating the French authorities whom they had dispossessed. One of these divisions, under Verdier, routed the enemy at Logrono, and, with inhuman and unjustifiable cruelty, put all their leaders to death; another, under Lasalle, broke the armed peasantry at Torquemada, burned the town, pursued them with merciless severity, and entered Palencia on the day following; while a third, under Merle, uniting with Lasalle, made straight for Cuesta at Cabeçon, who accepted battle, but was speedily overthrown, and his whole new levies dispersed, with the loss of all their artillery, and several thousand muskets, which were thrown away in the pursuit. By these successes the whole level country in the upper part of the valley of the Douro was overawed and reduced to sub-

In addition to these immense national supplies, private subscriptions were entered into in the chief towns of the empire, and large sums collected and remitted from the British islands to the Spanish patriots.—*Annual Register*, 1808, 195.

* Napoleon's Orders. Napier, i., App. No. 2. Ibid., i., 60. Foy, iii., 265, 268.

mission. Segovia, Valladolid, Palencia, and all the principal towns which had revolted, were compelled to send deputies to take the oath of allegiance to Joseph; and the terrible French dragoons, dispersing through the smaller towns and villages, diffused such universal consternation, that all the flat country in this quarter submitted to King Joseph and the French; requisitions and taxes were levied without difficulty throughout the whole remainder of the campaign. General Merle, continuing his success, marched northward against the province of Santander in Asturias, forced the rugged passes of Lantuerio and Venta d'Escudo, and descending the northern side of the ridge of Santander, in concert with a portion of the reserve, which the emperor despatched to his assistance, made themselves masters of that town, and forced the intrepid bishop, with his warlike followers, to take refuge in the inaccessible fastnesses of the neighbouring mountains.*

While Leon and Castile were the theatre of these early and important successes, the province of Arragon, though almost entirely destitute of regular forces, was successful, after sustaining several bloody reverses, in maintaining a more prolonged resistance to the enemy. By indefatigable exertions, Palafox and the energetic junta of Saragossa had succeeded in arming and communicating the rudiments of discipline to a tumultuous assembly of ten thousand infantry and two hundred horse, with which, and eight pieces of artillery, his brother,

the Marquis Lazan, ventured to march out of the city and await Lefebvre in a favourable position behind the Huecha. But, though the French were not more than half the number of the enemy, they were, from the want of discipline in their opponents, and their own great superiority in cavalry, much more than a match for them. The peasants withstood, without flinching, several attacks in front; but a vigorous charge in flank threw them into disorder, and a gallant attack by the Polish lancers completed their rout. Notwithstanding this defeat, the Arragonese who had escaped, having received re-enforcements, again

stood firm on the following day at Galur, still nearer Saragossa, and were again overthrown. Upon this, Palafox himself marched out of the capital, at the head of five thousand undisciplined burghers and peasants, and moved to re-enforce the wreck of the former army at Alagon: an advantageous position, four leagues from the capital of the province, on the banks of the Jalon, near its confluence with the Ebro,

where the whole took post. But the undisciplined crowd, discouraged by the preceding defeats, was now in no condition to make head against the French legions. The burghers, at the first sight of the enemy, broke and fled; and though Palafox, with a few pieces of artillery and three companies of regular troops, contrived for long to defend the entrance of the town, they, too, were at last compelled to yield, and retire in disorder into SARAGOSSA, and the French troops appeared before the heroic city. In the first tumult of alarm

the gates were feebly defended, and a battalion of French penetrated by the Corso as far as Santa Engracia; but, being unsupported, it was compelled to retire, and the inhabitants, elated with this trifling advantage, crowded to the walls and prepared seriously for their defence.*

Saragossa, which has now, like Numantia and Saguntum, become immortal in the rolls of fame, is situated on the right bank of the Ebro, in the midst of a fertile plain abounding in olive groves, vineyards, gardens, and all the marks of long-continued civilization. It contained at that period 55,000 inhabitants, though the sword and pestilence consequent on the two memorable sieges which it underwent have since considerably reduced its numbers. The immediate vicinity is flat, and in some places marshy; on the southern or right bank of the river it is bounded by the little course of the Huerba, the bed of which has been converted into a canal, while on the northern, the clearer stream of the Gallego, descending from the Pyrenean summits, falls at right angles into the Ebro. On the southern side, and at a distance of a quarter of a league, rises Mont Torrero, on the side of which is conducted the Canal of Arragon, a noble work, forming a water communication, without a single lock, from Tudela to Saragossa, commenced by the Emperor Charles V. This hill commands all the plain on the left bank, and overlooks the town; several warehouses and edifices, constructed for the commerce of the canal, were intrenched and occupied by twelve hundred men. The city itself, surrounded by a low brick wall, not above ten or twelve feet in height, and three in thickness, interrupted in many places by houses and convents which were built in its line, and pierced by eight gates, with no outworks, could scarcely be said to be fortified. Very few guns were on the ramparts in a state fit for service; but the houses were strongly built, partly of stone, partly of brick, and in general two stories in height, with each story vaulted in the roof, so as to render them nearly proof against fire; and the massy piles of the convents, rising like castles in many quarters, afforded strong positions, if the walls were forced, to a desperate and inflamed population. Few regular generals would have thought of making a stand in such a city; but Florus has recorded that Numantia had neither walls nor towers when it resisted so long and heroically the Roman legions; and Colmenar had said, nearly a century before, with a prophetic spirit, "Saragossa is without defences, but the valour of its inhabitants supplies the want of ramparts."*

The resolution to defend Saragossa cannot with justice be ascribed to the honour of any single individual, as the glory belongs to the whole population, all of whom, in the first movements of confusion and excitement, had a share in the generous resolution. When Palafox retired, after his repeated defeats, into the town, he either despaired of being able to defend it, or deemed it necessary to collect re-enforcements for a prolonged resistance from other quarters, and accordingly set out

June 15.

* Napier, i., 62, 64. Tor., i., 300, 307. Foy, iii., 269, 285.

* Foy, iii., 291, 292. Tor., i., 307, 308. South., i., 457. † Tor., ii., 1, 4. Foy, iii., 293, 294. Nap., i., 65, 66. Cavallero, Siège de Saragossa, 29, 33.

with a small body of regular troops for the northern bank of the river, leaving the armed population nearly unsupported to defend the walls. This measure was well adapted to increase the ultimate means of resistance which might be brought to bear upon the invader, if the town, when left to its own resources, could make head against the enemy; but it exposed it to imminent hazard of being taken, if, in the first moments of alarm consequent on the removal of the captain-general and regular forces, the besiegers should vigorously prosecute their operations. This accordingly happened. On

June 16. the day after the repulse of his first attack, Lefebvre presented himself in greater force before the gates, and commenced an immediate assault. But the people, though without leaders, with surprising energy prepared to repulse it. In the first moment of assault, indeed, a column of the enemy penetrated to the street Santa Engracia; the people, though violently excited, were without leaders or concert, and a few additional battalions would have made the enemy masters of Saragossa. But at this critical moment a desultory fire from some peasants and disbanded soldiers arrested his advance, and the inhabitants, regaining hope from the hesitation of the assailants, exerted themselves with such vigour that the enemy again retired beyond the gates. Instantly the whole population were in activity: men, women, and children flew to the ramparts; cannons were dragged to the gates; loopholes struck out in the walls; fascines and gabions constructed with astonishing celerity, and in less than twenty-four hours the city was secure from a *coup-de-main*.*

The loss sustained by Lefebvre in these unsuccessful assaults was very severe, and sufficient to convince him that operations in form would be requisite before the town could be reduced. He withdrew to a little distance, therefore, from the walls, and sent for heavy artillery from Pampeluna and Bayonne, with a view to the commencement of a regular siege. Meanwhile, Palafox, who had issued into the plain on the left bank of the Ebro, moved to Pina, where he crossed the river and advanced to Belchite, where he joined the Baron Versage, who had assembled four thousand new levies; and uniting everywhere the volunteers whom he found in the villages,

gained, by a circuitous route, the River June 23. Xalon, in the rear of the French army, with seven thousand infantry, a hundred horse, and four pieces of cannon. Some of his officers, seeing so respectable a force collected together, deemed it imprudent to hazard it by attempting the relief of Saragossa, and proposed that they should retire to Valencia. Palafox assembled the troops the moment that he heard of this proposal, and, after describing in energetic colours the glorious task which awaited them of delivering their country, offered to give passports to all those who wished to leave the army. Such was the ascendancy of his intrepid spirit that not one person left the ranks.† Taking

advantage of the enthusiasm excited by this unanimous determination, the Spanish general led them against the enemy, but before they could reach him night had fallen. They took up their quarters, accordingly, at Epila, where they were unexpectedly assailed, after dark, by Lefebvre with five thousand men. The Spanish levies, surprised and unable to form their ranks during the confusion of a nocturnal combat, were easily dispersed, although a few fought with such obstinacy that they only effected their retreat to Calatayud the following morning. Despairing, from the issue of this conflict, of being able to keep the field,* Palafox became sensible that Saragossa must be defended within its own walls, and, making a long circuit, he at length re-en- July 2. tered the city on the 2d of July.

Meanwhile, the besieging force having received heavy artillery and stores from Bayonne and Pampeluna, were vigorously prosecuting their operations, which were in the first instance chiefly directed against Monte Torrero, on the left bank of the river. Destitute at this critical moment of any noble leaders, the people of Saragossa did not at the same time sink under their difficulties. Calvo de Rozas, to whom the command had been devolved in his absence by Palafox, was a man whose calm resolution was equal to the emergency; and he was energetically supported by a plebeian chief, Tió Martin, to whom, with Tio Jorge, of similar rank, the real glory of resolving on defence, in circumstances all but desperate, is due. Encouraged by the intrepid conduct of their chiefs, the people assembled in the public square, and

June 25. with the magistrates, officers, and troops of the garrison, voluntarily took an oath "to shed the last drop of their blood for the defence of their religion, their king, and their hearths." They had need of all their resolution, for the means of attack against them were multiplying in a fearful progression. Verdier, whose talents had been fatally felt by the Prussians and Russians in the Polish campaign, was appointed to the command of the siege; the troops under his command were strongly re-enforced, and Lefebvre detached to act under the orders of Bessières against the insurgents in Leon. At the end of June, the besieging force being augmented to twelve thousand June 26. men, and the battering train having arrived, an attack was made on the Convent of St. Joseph, situated outside of the walls, which at first failed, though the besieged had no other defence than loopholes struck out in the rampart;

that firmness in danger which his speech promised, as he must have fled early and reached Calatayud in the night, though many of the troops arrived there unbroken next morning." Neither the words in italics, nor any corresponding words, are to be found in Cavallero, whom he quotes as his authority, nor in any Spanish historian with whom I am acquainted. Toreno, though an avowed Liberal, after recounting Palafox's speech on this occasion, says, "Such is the power which the inflexible resolution of a chief exercises in critical circumstances." There is not the least reason to suspect the distinguished English author of intentional misrepresentation, but the insinuations here made are vital to the character of Palafox; and as there is no ground for them, at least in the author quoted by him, it is desirable that the authorities on which they are made should be given in the next edition of that able work.—See CAVALLERO, *Siège de Saragossa*, 49; TORENO, ii., 11; and NAPIER, i., 67.

† Colonel Napier, who is never favourable to aristocratic leaders, says that "Palafox, ignorant of war, and probably aided by Tio Jorge (an urban chief of humble origin), expressed his determination to fight," but he "did not display

but, being resumed with greater force, the defences were carried, and the brave garrison, after obstinately defending the church, refectory, and cells, set fire to the edifice, and retreated to the city. Monte Torrero

June 27. was the next object of attack, while a tremendous fire, kept up with uncommon vigour on other parts of the town, diverted the attention of the besieged from the quarter where the real attack was to be made. The commander, despairing of success with the undisciplined crowd under his command, and not aware of the difference between fighting with such troops behind walls and in the open field, evacuated that important post; for which, though perhaps inevitable, he was remitted to a council of war, condemned and executed.*

Having gained this vantage-ground, Verdier commenced a vigorous bombardment of the city, and battered its feeble walls furiously from the advantageous position which had so unexpectedly fallen into his power; and amid the terror and confusion thus excited, made repeated attacks on the gates of El Carmen and Portillo; but such was the ardour and tenacity of the defence, and the severity of the fire kept up from the windows, walls, and roofs of houses, that he was on every occasion repulsed, after desperate struggles, with severe loss. These repeated failures convinced Verdier of the necessity of making approaches in form, and completing the investment of the city, which still received constant supplies of men and provisions from the surrounding province.

July 10. With this view he threw a bridge of boats over the Ebro, and having thus opened a communication with the left bank, the communication of the besieged with the country, though not entirely cut off, was, after hard fighting, for many days restrained within very narrow limits. Before this could be effected,

July 17. however, the patriots received a re-enforcement from the regiment of Estremadura eight hundred strong, with the aid of which they made a desperate sally with two thousand men to retake the Monte Torrero; but, though the assailants fought with the utmost vehemence, they were unable to prevail against the disciplined valour of the French, and were repulsed with very heavy loss, including that of their commander. After this disaster they were necessarily confined to their walls; and the French approaches having been at length completed, the breaching batteries opened against the quarters of St. Engracia and Aljafria, and a terrible bombardment having at the same time been kept up, a powder-magazine blew up with terrific devastation in the public walk of the Cosso. The slender wall being soon laid in ruins, the town was summoned to surrender; but Palafox having rejected the offer, preparations were made for an assault.†

Aug. 3. The storm took place on the 4th of August. Fruitless Palafox at an early hour stationed himself on the breach, and even when the town. the forlorn hope was approaching, refused all terms of capitulation. The combat at

the ruined rampart was long and bloody; but after a violent struggle the French penetrated into the town, and made themselves masters of the street of Santa Engracia. Deeming themselves now in possession of Saragossa, their numerous battalions poured through the deserted breach, overspread the ramparts on either side, while a close column pushed on, with fixed bayonets and loud cheers, from Santa Engracia to the street of Cosso. But a desperate resistance there awaited them. Despite all the efforts of the citizens, they penetrated to the centre of the street, planted the tricolour flag on the Church of the Cross near its middle, and pierced into the Convent of St. Francisco on its left, and the lunatic asylum on its right, whence the insane inmates, taking advantage of the confusion, issued forth, and mingled, with frightful cries, shouts, and grimaces, among the combatants. To add to the consternation, another powder-magazine blew up in the thickest of the fight, and the burning fragments falling in all directions, set the city on fire in many different quarters. But notwithstanding all these horrors, the Spaniards maintained the conflict; an incessant fire issued from the windows and roofs of the houses; several detached bodies of the enemy which penetrated into the adjoining streets were repulsed; a column got entangled in a long crooked street, the Arco de Cineja, and was driven back into the Cosso with great slaughter; Palafox, Calvo, Tio Jorge, and St. Martin vied with each other in heroism; and when night separated the combatants, the French were in possession of one side of the Cosso and the citizens of the other.*

The successful resistance thus made to the enemy after they had penetrated into the city, and the defences of the place, in a military point of view, had been overcome, showed the Saragossans with what prospects they might maintain the conflict even from house to house; but their gallant leader was not without apprehensions that their ammunition might fail, or their defenders be ruinously reduced during so prolonged a struggle; and, therefore, no sooner had the first triumph of the enemy been arrested, than he hastened out of the town to accelerate the arrival of the re-enforcements which he knew were approaching, and exerted himself with so much vigour during the succeeding days, that on the morning of the 8th he succeeded in eluding the vigilance of the Aug. 8. besiegers, and entered the city at the head of three thousand men and a large convoy of ammunition and provisions. It may easily be imagined with what transports they were received, for in the interim the citizens had had a desperate conflict to maintain, from which they never enjoyed one moment's respite. From street to street, from house to house, from room to room, the fight was kept up with incredible obstinacy on both sides; every post became the theatre of bloody strife, to which company after company, column after column, regiment after regiment, were successively brought up; while the fire of musketry, the roar of artillery, the flight of bombs, the glare of conflagration, and the cries of the combatants, continued without

intermission night and day. But all the efforts of the besiegers were in vain: animated almost to phrensy by the long duration and heart-stirring interest of the conflict, all classes vied with each other in heroic constancy; the priests were to be seen at the posts of danger, encouraging the soldiers, and administering consolation to the wounded and the dying; the women and children carried water incessantly to the quarters on fire, attended the wounded, interred the dead; many even forgot the timidity of their sex, and took the places of their slain husbands or brothers at the cannon side; the citizens relieved each other night and day at the mortal and perpetual struggle with the enemy. Such was the vigour of the resistance, that from the 4th to the 14th of August the besiegers made themselves masters only of four houses; one in front of the treasury was only won after an incessant combat of six days' duration. After the arrival of the re-enforcements under Palafox, the conflict was no longer equal: symptoms of discouragement were manifest in the enemy; sinister rumours circulated on both sides of a great disaster in the south; and they were gradually losing ground, even in those quarters of which they had obtained possession during the first burst of the assault. Still the fire of artillery continued, and was particularly violent during the night of the 14th of August; but at daybreak on the following morning it suddenly ceased, and the besieged, when the sun rose, beheld with astonishment the enemy at some distance, in full retreat, traversing the plain towards Pampeluna. The victory was complete: the heavy cannon and siege stores were all abandoned or thrown into the canal; and the inhabitants, with enthusiastic shouts of transport, concluded, amid cries of "Long live our Lady of the Pillar!" the ceremony of the *fête Dieu*, which had been interrupted by the commencement of the siege on the 16th of June.*

Operations of Moneycey in Valencia. In truth, while this sanguinary conflict was raging in Saragossa, disasters of the most serious nature had been experienced by the French in the south and east of Spain. Moneycey, who had set out

from Madrid early in June, with eight thousand men, to suppress the insurrection in Valencia and cut off the communication between that city and Saragossa, reached Cuenca on the 11th, where he remained inactive for several days. Resuming at length his march on the 16th, he advanced by Pesquiera towards Valencia; but as he penetrated farther into the country, the universal desertion of the towns and villages, and evident traces of armed men on his line of march, gave gloomy presages of an approaching storm. In the first instance, however, these indications proved fallacious. Some Swiss companies, with a body of armed peasants and four pieces of cannon, had, indeed, taken post to defend the strong and important pass of the bridge of Pajazo, on the River Cabriel; but the new levies dispersed on the first appearance of the enemy, and the greater part of the Swiss troops joined the invaders, so that the bridge was gained without any difficulty. Encouraged by this success, Moneycey wrote to General Chabran,

who was ordered to co-operate with him from the side of Catalonia, appointing a rendezvous on the 28th, under the walls of Valencia; and, advancing forward, approached the rocky ridge of calcareous mountains called Cabrillas, which forms the western boundary of the kingdom of Valencia. A single road traversed, by a rapid and laborious ascent, this rugged barrier; and as the adjoining heights were impassable for cavalry, a more advantageous position for resisting the enemy could not have been desired. The summits of the rocks which bordered the defile on either side, were covered with armed peasants to the number of six thousand; and four pieces of artillery, supported by a regiment of regular troops and a troop of horse, guarded the main road. All these obstacles, however, were speedily overcome: while the cavalry and artillery engaged the attention of the enemy in front, General Harispe turned their flank, and by a rapid attack over almost inaccessible rocks, threw them into confusion, dispersed the new levies, and captured all the ammunition, baggage, and artillery. Nothing now existed to retard the advance of the invaders; the summit of the ridge was soon gained, from which the French soldiers, wearied with the arid mountains and waterless plains of Castile,* beheld, with the delight of the Israelites of old, the green plains, and irrigated meadows, and level richness of the promised land, and three days afterward they appeared before the walls of Valencia.

Situated on the right of the Guadalaviar or Turia, and in the vicinity of the sea, Valencia is one of the most delightful cities which is to be found in Europe. It contains a hundred thousand inhabitants; but of that number more than one half inhabit the enchanting suburban villas which lie without the walls. These consist of an old rampart of unhewn stones, rudely put together, including within their circuit a decayed citadel. In a military point of view, therefore, it could hardly be regarded as a place of defence; but the spirit and circumstances of the inhabitants rendered the slightest rampart a tower of strength. The enthusiasm of the people ran high; their hatred of the invaders was inextinguishable, and the crimes they had committed were too serious to give them any rational hope of safety but in the most determined resistance. It is a melancholy but certain fact, that in revolutionary movements, as in all others where passion is the prime mover, the most enduring and often successful efforts result from the consciousness of such enormities as leave no hope but in obstinate hostility—*unas pes victis, nullam sperare salutem*. The junta had ably and energetically directed the public activity; engineers had marked out intrenchments and planted batteries to protect the principal gates of the city; a fortified camp had been constructed at a league from the walls; and the inhabitants, without distinction of age, rank, or sex, had laboured night and day, for several weeks past, to complete the works on which their common safety depended. Within the gates preparations had been made for the most vigorous resistance; trenches had been cut and barriers constructed

June 24.

Description of Valencia, and preparations for its defence.

* Cav., 59, 63. Tor., ii., 28, 32. Foy, ii., 321, 331. South., ii., 25, 31.

* Nap., i., 92, 93. Tor. i., 326, 329. Foy, iii., 250, 253.

across the principal streets; chariots and carts overturned so as to impede the advance of the assailants; the windows were filled with mattresses, and the doors barricaded; while a plentiful array of firearms, stones, and boiling oil was prepared, on the flat tops of the houses, to rain down death on the enemy.*

The wreck of the troops and armed peasants who had combated at the Cabrillas, city. Its re- took refuge in the entrenched camp pulse. at Cuarte, without the walls, where

they occupied in force the sides of the canal which unites the waters of the Guadalaviar to those of the Fera. In that position they were June 27. attacked early on the morning of the 27th, and, after three hours' firing, driven back to the batteries and intrenchments in front of the gates. There, however, a more determined stand was made; and Moncey, desirous of bringing up his whole forces and artillery, deferred the attack on the city itself till the following day. Hardly an eye was closed in Valencia during the succeeding night; all ranks and both sexes laboured incessantly to complete the preparations of defence; and so great was the universal activity, that, when the rays of the morning sun appeared above the blue expanse of the Mediterranean, it was hardly possible for the assailants to hope for success but from the pusillanimity of the defenders.

June 28. Moncey disposed his fieldpieces in the most favourable situations to reply to the heavy artillery on the ramparts and outworks, and, having driven the enemy through the suburbs, commenced the assault. Such, however, was the vigour of the defence that very little success was gained: the light artillery of the French was soon overpowered by the heavy cannon on the walls; a murderous fire of grape was kept up from the top of the rampart and the intrenchments round the entrances of the city; while the new levies, wholly unable to withstand the shock of their veteran opponents in the open field, contended on terms of comparative equality in the houses and behind the walls or enclosures adjoining the gates. The enthusiasm within increased as the fire approached their dwellings; the priests traversed the streets with the cross in their hands, exhorting the people to continue the contest; the women brought up ammunition to the combatants, and when the grapeshot began to fail, the ladies of rank instantly furnished an ample supply of missiles to charge the guns. A city so defended was beyond the reach of a *coup-de-main*: the French troops rapidly melted away under the dropping fire with which they were assailed from many different quarters; and in the evening Moncey drew off to Cuarte, having lost two thousand men in this fruitless attack.†

The spirit of the Valencians was roused to the very highest pitch by this glorious result, and, in the first burst of their triumph, they confidently expected that the Conde Cervallon, who commanded a corps six thousand strong, consisting chiefly of armed peasants, on the banks of the Xucar, would fall upon the enemy in his retreat, and

complete his destruction. But, while these flattering illusions were filling the city with transport, Cervallon himself narrowly escaped destruction. Attacked by Moncey in his July 1. retreat, he was surprised with one half of his corps on one side of the river and the remainder on the other; the part first assailed made a feeble resistance: in the confusion of the rout the French made themselves masters of a bridge, and, rapidly passing over, soon completed the defeat of the portion on the other side. Two days after, three thousand, July 3. who had escaped from the first disaster, were attacked and dispersed, with the loss of all their artillery, near Almanza, the celebrated theatre of the victory of the French over the allies in the Succession War. But these advantages, though considerable, gained by a retreating army in the course of its flight, were no counterpoise to the disaster experienced before Valencia: the whole province was up in arms at the glorious tidings; the communication both with Catalonia and Madrid was cut off; Cuenca was besieged by a body of seven thousand peasants, who overpowered the detachment left in that town; and though July 1. the victors were themselves assailed two days after and dispersed with great slaughter by Caulaincourt, whom Savary despatched from Madrid with a powerful body of horse to restore the communication with Moncey in that July 3. quarter, yet the object of the advance towards Valencia was totally lost; and the French general finding that Frere, with his division, on whose aid he had calculated in a renewed attack which he was preparing against that city, had been recalled to Madrid by orders of Savary, who was alarmed at the advance of Cuesta and Blake towards the Guadarrama pass, gave up the expedition in despair, and returned by Ocaña to the capital.*

The ultimate failure of the expedition of Moncey towards Valencia was occasioned by the terror excited in the capital of the threatening advance of Cuesta and Blake, with their united forces, upon the French line of communication between Madrid and the Bayonne frontier. There, it was evident, was the vital point of the contest; there a disaster would instantly be attended with fatal consequences; secured in that quarter, the failure of less considerable expeditions emanating from the capital was of comparatively little importance. Napoleon, who was strongly impressed with these views, had used the utmost efforts to re-enforce Bessières, to whom the defence of the line through Old Castile was intrusted; and, after providing for the occupation of the various points in which he had so early and successfully suppressed the insurrection, he could concentrate twenty thousand men to act against the enemy, who were approaching from the Galician Mountains. But meantime the enemy had not been idle. Filanghieri, captain-general of Galicia, had, with the aid of the bountiful supplies of England, succeeded in organizing twenty-five thousand men—including the soldiers who had come to Corunna from Oporto, originally part of Junot's expedition,

Operations of Bessières against Blake and Cuesta in Leon.

* Tor., 329, 330. Foy, iii., 253, 255. Nap., i., 93.

† Tor., i., 333, 336. Nap., i., 94, 95. Foy, iii., 254, 259.

and the garrisons of that place and Ferrol, with a considerable train of artillery—and taken post in the mountains ten miles in the rear of Astorga. The situation of this corps, threatening the line of communication between Bayonne and Madrid, was such as to excite the utmost disquietude in the breast of Napoleon, and he sedulously impressed upon Savary that it was there that the decisive blow was to be struck.* That general, however, was not so well aware as his imperial master where the vital point was to be found; and, instead of re-enforcing Bessières with all his disposable forces, he despatched Frere with his division on the track of Moncey, to endeavour to reopen the communication with that marshal, which the intervening insurrection had entirely cut off; and sent on Vedel and Gobert, with their respective divisions, to re-enforce Dupont, who had by this time crossed the Sierra Morena, and was far advanced in his progress through Andalusia. Impressed, in a short time afterward, with the increasing danger to his communications which arose from the junction of the Galician army near Astorga with that which still kept its ground in Leon under Cuesta, he hastily countermanded these orders, recalled Frere to Madrid, ordered Vedel, Gobert, and even Dupont himself to remeasure their steps, and held himself in readiness to march from the capital with all the disposable troops he could collect, to re-enforce Bessières on the line of the great northern communication. These dispositions, as usual with alterations made in general designs on the spur of the moment, and in presence of the enemy, were essentially erroneous: the decisive point should have been looked to at first; the subsequent vacillation was too late to strengthen Bessières, but was calculated essentially to weaken Dupont, whom it went to deprive, in imminent danger, of one of his best divisions. As such they excited the greatest displeasure in Napoleon, who gave vent to it in an able and acrimonious despatch (which throws great light on the state of the campaign at this period), and never afterward, in military transactions, intrusted Savary with any important command.†

* "A stroke delivered by Bessières," said he, "would paralyze all Spain. What signifies now Valencia and Andalusia? The only way really to strengthen Dupont is to re-enforce Bessières. There is not a citizen of Madrid, not a peasant in the remotest valleys of Spain, who does not feel that the fate of the campaign is exclusively in the hands of Marshal Bessières. What a misfortune, then, that in so important an affair we should lose a chance, how inconsiderable soever, of success."—NAPOLEON TO SAVARY, July 13, 1808. Foy, iv., 45, 46, and NAPIER, i., Appendix No. 1. † Sav., iii., 248, 252. Tor., ii., 344, 345. Foy, iv., 40, 47. Nap., i., 101, 102.

‡ "The French affairs in Spain," said Napoleon, "would be in an excellent state if Gobert's division had marched upon Valladolid to support Bessières, and Frere's division had occupied San Clemente, alike ready to re-enforce Moncey or Dupont, as circumstances might require. Instead of this, Gobert having been directed upon Dupont, and Frere being with Moncey, harassed and weakened by marches and countermarches, our situation has been sensibly injured. It is a great mistake not to have occupied the citadel of Segovia; of all positions in that quarter it is the most dangerous to the French army, as, situated between two roads, it intercepts both communications. If Dupont should experience a check, it is of no consequence; the only effect of it would be to leave him to repass the mountains; but a stroke delivered to Marshal Bessières would tell on the heart of the army, which would give it a locked jaw, and speedily be felt in all its extremities. It is on this account that it is so unfortunate that the prescribed orders have not been specifically obeyed. The army of Bessières should have had at

But meanwhile the danger had blown over in the North: Bessières, though unsupported, had not only made head against Cuesta and Blake, but defeated them; and a great victory in the plains of Leon had opened to Joseph the gates of Madrid.

Blake, with the army of Galicia, having effected a junction with the remains of Cuesta's troops which had escaped the rout of Palencia, their united forces having left a division at Benevento to protect their stores, advanced into the plains of Leon to give battle to Bessières. This plan could not but appear rash, considering the veteran character of the French troops, their superiority in cavalry, and the undisciplined crowd of which a large part of the Spanish levies was composed. It was undertaken solely on the responsibility of Cuesta, who had assumed the chief command, and against the strongest remonstrances of Blake, who urged that, by falling back to the frontiers of Galicia, where the French general could never pretend to follow them, they would gain time to discipline and equip their troops, and would soon be enabled to advance again at the head of forty thousand effective men. This sage counsel was rejected. Cuesta, who was a brave but inexperienced veteran, equally headstrong and obstinate, insisted upon an immediate action, and finding that Blake still declined to obey, he addressed himself to the junta of Galicia, who, yielding to popular clamour, seconded his orders, and directed Blake forthwith to advance and give battle. Having now no alternative but submission, Blake did the utmost in his power, during the short interval which remained, to put his troops into good condition; and on the 13th of July 13. Cuesta moved forward with the united forces, amounting to twenty-five thousand infantry, four hundred cavalry, and thirty pieces of cannon, to Rio Seco. Bessières' force was, upon the whole, less numerous, amounting only to fifteen thousand men and twenty-five guns; but of these nearly two thousand were admirable horsemen, and the composition of the whole was such as more than to counterbalance the inferiority in point of numbers.*

least 8000 men more than it has, in order to remove all chance of a disaster in that quarter. The affair of Valencia was a matter of no importance; Moncey was alone adequate to it; it was absurd to think of re-enforcing him. If he could not take that town with the forces he had, he could not have done so with 20,000 more; in that view it would become an affair of artillery. You cannot take by a stroke on the neck a town with 80,000 or 100,000 inhabitants, who have barricaded the streets and fortified the houses. Frere, therefore, could have added nothing to the means of Moncey against Valencia, while the abstraction of his division seriously weakened Dupont. Moreover, if the latter general was to be succoured, it would have been better to have sent him a single regiment direct, than three by so circuitous a route as that by which Frere was ordered to march. In civil wars it is the important points which must be defended, and no attempt made to go everywhere. The grand object of all the armies should be to preserve Madrid; it is there that everything is to be lost or won. Madrid cannot be seriously menaced but by the army of Galicia; for Bessières has not adequate forces to ensure its defeat. It may be threatened by the army of Andalusia, but hardly endangered; for, in proportion as Dupont falls back, he is re-enforced, and with their 20,000 men he and Vedel should at least be able to keep the enemy in check in that quarter. 7.—

Notes addressed to SAVARY on the affairs of Spain by NAPOLEON, 13th July, 1808; taken at the battle of Vittoria, in King JOSEPH's Portfolio. NAPIER, i., Appendix No. 1.

* Nap., i., 106. Tor., ii., 347, 348. Foy, iii., 302, 308.

The dispositions of Cuesta for the battle were as faulty as the resolution to hazard it was ill advised. Contrary alike to the rules of the military art and the dictates of common sense on the subject, he drew up his troops in two lines at the distance of nearly a mile and a half from each other. The first, ten thousand strong, under Blake, with fifteen pieces of cannon, was stationed on a plateau in advance, of rugged and difficult access; the second, fifteen hundred toises (9000 feet) in the rear, led by Cuesta in person, consisted of fifteen thousand men, almost all regular soldiers, and fifteen guns. The few cavalry they had were with the first line. Bessières, perceiving at once the advantage which this extraordinary disposition offered to an enterprising attack, prepared to avail himself to the utmost of it by throwing the bulk of his forces into the wide chasm between the two lines, so as to overwhelm the first before the second could come up to its assistance. Penetrating rapidly into the open space between the two parts of the army, he attacked Blake both in flank and rear with such vigour, that in an instant his lines were broken, his artillery taken, his men dispersed. As soon as he saw the rout of his first line, Cuesta moved forward with the second to the attack, and succeeded in reaching the enemy before the disorder consequent on their rapid success and pursuit had been repaired. The consequences had wellnigh proved fatal to the victors. Cuesta's right wing, advancing swiftly and steadily forward in good order, overthrew several French battalions which had not fully recovered their ranks, and captured four guns. This disaster, like that experienced by Zach's grenadiers at Marengo, might, with a less skilful commander, or less steady troops, have turned the fortune of the day; for the example of disorder is contagious, and the confusion was already spreading into the French centre, when Bessières, with the cavalry of the Imperial Guard, twelve hundred strong, charged the Spanish right in flank, which had become exposed by the rapidity of its advance, with great vigour; and Merle's division, returning from the pursuit of Blake, renewed the combat in front. A short but sanguinary struggle ensued: the Spanish infantry fought bravely, and for a few minutes the fate of the battle hung by a thread; but at length they were broken, and the loud shouts of victory, which had been raised in the Castilian ranks, passed to the French side. After this it was no longer a battle, but a massacre and rout: the Spaniards broke and dispersed on all sides, leaving eighteen guns and their whole ammunition, besides two thousand prisoners, in the hands of the enemy. Three thousand had fallen on the field, while the loss of the victors did not exceed twelve hundred men. The town of Rio Seco, taken in the pursuit, was sacked and plundered with merciless severity, and all the nuns in the convents were subjected to the brutal violence of the soldiery. Few days have been more disastrous to Spain, for, worse than the loss of artillery and prisoners, it destroyed all confidence in the ability of their troops to withstand the enemy in the field; while to Napoleon it was the source of unbounded, and, as it turned

out, undeserved exultation. "It is Villa Viciosa" (Almanza), he exclaimed, when the joyful intelligence arrived at Bayonne: "Bessières has placed Joseph on the throne of Spain;"*† and, deeming the war over, he left that fortress, and pursued his journey by Bordeaux for the French capital; while Joseph, relieved now of all anxiety in regard to his communications, pursued his journey to Madrid, where he arrived, as already mentioned, on the 21st of July.

Napoleon was premature in this judgment: Rio Seco placed Joseph on the throne of Madrid, but it neither finished the war nor maintained him there. He did not, however, on that account suspend his military preparations: nine thousand Poles, who had entered the service of France, were directed, with four regiments of infantry and two of cavalry from the grand army in Germany, towards the Pyrenees. All the princes of the Rhenish Confederacy received orders to send a regiment each in the same direction. The guards of Joseph followed him to Spain from Naples. Tuscany and the kingdom of Italy were commanded to send their contingents to re-enforce Duhesme in Catalonia. Re-enforcements to the amount of forty thousand men were thus provided for, which all arrived in Spain during the three following months, but too late to arrest the progress of disaster. While both the French emperor and his royal brother were indulging in the sanguine hope that all was terminated, a dreadful disaster had occurred in Andalusia, and a blow been struck on the banks of the Guadalquivir which resounded from one end of Europe to the other.‡

Dupont, who was at Toledo when the insurrection broke out in all parts of Spain, received, on the 24th of May, an order from Murat, then Lieutenant-general of Spain, to move upon Cadiz, by the route of the Sierra Morena, Cordova, and Seville. He was to be joined in Andalusia by four thousand men and ten guns drawn from the army of Portugal. He immediately set out, and experienced no resistance while traversing the open plains of La Mancha, and in the Sierra Morena found the villages indeed deserted, but no enemy to dispute his progress. At Andujar, however, where he arrived on the 2d of June, he received information of the real state of June 2. matters in that province: that Seville, Cadiz, and all the principal towns were ruled by juntas, which had declared war against France; that the army at St. Roque had joined the patriot cause, and that the peasants, by tens of thousands, were flocking into the burghs to enrol themselves under the national banners. Alarmed by this intelligence, Dupont wrote to

Farther preparations of Napoleon for this war.

March of Dupont into Andalusia, and his early successes there

* South., i., 480, 481. Foy, iii., 310, 313. Tor., ii., 352, 354. Nap., i., 107.

† In allusion to the battle at Villa Viciosa, where Philip V. and the Duke de Vendome gained a complete victory over the allies, which decided the Succession War in favour of the house of Bourbon. But the comparison was the reverse of the truth, for at Villa Viciosa Philip and the Spaniards combated for Spain against foreign armies; and the affair was decisive, for the whole military force of both sides was collected in one field; whereas at Rio Seco the general of an intrusive king sought to beat down the native troops of Castile, and a fragment only of the military strength of either side was engaged.—See Foy, iv., 47.

‡ Foy, iv., 48, 49.

Madrid for re-enforcements, and, after establishing a hospital at Andujar, and taking measures of precaution to secure his rear, set out four days afterward, and continued his march towards Cordova, still following the left bank of the Guadalquivir. This road, however, after running eight-and-twenty leagues on that bank of the river, crosses it at Vinta de Alcolea by a

June 7. long bridge of nineteen arches, strongly constructed of black marble. It was at its extremity that the Spaniards awaited the enemy. The end of the bridge on the left bank was fortified by a *tête-du-pont*: twelve guns were mounted on the right bank to enfilade the approach to it, and three thousand regular troops, supported by ten thousand armed peasants, awaited in Alcolea to dispute the passage, while the heights on the left bank, in the rear of the French, were occupied by a cloud of insurgents ready to fall on them behind as soon as they were actively engaged with the more regular force in front. The French general, seeing such preparations made for his reception, delayed the attack till the following morning, and meanwhile made his dispositions against the numerous enemies by whom he was surrounded. This was no difficult matter: a very small part only of the Spanish force was adequate to

the encounter of regular soldiers. At June 8. daybreak on the following morning, General Fresia, with a battalion of infantry and a large body of cavalry, attacked the peasants on the left bank, and by a few charges dispersed them; at the same time a column with ease broke into the *tête-du-pont*, the works of which were not yet finished, and rapidly charging across the bridge, of which the arches had not been cut, routed the Spanish troops at Alcolea on the opposite side with such loss that all their artillery was taken, and Echevarria, the commander, despairing of defending Cordova, fled with such precipitance, that before night he reached Ecija, twelve leagues from the field of battle.*

Abandoned to their own resources, and destitute of any leaders for their guidance, the magistrates having all fled on the first alarm, the inhabitants of Cordova, before which the French presented themselves the same day, were in no condition to resist the invaders. The gates, nevertheless, were shut, and the old towers which flanked their approaches filled with armed men, by whom, as the cannon of the enemy approached, a feeble fire was kept up. A parleying for surrender, however, took place, and the conferences were going on, when, under pretence of a few random shots from some windows, the guns were discharged at the gates, which were instantly burst open; the troops rushed into the town, where hardly any resistance was made, but which, notwithstanding, underwent all the horrors of a place carried by assault. A scene of indescribable horror ensued, fraught with acute but passing suffering to the Spaniards, with lasting disgrace to the French. A universal pillage took place: Every public establishment was sacked, every private house plundered. Armed and unarmed men were slaughtered indiscriminately; women ravished; the

churches plundered; even the venerable cathedral, originally the much-loved mosque of the Omniade Caliphs, which had survived the devastations of the first Christian conquest, six hundred years before, was stripped of its riches and ornaments, and defiled by the vilest debauchery. Nor was this merely the unbridled license of subaltern insubordination: the general-in-chief and superior officers themselves set the first example of a rapacity as pernicious as it was disgraceful; and from the plunder of the treasury and office of consolidation, Dupont contrived to realize above ten millions of reals, or £197,000 sterling. Not content with this hideous devastation, the French general, when the sack had ceased, overwhelmed the city by an enormous contribution. It is some consolation, amid so frightful a display of military license and unbridled cupidity, that a righteous retribution speedily overtook its perpetrators; that it was the load of their public and private plunder which shortly after retarded their retreat along the banks of the Guadalquivir; and that it was anxiety to preserve their ill-gotten spoil which paralyzed their arms in the field, and brought an unheard-of disgrace on the French standards.*†

Dupont remained several days at Cordova, but learning that the insurrection had spread and was gathering strength in all directions, and finding his communications with Madrid intercepted with the patriot bands in his rear, he deemed it imprudent to make any farther advance in the direction of Seville. Meanwhile the insurgents closed around and hemmed him in on every side. The armed peasants of Jaen and its vicinity crossed the Guadalquivir, and overwhelmed the detachment left at Andujar in charge of the sick there, and with savage cruelty, in revenge for the sack of Cordova, put them all to death; the smugglers of the Sierra Morena, relinquishing

Accumulation of forces round the invaders under Castanos.

* Foy, iii., 229, 231. Tor., i., 321, 323. Nap., i., 113. South., i., 475, 476. Lond., i., 87.

† Colonel Napier says (i., 114, 1st edit.), "As the inhabitants took no part in the contest, and received the French without any signs of aversion, the town was protected from pillage, and Dupont fixed his headquarters there." It would be well if he would specify the authority on which this assertion is made, as it is directly contrary to the united testimony of even the most liberal French and Spanish historians. Foy says, with his usual admirable candour, "To some musket-shots, discharged almost by accident from the windows, the French answered by a continued discharge, and speedily burst open the gates. Men without arms, without the means of resistance, were slaughtered in the streets; the houses, the churches, even the celebrated mosque, which the Christians had converted into a cathedral, were alike sacked. The ancient capital of the Omniade Caliphs, the greatest kings which Spain ever beheld, saw scenes of horror renewed such as it had not witnessed since the city was taken in 1236 by Ferdinand, king of Castile. These terrible scenes had no excuse in the losses sustained by the conqueror; for the attack of the town had not cost them ten men, and the total success of the day had only cost them thirty killed and eighty wounded." Toreno, though a decided liberal Spanish historian, observes: "Rushing into the town, the French proceeded, killing or wounding all those whom they met on their road; they sacked the houses, the temples, even the humblest dwellings of the poor. The ancient and celebrated cathedral became the prey of the insatiable and destructive rapacity of the stranger. The massacre was great; the quantity of precious spoil collected immense. From the single depôts of the treasury and the consolidation Dupont extracted 10,000,000 reals, besides the sums extracted from public and private places of deposit. It was thus that a population was delivered up to plunder which had neither made nor attempted the slightest resistance."—See Foy, iii., 230, 231, and TORENO, i., 322.

* Foy, iii., 224, 230. Nap., i., 112, 113. Tor., i., 320, 321.

their illicit traffic for a more heart-stirring conflict, issued from their gloomy retreats, and beset all the passes of their inaccessible mountains. Even the peasants of La Mancha had caught the flame; the magazines of Mudela had fallen into their power; the sick at Manzanares had been put to the sword; the roads were so beset that even considerable detachments in his rear were captured or defeated; General Roize, with a body of four hundred convalescents, was defeated in the open plains of La Mancha; and after having joined five hundred light horse under General Belair, the united force was deemed inadequate to forcing the passes of the Sierra Morena, and fell back towards Toledo. These accumulating disasters, which were greatly magnified by popular rumour, and the impossibility of getting any correct detail of the facts from the general intercepting of the communications, produced such an impression on Dupont, that he deemed it hopeless to attempt any farther advance into Andalusia: a resolution which proved the salvation of that province, and, in the end, of Spain; for such was the state of anarchy and irresolution which prevailed among the troops intrusted with its defence, that, had he advanced boldly forward, and followed up his successes at Alcolea and Cordova with the requisite vigour, Seville would at once have fallen into his power, and the insurrection in that quarter been entirely crushed. Castanos, indeed, was at the head of eight thousand regular troops, drawn from the camp at St. Roque, and an enthusiastic but undisciplined body of thirty thousand armed peasants assembled at Utrera; but the latter part of his force was incapable of any operations that could be relied on in the field; and such was the consternation occasioned, in the first instance, by the success of the French irruption, that the general-in-chief was desirous of retiring to Cadiz, and making its impregnable fortifications the citadel of an intrenched camp, where the new levies might acquire some degree of consistency, and the support of ten or twelve thousand British troops might, in case of necessity, be obtained. The authority of

Castanos was merely nominal; Morla, governor of Cadiz, was his enemy, and the junta of Seville issued orders independent of either; so that the former general, despairing of success, had actually, under pretence of providing for the security of Cadiz, embarked his heavy artillery for that fortress. From this disgrace, however, the Spaniards were relieved by the hesitation of the enemy: a pause in an invading army is dangerous at all times, but especially so when an insurrection is to be put down by the moral influence of its advance; and the hesitation of Dupont at Cordova proved his ruin. He remained ten days inactive there, during which the whole effect of his victory was lost; confidence returned to the enemy from the hourly increase of their force and the evident apprehensions of the French general; and at length some intercepted despatches to Savary were found to contain so doleful an account of his situation,* that not only were all thoughts of retiring farther laid aside, but it was resolved immediately to advance, and sur-

round the enemy in the city which he had conquered.

The fears of Dupont, however, prevented Cordova from a second time becoming the theatre of military license. Detachments of peasants had occupied all the passes in the Sierra Morena; troops, including some regulars, were accumulating in the direction of Grenada, with the design of seizing Carolina and intercepting his retreat to La Mancha. Fame had magnified the amount of the forces descending into the plains of Leon, under Cuesta and Blake, and rumours had got abroad that Savary was fortifying himself in the Retiro. Unable to withstand the sinister presentiments consequent on such an accumulation of adverse incidents, the French general resolved to fall back; and accordingly broke up from Cordova on June 16. the 16th of June, and three days afterwards reached Andujar without having experienced any molestation. A strong detachment was immediately sent off to Jaen, which defeated the insurgents, and took a severe but not undeserved vengeance on the inhabitants for their barbarity to the sick at Andujar, by sacking and burning the town.* The supplies, however, which Dupont expected from this excursion were not obtained, for every article of provisions which the town contained was consumed in the conflagration. Both sides after this continued inactive for above three weeks, during which the sick in the French hospital, as usual with a retreating army, rapidly augmented; while the Spanish forces, under Castanos, which now approached, increased so much, by re-enforcements from all quarters, that that general could now muster above twenty thousand regular infantry and two thousand horse, besides a motley crowd of thirty thousand armed peasants under his command. During the same period, however, powerful re-enforcements reached the French general; for Gobert, with his division, whose absence from Leon Napoleon had so bitterly lamented, joined Vedel at BAYLEN on the 15th of July,† and a brigade was pushed on under Leger Belair to open up the communication with the main body at Andujar, while the Spanish generals, now deeming the escape of the French impossible, were taking measures for enveloping the whole and forcing them to surrender.

Meanwhile the long delay afforded by the inactivity of Dupont had been turned to the best account by Castanos. In the interim he contrived to give a certain degree of consistence to his numerous but tumultuous array of peasants, while the disembarkation of General Spencer with five thousand English troops, chiefly from Gibraltar, at Port St. Mary's, near Cadiz, inspired general confidence by securing a rallying-point in case of disaster.

Spanish plan of attack, and preparatory movements on both sides.

* That severity, however deplorable, was perhaps rendered necessary, and therefore justified, by the massacre of the sick at Andujar; but, in the prosecution of their orders, the French soldiers proceeded to excesses as wanton as they were savage: massacring old men, and infants at the breast, and exercising the last acts of cruelty on some sick friars of St. Domingo and St. Augustine who could not escape from the town.—TORENO, i. 326.

† Nap., i., 117, 120. Foy, iv., 49, 52. Tor., i., 326, 360

* Nap., i., 114, 116. Foy, iii., 234, 236. Tor., ii., 326. Nap., i., App. No. 13.

At length the regular troops from Grenada, St. Roque, Cadiz, and other quarters having assembled, to the number of eight-and-twenty thousand foot and two thousand horse, a combined plan of attack was agreed on. The army was arranged in three divisions: the first, under Reding, a Swiss general of distinction, brother to the intrepid patriot of the same name,* received orders to cross the

July 11. Guadalquivir at Mengibar, and move to Baylen, in the rear of Andujar, where Dupont still was, and between that town and the Sierra Morena; the second, under Coupigny, was to pass the same river at Villa-Nueva and support Reding; while Castanos, with the third and the reserve, was to press the enemy in front, and a body of irregular troops, under Don Juan de la Cruz, passing by the bridge of Marmolejo, and harass his right flank. A glance at any good map of the country will at once show that the effect of these dispositions, which were ably combined, was to throw a preponderating force in the rear of Dupont directly on his line of communications, and either separate the division under his immediate command from those of Gobert and Vedel, or interpose between them both and the road to Madrid. They were promptly and vigorously carried into execution: Castanos, with the troops under his immediate command, approached to within a league of Andujar, and so alarmed Dupont that he sent

July 14. to Vedel for assistance, who came with his whole division, except thirteen hundred men left to guard the ford of Mengibar.

July 16. This small body was there attacked, two days after, by Reding with eight thousand men, defeated, and the passage of the river forced; Gobert, advancing from Baylen to support the broken detachment, received a ball on the forehead, and fell dead on the spot. The French in dismay retreated to Baylen; the Spaniards, seeing themselves interposed in this manner between Gobert and Vedel, with forces little superior to either, taken singly, also retired in the night across the ford to the other bank of the river. But this bold irruption into the middle of their line of march, and the disaster of Gobert, spread dismay through the army; a loud cannonade heard the whole day from the side of Andujar, where Castanos was engaging the attention of Dupont, induced the belief that they were beset on all sides, and the accounts which reached both armies in the evening of the disaster experienced before Valencia, increased the confidence of the Spaniards as much as it depressed the feelings of the French soldiers.††

In the whole French army there was not a general of division who bore a higher character than Dupont; and when he set out for Andalusia, in command of so considerable a force,

it was universally believed that he would find his marshal's baton at Cadiz. In 1801, he had distinguished himself, under Brune, in the winter campaign with the Austrians on the Italian plains: in 1805, his gallant conduct had eminently contributed to the glorious triumph at Ulm: in 1807, he had been not less conspicuous in the Polish war at Eylau and Friedland. His courage was unquestionable; his talents of no ordinary kind. But it is one thing to possess the spirit and intrepidity which makes a good general of division or colonel of grenadiers; it is another and a very different thing to be endowed with the moral resolution which is requisite to withstand disaster, and act with the decision and energy indispensable in a general-in-chief. In the situation in which he was now placed there was but one course to adopt, and that was to mass all his forces together, and bear down in a single column upon the enemy, so as to reopen his communications, and secure, at all hazards, his retreat; and twenty thousand French soldiers assembled together were adequate to bursting through at a single point all the troops of Spain. Instead of this he divided his force, and thereby

July 17. exposed it to destruction. Vedel received orders to lead back to Baylen his own division and that of Gobert, while the general-in-chief himself continued fronting Castanos at Andujar. But meanwhile Generals Dupont and Leger Belair, who had been left at Baylen, were so much disquieted by the forces under Reding and Coupigny, which had now united together, and threatened them with an attack, that they retired towards Carolina, on the road to the Sierra Morena; and Vedel finding, on his arrival at Baylen, that it was entirely evacuated by the French troops, followed them to the same place, with the design of securing the passes of the mountains in their rear. By this fatal movement the two divisions of the French army were irrevocably separated, and Reding and Coupigny, finding no enemy to oppose them, entered in great force into Baylen and established themselves there. Thus the two hostile armies became interlaced in the most extraordinary manner: Castanos having Dupont between him and Reding, and Reding being interposed between the French general and his lieutenant, Vedel.*

In such a situation a decisive advantage to one or other party is at hand, and it generally falls to the commander who boldly takes the initiative and brings his combined forces to bear on the isolated corps of his opponent. Dupont, sensible of his danger, broke up from Andujar late on the evening of the 18th and marched towards Baylen, on his direct line of retreat; while Reding and Coupigny, finding themselves relieved of all fears from Vedel and Dufour, who had moved to Carolina, in the entrance of the mountains, turned their faces to the southward, and early on the following morning marched towards Andujar, with the design of co-operating with Castanos in the destruction of Dupont. Hearing, soon after their departure, of his approach towards them, they took post in a

Singular manner in which these armies became interlaced.

Battle of Baylen. July 19.

* Ante, i., 538.

† Tor., i., 360, 363. Foy, iv., 59, 66. Jom., iii., 60, 61. Nap., i., 120, 121.

† A singular coincidence occurred in relation to the place and day of the action in which General Gobert lost his life. On the same day (16th of July), nearly six hundred years before (16th of July, 1212), there had been gained at the same place the great battle of Las Navas de Tolosa, by Alphonso IX. over the Mussulman host of Spain and Africa, two hundred thousand strong. Gobert fell on the field still called the *field of massacre*, from the carnage made of the Moors on that memorable occasion; the greatest victory after that of Tours ever gained by the Christians over the soldiers of the Crescent.—TORENO, i., 363.

* Foy, iv., 67, 77. Tor., i., 363, 364. Nap., i., 122. Jom., iii., 60, 61.

strong position, intersected with ravines and covered by olive woods, in front of Baylen, and soon the French outposts appeared in sight. Their forces, widely scattered and coming up in disorder, resembled rather a detachment guarding an immense convoy than a corps equipped for field operations; so heavily were they laden by five hundred baggage-wagons, which conveyed along the artillery, ammunition stores, and ill-gotten plunder of Cordova. Great was the dismay in the French troops when, in the obscurity of the morning, an hour before sunrise, they suddenly came upon the Spanish array right in their front, occupying this advantageous position; but there was no time for deliberation, for Castanos, having heard of their departure from Andujar, had shortly after entered that town, and, passing through it with the bulk of his forces, was already threatening their rear. Dupont immediately made his dispositions for forcing his way, sword in hand, through the barrier of steel which opposed his progress; and had his troops been concentrated, there can be little doubt that he would have succeeded in doing so, and either thrown Reding back towards Vedel, or opened up his own communication with that general. But at this decisive moment the sack of Cordova proved their ruin. The troops were scattered along a line of march of three leagues in length, encumbered with innumerable wagons; the best were in rear to guard the precious convoy from the attacks of Castanos. Hastily assembling such troops as he could collect in front, Dupont, with three thousand men, commenced an attack when the day broke, at four o'clock in the morning; but his troops, fatigued by a long night march, and discouraged by the unexpected and dangerous enemy which obstructed their advance, could make no impression on the Swiss regiments and Walloon Guards, the flower of the Spanish army, which there awaited their approach. After a gallant struggle, in which they sustained a severe loss, they were driven back, and lost not only some guns, which in the commencement of the action they had taken from the enemy, but even their own. As brigade after brigade successively came up to the front, they were brought forward to the attack, but with no better success; the French troops, wearied by a night march, choked with dust, disordered by the encumbrance of baggage-wagons, overwhelmed by the burning sun of Andalusia in the dog-days, were no match for the steady Swiss and Walloon Guards who had rested all night, cool under the shade, in a strong position, or even the new levies, to whom Reding had imparted his own invincible spirit; and their guns, which came up one by one, in haste and confusion, and never equalled those which the enemy had in battery, were speedily dismounted by the superior force and unerring aim of the Spanish artillery. Two thousand men had already fallen on the side of the invaders, while scarce a tenth of the number were disabled on that of their enemies; heat and thirst overwhelmed even the bravest soldiers; and that fatal dejection, the forerunner of disaster, was rapidly spreading among the young conscripts, when two Swiss regiments, which had hitherto bravely maintained the combat on the right, came to a

parley with their brethren in the Spanish lines, and passed over to the side of Reding. At the same time a loud cannonade was heard from behind, and disordered fugitives, breathless from running, and almost melting with heat, burst through the ranks, and announced that a large body of the Spaniards, under La Pena, the advanced guard of Castanos, was already menacing the rear. Despairing now of extricating himself from his difficulties, ignorant of the situation of Vedel or Dufour, and deeming a capitulation the only way to preserve the army from destruction, Dupont sent to Reding to propose a suspension of arms, which was at once agreed to.*

While Dupont, with the corps under his immediate command, not ten thousand strong, was thus maintaining of Vedel, who a painful and hopeless struggle with the concentrated masses of the Spaniards, more than double their amount, the remainder of his army, of equal force, under Vedel and Dufour, was occupied to no purpose at a distance from the scene of action. The whole of the 18th was spent by these generals at Carolina in allowing the soldiers to repose, and repairing the losses of the artillery; but as the enemy, whom they expected to find at the entrance of the passes, had disappeared, and a loud cannonade was heard the following morning on the side of Baylen, they rightly judged that it was there that the decisive point was to be found, and set out in that direction. The distance from Carolina to Baylen was only eight miles; that from Andujar to the same place was sixteen: by a little activity, therefore, Vedel might have reached the rear of Reding sooner than Castanos could that of Dupont, and then the fate which the Spanish generals designed for the French troops might have overtaken themselves. When he arrived at Guaroman, however, nearly half way, the troops were so much exhausted by the heat that Vedel, though he heard the cannonade, now only five miles distant, hourly increasing, had the weakness to allow them some hours of repose. This halt proved decisive; while it continued, Dupont's troops, whom he might with ease have reached in two hours, were reduced to desperation. At noon it suddenly ceased, and the soldiers flattered themselves that the danger had passed; it was the suspension of arms, which was about to bring unheard-of disgrace upon them all. When they resumed their march, at two in the afternoon, they soon came upon the rear of Reding, and discrediting the statement of an armistice, which was immediately made to them, commenced an attack, made prisoners a battalion of Irish in the service of Spain, captured some guns, dispersed some new levies which defended them, and were within a league of their comrades in distress, when an officer from Dupont arrived with the mournful intelligence that an armistice had been agreed to, and that they had no alternative but submission. It was all over: the halt of a few hours at Guaroman had ruined the expedition; twenty thousand men were about to lay down their arms; Europe was to be electrified; the empire of Napoleon shaken to its

* *Foy*, iv., 77, 84. *Tor.*, i., 364, 367. *Nap.*, i., 122, 123. *Jom.*, iii., 61, 62. *London*, i., 94, 95.

foundation. Such is the importance of time in war.*

Dupont, in the first instance, proposed a capitulation, in virtue of which the whole French troops were to be allowed to retire, with their artillery and baggage, out of Andalusia; and Castanos was at first inclined to have acceded to the proposal, deeming it an immense advantage to clear that province of the enemy, and gain time in this way for completing their preparations. But at this critical moment the despatches were intercepted and brought to headquarters, which announced the approach of Cuesta to the capital, and recalled Dupont to contribute to its defence. A convention would no longer be listened to; an absolute surrender of arms was required, under condition only of being sent to France by sea. After many fruitless efforts to avoid so hard a fate, this was agreed to by Dupont, but he insinuated to Vedel that he might endeavour to extricate himself from his toils. That general accordingly retired to Carolina; but the Spaniards threatened to put Dupont and his whole division to the sword if this movement was not stopped and Vedel included in the capitulation. Intimidated by these menaces, orders to this effect were despatched by Dupont, and so completely were the spirits of the French officers broken, that, out of twenty-four whom Vedel assembled to deliberate on the course they should pursue at this crisis, only *four*, including that general himself, voted for disregarding the capitulation and continuing their retreat, which was now open, to La Mancha. Nay, to such an extent did the panic extend, that a Spanish detachment crossed the mountains and made prisoners, upon the strength of the capitulation of Baylen, all the French depôts and insulated bodies as far as Toledo, which, with those who laid down their arms on the field, swelled the captives to twenty-one thousand. Two thousand had fallen in the battle; a thousand in the previous operations, or from the effect of sickness: twenty-four thousand men were lost to France.†

Language can convey to future ages no adequate idea of the impression which this extraordinary event produced in Europe. Nothing, since the opening of the Revolutionary war, had at all approached to it in importance. Hitherto the career of the French armies had been one of almost unbroken success, and even though the talents of the Archduke Charles and the firmness of the Russians had for a time arrested the torrent, yet it had been suspended only to break out shortly after with accumulated force, and sweep away every obstacle which courage, combination, or genius could oppose to its progress. Even at their lowest point of depression, disgrace had never sullied the Republican ranks: victorious or vanquished, they had ever commanded the respect of their enemies; no large bodies had laid down their arms; their retreat had ever been that of brave and honourable men. Now, however, a disaster unheard-of in Europe since the battle of Pavia, had overtaken their standards:

twenty-thousand men had surrendered; the imperial eagles had found in Andalusia the Cadiz Forks. Fame and incorrect information gave greater importance to this triumph than even its intrinsic magnitude deserved; it was unknown or overlooked that it was by a skilful series of military movements on the one side, and an extraordinary combination of errors on the other, that Dupont had been brought to such hazardous straits; by the firmness of the Swiss and Walloon Guards, the precision in fire of the Spanish artillery, and the inexperience of his own troops, that he had been compelled to surrender. It was generally imagined that the French veterans had laid down their arms to the Spanish peasants; it was unknown or forgotten that the victory was really gained by experienced soldiers; and the imaginations of men, both in the Peninsula and over all Europe, were set on fire by the belief that a new era had dawned upon mankind; that the superiority of disciplined troops and regular armies was at an end; and that popular enthusiasm and general zeal were all that were necessary to secure the victory even over the greatest and most formidable veteran armies. How widely this belief spread, how generally it was acted upon, and what oceans of blood it caused to be spilled in vain in Spain itself, will amply appear in the sequel of this history; and probably, by inspiring the people of that country with an overweening idea of their own strength, and of the capability of raw levies to contend with regular forces, it contributed, in no small degree, to that almost unbroken train of disasters in the field which their armies, when unsupported by the British, subsequently experienced during the remainder of the war. But in the first instance it produced a prodigious and most important burst of exultation and enthusiasm; it determined the conduct of a great proportion of the grandes and nobles of Spain, who had in the first instance adhered to the usurper, but now, with the Dukes del Infantado and del Parque, Cevallos and Penuela, rejoined the ranks of their countrymen; and by throwing the capital and chief towns of the kingdom, with the exception of the frontier fortresses, into the hands of the insurgents, gave the struggle, in the eyes of all Europe, as well as of the people themselves, the character of a national contest. Nor was the effect less momentous over the whole Continent, by affording a convincing proof that the French, at least, were not invincible, and opening the eyes of all governments to the immense addition which the military force, on which they had hitherto exclusively relied, might receive from the ardour and enthusiasm of the people.*

Napoleon was at Bordeaux when the account of the capitulation reached him. Opinions of Napoleon on this algar, had he been so completely overwhelmed: for a time he could not speak; the excess of his depression excited the alarm of his ministers. "Is your majesty unwell?" said the minister for foreign affairs, Maret. "No." "Has Austria declared war?" "Would to God that were all!" "What, then, has happened?" The emperor recounted the humil-

* Tor., i., 367, 368. Foy, iv., 85, 91. Nap., i., 122, 124. Jom., ii., 62, 63.

† Nap., i., 123, 124. Foy, iv., 97, 106. Tor., i., 370, 372. Jom., ii., 63, 64.

† Montg., vi., 345. Foy, iv., 110, 114. Lond., i., 97. Tor., i., 378. Nell., i., 124, 125. Jom., iii., 64.

iating details of the capitulation, and added, "That an army should be beaten is nothing; it is the daily fate of war, and is easily repaired; but that an army should submit to a dishonourable capitulation, is a stain on the glory of our arms which can never be effaced. Wounds inflicted on honour are incurable. The moral effect of this catastrophe will be terrible. What! they have had the infamy to consent that the haversacks of our soldiers should be searched like those of robbers! Could I have ever expected that of General Dupont, a man whom I loved, and was rearing up to become a marshal? They say he had no other way to prevent the destruction of the army—to save the lives of the soldiers! Better, far better, to have perished with arms in their hands, that not one should have escaped. Their death would have been glorious; we would have avenged them. You can always supply the place of soldiers; honour alone, when once lost, can never be regained."*

If the capitulation itself was dishonourable to the French arms, the subsequent violation of it by the Spaniards was still more disgraceful to the victors, and remains a dark stain on the Castilian good faith. From the moment that the long file of prisoners began their march towards Cadiz as the place of their embarkation, it was felt to be extremely difficult to restrain the indignation of the people, who loudly complained that so large a body of men, for the most part stained by robbery or murder, committed in Spain, should be forwarded to France, apparently for no other purpose but that they might be again let loose in the Peninsula to commit similar devastations. Alarmed at the increase and serious character of the ferment, the junta of Seville consulted Castanos and Morla, the governor of Cadiz, in the course which they should adopt. The first, with the honour and good faith of a gallant soldier, in opposition to the public clamour, insisted that the capitulation should be religiously observed; the latter, forgetting every other consideration in the desire to gain a temporary popularity with the multitude, contended that no treaty could be binding with men who had committed such enormities on the Spanish soil as the French prisoners; that to let them return to France, loaded with the spoil of Cordova, torn from the wretched inhabitants in open violation of the laws of war, would be a palpable act of insanity; and that, having once got them in their power, the only sensible course was to detain them till the war was over. These specious but sophistical arguments, unworthy of a Spanish officer, found a responsive echo in the breast of the infuriated multitude; the public effervescence increased as they advanced in their march; in consequence of the discovery of precious spoils in the knapsacks of some of the soldiers at Lebrixa, a tumult ensued between the peasantry and the prisoners, which cost many lives to the latter; the sacred vases of Cordova and Jaen were loudly demanded; and at Port St. Mary's the accidental circumstance of one of these holy cups falling from the haversack of a soldier gave rise to such a tu-

mult, that a general search of the baggage could no longer be prevented. These disorders were, perhaps, unavoidable in the circumstances in which the Spanish government of the province was situated, and the unexampled treachery with which they had been assailed by the French, but for the subsequent violation of the capitulation no sort of apology can be found. Desirous of maintaining their popularity, the junta of Seville acceded to the opinion of Morla, in which they in vain endeavoured to get Lord Collingwood and Sir Hugh Dalrymple to concur; instead of being sent by sea to France, the soldiers and regimental officers were crowded together into the hulks of Cadiz, where, such were the privations and misery to which they were subjected, that very few remained at the conclusion of the war.* Dupont, the officers of his staff, and all the generals, were permitted to return to France; but the remainder, nearly eighteen thousand in number, were kept in lingering suffering in their dismal captivity, and, with the exception of a few who accepted service under the Spanish government, and took the first opportunity to desert to their beloved eagles, and those contained in one hulk, who overpowered their guards during the night, and contrived to float her across to the lines of their countrymen three years afterward, during the siege of Cadiz, hardly any ever revisited their native country.† This frightful act of injustice was as impolitic as it was disgraceful; it gave the French, in their turn, too fair a ground for inveighing against the perfidy of their enemies, exasperated the feelings of their armies, who had first entered into this contest with lukewarm dispositions or undisguised aversion, and repeatedly afterward stimulated them to desperate and sanguinary resistance, under circumstances when, with a more trustworthy enemy, they would have entered into terms of accommodation.‡

* Sir Hugh Dalrymple's answer to the junta of Seville, when his opinion was asked on this subject, is worthy of a place in history. "It is quite clear that the capitulation is binding on the contracting parties, so far as they have the means of carrying it into execution. The laws of honour, not considerations of expediency, should ever govern soldiers in solemn stipulations of this kind; the surrender of General Vatel could only be supposed to have arisen from the confidence which he placed in the honour which characterized the Spanish nation. The reputation of a government, especially one newly formed, is public property, which ought not to be lightly squandered. The matter, therefore, is clear on considerations of honour and justice; even viewed in the light of expediency, it is far from being beyond dispute." Lord Collingwood, when applied to, answered, that if the Spanish government had not adequate seamen to man transport vessels for conveying the troops, he would order British seamen to fit out their merchant vessels for that purpose; that the capitulation must be observed so far as possible; if the conditions were impossible, they annulled themselves. —SOUTHBY, i., 502, 504. COLLINGWOOD'S *Memoirs*, ii., 127, 128.

† Foy, iv., 107, 109. Tor., i., 373, 377. Nap., i., 125, 127. South., i., 502, 510. Collingwood, ii., 124.

‡ The fate of the generals and officers who were returned to France from Cadiz was hardly less deplorable than that of their comrades who lingered away in prolonged torments on board the Spanish hulks. Dupont and all the generals were immediately arrested and sent to prison, where they lingered, without either trial or investigation, for many years afterward. General Marescot, who, though in a subaltern rank, had taken a certain part in the negotiation, loudly, but in vain, demanded to be brought to a court-martial. Neither he nor Dupont, nor any of the superior officers connected with the capitulation of Baylen, were ever more heard of till after the fall of Napoleon in 1814. In 1812, a court of inquiry sat on the generals Feb. 17, 1812, and condemned them all, but public opinion

The fatal news of the capitulation of Baylen arrived at Madrid on the 29th of July, and diffused universal consternation among the adherents of Joseph. A council of war was immediately summoned by Savary, and opinions were much divided on the course which should be pursued. Moncey proposed that Bessières' division should be recalled, and that with their united forces they should take a position in front of the capital, and defend it to the last extremity. But Savary, to whom the situation which he held as lieutenant-general of the king, as well as the known confidence which he enjoyed with the emperor, gave a preponderating voice in the deliberations, strongly urged the necessity of retiring to the northward, and taking council from circumstances as to the point to which it should be prolonged. On the 30th of July the intrusive king commenced his retreat: the hospitals had previously been evacuated for Bayonne; the heavy artillery, which could not be brought away, amounting to eighty pieces, were spiked; but the retiring monarch and his military satellites carried off with them all the jewels and precious articles from the palaces they had so recently occupied. They retired by the great road to Burgos, where headquarters were established on the 9th of August; the rear-guard collecting as it went along all the garrisons of the towns and castles which had been occupied by the French troops to the south of the Ebro. They experienced no molestation from the Spaniards during their retreat; notwithstanding which, all the villages and hamlets through which they passed were given up to pillage, and a great number burned to the ground. Soon after Joseph arrived at Burgos, Bessières arrived with his corps, and Verdier came up with the force which had been engaged in the siege of Saragossa, so that, including Moncey's corps and the troops brought up from Madrid, above fifty thousand veteran troops could, notwithstanding all the losses of the campaign, be collected for the defence of the Ebro.*†

was far from supporting their decision. Shortly after (1st May 1. May, 1812), an imperial decree forbade, on pain of death, any capitulation in the field which should amount to a laying down of arms. Such was Napoleon's irritation in everything connected with this convention, that when he afterward saw General Legendre, who, as chief of the staff to Dupont, had officially affixed his signature to the treaty, he was seized with a trembling from head to foot, and his indignation exhaled in these words: "How, general! did your hand not wither when you signed that infamous capitulation?" He never afterward heard Baylen alluded to without evincing such indignation as showed how deeply it had wounded his mind.—Foy, iv., 110, 113. * Foy, iv., 117, 124. Thib., vi., 442, 443. Sav., iii., 275, 277.

† Savary was blamed by Napoleon for this retreat to the Ebro, and he alleged that the line of the Douro might have been maintained, and the operations against Saragossa in consequence not interrupted. In justice to the French general, however, it must be observed, that his situation in the capital, after the surrender of Dupont, had become extremely critical; and that the losses which the troops at the capital had undergone were such as to preclude the hope of a successful stand being made against the united Spanish armies which might advance from the South. Shortly after his arrival at Madrid he had written in these luminous and explicit terms to the emperor, in a despatch which throws great light on the state of the contest at that period: "It is no longer a mere affair in which, by punishing the leaders, a revolt may be suppressed. If the arrival of the king does not pacify the country, we shall have a regular war on our hands with the troops of the line,

While this decisive stroke was struck in the south of Spain, the contest had already assumed a sanguinary character; the success had been more checkered in the Catalonian mountains, and the British army, under the guidance of WELLINGTON, had chased the French eagles from the rock of Lisbon.

Napoleon, who was by no means aware of the almost insurmountable obstacles which the tenacious spirit and rugged mountains of Catalonia were to oppose to his arms, had directed Duhesme to lend a helping hand to Lefebvre Desnoettes in the siege of Saragossa. In order to accomplish this object, that general, early in June, fitted out two corps: the first, four thousand five hundred strong, under the orders of General Chabran, was despatched towards the south, with instructions to make himself master of Tortosa and Tarragona, and then proceed on and co-operate with Marshal Moncey in the attack on Valencia; while the second, under General Schwartz, consisting of three thousand eight hundred men, after punishing Manresa, destroying the powder-mills there, and levying a heavy contribution on its inhabitants, was to push on to Lerida, and, after securing that important fortress, lend a hand to Lefebvre before the walls of Saragossa. These columns

quitted Barcelona early in June, and directed their march to their respective points of destination; but both experienced defeat. The tocsin was ringing in all the hills; the villages were deserted; the woods and higher parts of the mountains, the rugged passes and inaccessible thickets, formed so many rallying-points to the courageous Somatenes.* Schwartz, indeed, in his march towards Saragossa, forced the celebrated pass of Bruch, though beset with armed men; but, advancing a little farther, he fell into a disaster at Casa Mansana: the villagers assailed the invaders with showers of stones, balls, and even boiling water from the roofs of the houses; the peasants, who had fled in disorder a few minutes before through the streets, returned to the charge; threatened on all sides, Schwartz resolved to retreat, which he effected at first in good order; but his advanced guard having attempted to force the passage of the town of Esparraguera, which lay on his road during the night, was repulsed with loss, and his troops, thrown into disorder by that nocturnal check, were never able to regain their proper array till they found refuge, two days after, under the cannon of Barcelona. Chabran, whose route

and one of extermination with the peasantry. The system of sending movable columns over the provinces is likely to induce partial checks, which will lead to the spreading of the insurrection. It is indispensable that your majesty should consider seriously of the means of carrying on the war. We lose four hundred men a month in the hospitals alone; our army can in no respect be compared to that which occupies Germany. Everything has been calculated according to the turn which it was expected affairs would assume, not that they have actually taken. Many battalions have not four officers; the whole cavalry is fit for the hospital together. The crowds of young and presumptuous men who crowd the army, contribute rather to embarrassment than anything else. There is an incalculable difference between such coxcombs and a steady veteran sergeant or officer."—SAVARY TO NAPOLEON; Foy, iv., 34, 35.

* The *Somatenes* are the *levy-en-masse*, which, by an ancient law of Catalonia, are bound to turn out and defend their parishes whenever the *Somaten* or alarm-bell is heard from the churches.—TORENO, i., 309.

lay through a less mountainous district, reached Tarragona in safety on the 7th, and got possession of that important town without opposition; but Duhesme was so much alarmed by the repulse of Schwartz that he hastily recalled him to Barcelona; and so dangerous is it to make a retrograde movement while engaged with an insurrection, that a very severe resistance was experienced in the retreat, at places where not a shot had been fired during the advance. Irritated by this opposition and the sanguinary excesses of the peasants, the French set fire to the Villa-Franca as they retired; and Duhesme having sent Count Theodore Lecchi with the Italian division and Schwartz's troops to his assistance, the united columns again approached the pass of Bruch; but finding the Somatenes posted on its rugged cliffs in even greater strength than before, they fell back, after a bloody skirmish, and regained the shelter of Barcelona, pursued up to the very gates by the dropping fire and taunting scoffs of their gallant though rustic opponents.*†

These defeats produced the greater sensation, both among the French and the Spaniards, that they were gained, not by regular troops, but a tumultuary array of peasants, wholly undisciplined, and most of whom had then for the first time been engaged either in military service or exercise. They occasioned, in consequence, a universal insurrection in Catalonia: the cities equally as the mountains caught the flame; the burghers of Lerida, Tortona, Tarragona, Gerona, and all the towns in the province not garrisoned by French troops, closed their gates, manned their ramparts, and elected juntas to direct measures of defence; while the mountain districts, which embraced four fifths of the province, obeyed the animating call of the Somaten, and, under the guidance of their parish priests, organized a desperate Vendéan warfare. Forty regiments, of a thousand men each, were ordered to be raised for active operations of these formidable mountaineers; regular officers were, for the most part, obtained to direct their organization, and the ranks were in a short time complete, and, for the service of light troops, of a very efficient description. An equal force was directed to be prepared as a reserve, in case their mountain fastnesses should be threatened by the enemy. The peculiar nature of these extensive and thickly-peopled hill districts, as well as the character and resolution of their inhabitants; their rugged precipices, wood-clad steeps, and terraced slopes; their villages, perched like eyries on the summit of cliffs, and numerous forts and castles, each susceptible of a separate defence; their bold and energetic inhabitants, consisting of lawless smugglers or hardy peasants, long habituated to the enjoyment of almost unbounded practical freedom, rendered this warfare one of a peculiarly hazardous and laborious description.‡ Aware of the necessity of stri-

king a decisive blow in the present critical state of affairs of the province, Duhesme conceived that a sudden *coup-dé-main* against GERONA, which lies on the direct road to France, would both re-establish his communications, which the insurrections in all directions had totally intercepted, and strike a general terror into the enemy. Two days after the return of the former ill-fated expedition, accordingly, June 16. he set out in the direction of that town, with six thousand of his best troops, taking the coast-road to avoid the fortress of Hostalrich, which was in the hands of the enemy, and after cutting his way with great slaughter through a large body of Somatenes who endeavoured to obstruct his progress, appeared on the 20th before the walls of Gerona. Little preparation had been made to repel June 17. an assault; but the gates were closed, and the inhabitants, in great numbers, were on the walls prepared to defend their hearths. Having at length got his scaling-ladders ready, and diverted the attention of the besieged by a skirmish with the Somatenes on the plain at a distance from the ramparts, the assaulting columns suddenly approached the walls at five in the afternoon. Though they got very near without being perceived, and a few brave men reached the summit, they were repulsed in two successive attacks with great slaughter; and Duhesme having in vain tried the effect of a negotiation to induce a surrender, returned, by forced marches, to Barcelona, harassed at every step by the Somatenes, who, descending in great strength from the hills, inflicted a severe loss on his retreating columns.*

After this defeat, the whole plain round Barcelona, called the Llobregat, was filled with the enemy's troops; and General Duhesme, enraged at finding himself thus beset in the capital of the province, marched out against them a week afterward, and defeated a large body of the peasantry at the bridge of Molinos del Rey, capturing all their artillery. Rallying, however, at their old fastnesses of Bruch and Igualado, they again, when the French retired, returned to the Llobregat, and not only shut up the enemy within the ramparts of Barcelona, but established a communication with the insurgents in the interior, along the seacoast, from the Pyrenean frontier to the mouth of the Ebro, which all became the theatre of insurrection. Napoleon, to whom the prolongation of the war in so many different quarters of Spain had become a subject of great uneasiness, no sooner received intelli-

province of Catalonia, like those of Navarre and Biscay, has long enjoyed such extensive civil privileges as savour rather of Democratic equality than despotic authority. Its social state differs altogether from that of Arragon, though it was so long united under the same sceptre. Nowhere, except in this mountain Republic, is there so ardent a thirst after political freedom, or so large an enjoyment, at least in the mountainous districts, of its practical blessings. The inhabitants nourish the most profound hatred at the French, whom they accuse of having excited their fathers to revolt against the government of Madrid, and abandoned, when the contest was no longer conducive to their interests. In the long and opulent district which runs along the seashore, and contains the flourishing seaports of Tarragona, Roses, and Barcelona, commercial interests prevail; and the alliance and consequent trade with England was as much the object of desire as the withering union with France had been a subject of aversion.—Foy, iv., 137, 138.

† The inhabitants of Bruch, to commemorate their victory, erected a stone in the pass, with this pompous though laconic inscription: "Victores Marengo, Austerlitz, et Jena, hic victi fuerunt diebus vi. et xiv. Junii, anno 1808."—Foy, iv., 151.

‡ Though locally situated in an unlimited monarchy, the

gence of these untoward events than he directed Duhesme to issue from Barcelona, relieve Figueras, where four hundred French were closely blockaded by the insurgent peasantry, and afterward carry by assault both Rosas and

July 5. Gerona. General Reille, whom he sent

forward with a large convoy guarded by five thousand men, defeated the Somatenes before Figueras, and raised the blockade of that fortress; but when, encouraged by this success,

July 11. he attempted a *coup-de-main* against

Rosas, he sustained a repulse; and, finding himself daily more closely straitened by the insurgents, was obliged to retire with considerable loss towards Gerona. About the same time the Spanish affairs in the whole province acquired a degree of consistency to which they had never previously attained, by

July 22. the conclusion of a treaty between Lord

Collingwood and the Marquis Palacios, governor of the Balearic Isles, in virtue of which the whole disposable force in those islands was conveyed to the Catalanian shores, and thirteen hundred good troops were directed towards Gerona, while Palacios himself, with four thousand five hundred, and thirty-seven pieces of cannon, landed at Tarragona, where their presence excited a most extraordinary degree of enthusiasm.*

Meanwhile Duhesme, with the main body of

his forces, six thousand strong, a considerable train of heavy artillery, and everything requisite for a

siege, set out from Barcelona, and took the road for Gerona; but he was long delayed on the road, which runs close to the seashore, by the fire of an English frigate, under the command of Lord COCHRANE, which sent a shower of balls among his columns whenever they came within range, on the one side, and the desultory but incessant attacks of the Somatenes on the other. At length, after encountering great difficulties and experiencing a heavy loss, he succeeded in forcing his way, by the hill-road, to Hostalrich, which he summoned in vain to surrender; and leaving a few troops only to observe its garrison, he, by infinite skill and no small good fortune, avoided the guns of that

July 24. fortress, and proceeded on to Gerona,

under the walls of which he effected a junction with Reille's troops, who had come up from Rosas. Their united strength being now, notwithstanding all their losses, above

July 22. nine thousand men, operations in form

were commenced against the place. Before this could be done, however, the succours from Majorca had been thrown into the town; and as the besiegers were themselves cut off from all communication, both with their reserve magazines at Barcelona and the frontier of France, by the incessant activity of the peasantry, who lay in wait for and frequently intercepted the convoys, the works advanced

Aug. 15. very slowly. On the 15th of August, however, the breach of Fort Montjuic was declared practicable, and an assault was about to commence, when the besiegers were themselves assailed by a confused but formidable body, ten thousand strong, which appeared in their rear. This consisted, one half of reg-

ular troops, which the Count Caldagues had brought up from Tarragona, the other of Somatenes and Miquelets, with which he had augmented his force during its march along the coast of Catalonia. Count Theodore Lecchi, who was left in charge of Barcelona, was in no condition to oppose their passage almost within range of the guns of the fortress; for the troops he commanded, hardly four thousand strong, were barely adequate to guard its extensive works, and the Miquelets, stationed on the heights which overhang the city, had carried their audacity to such a pitch as not only to keep up a constant fire on the French sentinels, but even make signals to the disturbed multitude in the streets to revolt. When this powerful force approached Gerona, the besieged made a general sally on the French lines, and with such vigour that they penetrated into the batteries through the embrasures of the guns, spiked the heavy cannon, and set fire to the works; while Duhesme, with the great body of the besiegers' force, was sufficiently engaged in observing the enemy which threatened them from the outside. Finding it totally impossible to continue the siege, Duhesme broke up in the night, and, dividing his force into two columns, took the road for Barcelona. But here fresh difficulties awaited him: two English frigates, under the able direction of Lord Cochrane, cannonaded and raked the road by the seacoast; overhanging cliffs prevented them from getting out of the destructive range; while the route by the mountains in the interior, besides being closed by the cannon of Hostalrich, was in many places steep and intersected by ravines, and beset by armed peasants, who, from the rocks and woods above, kept up a destructive fire upon the troops beneath.* In these circumstances, the French general did not hesitate to sacrifice his artillery and stores; and, thus lightened, he succeeded in fighting his way back, by mountain-paths on the summit of the cliffs which overhang the sea, amid a constant fire, to Barcelona. In this disastrous expedition above two thousand men and thirty pieces of artillery, besides extensive stores, were lost; and at its conclusion the French possessed nothing in Catalonia but the fortress of Barcelona and the citadel of Figueras.

Unbounded was the joy which these extraordinary successes in every part of Spain excited among its inhabitants. The variety of quarters in which they had arisen augmented their moral effect: it was supposed that popular energy was irresistible, when it had triumphed over its enemies at once in Andalusia and Arragon, Valencia and Catalonia. Abandoning themselves to a pleasing and allowable, though short-lived illusion, the Spaniards generally believed that the war was at an end; that the Castilian soil was finally delivered from its invaders; and that, relieved of all disquietude as to the defence of their own country, the only question was, when they should unite their victorious arms to those of the English, and carry the torrent of invasion across the Pyrenees into the French plains. These enthusiastic feelings rose to a perfect

* Tor., i., 38, 39. Nap., i., 82, 83. Foy, iv., 169, 172. St. Cyr, *Guerre la Catal.*, 14, 17. Castanos, i., 32, 84.

* Cabanes, ii., 62, 81. Foy, iv., 172, 193. Tor., i., 37, 40. Nap., i., 85, 86. St. Cyr, 40, 47. Duhesme, 28, 39.

climax when the Spanish army from Andalusia entered the capital, in great pomp, with Castanos at their head, under a majestic triumphal arch, erected by the citizens to do honour to their arrival; and the whole of Spain, Aug. 25. now delivered from the enemy, with the exception of the small portion occupied by the French army in Navarre and on the Ebro, joined in one universal chorus of national exultation and hatred of the invaders. The press joined its influence to the same excitement; newspapers, warmly advocating the patriotic cause, were established at Madrid, Seville, Cadiz, and the other chief towns of Spain, and by their vehement declamation added to the general enthusiasm, as much as by their extravagant boasting they weakened the sense of the necessity of present exertion, and thus diminished the chance of bringing the contest in the end to a successful issue. But in the midst of the universal exultation it was observed with regret that few vigorous or efficient measures were adopted by the many separate and independent juntas to prosecute the war against the enemy: a feeling increased by the calamitous issue of the revolt of Bilbao, which had taken up arms upon receipt of the glorious news from Andalusia. The inhabitants, in the first instance, had succeeded in expelling the French garrison; but, being unsupported by any aid from Asturias or Aug. 16. Galicia, the place was quickly recaptured, with great slaughter, by the French division of Merle. This was done by the express commands of Joseph Bonaparte, to whom this dangerous movement, in a town of such magnitude, so near his line of communications with France, had been the subject of no small disquietude; and who boasted in his despatches, that "the fire of the insurrection at Bilbao had been extinguished in the blood of twelve hundred men."^{*}

Meanwhile events of a still more glorious and decisive character had liberated the kingdom of Portugal from its oppressors.

In every phase of modern history it has been observed that Portugal has, sooner or later, followed the course of changes which public feeling had established in Spain; and it was hardly to be expected that so great and heart-stirring an event as the resurrection of Castilian independence was not to find a responsive echo in the kingdom so closely neighbouring, and equally suffering under the evils of Gallic oppression. At a very early period, accordingly, symptoms of an alarming effervescence manifested themselves in Portugal, and Napoleon, appreciating more justly than Junot the probable course of events in that kingdom, strongly enjoined him to abandon the pompous proclamations in which he was endeavouring to win the affections of the people, and in good earnest prepare for military operations.† Not

anticipating, however, any immediate hostilities, he ordered him to detach four thousand men to support Bessières in Leon, and three thousand to co-operate with Dupont in Andalusia. But these detachments were rendered impossible by the pressure of events in Portugal itself. No sooner did the intelligence of the massacre at Madrid on the 2d of May, and the insurrection in Galicia reach Oporto, than the Spanish troops there, ten thousand strong, dispossessed the French authorities, and marched off in a body towards Galicia, from June 5. whence, as already mentioned, they were forwarded to Leon in time to share in the disaster of Rio Seco. The inhabitants, in the first moment of enthusiasm, installed insurrectionary authorities in room of the French ones, who had been dispossessed; but after the departure of the Spanish troops they became alarmed at their own boldness, and hastened to reinstate the tricolour flag, and to renew their protestation of fidelity to the French general at Lisbon. The moment, however, that he was apprized of the events at Oporto, Junot made preparations to effect the disarming of the June 9. Spanish troops in the capital; and with such secrecy and decision were his measures taken, that, before they were well aware of the danger impending over them, they were all surrounded by greatly superior masses of French troops, and compelled to surrender. By this able stroke nearly five thousand Spanish troops were made prisoners, who might have been highly prejudicial to the French arms, if they had succeeded in withdrawing and forming the nucleus of an insurrection in the interior of the country.*

The flame, however, excited by the glorious intelligence of popular success, which daily came pouring in from all parts of Spain, could not so easily be suppressed. The students at Coimbra were among the first to take up arms; the mountaineers of Tras-los-Montes speedily followed the example; the tocsins were heard in their lovely hills, arms and torches gleamed in their vine-clad vales; Al- June 11. garves was speedily in open revolt; Alentejo was known to be ripe for insurrection, and, at the summons of Colonel Lopez de Souza, soon after took up arms. Encouraged by this revolt in their neighbourhood, the inhabitants of Oporto a second time hoisted the standard of independence. A junta was speedily formed June 9. in that opulent city, which shared the supreme direction of affairs with the bishop, who early signalized himself by his zeal in the patriot cause. The insurrection in the province of Entre Douro-Minho appeared so formidable, that Junot directed General Loison with a strong division to proceed against it from Almeida; but though he at first obtained some

Progress of the insurrection.

Affairs of Portugal, and disarming of the Spanish troops in that country.

* South., ii., 287, 288. Tor., ii., 82, 85. Nap., i., 287, 288.

† "What is the use," said he, "of promising to the Portuguese what you will never have the means of fulfilling? Nothing is more praiseworthy, without doubt, than to gain the affections of the people; but it should never be forgotten that the primary object of a general should be the safety of his soldiers. Instantly disarm the Portuguese; watch over the soldiers who have been sent to their homes, in order

that their chiefs may not form so many centres of insurrection in the interior. Keep your eye on the Spanish troops; secure the important fortresses of Almeida and Elvas. Lisbon is too large and populous a city; its population is necessarily hostile. Withdraw your troops from it; place them in barracks on the seacoast. Keep them in breath—well disciplined, massed, and instructed, in order to be in a condition to combat the English army, which, sooner or later, will disembark on the coasts of Portugal."—NAPOLÉON to JUNOT, May 24, 1808. Foy, iv., 198, 199.

* Lond., i., 117, 119. South., ii., 41, 47. Nevis, 99, 109. Foy, iv., 202, 210.

success, yet, as he advanced into the mountains, his communications were so completely cut off, and the insurrection appeared so formidable on all sides, that he was obliged to return to Lisbon by Celorico and Guarda, at which places he routed the peasantry with great slaughter.* In the south, the patriots gained considerable successes against the French detachments, which endeavoured to penetrate into the Alentejo; in the northeast, Abrantes was threatened by the insurgents of the Valley of the Tezers; in the east, the revolt at Beija was only extinguished by a bloody nocturnal assault of the town, after a rapid march, by a French brigade.† Surrounded in

June 9. this manner with embarrassments, Junot, after holding a council of war, the invariable sign of experienced difficulty, again despatched Loison with four thousand men to Abrantes; in his progress he had several severe actions with the Portuguese peasants, who were dispersed with great slaughter, but who evinced, by their courage in disaster, what materials were to be found among them for a formidable resistance in future times; and he returned to Lisbon, having irritated the insurrection more by his cruelty than he had overawed it by his success. His recall to the capital was rendered necessary by the progress of the insurrection in the Alentejo, which had

July 25. elected a junta, and established a sort of provisional government at Evora. Resolved to strike a decisive blow in that quarter, where the proximity of English succours from Gibraltar rendered it peculiarly formidable, Junot fitted out a more powerful expedition, consisting of seven thousand infantry, twelve hundred horse with eight guns, which was sent forth under the command of the sanguinary Loison. After dispersing several armed assemblages which strove in vain to obstruct his progress, this general came

July 29. up with the main body of the insurgents posted in front of Evora. Ten thousand Portuguese peasants, and four thousand Spanish troops, who had advanced to support them from Badajoz, were there assembled, with twelve pieces of cannon. They were wholly unable, however, to withstand the shock of the French legions; at the first onset, the undisciplined peasantry fled from the terrible charge of their dragoons. The Spanish auxiliaries, seeing themselves left alone with the whole weight of the action on their hands, retired in haste, and were speedily thrown into disorder; and in the general confusion, the victorious troops entered the town, where a feeble resistance only was attempted, but an indiscriminate massacre im-

mediately commenced. Neither age nor sex was spared: armed and unarmed were inhumanly put to the sword: it is the boast of the French historians, that while "they lost only two hundred and ninety, eight thousand were slain or wounded on the part of the insurgents."* Never, while Portuguese blood flows in the human veins, will the remembrance of that dreadful day be forgotten: never will the French be any other than an object of execration to the descendants of those who perished in that inhuman massacre.† But the cup of human suffering was full: the hour of retribution was fast approaching, and Loison was awakened from his fancied dream of security, and the farther prosecution of his blood-stained progress towards Elvas, by intelligence that a BRITISH ARMY HAD APPEARED OFF THE COAST OF PORTUGAL.

Ever since the insurrection in the Peninsula had assumed a serious aspect, the English government had resolved upon sending out powerful military succours to its assistance, and at length bringing the strength of the two nations to a fair contest with land-forces.

The English cabinet resolve on sending succours to Portugal.

Fortunately, a body of about ten thousand men were already assembled at Cork, having been collected there by the preceding administration for the purpose of an expedition against South America; a proposed diversion of force, at a time when every sabre and bayonet was required in European warfare, which appears almost inconceivable; unless, as Colonel Napier sarcastically observes, it was projected in imitation of the Romans, who sent troops to Spain when Hannibal was at their gates.‡ The command of the expedition was given to SIR ARTHUR WELLESLEY, whose great capacity had been evinced in the glorious fields of Indian warfare, and, more recently, in the easier conquest of the Danish militia; and General Miranda, the able adventurer who had so long been concerned in projects for the separation of the Spanish colonies from the mother-country, was given to understand that no countenance could now be shown by the British government to any such designs. Two smaller divisions were soon afterward prepared, and set sail from Ramsgate and Margate; and orders were sent to Sir John Moore, who, with twelve thousand men, had been sent to Gottenberg to aid the King of Sweden in his heroic defence of his kingdom against Russia, an offer which that gallant monarch declined to accept,§ to return forthwith to England, to form a farther reinforcement of the armies in the Peninsula. Though the direction of the Cork expedition, however, was intrusted to Sir Arthur Wellesley, yet a senior officer, Sir Harry Burrard, was appointed to supersede him in the command shortly after he landed in Portugal; who, again, was to retain the supreme direction only until Sir Hugh Dalrymple arrived from Gibraltar.

* "In this expedition," says Thiebault, "we lost 60 men killed and 140 wounded: of the insurgents at least 4000 were killed or wounded on the different fields of battle."—THIEBAULT, 155.

† The French general, Thiebault, boasts of this as a great exploit. "Twelve hundred Portuguese were put to death in the conflict; no quarter was shown to any one with arms in his hands. The town was afterward set on fire and plundered, and the worst military excesses committed on the wretched inhabitants. Kellerman shortly afterward said, in a proclamation to the people of Alentejo, 'Beija had revolted; Beija is no more. Its guilty inhabitants have been put to the sword; its houses delivered up to pillage and the flames. Thus shall all those be treated who listen to the counsels of a perfidious rebellion, and with a senseless hatred take up arms against us.'"—THIEBAULT, 135, 136. SOUTH-
EY, i., 105.

* Thiebault, 165.

§ The particulars of this expedition, and the causes of the disagreement with the Swedish monarch, will be found below, Chap. LIV., which treats of the war between Turkey, Sweden, and Russia.

Thus, in the most momentous period of the campaign, that in which the British troops were first to be engaged with the enemy, and when they were exposed to all the difficulty incident to a first landing on a hostile shore, they were to be intrusted successively to the command of three different generals: an arrangement as characteristic of the happy ignorance of military affairs which at that period prevailed in the British government, as the cheerful acquiescence of the first commander in the appointment of any officer, how unknown soever to fame, over his head, was of the single-hearted feeling and patriotic devotion which in every age has been found to be the accompaniment of real greatness.*†

The expedition, under the command of Sir Arthur, sailed from Cork on the 12th of July, but the general himself preceded them in a fast-sailing frigate, and arrived at Corunna on the 20th. He immediately entered into communication with the junta of Galicia, from whom he received the distressing intelligence of the defeat at Rio Seco, and also was made acquainted with the desire of the Spaniards in that quarter to receive no succours, except in arms, stores, and money, from England: a resolution which it is hard to say, after such a disaster, savoured more of magnanimous resolution or presumptuous confidence.‡ He found the opinion of all classes so unanimous in hatred of the French, "that no one dared to show that he was a friend to them." Having supplied the junta, therefore,

with £200,000 in money, and assured them of the speedy arrival of extensive military stores, which in a great measure elevated their spirits after their late misfortunes, he proceeded to the southward to secure the main objects of the expedition, which were, in the first instance, an attack upon the Tagus, and afterward the detachment of such a force to the southward as might effectually secure Cadiz from any attack from the French under Dupont. As the whole force of the expedition, when joined by the reinforcements from England, the corps of Sir John Moore, and that under General Spencer, which was off Cadiz, was estimated by government at thirty thousand men, it was thought that ample means existed to achieve both these objects; and as the primary condition of all successful military efforts by a transmarine power is the securing strong seaports, as a base for the army, and a point of refuge in case of disaster, it is evident that the attainment of one or both of these objects was an indispensable preliminary to future operations. It was fortunate, however, that subsequent events rendered the dispersion of the English force, and the formation of a double base of operations, unnecessary; and that the British army was thereby concentrated in Portugal, where it had a strong country to defend, a docile population to work upon, and a central position in the flank of the French armies in Spain to maintain.*

Sir Arthur Wellesley arrived at Oporto on the 26th, and proceeded on with the expedition to Mondego Bay, where he arrived on the 30th of July. Having there received intelligence of the surrender of Dupont, he deemed all operations in Andalusia unnecessary, and having sent orders to General Spencer to come round from the Bay of Cadiz and join him, he determined upon an immediate landing: a bold and decisive resolution, considering that his own force did not exceed ten thousand men, and Junot had fifteen thousand at Lisbon.† He accordingly issued a proclamation to the people of Portugal, eminently descriptive of the principles of that glorious struggle which was now about to commence,‡ and which his own talents and constancy, and the resolution of the three nations now banded together, ultimately brought to so glorious a termination. At first, Sir Arthur thought of landing on the small peninsula of Peniche, about seventy miles to the north of the Rock of Lisbon, but, though the anchorage

* Well, Desp. by Gurwood, iv., 1, 3, 21, 22, 43.

† When Sir A. Wellesley received the command of the expedition at Cork, government gave him no reason to believe that he was to be superseded in the supreme direction of it. The first intimation he obtained of that intention was by a letter from Lord Castlereagh, dated the 15th of July, 1808, which was received by him when at sea, off Mondego Bay. Many officers, who had held the situations and achieved the victories which he had in India, would have at once resigned the command in which he was now reduced to so subordinate a station; but Sir Arthur acted otherwise. In answer to Lord Castlereagh, he said, "Pole and Burghersh have apprized me of the arrangements for the future command of the army. All that I can say on the subject is, that whether I am to command the army or not, or am to quit it, I shall do my best to ensure its success; and you may depend on it that I shall not hurry the operations, or commence them one moment sooner than they ought to be commenced, in order that I may acquire the credit of the success. The government will determine for me in what way they will employ me hereafter, either here or elsewhere." When asked by an intimate friend, after his return, how he, who had commanded armies of 40,000 men, received the Order of the Bath, and the thanks of Parliament, could thus submit to be reduced to the rank of a brigadier of infantry, he replied: "For this reason, I was nimuk-wallah, as we say in the East; I have ate of the king's salt, and therefore I consider it my duty to serve with zeal and promptitude when or wherever the king or his government may think proper to employ me." Nor was this disinterested and high-minded patriotism and sense of duty without its final reward; inferior men would probably have thrown up the command, and rested on the laurels of Seringapatam and Assaye; but Wellington pursued the path of duty under every slight, and he lived to strike down Napoleon on the field of Waterloo.—See GURWOOD'S *Despatches*, August 1, 1808, vol. iv., 43; and *Blackwood's Magazine*, xli., 714.

‡ "Notwithstanding the recent defeat of the Galician army, the junta here have not expressed any wish to receive the assistance of British troops; and they again repeated, this morning, that they could put any number of men into the field if they were provided with arms and money; and I think this disinclination to receive the assistance of British troops is founded, in a great degree, on the objection to give the command of their troops to British officers."—WELLINGTON to LORD CASTLEREAGH, Corunna, July 21, 1808; GURWOOD, iv., 27.

* Gurw., iv., 20, 33. Lond., i., 114, 116. Nap., i., 187.

† The exact number was 9280 sabres and bayonets—about 10,000 men, including subalterns and officers. Spencer's corps was 4793 strong—about 5000 men.—GURWOOD, iv., 20.

‡ "The English soldiers who land upon your shores do so with every sentiment of friendship, faith, and honour. The glorious struggle in which you are engaged is for all that is dear to man: the protection of your wives and children, the restoration of your lawful prince, the independence, nay, the existence of your kingdom, the preservation of your holy religion; objects like these can only be attained by distinguished examples of fortitude and constancy. The noble struggle against the tyranny and usurpation of France will be jointly maintained by Portugal, Spain, and England; and, in contributing to the success of a cause so just and glorious, the views of your Britannic majesty are the same as those by which you yourselves are animated."—A. WELLESLEY'S *Letter*. It is seldom that a proclamation, in the outset of a struggle, so faithfully represents the real objects at issue in it; still seldomer that it so prophetically and truly describes its ultimate result after many and long-continued disasters.—See GURWOOD, iv., 46.

was safe and practicable, it was commanded by the guns of the fort at its extremity, which was still in the hands of the enemy. He therefore, by the advice of Sir Charles Cotton, selected in preference Mondego Bay, where the whole fleet were assembled on the 31st of July. On

Aug. 1. the following morning the disembarkation commenced, and, notwithstanding the obstacles arising from a strong west wind and heavy surf, which occasioned the swamping of several boats and the loss of many lives, it

Aug. 5. was completed by the 5th, at which time General Spencer with his division came up, and was immediately put on shore. He had not received Sir Arthur's orders to join, but, with great presence of mind and the true military spirit, the moment he heard of Dupont's surrender he made sail for the Tagus, from whence he was sent forward by Sir Charles Cotton to the general point of disembarkation.

Aug. 8. On the evening of the 8th the united forces, thirteen thousand strong, bivouacked on the beach, and on the following morning the advanced guard moved forward, and commenced that memorable march which, though deeply checkered with disaster, was destined to be never finally arrested till the British cavalry passed in triumph from Bayonne to Calais.*

The troops took the field in the highest spirit, and the most perfect state of discipline and equipment, confident in their leader, and not less confident in themselves; for even at this early period of the war it was the habit of the British soldiers, the habit bequeathed by centuries of glory, to admit of no doubt as to the issue of a combat. The Portuguese generals, who had six thousand men, were at first most extravagant in their demands, and would only consent to join the English upon condition that their troops should all be maintained from the British commissariat: a proposition so utterly unreasonable when made by the natives of the country to their allies, just landed from their ships, that it thus early evinced, what the future progress of the war so clearly demonstrated, that jealousy of foreign co-operation, and aversion to foreign command, were nearly as strongly imprinted on their minds as hatred at the invaders. At length they consented to let General Freire, with one brigade of infantry, fourteen hundred strong, and two hundred and fifty horse, remain with Sir Arthur; but the main body was positively prohibited to advance beyond Leira, on the road to Lisbon. The truth was, that they entertained a secret dread of the French troops; and deeming the English totally inadequate to contend with them, they were unwilling to commit themselves by their side to a decisive affair. This defection of the native troops threw a chill over the English army, not from any doubt as to its ability to contend single-handed with the forces of Junot, but from the apprehensions which it inspired regarding the sincerity of their allies' professions of zeal against the common enemy. Sir Arthur, notwithstanding, continued his advance, and was received everywhere by the people with rapturous enthusiasm. His route lay by Alcobaca to Caldas, which latter place he

reached on the evening of the 15th; Aug. 15. Laborde, who commanded a division of five thousand French, which Junot, on the first alarm, had sent down to the coast, retiring as he advanced. A trifling unsuccessful skirmish occurred on the same day at Obidos, in which a few men were killed and wounded on both sides: memorable as the first British soldiers who fell in the Peninsular war.*

Meanwhile, Junot despatched orders in all directions to call in his detached columns, and concentrate all his forces for the protection of Lisbon; and Laborde, to give him time to complete his arrangements, resolved to stand firm at ROLICA, a little village situated at the southern extremity of a large oblong valley, running nearly north and south in the bosom of the Monte Junta, in the centre of which the little village and Moorish tower of Obidos are situated. His force, five thousand strong, including five hundred horse and five guns, was stationed on a small elevated plateau in front of Rolica; at the upper end of the valley; and the hills on either side which shut it in were occupied by detachments, who, from amid the rocky thickets and close underwood of myrtles and gumcistus with which they were covered, threatened to keep up a heavy fire on the assailants. Sir Arthur divided his force into three columns: the right, consisting of the Portuguese infantry, and fifty horse under Colonel Trant, was directed to turn the mountains in the rear; while the centre, under Sir Arthur in person, attacked the plateau in front; and the left, under General Ferguson, was ordered to ascend the hills abreast of Obidos, and menace the French right by turning it in the mountains. As the centre advanced, preceded by nine guns, the corps on the right and left moved simultaneously forward in the hills, and the aspect of the body in the plain, nine thousand strong, moving majestically forward at a slow pace, in the finest order, and constantly closing again, after the array had been broken by trees or houses in the line of its advance, strongly impressed the French soldiers, most of whom, like the British, were that day to make their first essay in real warfare against an antagonist worthy of their arms. No sooner, however, was Laborde made aware of the risk he ran, if he remained in his present situation, of being outflanked on either side, than he fell swiftly back, in admirable order, and took up a second position, much stronger than the former, in a little plain projecting into the valley higher up in the gorge of the pass, and shut in by close rocky thickets on either side. Thither he was rapidly pursued by the British, the right, centre, and left still moving in the same order. Never in the whole progress of the Peninsular campaigns did war appear in a more picturesque and animating form than in the first engagement of the British soldiers. The loud shouts of the advancing columns, re-echoed by the surrounding hills, and answered by as confident cheers from the enemy; the sharp rattle of the musketry among the woods, which marked the advance of the assailants as they drove before them the French light troops; the curling wreaths of smoke

Combat of Rolica.

which rose above the foliage, and were wafted by the morning air up the sides of the mountains, amid the rays of a resplendent sun, formed a scene which resembled rather the mimic warfare of the opera stage than the opening of the most desperate and sanguinary strife recorded in modern times. Such was the impetuosity of the attack that the leading troops of the centre column, particularly the 29th regiment, forced their way through the gorge, and alone sustained the brunt of the enemy's fire before any of their comrades could come up to their assistance. But the severity of the concentric discharges, not merely from the line in front, but the woods on either flank, was so great that this gallant regiment, on first emerging into the little plain, wavered and broke, and their noble colonel, Lake, as he waved his hat to lead them back to the charge, was killed. At that critical moment, however, the 5th and 9th came up, the 29th rallied, and the whole rushed forward with irresistible impetuosity upon the enemy. The French were obliged to give ground; the position was carried before it was menaced by the flank columns getting into its rear. Even then the enemy retired slowly and in compact order, keeping up a continued fire from the rear-guard, and exhibiting, equally with the advance of the assailants, the finest specimen of discipline and steadiness amid all the confusion incident to a retreat over broken ground and through entangled thickets. In this brilliant affair the British lost five hundred men killed and wounded; the French six hundred, and three pieces of cannon; and as the former, though nearly triple the enemy upon the whole, were necessarily, from the narrow and rugged character of the ground, inferior, in the first instance, at least, at all the points of attack, it was hard to say to which of these two gallant nations the palm of courage and skill in this their first encounter in the Peninsula was to be awarded.*†

On the following morning orders were, in the first instance, issued for the continuance of the pursuit, and it was universally believed in the army that the enemy would be pursued, at the point of the bayonet, to the Rock of Lisbon; but at noon accounts arrived at headquarters of the arrival of Generals Anstruther and Ackland, with their respective brigades from Eng-

land, off the coast; and, at the same time, that Junot had marched with all his disposable force out of Lisbon to bring matters to the issue of a decisive battle. Orders were therefore given to suspend the pursuit, and the line of march was directed by Lourinhã to Vimiero, where headquarters were established on the 19th, in order to be near the seacoast, to take advantage of the re-enforcements which were at hand. On the other hand, Junot, having by great exertion collected all his disposable force and formed a junction at Torres Vedras with the retiring division of Laborde, found himself at the head of only fourteen thousand men, including, however, twelve hundred horse and six-and-twenty pieces of cannon; so heavily had the necessity of occupying many different points in a hostile country weighed upon and divided the twenty-five thousand which still remained at his disposal. On the 19th, General Anstruther's brigade was landed, and on the 20th General Ackland's; and these re-enforcements raised the English army to sixteen thousand fighting men, besides Trant's Portuguese and two regiments which were with Sir Charles Cotton off the Tagus. It had, however, only eighteen guns and a hundred and eighty horse British, and two hundred Portuguese horse, so that the superiority of infantry was nearly counterbalanced by the advantage of the enemy in the other arms of war. Accurately informed of the nature of the country through which he was to advance, Sir Arthur proposed, on the 21st, to turn the strong position of Torres Vedras and gain Mafra with a powerful advanced guard, while the main body was to move forward and seize the adjoining heights, so as to intercept the French line of retreat by Montachique to Lisbon. But Sir Harry Burrard, Sir Arthur's superior in command, who had now arrived off the coast, forbade any such hazardous operation, as endangering unnecessarily part of the army, when the force already in hand, and still more the powerful re-enforcement approaching under Sir John Moore, rendered ultimate success a matter of certainty without incurring any such risk. The troops, therefore, were concentrated at Vimiero, and every arrangement made for a decisive battle on the morrow; while Junot, having mustered every man he could collect at Torres Vedras, set out, soon after nightfall, and advanced, through tedious and difficult defiles, to within a league and a half of the British outposts, where he arrived by seven o'clock on the following morning.*†

* Foy, iv., 304, 315. Thieb., 174, 182. Gurw., iv., 81, 84. Nap., i., 202, 205. Lond., i., 130, 137.

† In this, as in all the other actions of the war, the estimate of the numbers engaged is taken from a medium of the accounts on both sides; keeping in view the credit due to the different narratives, and the maxim, *testimonia ponderanda sunt potius quam numeranda*. In this affair Sir Arthur estimates the French at six thousand men, Thiebault at nineteen hundred, Foy at twenty-five hundred, Torneo at five thousand, Thibaudenau at three thousand five hundred. —See THIEB., 179; GURW., iv., 81; FOY, iv., 324; TOR., ii., 46; THIB., vi., 464. With the utmost wish to maintain an impartial view, and the greatest anxiety to avoid the influence of undue national partiality, it is impossible to study the French accounts of the actions in the Peninsular war, and particularly the numbers engaged and lost on the opposite sides, without feeling as great distrust of the fidelity of their facts as admiration of the brilliancy of their descriptions and the talent of their observations, and arriving at the conclusion that the two rival races of modern Europe have here, as elsewhere, preserved their never-failing characteristics; and that, if the palm for the eagle-glance and the scientific reflection is frequently to be awarded to the writers of the Celtic, the credit of honest and trustworthy narrative is in general due to the historians of the Gothic race.

* Gurw., iv., 89, 93. Sir A. Wellesley's Evid. Ibid., iv., 181. Lond., i., 137, 142. Nap., i., 207, 209. Foy, iv., 319, 323. Thieb., 183, 195.

† The road by which Sir Arthur proposed to have advanced from Vimiero to Mafra was near the seacoast; that by which Junot actually came up from Torres Vedras to Vimiero was farther in the interior, but nearly parallel to the former. If, therefore, the design of the English general had been followed out, it would have brought the two armies into a position similar to the French and Prussian at Jena: they would have mutually turned and crossed each other in their march, and when they came to blows, Junot would have fought with his back to Oporto and his face to Lisbon, and Wellington with his back to Lisbon and his face to Oporto. But there would have been this essential distinction between the situation of the two armies, after having thus mutually passed each other: that Junot, out off from all his reserves and supplies at Lisbon, would have been driven, in case of disaster, to a ruinous retreat through

The ground occupied by the British in front of Vimiero, though not clearly defined as a military position, was yet of considerable strength. The village of that name stands in a beautiful valley, running in a northwesterly direction from the interior towards the Atlantic, with the clear stream of the Maceira glittering over a pebbly bottom in its bosom, at the distance of about three miles from the sea. Hills rise on either side, especially on the northern, where a range of abrupt heights overhang the little plain. Over the summit of these runs the great

Battle of Vimiero, Aug. 20.
road from Lisbon, through the hamlets of Fontaniel and Ventoza to

Lourinham, while on the southeast is a sort of high table-land, covered in the ravines with myrtle, in the open part bare, over which the approach on the side of Torres Vedras passes. A still loftier mass of heights overlook these in the rear, and lie between them and the sea. On this rugged ground the British army lay in bivouac on the night of the 20th, the village of Vimiero being occupied by a strong detachment, and a few pickets stationed on the heights towards Lourinham, to give warning of the arrival of the enemy. The first information of their approach was obtained at midnight, when a horseman in haste rode up to Sir Arthur with the account that Junot's whole army, said to be twenty thousand strong, was approaching. Shortly before sunrise a cloud of dust was seen to arise in the direction of the road leading from Torres Vedras to Lourinham: column after column were soon after discerned, through the morning dawn, to cross the sky-line of the opposite eminences, and it was evident that the French were bearing down in great force on the British left. After they descended from the heights on the opposite side, however, the direction of their march could no longer be distinctly perceived, and the advanced guards were upon the English videttes almost as soon as they were perceived. But Sir Arthur, concluding, from the line of road on which they were marching, that the left was the principal object of attack, had, meanwhile, ordered four brigades successively to cross the valley from the heights on the south to those on the north of the stream, and before the action began the left was secure. Observing the rapid concentration of troops on the English left, the

French accumulated their forces on their own right. General Laborde commanded a column, six thousand strong, which advanced against the centre, while Brennier, with his division of five thousand, moved against the left of the British; and the reserve under Killerman, with the cavalry led by Margaron, in all about three thousand men, was ready to support any point where their aid might be required. Generals Ferguson, Nightingale, and Bower commanded the English left. Ackland united the left to the centre, which, strongly grouped together in the valley in front of Vimiero, was formed of the brigades of Anstruther and Fane, while, on the right, Hill's brigade, in massy column, rested on the summit of the heights which formed the southern boundary of the valley.*

The action began with the head of Laborde's column, which, advancing with the utmost impetuosity against the British centre, first came in contact with the 50th regiment. Its light troops were driven in with great vigour, and the French mounted the hill to the northeast of Vimiero with loud cries and all the confidence of victory; but when they reached the summit, they were shattered by a well-directed fire from the artillery, disposed along the front of the English line on the edge of the steep; and their troops, astonished by the effect of the shrapnell shells, then first used against them, which, after striking down by a point-blank discharge whole files of soldiers in front, exploded with all the devastation of bombs in the rear. While yet breathless with their ascent, they received a discharge within pistol-shot from the 50th, and were immediately charged with the bayonet with such vigour that, ere the rush took place, they broke and fled.† At the same time, Fane's brigade repulsed, with equal success, an attack on the village of Vimiero in the centre, and, after a desperate contest, seven pieces of cannon were taken in that quarter; while the few horsemen with the army who were there sta-

Battle of Vimiero, Aug. 21.

* Lond., i., 140, 142. Nap., i., 208, 212. Foy, iv., 324, 333. Thieb., 192, 194. Gurw., iv., 93, 94.

† Colonel Walker, of the 50th regiment, finding his battalion, which had only 700 bayonets in the field, unable, by a direct resistance in front, to withstand the assault of above 2000 men in column, whom Laborde led on, most skillfully drew it up obliquely to their advance, with the left, against which they were directed, thrown back. The effect of this was to expose the flank as well as front of the French column to the British fire, almost every shot of which told on their crowded ranks, while a small number only would return their discharge, and the numerous ranks in rear were perfectly useless. When the order to charge was given, the British regiment in line came down in compact order on the French column, partly in front and partly in flank, and in the attempt to deploy and form line to withstand the levelled steel, they almost unavoidably broke and fled. This method of resisting the French attack in column was very frequently afterward employed by Wellington, and always with the same success. It can hardly fail of proving so, if the part of the line menaced by the head of the column can be relied on to withstand the shock till the fire of the other parts on the flank of the column has produced the desired effect; but, unless this is the case, the column will break the line, and deploying against the oblique line, now itself taken in flank, soon drive it off the field. Of all the European troops the British are the only ones by whom this hazardous, but, if successful, decisive mode of resisting the attack in column was habitually practised. General Loison, who witnessed this able movement, desired, after the convention of Cintra, to be introduced to Colonel Walker, and, with true military frankness, congratulated him on the steadiness and talent with which he had, with a battalion in line, withstood the formidable attack of the French column.—See Scott's *Napoleon*, vi., 235.

the insurgent and hostile mountains of the north of Portugal; whereas Wellington, backed by the sea, and having his fleet, containing powerful re-enforcements, to fall back upon, would have fought in the most advantageous position. There can be little doubt that, in these circumstances, defeat to Junot would have been attended with decisive consequences, and that Wellington was pursuing the plan of an able commander in throwing himself in this manner upon his enemy's line of communication without compromising his own—the great object and most decisive stroke which can be dealt out in war. At the same time, it is not surprising that Sir Harry Burrard, who came in on the broadside of the affair, and could not be supposed to appreciate so clearly as the commander actually engaged, the vital importance of not delaying an hour the proposed night-march between the sea and the hills, should have declined to plunge at once into so perilous an operation. His real error consisted in interfering at all with an important and delicate military operation, at a time when it was on the eve of execution by an able and experienced general; and the chief fault lay with the government in subjecting the army, at such a critical time, to the successive command of three different generals, who could not be supposed properly to enter into, or thoroughly understand, the operations in the course of execution at the time when they successively assumed the direction.

tioned broke forth among the retreating lines with great execution; but, pursuing their advantage too far, they were assailed when in disorder by the superior troops of the French cavalry, and almost cut to pieces. While these successes were achieved in the centre, a most severe conflict was going on in the hills to the left, where the road to Lourinham ascends the steep heights to the north of Vimiero. Brennier and Solignac commanded in that quarter; and as Junot perceived that their attack did not at once prove successful, they were supported in the end by the whole reserve of infantry, under Kellerman. The French, under Solignac, preceded by a cloud of light troops, came on with the utmost impetuosity, and first encountered Ferguson's brigade on the summit of the ridge. Several terrible discharges of musketry were exchanged between these dauntless antagonists with extraordinary execution on both sides, as the firearms, almost within pistol-shot, told with murderous effect on the dense array of either line; but at length the three English regiments, which had hitherto singly maintained the combat (36th, 40th, and 71st), being supported by three others, levelled their bayonets, and, rushing forward with irresistible impetuosity, drove the French line headlong down the steep, with the loss of all their artillery. So dreadful was the execution of the bayonet on this occasion, that the whole front line of one of the French regiments went down like grass before the scythe, and three hundred men lay dead as they stood in their ranks. Brennier's, however, still remained, as well as the reserve under Kellerman—the flower of the French army—and with these choice troops Junot made a gallant attempt to regain the day. Forming his men under the cover of the rocks and woods which concealed them from the enemy, Brennier, with his columns in admirable order, came suddenly upon the victorious British as they were lying on the ground, in loose array in the valley, reposing after their success, and, suddenly charging, drove them back and retook the guns; but his triumph was but momentary; the surprised troops rallied upon the heights in their rear, to which they had been driven, and, facing about, poured in a destructive volley upon their pursuers; and immediately charging with a loud shout, not only again captured the artillery, but made Brennier himself prisoner, and drove the enemy a second time in utter confusion down the hill. So complete was the rout, that Solignac's brigade was driven off the ground in a different direction from Brennier's; the former general was desperately wounded, and his troops would all have been made prisoners had not an unexpected order from Sir H. Burrard obliged Ferguson to halt in the midst of his success. The broken French upon this rallied and reunited, and the whole fell back to the heights on the opposite side of the valley, considerably to the north of the ground from which they had commenced their attack in the morning, leaving in the hands of the victors thirteen pieces of cannon, a large quantity of ammunition, and four hundred prisoners, besides two thousand who had fallen on the field.* The English had

to lament the loss of nearly eight hundred men in killed and wounded.

Like the allied sovereigns at Austerlitz, Junot had made his attack by a flank march directed in echelon athwart the front, against the left of the British in position; and his disaster, like theirs, was in a great measure owing to that cause, which brought his different columns not simultaneously, but at successive periods, into action. Sir Arthur Wellesley had as decisive success in his power as Napoleon at the close of the day; for not only had the three brigades under Hill on the right and the Portuguese never fired a shot, but two other brigades had suffered very little; the whole army was in excellent order and the most enthusiastic spirits; the shouts of victory, the triumphant clang of trumpets, were heard along their whole line; and from the direction which the broken French had taken after their defeat, they were entirely cut off from the retreat to Lisbon; while the British, who had repulsed their oblique attack, and driven them off in a northeasterly direction, were masters of the great road by Torres Vedras to the capital. This situation of things promised the greatest results to immediate activity: Sir Arthur was fully aware of the vast advantages thus placed within his grasp, and prepared, by immediate and decisive operations, instantly to turn them to the best account. He proposed, with the five brigades on the left, about nine thousand men, and the Portuguese, five thousand more, to follow up his success against the retreating columns of the enemy, now blended together in great confusion on the opposite heights, and drive them as far as possible back in a northeasterly direction over the Sierra da Baragueda, away from the capital; while Hill, Anstruther, and Fane, six thousand strong, should make straight for the defile of Torres Vedras, which lay open to the south, and thence push on to Montachique, and cut off all retreat by the French to the capital. Considering that Junot had lost two thirds of his artillery, and great part of his reserve park of ammunition, there can be no doubt that this operation would have proved successful, and that not only would Lisbon have fallen an easy prey to the victors, but Junot himself, driven to an eccentric and disastrous retreat through an insurgent and mountainous country almost destitute of roads, would have been too happy to find shelter under the cannon of Almeida with half his forces. Orders to that effect were already given, the army was preparing to execute them, when the assumption of the command by Sir Harry Burrard at once stopped short the career of victory. That officer, who had arrived on the field with his staff early in the day, had, with generous forbearance, declined to take the command from Sir Arthur during the battle; but after it was over, considering the responsibility of ulterior operations as resting on himself, he gave orders to halt at all points, and remain in position at Vimiero till the expected re-enforcements under Sir John Moore joined the army. Sir Arthur, in the strongest terms and with military frankness, represented to his superior general, on the field of battle, the inestimable importance of instantly follow-

Sir A. Wellesley proposes to follow up the victory, but is prevented by Sir Harry Burrard.

* Sir A. Wellesley's Despatches. Gurw., iv., 93, 96. Nap., i., 212, 216. Lond., i., 142, 144. Foy, iv., 330, 339. Thieb., 193, 201. Jom., iii., 71, 72. Scott, vi., 234, 235.

ing up the beaten enemy, driving him still farther to the northeast, and interposing between his disordered columns and the strong defiles of Torres Vedras, the real gates of the capital. But all was in vain. Sir Harry Burrard, though a respectable and gallant veteran, had none of the vigour or daring requisite for decisive success; he belonged to the old school, by whom one battle was considered sufficient work for one week, and deemed it imprudent, when the artillery-horses were fatigued and the cavalry destroyed, to hazard anything by a farther advance, the more especially as ultimate success without any risk was certainly to be looked for upon the arrival of Sir John Moore's division. He persisted, accordingly, in his resolution not to move from his ground: the precious-moments never to be regained were lost; the disordered French, seeing with astonishment that they were not pursued, re-entered their ranks. Junot that very night, by a forced and circuitous march, regained the defiles of Torres Vedras, and secured his retreat to the capital, while Sir Arthur, seeing the opportunity was lost, and concealing the bitterness of his disappointment under an affected gayety, said to the officers of his staff, "Gentlemen, nothing now remains to us but to go and shoot red-legged partridges."^{*†}

Sir Harry Burrard's tenure of the supreme direction of affairs was of short duration. Early on the morning of the 22d, Sir Hugh Dalrymple arrived from Gibraltar, and immediately landed and assumed the command; so that within thirty hours a pitched battle had been fought, a decisive operation rejected, and three successive commanders called to the direction of the army. After consulting with Sir Arthur and Sir Harry, and getting the best information he could, he resolved to advance on the 23d against Aug. 23. Junot, now in position at Torres Vedras, and orders to that effect had already been issued, when information was brought that a French flag of truce had reached the outposts. It proved to be General Kellerman, with a proposal from Junot for a suspension of arms, with a view to the evacuation of Portugal.[†]

In truth, the situation of Junot since the battle of Vimiero had been such, that he had no longer any alternative to adopt. Early on the morning of the 22d, a council of war was held at Torres Vedras; and the proverb almost invariably holds good, that such a council never fights. The French generals were aware that a powerful re-enforcement, under Sir John Moore, was on the eve of landing; that a city containing three hundred thousand agitated and hostile citizens was in the rear; that the forts and points of defence which it contained were

hardly tenable against an army of thirty thousand English troops; and that to attempt a retreat through Portugal, intersected as it was by mountain torrents and almost inaccessible ridges, in the face of an insurgent population, and pursued by a victorious army, could not fail to be attended with the greatest disasters. In these circumstances, it was unanimously agreed that enough had been done for the honour of the imperial arms, and that to endeavour to obtain by negotiation a convention which might restore the army to the French soil, and ultimately to renewed operations in the north of Spain, was the most prudent course which could be adopted. General Kellerman was selected for this delicate mission, and it could not have been intrusted to abler or more skilful hands. Enjoying a European reputation, not less from the glory of his father, the hero of Valmy,* than his own inappreciable achievements on the field of Marengo,† he was at the same time possessed of all the tact and finesse in which the French diplomatists excel all those of Europe, with the exception of those of Russia. Perceiving, from some hints dropped in conversation by the English general, Sir Hugh Dalrymple, and his brother officers, who were not aware that he understood their language, that they were far from possessing the confidence of Sir Arthur Wellesley in the results to be expected from immediate and decisive operations, he began by representing, in the most favourable colours, the strength of the French army and the magnitude of its resources, especially from the aid of the sailors and artillery of the Russian fleet, as well as the resolution of its commander, whom he described as determined to bury himself under the ruins of Lisbon rather than submit to any conditions derogatory to the honour of the imperial arms. Having thus effected his object of producing a favourable impression of the protracted and doubtful nature of the contest which awaited them if hostilities were persisted in, he gradually opened the real object of his mission, which was the conclusion of an armistice preparatory to a convention for the evacuation of Portugal. The terms proposed were, that the French army should not be considered as prisoners of war, but be sent back to France by sea, with their artillery, arms, and baggage; that their partisans in the country should not be disquieted on account of their political opinions, but, so far as they desired it, be permitted to withdraw with their effects; and that the Russian fleet should remain in Lisbon as in a neutral harbour. The first two conditions were accepted without any difficulty by all 23d Aug. the English generals; but Sir Arthur Wellesley strenuously opposed the last, and it was at length agreed to refer it to the decision of Sir Charles Cotton, who positively refused to agree to it. Foiled in this attempt to extricate the Russian fleet from their awkward situation, the French general was obliged to leave them to their fate, and a separate convention was some days afterward concluded with Admiral Sinavin, the Russian commander, in virtue of which the whole fleet was to be conducted to England and retained in deposit till the conclusion of a

* Sir A. Wellesley's Despatches. Gurw., iv., 99, and Evid. Ibid., iv., 207, 208. Lord Burghersh's Evidence. Ibid., iv., 214. Lond., i., 145, 146. Nap., i., 216, 217.

† Lord Burghersh, in his evidence before the court of inquiry, declared, "I recollect that, on the evening of the 21st of August, Sir Arthur Wellesley urged Sir H. Burrard to advance, giving as a reason that his right was some miles nearer to Torres Vedras than the enemy; that he had four brigades that had not been engaged; that Torres Vedras was the pass by which the enemy must retire to Lisbon, and that, in his opinion, by that movement no part of the French army could reach Lisbon."—Evidence, Court of Inquiry. † Ante, ii., 106

general peace, and the officers and crews be transported to Russia at the expense of the British government, without any restriction as to their future service.*†

Posterity will scarcely be able to credit the universal burst of indignation with which this convention was received, both in the Peninsular nations and the British islands. Totally incapable of appreciating the real importance of the acquisition

of Portugal at one blow on the future progress of the war, the inhabitants of all these countries united in condemning a treaty which was thought to step between them and the glory which they had earned, or the vengeance which was their due. The Portuguese, though they had been in no hurry to confront the invader in the field, and were strangers to the glories of Rólica and Vimiero, were yet loud in their complaints of the capitulation which had been granted, and bitterly inveighed against the clauses which, under the specious veil of protecting private property, in effect gave the public robbers the means of securely carrying off the stores of private and ecclesiastical plunder which they had amassed. The Spaniards re-echoed the same sentiments, and with some appearance of reason; contrasted the unconditional surrender of Dupont's corps at Baylen with the unhappy convention which tended only to remove the French army from a situation where it was detached from the remainder of the imperial forces, and ran the most imminent hazard of being made prisoners of war, to one where it might be more advantageously and securely employed in forming the right wing of the army with which the invasion of the Peninsula was again to be attempted. Roused to the very highest pitch of enthusiasm by the early and decisive successes which had attended their arms—panting for their full share of the glories which had been won—and nothing doubting that an unconditional surrender would immediately follow, and that they should soon see a marshal of France and twenty thousand men arrive as prisoners of war at Spithead, the British people abandoned themselves

to unbounded vexation when the capitulation was announced which was to convey them, without that last disgrace being incurred, to swell the invader's ranks at Rochefort and L'Orient. In vain were the Park and Tower guns fired on this as on other triumphs of our arms: the public voice refused to join in the acclamation; the press, both in the metropolis and the provinces, loudly condemned the convention as more disgraceful than even those of the Helder and Closter Seven, where the British troops had been constrained to sue for terms of accommodation; many of the public journals refused to stain their pages by the obnoxious articles, others appeared with their columns in mourning, as in a season of national calamity; public meetings were assembled in most parts of England to express the general indignation, and call for the punishment of the guilty parties; and to such a length did the outcry proceed that it was deemed indispensable to appoint a court of inquiry, consisting of highly respectable, though somewhat antiquated officers, who, after a full investigation, arrived at the conclusion that, considering the extraordinary manner in which three successive commanders had been invested with the direction of the army after the battle of Vimiero, it was not surprising that that victory had not been more vigorously followed up; that unquestionable zeal and firmness had been exhibited by all the three generals; and that, in the whole circumstances of the case, no farther proceedings were necessary. The general odium attached to Sir Hugh Dalrymple, as the senior officer in command at the time the convention was signed, though it was evident that the chief fault in the case, if there was fault at all, lay with Sir Harry Burrard, as the commander-in-chief when the decisive march to Torres Vedras was declined. Such was the general discontent that neither of these two generals, notwithstanding the acquittal of the court-martial, was again employed in any considerable command in the British army; and it required all the family influence and early celebrity of the hero of Assaye and Vimiero to save the future conqueror of Napoleon from being cut short in the threshold of his career, for no fault whatever of his own, by the very people upon whom he had conferred an inestimable benefit.*†

The English people in general arrive in the end at more sober and rational Its expedience opinions on political subjects than at that juncture. served a record; but they are prone, in the first instance, in a most extraordinary degree, to common delusions or phrensies, which almost amount to national insanity. The cruel injustice with which they persecuted Sir Robert Calder for having gained a victory, perhaps the most momentous in its ultimate consequences, and most vital to the safety of the country, of any recorded in the British annals,‡ is an instance of the first; the universal and senseless

* Nap., i., 220, 229. Gurw., iv., 105, 116, 117. Foy, iv., 343, 345. Lond., i., 152, 160. Thieb., 204, 209.

† The Convention of Cintra excited such a clamour at the time, both in the British and Peninsular nations, that a short summary of its leading provisions is indispensable. It was provided that the French should evacuate the forts of Lisbon and the whole kingdom of Portugal, and be conveyed to France, with their artillery and sixty rounds a gun, but with liberty to serve again; all other artillery, arms, and ammunition to be delivered up to the British army and navy; the French army to carry with them all their equipments, the cavalry their horses, and the individuals their property; the sick and wounded to be intrusted to the care of the British government, and returned to France when convalescent; the fortresses of Elvas, Almeida, Peniche, and Palmela shall be delivered up as soon as British detachments can be sent forward to take possession of them; all subjects of France shall be protected who are domiciliated in Portugal; all their property of every description to be guaranteed to the French citizens in Portugal; no inhabitants of that country to be disquieted on account of their political conduct or opinions; the Spanish troops in the custody of the French armies to be liberated. By the supplementary convention, in regard to the Russian fleet, it was stipulated that it should be conveyed to Great Britain, to remain in deposit with all its stores till six months after the conclusion of a general peace; and the officers and men, meanwhile, to be returned to Russia, without any restriction as to their future service.—See GURWOOD, iv., 113, 117.

† At the meeting of Parliament, the public thanks of both houses were voted to Sir Arthur Wellesley for the battle of Vimiero. But he had a narrow escape, notwithstanding all his glory, from the obloquy consequent on the Convention of Cintra.—See GURWOOD, iv., 239, 241.

‡ *Ante*, ii., 330.

clamour raised about the Convention of Cintra an example of the second. There cannot be a doubt, not only of its expedience at the juncture when it was concluded, but of its having been the means of acquiring the basis on which the whole future successes of the British arms were rested. Having missed, perhaps through an excess of caution, the opportunity of following up, according to Sir Arthur Wellesley's advice, the brilliant success of Vimiero on the evening of the battle, nothing remained but to close with the highly advantageous offer, which at once liberated Portugal from its oppressors and established the best possible base for future operations. The sea, sterile and unproductive if in the rear of the forces of any other power, is the source of strength and vigour to the British armies; to them every tide is fraught with plenty, every wind wafts the sinews of war on its gales. Thenceforward Lisbon became the great *place d'armes* to the English army; the stronghold of defence in periods of disaster, the reservoir from whence all the muniments of war were drawn in prosperous times. To have missed the opportunity of at once, and in the outset of the campaign, acquiring such a base for future operations, for the vain glory of possibly compelling a French corps and marshal, after a bloody siege of several months' duration, to lay down their arms in Lisbon, Elvas, or Almeida, would have been sacrificing the solid advantages of war for its empty honours. The restoration of twenty thousand defeated and dispirited soldiers to the standards of the enemy was a matter of no sort of consequence to a sovereign who had seven hundred thousand disciplined men at his command: the loss of a whole kingdom, of a chain of strong fortresses, of an admirable harbour, of ten sail of the line to his ally, of the *prestige* of victory to himself, was a calamity of a very different description. Napoleon showed clearly in what light he viewed the acquisition of such advantages to the French arms when, in the outset of his career, he stipulated only, in return for his glorious successes in the Maritime Alps, the cession of the Piedmontese fortresses from the cabinet of Turin;* and when, after the triumph of Marengo, he at once allowed the Austrian army, cut off from the hereditary states and thrown back on Genoa, to retire unmolested to the Mincio, provided only they ceded Alexandria, Tortona, and the other strongholds in the west of Lombardy, as the reward of victory.† On the present occasion, he felt quite as strongly the vast importance of the fortified bases for future operations, so advantageously situated on the edge of the sea, and on the flank of the Peninsular plains, which had thus, in the very outset of their career, been wrested from him by the British arms: had the advantage been gained by himself, he would have made Europe ring from side to side with the triumph which had been achieved. As it was, he manifested the utmost displeasure at the generals who were engaged in the Convention of Cintra; and Junot, in particular, never afterward regained his confidence or esteem. "I was about," said he, "to send Junot to a council of war; but, happily, the English got the start of

me by sending their generals to one, and thus saved me from the pain of punishing an old friend."*†

Many causes conspired to make the execution of the Convention of Cintra a matter of great difficulty to all the contracting parties. The French troops, from the time it was concluded, were constantly kept together in masses, encamped on the heights and forts, with cannon directed down the principal streets which led to their bivouacs. Notwithstanding these formidable preparations, and the proximity of the British forces, who, early in September, approached close to Lisbon, Sept. 5 it was found to be impossible to prevent the indignation of the populace from finding vent in detached acts of aggression; crowds of infuriated peasants incessantly thronged into the city, decorated with ribands, vociferating shouts of triumph, and bearing on their hats the favourite motto, "Death to the French!" and at night the discharge of firearms or explosion of petards was heard on all sides, occasioned by skirmishes between the enraged populace and the French advanced posts. Loison, whose unnecessary cruelty had rendered him in an especial manner the object of universal hatred, was menaced by a serious attack; while other generals, especially Travot, who had executed their orders with humanity, were not only unmolested, but traversed the streets alone in perfect safety: a fact, as Colonel Napier justly observes,‡ extremely honourable to the Portuguese, and conclusive as to the misconduct of the obnoxious officers. But these difficulties, great as they were, soon sunk into insignificance when compared with those which arose from the discoveries made, in the course of the preparations for the embarkation, of the extent to which public and private plunder had been

Disgraceful revelations which are made at Lisbon of the plunder by all ranks in the French army.

* Thieb., vi., 472. D'Abr., xii., 64, 102.

† "He," says the Duchess of Abrantes, "to whom the whole life of Junot was devoted, alone viewed in a false light the Convention of Cintra. Everything which was not a triumph he regarded as a defeat; and, like Augustus, he never ceased to demand his legions from all those who had not succeeded in conducting his young conscripts, hardly emerged from boyhood, to victory."—D'ABRANTES, xii., 64, 102.

The Duke of Wellington's opinion on the expedience of the Convention of Cintra was equally clearly expressed. "If we had not negotiated," said he, "we could not have advanced before the 30th, as Sir John Moore's corps was not ready till that day. The French would by that time have fortified their positions near Lisbon, which, it is probable, we could not have been in a situation to attack till the end of the first week in September. Then, taking the chance of the bad weather depriving us of the communication with the fleet of transports and victuallers, and delaying and rendering more difficult and precarious our land operations, which, after all, could not have been effectual to cut off the retreat of the French across the Tagus into Alentejo, I was clearly of opinion that the best thing to do was to consent to a convention, and allow them to evacuate Portugal. The details of the convention and the agreement to suspend hostilities are different matters: to both of them I have very serious objections. I do not know what Sir Hugh Dalrymple proposes to do, or is instructed to do, but, if I were in his situation, I would be in Madrid with 20,000 men in less than a month from this time."—Sir A. WELLESLEY to CHARLES STUART, Esq., September 1, 1808. GURWOOD, iv., 121. Here is the clearest evidence of the advantageous results of obtaining so early in the campaign the great fortified base of Portugal for the British operations. Sir Arthur, in a month, proposed to have had twenty thousand men in Madrid! He is a bold man who, on such a subject, dissents from the concurring opinion of Napoleon and the Duke of Wellington. ‡ Nap., i., 231.

* Ante, i., 401.

† Ante, ii., 107.

carried by the French army. Sir John Hope, who had been appointed governor of Lisbon, took possession of the castle of Belem on the 10th of September, and by his firm and vigorous conduct soon reduced the unruly multitude to some degree of order; but the complaints which daily arose as to the enormous quantity of plunder which the French were about to carry off under pretence of its being their private property, continually increased, and became the occasion of much more serious embarrassment. The museum, the treasury, the public libraries, the church plate, the arsenals of the state, equally with the houses of individuals, had been indiscriminately ransacked; most of the valuable articles left in the royal palace by the flying regent were packed up and ready for embarkation; all the money in the public offices was laid hold of; even the sums lying in the *Deposito Publico*, a bank where they were placed to await the decision of the courts of law on matters of litigation, were appropriated by these insatiable hands. Junot even demanded five vessels to take away his personal effects. Matters at length rose to such a height that the British commanders felt themselves called upon to interfere; and the commissioners, to whom the execution of the convention had been intrusted, with much difficulty, and after the most violent altercation, succeeded in putting a stop to the disgraceful spoliation. These high functionaries, General Berresford and Lord Proby, acted with such firmness, that not only was the progress of the plunder arrested, and much which had been seized from the public offices

restored; but a general order was extorted from the French commander, enjoining the immediate restitution of all the property which had been taken from public or private establishments within twenty-four hours. Yet so inveterate was the habit of plunder in all ranks of the French army, from the highest to the lowest, that, within a few hours after this order was issued, Colonel Delambis, Junot's chief aid-de-camp, carried off the prince regent's horses; a valuable collection of private pictures was seized on by Junot himself; and two carriages belonging to the Duke of Sussex were appropriated, which were only got back by the threat of detaining the general himself as a hostage. At length, however, after vehement discussion and a complete revelation of that extraordinary system of public and private plunder which had been so long and disgracefully the characteristic of the French army, the greater part of this ill-gotten spoil

was wrested from the invaders. On the 15th the first division of the fleet sailed from the Tagus; by the 30th the whole were embarked; shortly after Elvas and Almeida were given up in terms of the capitulation; and before the middle of October not a French soldier remained on the soil of Portugal. Twenty-two thousand men were disembarked on the coasts of France; thirty thousand had perished of fatigue, disease, fallen in the field, or voluntarily enlisted in the British army. The convention, though loudly disapproved of by the British people, was, on the admission of the French themselves, carried into execution

with scrupulous good faith by the British government.*†

The subordinate arrangements consequent on the decisive events which had in this manner liberated Portugal, were soon concluded. Such was the violence of the groundless clamour which arose in England on the subject of the convention, that all the generals engaged in it, Sir Hugh Dalrymple, Sir Harry Burrard, and Sir Arthur Wellesley, were obliged to return to Great Britain, where, as already mentioned, their conduct in relation to it became the subject of deliberation to a court of inquiry, which, after a long and impartial investigation, returned a report distinguished by little ability, and which, in substance, found that no blame could be attached to any of these officers. Meanwhile the army, deprived in this way, for a time, of the assistance of the brave leader who had, in so glorious a manner, led it to victory, was placed under the command of Sir John Moore, an officer whose gallant conduct in Egypt, as well as admirable skill in the training and disciplining of his troops, had already rendered him distinguished among all his brethren in arms. His division had landed and joined the other troops at Lisbon, while another corps, fifteen thousand strong, under the orders of Sir David Baird, whose gallantry and firmness had been conspicuous at the storming of Seringapatam, was assembled in the British islands, and was destined to land at Corunna, descend through Galicia, and co-operate with those which had advanced from Portugal, in the plains of Leon. The two together, it was hoped, would amount to nearly forty thousand men, even after providing in an adequate manner for the security of Portugal, and the magazines and dépôts in the rear: a force which appeared, and doubtless was, if tolerably supported by its Peninsular allies, capable of achieving great things for the deliverance of Europe. Meanwhile, the Spanish troops, nearly five thousand strong, which had been liberated at Lisbon, were equipped anew, at the expense of the British government, and despatched by sea to Catalonia, from whence the most pressing representations had been sent of the necessity of regular troops to aid the efforts and improve the discipline of the numerous peasants in arms in the province; the Russian fleet, in conformity with the treaty, was conducted to the British harbours; a central junta was formed at Lisbon, to administer the affairs of the kingdom in the absence of the prince regent; and the preparations for the campaign being at length completed, the British troops began their march from the Portuguese capital for the seat of war at the foot of the Pyrenees.‡

The decisive influence of the recent successes and central position of the English army, in possession of the capital and principal strongholds of the

* Nap., i., 232, 234. South., i., 240, 249. Nevins, ii., 230, 249. Foy, iv., 356, 364. Thieb., 239.

† "That same public opinion, under the influence of a free constitution, which condemned the Convention of Cintra, enjoined to its government its faithful execution. In so far as depended on the English government, the convention was executed with honourable fidelity."—Foy, iv., 356.

‡ Lond., i., 179, 181. Nap., i., 247, 248. South., i., 267. Nevins, ii., 264, 287.

country, rendered the appointment of a central junta, and the defeat of the local intrigues everywhere set on foot in order to obtain a preponderating voice for particular men in its councils, a comparatively easy task in Portugal. But the case was very different in Spain, where jealousy of foreign interference had already risen to a most extravagant height, where the people entertained a most exaggerated idea of their own strength and resources, and many different provincial governments, elected under the pressure of necessity in different parts of the country, had opposite and jarring pretensions to advance for the supreme direction of affairs. Much division, and many dangerous jealousies, were rapidly rising upon this subject, when the junta of Seville, whose prudence and success, as well as the consideration due to the great cities and opulent province which they represented, had already invested with a sort of lead in the affairs of the Peninsula, had the good fortune to bring forward a project, which, from its equity and expedience, soon commanded universal assent. This was, that

Aug. 3. the different supreme juntas, each on the same day, should elect two deputies, who should, when united together, form the central government, to which all the local authorities were to be subject; that the local juntas should, nevertheless, continue their functions, in obedience to the commands of the supreme junta; and that the seat of government should be some town in La Mancha, equally convenient for all the deputies. This proposal having met with general concurrence, the different provincial juntas elected their respective representatives for the central government, which was installed with extraordinary pomp at Aranjuez in the end of September, Sept. 25. and immediately commenced its sittings. At first it consisted of twenty-four members, but their ranks were soon augmented, by the number of provinces which claimed the right of sending representatives, to thirty-five: an unhappy medium, too small for a legislative assembly, too large for an executive cabinet. Though it numbered several eminent men and incorruptible patriots among its members, particularly Count Florida Blanca, who, though in the eightieth year of his age, preserved undiminished the vigour of intellect and cautious policy which had distinguished his long administration, and Jovellanos, in whom the severities of a tedious captivity had still left unextinguished the light of an elevated understanding and the warmth of an unsuspecting heart; yet it was easy to foresee, what subsequent events too mournfully verified, that it was not composed of the elements calculated either to communicate vigour and decision to the national councils, or impress foreign nations with a favourable idea of its probable stability. Formed, for the most part, of persons who were totally unknown, at least to public life, before the commencement of the Revolution, and many of whom had been elevated to greatness solely by its convulsions, it was early distinguished by that overweening jealousy of their own importance, which in all men is the accompaniment of newly, and still more of undeservedly acquired power, and torn with intestine intrigues, when the utmost possible unanimity and vigour

were required to enable them to make head against the formidable tempest which was arising against them, under the guidance of the Emperor Napoleon.*

The central junta displayed a becoming vigour in asserting the inviolability of their privileges against Cuesta, who had arrested one of its members; but they were far from evincing equal energy in the more important duty of providing for the wants of the military force which was to maintain the conflict. So completely had the idea of their own invincibility taken possession of the Spaniards, that they never once contemplated the possibility of defeat; and all their arrangements were based on the assumption that they were speedily to drive the French over the Pyrenees, and intended to meet the contingencies which might then occur. Nothing was foreseen or provided for in case of disaster; there were no magazines or reserve stores accumulated in the rear, no positions fortified, no fortresses armed; there was no money in the treasury, no funds in the military chests of the generals; the soldiers were naked, destitute of shoes, and rarely supplied with provisions; the cavalry dismounted; the artillery in the most wretched condition; even the magnificent supplies which the generosity of England had thrown with such profuse bounty into the Peninsula, were squandered or dilapidated by private cupidity, and seldom reached the proper objects of their destination. Corruption in its worst form pervaded every department of the state; the inferior officers sold or plundered the stores; the superior, in many instances, made free with the military chest. In the midst of the general misrule, the central junta, among eloquent and pompous declamations, could find no more worthy object of their practical deliberations than discussing the honorary titles which they were to bear, the ample salaries which they assigned to themselves, the dress they were to wear, and the form of the medals which were to be suspended round their necks. In the midst of this general scene of cupidity, imbecility, and vanity, nothing efficient was done, either for the service of the armies or the defence of the state. This deplorable result is not to be ascribed exclusively, or even chiefly, to the character of the members of the central junta, or the leaders at the head of the troops: it arose from the nature of things, the overthrow of all regular government in Spain, and the jarring and conflicting interests of the popular assemblages by which its place had been supplied. Democratic energy is a powerful auxiliary, and when directed or made use of, in the first instance, by aristocratic foresight, it often produces the most important results; but its vigour speedily exhausts itself if not sustained by the lasting compulsion of terror or force; and the despotic tyranny of a committee of public safety is not less necessary to give success to its external operations than restore credit or usefulness to its internal administration.†

In the north of Europe, however, decisive

Miserable condition of the central government, and armies on the Ebro.

Escape of the Marquis Romana's corps from Jutland, and its forwarding to Spain.

steps were adopted by the British government, which had the happiest results, and succeeded in restoring ten thousand of the veteran soldiers, whom the prudent foresight and anticipating perfidy of Napoleon had so early removed from the Peninsula, to the Spanish standards. It has been already mentioned that, so early as the spring of 1807, the French emperor had made it the price of his reconciliation with Spain, after the premature proclamation of the Prince of Peace in the October preceding, that they should furnish sixteen thousand men to aid in the contest in the north of Europe, and that the corps of the Marquis of Romana was, in consequence, forwarded to the shores of the Baltic.* Soon after the commencement of hostilities in the Peninsula, Castanos, who had entered into very cordial and confidential communications with Sir Hugh Dalrymple, then chief in command at Gibraltar, strongly represented to that officer the great importance of conveying to the Spanish troops, then in Jutland, secret information as to the real state of affairs, which was likely to lead to their at once declaring for the cause of their country. In consequence of this advice, the English government made various attempts to communicate with the Spanish forces, but they were at first frustrated by the vigilant eye which the French kept on their doubtful allies. At length, however, by the address of a Catholic priest named Robertson, the dangerous communication was effected, and Romana was informed, in a secret conference held in Lahn, of the extraordinary events which had occurred in the Peninsula: the victory in Andalusia, the repulse from Saragossa, the capitulation of Junot, the flight from Madrid.† Violently agitated at this heart-stirring intelligence, the noble Spaniard did not for a moment hesitate as to the course which he should adopt. Robertson was immediately sent back, with a request that a British naval force might be forwarded to convey away his troops, and that, if possible, the assistance of Sir John Moore and the English troops at Gottenberg might be granted in aid of the undertaking. The latter part of the request could not be complied with, as Sir John Moore, with the British troops, had already sailed for England; but Admiral Keats, with the fleet stationed in those seas, drew near to the coast of Jutland, and suddenly appeared Aug. 9. off Nyborg, in the island of Funen. Romana, having seized all the Danish craft he could collect, pushed across the arm of the sea which separated the mainland from that

island, and, with the assistance of Keats, made himself master of the Port and Castle of Nyborg. From thence he traversed another strait to Langland, where all the troops he could collect were assembled together, and publicly informed of the extraordinary events which had occurred in the Peninsula, and which went to sever them from the connexion they had so long maintained with their brethren in arms. Kneeling around their standards, wrought to the highest pitch of enthusiasm by the intelligence they had received, with hands uplifted to heaven, and tears streaming from their eyes, they unanimously swore to remain faithful to their country, and brave all the anger of the Emperor Napoleon in the attempt to aid its fortunes. Such was the universal zeal which animated them, that one of the regiments which lay at Ebeltoft, having received intelligence at ten in the evening, immediately started, and, marching all night and the greater part of the next day, reached their comrades at the point of embarkation in time to get off, after having marched fifty miles in twenty-one hours. Nine thousand five hundred were brought Aug. 13. away, and, after touching at Gottenberg, were forwarded in transports, by the English government, to the coasts of Galicia, where they were disembarked, amid shouts of joy, before the middle of September, in time to share in the dangers which the efforts of Napoleon were preparing for their country. The remainder, being stationed in the middle of Jutland, could not be rescued, and were made prisoners by the French troops; and as the horses of two of the regiments of cavalry which embarked could not be provided for in the English ships, they were abandoned on the beach by the horsemen whom they had transported so far from their native plains. These noble animals, eleven hundred in number, of the true Andalusian breed, all of which were un mutilated, seemed to share in the passions which agitated their masters, and no sooner were they liberated, on the sands, from control, than, forming into squadrons, they charged violently with loud cries against each other, and when the British fleet hove out of sight, they could still be discerned by telescopes, fighting with each other on the beach, surrounded by the dead and the dying, with all the fury of human passions.*†

This long and unprecedented train of disasters made the deepest impression on the foreseeing and prophetic mind of Napoleon. It was not the mere loss of soldiers, fortresses, or territory, which affected him: these, to a sovereign possessed of such almost boundless resources, were of little importance, and could be easily supplied. It was their moral influence which he dreaded; it was the shake given to the opinions of men which devoured him with anxiety. No one knew better, or has expressed more clearly and emphatically, that his empire was founded entirely on

Deep impression which these events make on the mind of Napoleon.

* Ante, iii., 19.

† — Robertson was despatched in a boat from Heligoland, of which the English had recently taken possession, to the coast of Jutland; but the principal difficulty was to furnish him with a secret sign of intelligence which, beyond the reach of any other's observation, might at once convince Romana of the reality and importance of his mission. This was at last fallen upon in a very singular way. Romana, who was an accomplished scholar, had been formerly intimate with Mr. Frere when ambassador in Spain; and one day, having called when he was reading the *Gests of the Cid*, the English ambassador suggested a conjectural emendation of one of the lines.* Romana instantly perceived the propriety of the proposed emendation; and this line, so amended, was made the passport which Robertson was to make use of, which at once proved successful.—See SOUTH-
EY, ii., 337.

* *Aun vea el hora que vos Merceos doe tanto.*
Mr. Frere proposed to read *Mercedos*.

† The singular anecdote as to the horses, which were all of the highest breed, and in the finest condition, is related by Southey on the authority of Sir Richard Keats himself, as well as in a contemporary journal, *Plain Englishman*, i., 294, on the same high testimony.—SOUTH-
EY, ii., 346.

opinion; that it was the minds of men whom his own victories and those of the Revolution had really subdued; and that, great as their triumphs had really been, it was the imaginative idea of their invincibility which constituted the secret charm which had fascinated and subdued the world. Now, however, the spell appeared to be broken; the veil was drawn aside, the charm dissolved. This had been done, too, by hands whose weakness and inexperience augmented the severity of the blow. Armies had surrendered, kingdoms been evacuated, capitals abandoned: in Andalusia the French legions had found the Caudine Forks; in Portugal experienced the fate of Closter-Seven. These disasters had been inflicted, not by the sternness of Russia or the discipline of Austria; not by the skill of civilization or the perfection of art, but by the simple enthusiasm of an insurgent people; by bands at which the French legions had with reason scoffed; by those island warriors whose descent on the Continent his tutored journals had hailed as the dawn of yet brighter glories to the French arms.* Such misfortunes, coming from such quarters, appeared with reason to be doubly calamitous; his proclamations, instead of the heralds of victory, had become the precursors of defeat; and he anticipated in their ultimate effect, not merely the possible expulsion of his arms from the Peninsula, but the general resurrection of Europe from his authority.†

Already this effect had in some degree appeared. Austria, by a decree of the 9th of June, had directed the formation of a landwehr, or local militia, in all the provinces of her still vast dominions. The Archduke Charles, at the head of the war department, had infused an unheard-of activity into all branches of the army; and three hundred thousand provincial troops, already in the course of formation, promised to add an invaluable reserve to the regular forces. Pressed by Napoleon to give some account of such formidable preparations, Count Metternich, the imperial ambassador at Paris, alleged the specious excuse that the cabinet of Vienna was only imitating the conduct of his powerful neighbours; and that, when Bavaria had not merely adopted the system of the French conscription, but organized National Guards, which raised its disposable force to a hundred thousand men, it became indispensable to take corresponding measures of security in the hereditary states. The reason assigned was plausible, but it failed to impose upon the French emperor, who forthwith directed the princes of the Rhenish Confederacy to call out and encamp their respective contingents, and shortly after adopted the most energetic measures for the augmentation of the military strength of the Empire.‡

* "Nothing," said the president of the Senate, in his public speech, "can be more agreeable to the French and to the Continent, than to see the English at length throw off the mask and descend into the lists to meet our warriors. Would to God that eighty or a hundred thousand English would present themselves before us in an open field! The Continent has in every age been their tomb." Fifteen days afterward the Convention of Cintra was published!—See *Moniteur*, 22d Sept., 1808.

† *Thib.* vii., i., 14. *Month.*, vi., 350. *South.*, ii., 359, 360. *Jom.*, ii., 79, 81. ‡ *Jom.*, ii., 60. *Pelet*, i. 64, 72.

By a senatus consultum of the 10th of September, the Senate of France placed at the disposal of the French emperor eighty thousand conscripts, taken from those coming to the legal age (18 to 19) in the years 1806–7–8 and 9, and eighty thousand additional from those of 1810, which last were, in an especial manner, destined to the defence of the coasts and frontiers of the Empire. So far had the demands of the French emperor already exceeded the growth of the human race, and the boundless consumption of mankind in the Revolutionary wars outstripped even the prolific powers of nature! The adulatory expressions with which this frightful demand was acquiesced in by the Senate, was not less characteristic than its anticipating the resources of future years, of the iron tyranny as well as fawning servility which distinguished the government of the Empire. "How," said Lacépède, their president, "would the shades of Louis XIV., of Francis I., of the great Henry, be consoled by the generous resolutions taken by Napoleon! The French hasten to respond to his sacred voice! He requires a new proof of their affection; they hasten with generous ardour to furnish it to him. The wish of the French people, sire! is the same as that of your majesty: the war of Spain is *politic*, it is *just*, it is *necessary*; it will be *victorious*. May the English send their whole armies to combat in the Peninsula; they will furnish only feeble glories to our arms, and fresh disgrace to themselves." Such was the roseate hue under which the titled and richly-endowed senators of France represented the hideous spectacle of a hundred and fifty thousand human beings being torn from their homes to meet certain destruction, in the prosecution of the most perfidious and unjust aggression recorded in history; and such the triumphs which they anticipated for their arms, when Providence was preparing for them the catastrophes of Salamanca and Vittoria.*

At the same time, a subsidiary treaty was concluded with Prussia, calculated to relieve, in some degree, that unhappy power from the chains which Prussia, had fettered it since the battle of Jena. Napoleon, vanquished by necessity, and standing in need of a hundred thousand soldiers of the grand army for the Peninsular war, was driven to more moderate sentiments. It was stipulated that, for the space of ten years, the Prussian army should not exceed forty thousand men; that Glogau, Stettin, and Austria should be garrisoned by French troops till the entire payment of arrears of contributions of every description; that their garrisons, four thousand strong each, should be maintained and paid solely at the expense of Prussia; that seven military roads, for the use of France and her allies, should traverse the Prussian dominions; and that the arrears of the war contributions should be reduced to 140,000,000 francs, or £5,600,000 sterling; but that, at the expiration of forty days after these sums were provided for, the French troops should, with the exception of these fortresses, evacuate the Prussian dominions.† To Prussia this evacuation

His preparations to meet the dangers, and great levy of men by the French government, September 10.

was a source of unspeakable relief, and notwithstanding that the restriction on the army was both humiliating and hurtful, yet the cabinet of Frederic William had no alternative but submission; although, by the skilful change of the soldiers called out into actual service, they eluded the most galling part of the obligation, and prepared the means of political resurrection in future times.*

Napoleon, however, was well aware that, even after these treaties and precautions, he was still exposed to great danger from the renewed hostility of the German States in his rear, while engaged with the armies of England and Spain in front in the Peninsula, if he was not well secured in the alliance with Russia, and that it was in the breast of Alexander that the true security for the peace of the Continent beyond the Rhine was to be found. This was more especially the case, as the losses and serious aspect of the Spanish war had already rendered it necessary to withdraw a large part of the grand army from the north of Germany; and before winter, not more than a hundred thousand French soldiers would remain to assert the French supremacy in the centre of Europe. Impressed with these ideas, the French emperor used his utmost efforts to prevail on the Czar to meet him at a town in the north of Germany, where the destinies of the world might be arranged; and such was the ascendant which he had gained over his mind during the negotiations at Tilsit, and such the attractions of the new objects of ambition in Finland and on the Danube, which he had had the address to present to his ambition, that Alexander completely fell into his views. Erfurth was the town selected for this purpose, and there a conference was held between the two potentates, almost rivalling that of Tilsit in interest and importance. On his route for Germany, the emperor met large bodies of the grand army on their road from the Rhine to the Pyrenean frontier; he addressed them in one of those nervous proclamations which ever bear so strong an impress of his genius, but which, long the heralds of his victories, began now to afford a curious contrast to the disasters he was destined to undergo.† The troops traversed France in the highest spirits, animated by the emperor's address, magnificently feasted by the municipalities, beneath triumphal arches, and amid songs of congratulation from their fellow-citizens. Vain illusion! They were marching only to the scene of protracted ag-

ony; to whiten by their bones the fields of Spain; to a lengthened conflict, which, ushered in at first by brilliant victories, was destined in the end to thin their ranks by its carnage, and overwhelm their honour by its disasters.*

The Emperor Alexander set out before Napoleon, and on his way paid a melancholy visit to the King and Queen of Prussia at Königsburg. Proceeding on his route, he rapidly traversed the Prussian States, received with marked gratification the honours paid to him by the French troops; took Marshal Lannes with him in his own carriage, and expressed publicly to the French officers the satisfaction which he felt "at finding himself among such brave men, such renowned warriors." Proceeding in this manner, and received everywhere with the utmost distinction by the French authorities, he arrived at Weimar late on the evening of the 26th, and found everything prepared for his reception by his brother the Grand-duke Constantine, and the French ambassador Caulaincourt, who had arrived two days before. Meanwhile Napoleon, in more than regal state, was leisurely advancing from Paris, surrounded by the sovereigns, princes, and ministers of Germany, enjoying the first satisfaction of exhibiting the Russian autocrat awaiting his arrival in an inconsiderable town of Germany, above five hundred miles distant from the nearest point of his dominions. At ten o'clock on the morning of the 27th he made his public entry into Erfurth, and, after reviewing the troops, proceeded on horseback to meet Alexander, who had left Weimar at the same hour to approach his august ally. The two sovereigns met on the highway, between the village of Ottsted and Nora, near a remarkable pear-tree, which is still to be seen on the roadside. Alexander immediately descended from his carriage; Napoleon alighted from his horse, and the two monarchs embraced with the strongest marks of mutual esteem. The French emperor was decorated with the order of St. Andrew of Russia, the Russian bore the grand badge of the legion of honour on his bosom. Magnificent presents were interchanged on both parts; side by side the two emperors rode into Weimar, amid the roar of artillery, the cheers of multitudes, and the thundering acclamations of ten thousand soldiers. When they arrived at the hotel of the Czar the monarchs again embraced, and ascended the stairs arm in arm. Napoleon requested Alexander to give him the watchword of the day; he complied, and it was "Erfurth and confidence." The two monarchs dined together, and in the evening a general illumination evinced the intoxicating joy of the inhabitants.†

No adequate idea can be formed of the greatness of Napoleon's power, or the almost irresistible sway which he had acquired in northern and central Europe, but by those who had witnessed the pomp and deference with which he was surrounded at Tilsit and Erfurth, and, four years afterward, at Dresden. Environed by a brilliant cortège of marshals, generals, diplomatists, and staff-

* Montg., vi., 350. Martens, Sup., v., 113, 127.

† "Soldiers! after having triumphed on the banks of the Danube and the Vistula, you have traversed Germany by forced marches. I now make you traverse France without giving you a moment's repose. Soldiers! I have need of you. The hideous presence of the leopard (the arms of England) defiles the continent of Spain and Portugal. Let it fly dismayed at your aspect! Let us carry our arms to the Columns of Hercules; there also we have outrages to avenge. Soldiers! you have surpassed the renown of all modern armies, but have you yet equalled the glory of the Roman legions, which in the same campaign frequently triumphed on the Rhine and the Euphrates, in Illyria and on the Tagus! A long peace, a durable tract of prosperity, shall be the reward of your labours. A true Frenchman should never taste of repose till the seas are enfranchised from their oppressors. Soldiers! all that you have already done, all that you will yet do for the happiness of the French people, will be eternally engraven in my heart."—THIBAUDEAU, vii., 50.

Its secret object, and tenour of the conferences held there.

Sept. 26.

Fêtes and spectacles acquired in northern and central Europe.

officers, he was at the same time the object of obsequious attention to a crowd of princes and inferior potentates, who depended on his breath for their political existence or nominal independence. All the beauty, rank, and distinction of Germany were assembled, seventy princes or independent sovereigns were in attendance, and literally it might be said that the monarchs of Europe watched for a favourable sign from the mighty conqueror's chamberlains. The two emperors spent the forenoons together, conversing on the public affairs of Europe and the separate plans of administration for their vast dominions; they then rode out in company to a review or inspection of their respective troops, dined alternately with each other, and in the evening went to the same box at theatre. A brilliant band of the most distinguished French performers had come from Paris to grace the conference, and, during a fortnight, the theatre of Erfurth, resplendent with illustrious men and beautiful women, beheld the master-pieces of Racine and Corneille performed by the talents of Talma, Saint Pris, Mademoiselles Duchesnois and Bourgois, besides a host of inferior performers.* On the 6th of October the whole court proceeded to Weimar, where they were magnificently entertained by the grand-duke of that place, and Napoleon enjoyed the satisfaction of conversing with Goethe, Wieland, and the other illustrious men who

* The attentions of Alexander and Napoleon to each other at Erfurth, though delicate, were got up with so much anxiety as to impress the spectators with the impression that the intimacy of Tilsit had somewhat declined, and that a feeling, of which they were on every occasion so very solicitous to give public demonstration, could not in reality have a very deep foundation. On one occasion Alexander expressed great admiration for a singularly beautiful dressing-case and breakfast set of porcelain and gold in Napoleon's sleeping apartment: they were sent to him as a present on the same evening. At the representation of *Oedipe* on October 3, when the line was repeated,

"L'Amitie d'un grand homme est un bienfait des dieux,"

Alexander turned to Napoleon, and presented to him his hand. A few days after, the Czar, when preparing to go into the *salle-a-manger* to dinner, perceived that he had forgotten his sword. Napoleon immediately unbuckled his own, and presented it to him. "I accept it as a mark of your friendship," replied Alexander. "Your majesty may be well assured I shall never draw it against you." In the midst of all his grandeur, Napoleon had sufficient greatness of soul and true discernment to attempt no concealment of his origin. At dinner, one day, the conversation turned on the Golden Bull, and the primate of Germany insisted that it had been published in 1409. "I beg your pardon," observed Napoleon; "when I was a second lieutenant of artillery, I was three years at Valence, and there I had the good fortune to lodge with a learned person, in whose library I learned that and many other valuable details. Nature has given me a memory singularly tenacious of figures." Mademoiselle Bourgois, whose personal charms were equal to her talents as an actress, attracted the particular notice of the Emperor Alexander; and he inquired of Napoleon if there would be any inconvenience in his forming her personal acquaintance. "None whatever," replied Napoleon, "except that it would be a certain mode of making you thoroughly known to all Paris. The day after to-morrow, at the post hour, the most minute particulars of your visit to her will be despatched; and soon there will not be a statuary in Paris who will not be in a situation to model your person from head to foot." This hint had the effect of cooling the rising passion of the Russian emperor, who, with all his admiration for the fair sex, had an extreme apprehension of such a species of notoriety. It was at Erfurth that Napoleon made the memorable observation to Talma on his erroneous view of the character of Nero, in the *Britannicus* of Racine: that the poet had not represented him as such in the commencement of his career; and that it was not till love, his ruling passion at the moment, was thwarted, that he became violent, cruel, and tyrannical.—See LAS CASAS, iv., 232, and THIBAUDEAU, vii., 61, 65, 71.

have thrown an imperishable lustre over German literature. On the 7th, the whole party visited the field of Jena. An elegant temple had been constructed by the grand-duke on the highest summit of the Landgrafenberg, the scene of Napoleon's frigid bivouac two years before, on the night before the battle;* and a little lower down were a number of tents, of sumptuous construction, where the emperor and his cortège of kings were entertained, and from whence he pointed out to Alexander the line of the different movements, which, on that memorable spot, had led to the overthrow of his most cherished projects. At length, after seventeen days spent together in the closest intimacy, the two emperors, on the 14th of October, the anniversary of the battle of Jena, rode out together to the spot where they had met on the 27th of September; they there alighted from their horses, and walked side by side for a few minutes in close conversation, and then embracing, bade each other a final adieu. Alexander returned rapidly towards Poland; Napoleon remeasured his steps slowly and pensively towards Erfurth. They never met again in this world.†

Though Austria was not admitted as a party to the conference at Erfurth, Baron Vincent, envoy of the cabinet of Vienna, came with a letter from the Emperor Francis on the subject of the armaments on either side in Southern Germany; and a joint memorial was presented by the Emperors of France and Russia, proposing a termination of hostilities to the government of Great Britain. But these important state papers will more fitly come under consideration in the succeeding chapters, which treat specifically of the affairs of Austria and England at this momentous crisis of their history.‡

But it was neither to amuse themselves with reviews and theatrical representations, nor to make proposals to Austria and England, which they were well aware could not be listened to, that the two emperors had come so far and remained together so long. It was with no view to peace, but, on the contrary, with a clear prophetic anticipation of an approaching multiplication of hostilities, that the conference at Erfurth took place. Napoleon clearly perceived that Austria was about to take advantage of his immersion in the Peninsular war, and of the extraordinary preparations which England was making for a Continental campaign, to renew the contest in Germany, and it was to Russia alone that he could look for a sure guarantee of the peace of the north of Europe during the arduous crisis which was approaching. Albeit internally convinced of the necessity of a fearful contest in the end with the power of France, Alexander was not less sensible of the importance of gaining time for the preparations for it; and strongly impressed

* *Ante*, ii., 443.

‡ In one of their conversations Alexander strongly represented to the French emperor the resistance which he experienced in his senate from the aristocratic chiefs in his projects for the public good. "Believe me," said Napoleon, "how large soever a throne may be, it will always be found too small for two masters."—*MONTGAILLARD*, vi., 354.

§ See below, Chap. lii. and liii.

with the conviction that the peculiar and national interests of Russia were in the mean time chiefly to be promoted by remaining firm in the French alliance, and that when the evil day did come, the best preparation for it would be found in the augmentation of the strength of the empire in Finland and on the Danube, which was likely to follow an adherence to his present engagements. Thus, while both these great potentates were lavishing professions of friendship and regard on each other, they were in reality nursing the feelings destined to lead to inextinguishable hostility in their hearts; Napoleon returned, almost blinded by Russian flattery, to Paris, to prepare, in the subjugation of the Peninsula, the means of arranging the countless host which he was afterward to lead to the Kremlin; and Alexander, loaded with French presents, remeasured his steps to Muscovy to organize the force, destined, after adding Finland and the principalities on the Danube to his dominions, to hurl back to the Seine the tide of Gallic invasion.*†

The conferences of Erfurth were not reduced, like those of Tilsit, to formal or secret treaties; at least, if such were held there. signed, they have not yet transpired from any of the European archives. But they were not, on that account, the less important, or the less calculated to determine, for a course of years, the fate of the Continental monarchies. In the verbal conversations which took place, the great object of the two potentates was to obtain the consent of each other to their respective projects of aggrandizement at the expense of the lesser states in their vicinity; and their mutual interests or necessities rendered this an easy task. Alexander gave his sanction to the invasion of Spain and Portugal, and the placing of the princes of the Napoleon dynasty on the thrones of the Peninsula, as well as to the establishment of Murat in the kingdom of Naples, and the annexation of Tuscany to the French Empire. The effects of this consent soon appeared in the accrediting of Russian ambassadors to the courts of these infant sovereigns. On the other hand, Napoleon consented to the uniting of Finland, Moldavia, and Wallachia to the already vast dominions of the Czar, admitted his relation and future brother-in-law, the Grand-duke of Oldenberg, into the Confederation of the Rhine, gave satisfactory explanations in regard to the Grand-duchy of Warsaw, and held out to the Emperor of the East the prospects of obtaining aid from France in the attempt to stretch his mighty arms over the Asiatic Continent, and give a deadly wound

to the power of England on the plains of Hindostan. In return for so many concessions, he procured from Alexander a promise to aid France with a considerable force in the event of a war with Austria, and conceded to his earnest entreaties a considerable relaxation of the oppressive burdens under which Prussia had so long groaned. The arrear of contributions, fixed at 140,000 000 francs by the treaty of the 8th of September,* was reduced to 125,000,000; and a more important relaxation took place in the form of payment, by which, in consideration of 50,000,000 of francs received by Daru on the 5th of November, and 70,000,000 more, for which promissory notes were granted, the royal revenues were to be restored to the Prussian authorities; and the French troops, which were urgently required in the Peninsula, were, with the exception of the garrisons of Stettin, Custrin, and Glogau, entirely to evacuate the Prussian dominions. Thus had Napoleon the address to make his disasters in Spain, which imperatively required the removal of the French troops from the north of Germany, the means of gratifying Alexander by an apparent concession to his wishes, and diminishing the irritation of Prussia, which, in the event of hostilities with Austria, might prove, even after all its disasters, a formidable enemy in his rear. Two other more delicate subjects of discussion were, after being touched on, averted rather than settled, by the diplomatic skill of the two emperors, and left the seeds of inextinguishable future jealousy in their minds. The first was a proposal by Napoleon, who already had resolved to divorce Josephine, for the hand of the Grand-duchess Catherine Paolowna, the favourite sister of the emperor: a proposal which the astute Russian evaded by referring the matter, not to the reigning empress, whose ambition its brilliancy might have dazzled, but the empress-dowager, whose firmness of character was proof against the seduction, and who hastened to terminate the dangerous negotiation by alleging religious scruples, and shortly after marrying her daughter to Prince Oldenberg. The second was the amicable but resolute contest for the possession of Constantinople. Napoleon, as he himself has told us,† could not bring his mind to cede to his rival the Queen of the East: Alexander, with justice, regarded it as the outlet to his southern dominions: the back-door of his empire, and was earnest that its key should be placed in his hands. Fearful of interrupting their present harmony by any such irreconcilable theme of discord, the subject was, by common consent, laid aside: the city of Constantine was suffered to remain in the hands of the Turks, who, in every other respect, were abandoned to Muscovite ambition; but the tender point had been touched: the chord which jarred in the hearts of each struck, and the inestimable prize formed the secret subject of hostility, which, as much as jealousy of English power, afterward

* Thib., vii., 76, 78. Boutourlin, i., 32, 33, 45. Join., iii., 86.

† "The Emperor Alexander," says Boutourlin, "felt that the alliance concluded at Tilsit, cemented at Erfurth, as soon as it ceased to be conformable to the interests of Napoleon, would come to an end; and that the grand crisis was approaching which was destined either to consolidate the universal empire which the French emperor was endeavouring to establish on the Continent, or to break the chains which retained so many Continental states under his rule. Determined never to submit to any condition inconsistent with the honour of his crown, the Emperor of Russia regarded the rupture as near and unavoidable, and thenceforward applied himself silently to organize the immense resources of his states, to resist the danger which was approaching: a danger which promised to be more terrible, that Russia would have to sustain it, to all appearance alone, against the accumulated forces of the greater part of Europe."—BOUTOURLIN, i., 45.

* Ante, iii., p. 90.

† "We talked," says Napoleon, "of the affairs of Turkey, at Erfurth. Alexander was very desirous that I should consent to his obtaining possession of Constantinople, but I could never bring my mind to consent to it. It is the finest harbour in the world, is placed in the finest situation, and is itself worth a kingdom."—LAS CAJAS, iv., 231, and O'MEARA, i., 382.

led the French legions to Borodino and the Kremlin.*

Immediately after the conference at Erfurth, Nov. 5, 1808. a formal treaty was concluded with Prussia, by which the alleviations to her miseries provided for by the arbiters of Europe was reduced to writing; and in a short time the evacuation of the Prussian States, with the exception of the three retained fortresses, took place. Restored by this removal, and the recovery of the right of collecting his revenue, in a certain degree to his rank of an independent sovereign, Frederic William, Dec. 3. in company with his beautiful queen, returned to the capital, and made his public entry into Berlin amid the transports and tears of his subjects.†

The secret objects of the conference at Erfurth soon developed themselves. Murat declared King of Naples, and takes possession of his dominions. Murat was declared by Napoleon King of Naples and Sicily; and, leaving the theatre of his sanguinary measures and rash hostility in the Peninsula, hastened to take possession of his newly-acquired dominions. He was received with universal joy by the inconstant people, who seemed equally delighted with any sovereign sent to them by the great Northern conqueror. His entry into Naples was as great a scene of triumph, felicitations, and enthusiasm, as that of Joseph had been. Shortly afterward, however, he gave proof of the vigour which was at least to attend his military operations, by a successful expedition against the island of Capri, which the English had held for three years, but now yielded, with a small garrison under Sir Hudson Lowe, which capitulated and was sent back to England, to a vigorous and well-conceived attack from the French forces.‡

Secured by the conferences at Erfurth from all danger in his rear, Napoleon speedily returned to Paris; and, after presiding over the opening of the Legislative Assembly, then resolved, with his wonted vigour, to set out for the Pyrenees, determined by a sudden attack to disperse the Spanish armaments and capture Madrid, before either the English auxiliaries could acquire a solid foundation in the Peninsula, or Austria could gain time to put in motion the extensive armaments she was preparing on the Danube. Leaving Paris in the end of October, he Oct. 29. arrived at Bayonne on the 3d of November, and immediately disposed his forces for active operations.§

The effect of the vigorous exertions which he had made to strengthen his armies in that quarter was now beginning to display itself. The fifty thousand soldiers who, in the middle of August, were concentrated on the Ebro, dejected by disaster, dispirited by defeat, had now swelled, by the end of September, as if by enchantment, to ninety thousand men, present under arms on the Ebro, besides twenty thousand, under St. Cyr, in Catalonia. This body, already so formidable, subsequently received vast acces-

sions of force from the troops arriving from Germany, especially the Imperial Guard, and the corps of Soult, Ney, and Mortier, all of which were veterans from the Grand Army, confident in themselves, and inured to victory. During the whole of October, the road from Bayonne to Vittoria was crowded with horsemen and carriages; through every opening in the Pyrenees foot-soldiers were pouring in endless multitudes to re-enforce the grand muster in Navarre. Conformably to his general custom, Napoleon divided the whole army into eight corps, commanded by so many marshals, whose names, already rendered immortal in the rolls of Fame, seemed a sure presage to victory.* Their united force, when the emperor took the field in the beginning of November, was not less than three hundred thousand men, of whom at least forty thousand were cavalry; and, after deducting the troops in Catalonia, and those which required to be maintained in garrison in the northern fortresses, and the sick and absent, at least a hundred and eighty thousand could be relied on for offensive operations on the Ebro. But the magnitude of this force, great as it was, constituted the least formidable part of its character. It was its incomparable discipline, spirit, and equipment, the skill and vigour of its officers, the docility and experience of its soldiers, the central and impregnable position which it occupied among the mountains of Navarre, and the unity of design which it was well known would soon be communicated to its operations by the consummate talents of Napoleon, which constituted its real strength, and rendered the friends of freedom in Europe justly fearful of the collision of such a host with the divided and inexperienced armies of the Spanish provinces.†‡

These armies, though very numerous on paper, and in considerable strength in the field, were far from being in a situation, either from discipline, equipment, or position, to make head against so formidable an enemy. The Spanish troops were divided into three armies: that of the right, under Palafox, consisting of eighteen thousand infantry and five hundred horse, occupied the country between Saragossa and Sanguessa, and was composed almost entirely of Arragonese; the centre, under Castanos, which boasted of the victors of Baylen in its ranks, was twenty-eight thousand strong, including thirteen hundred horse, and had thirty-

six pieces of cannon; it lay at Tarazona and Agreda, right opposite to the French position; the left, under Blake, thirty thousand in number, almost entirely Galicians, but with hardly any cavalry, and only twenty-six guns, was stationed on the rocky mountains near Reynosa, from whence the Ebro takes its rise. Thus, seventy-four thousand infantry and two thousand horse, with eighty-six guns, were all that the Spaniards could rely upon for immediate operations on the Ebro; for, although considerable reserves were collecting in the rear,* yet they were too far from the scene of action, and their discipline and equipment not in a sufficient state or forwardness to permit of their either arriving in time at the theatre of conflict, or taking any useful part in it if they were there. Seventy thousand Spanish infantry and two thousand Spanish cavalry could never be considered a match for a hundred and fifty thousand French foot and thirty thousand horse, even under the most favourable circumstances; least of all could they be relied on, when the French occupied a central position, defended by almost inaccessible mountains, and were guided by one commander of consummate abilities, while their undisciplined antagonists, scattered over a circumference two hundred miles in length, and separated from each other by deep ravines, rapid rivers, and impassable ridges, were under the command of different and independent generals, jealous of each other, and gifted with comparatively moderate military talents.†

The British forces, it is true, under Sir John Moore and Sir David Baird, were rapidly approaching the scene of action; but their distance, notwithstanding all their efforts, was still such as to preclude the hope of their being in a situation to render any effectual assistance. Sir John Moore's forces, which set out on their march from Lisbon, as already mentioned, in the middle of October, had broken, for the sake of procuring better roads for the artillery and wagon train, into two columns; and while the main body, under Sir John in person, followed the direct road by Abrantes, Almeida, and Ciudad Rodrigo, a lesser division, but with the reserve and most of the guns, took the more circuitous route by Elvas, Badajoz, Talavera, and Madrid. It was not, however, till Nov. 8. the 8th of November that this heavily-encumbered corps reached the Spanish capital, and on the 27th of the same month Nov. 27. that it crossed the Guadarrama Mountains, before which time the fate of all the Spanish armies on the Ebro was sealed. Meanwhile, Sir John Moore was farther advanced; for, on the 11th, he crossed the Spanish frontier, and on the 18th had collected the bulk of his forces at Salamanca; but

Sir David Baird, who had landed at Coruña on the 13th of October, had only, by Oct. 13 great exertion, succeeded in reaching Astorga in Leon, four days' march from Salamanca, on the 20th of November. Thus the British army, not in all more than thirty thousand strong, was split into three divisions, severally stationed at the Escorial, Salamanca, and Astorga, distant eighty or a hundred miles from each other, and without any common base or line of operations; and the Spaniards, a hundred miles farther in advance, were also divided into three armies, separated by still greater distances from each other, while Napoleon lay with a hundred and eighty thousand veteran troops clustered round the basin of Vittoria. It was easy to see that the allies, exhibiting, in this respect, a melancholy contrast to their antagonists, were but novices in the art of war, and signally ignorant of the importance of time in its combinations; and that the English, in particular, inheriting too much of the character of their Saxon ancestors, were, like Athelstane the Unready, still unprepared to strike till the moment for decisive operations had passed.*†

Napoleon, who was well aware of the importance of striking a decisive blow in the outset, and dispersing the Spanish armies in his front, before the warlike and disciplined reserve of the English troops could arrive

Movements on the French left before the arrival of Napoleon.

* South, ii., 470. Nap., i., 425, 431. Lond., i., 181, 199.

† These observations apply to those having the general direction of the allied campaign, and especially the English government, who, at this period, were far from being adequately impressed with the vital importance of time in war. Their instructions for the campaign were dated so late as October 6. Both the gallant generals intrusted with the direction of the English army pressed forward with all imaginable expedition after they received them; and Sir John Moore, in particular, as it will appear in the sequel, with mournful resolution, commenced an important advance, under circumstances, to all but a soldier of honour, utterly desperate. It was impossible for him to commence operations before the junction with Sir David Baird, which did not take place till the end of November. But still, in all concerned, there was at this period an evident want of the vigour and expedition requisite for success in war. Napoleon would never have permitted the main English army to have lingered inactive at Lisbon from the end of August, when the convention at Cintra was concluded, till the middle of October, when the march for Spain commenced, nor delayed the British expedition under Sir David Baird till it reached the Spanish shores for the first time on the 18th of that month. But these were the faults of government.

The greatest error, in a military point of view, of Sir John Moore, was separating the artillery from the infantry and cavalry in the advance into Spain. For this oblivion of the first rule of military movements, viz., to station each portion of the army so that its different arms may, in case of need, support and aid each other, it is hardly possible to find any excuse. It is difficult to conceive how the direct road by Almeida could at that period have been impassable for artillery and wagons, when it had so recently before been traversed by Junot, with all his army, and was ever after the great line of military communication which the Duke of Wellington made use of from the capital to the frontier; and, at any rate, if the passage at that period was impracticable for the guns, that might have been a good reason for sending the whole army round by Elvas, but it could be none for separating it into two parts, severed by two hundred miles from each other, and exposing either to the chance of destruction when the other was not at hand to lend it any support. Colonel Napier, much to his credit, admits that this separation violated a great military principle, though he endeavours to defend it in that particular case as unattended with danger. It will appear, in the sequel, that the greatest commanders sometimes unnecessarily fall into a similar forgetfulness; and that the cantoning the English infantry apart from the cavalry and artillery on the Flemish frontier, and within the reach of the enemy's attack, in 1815, had wellnigh induced a serious disaster at Quatre Bras.—See NAPIER, i., 334, and *Infra*, vol. iii., *Voce Waterloo*

* These reserves were stated to be as follows; but they were all distant from the scene of action, and had, for the most part, hardly acquired the rudiments of the military art:

Castilians at Segovia, about 150 miles in the rear	12,000
Estremadureans at Talavera	13,000
Andalusians in La Mancha	14,000
Asturians in reserve at Llanes	18,000

Total 57,000

† Nap., i., 362, 363. Tor., ii., 103, 104. Thib., vii., 152, 153. Tor., ii., 108.

at the scene of action, lost no time, after his arrival on the Bidassoa, in pressing forward the most active operations. Some inconsiderable actions had, before his arrival, taken place on the left, where Blake had, since the 18th of September, been engaged in an offensive movement, from which no material results had ensued. Prior to this the French had evacuated Burgos and Tudela, and extended themselves towards Bilbao, which they still held, much against the will of Napoleon, who strongly censured such a proceeding, as gaining nothing in strength of position, and losing much in moral influence.*

Sept. 18. Blake broke up from Reynosa on the 18th of September with thirty thousand Galicians, and advanced to Santander. The effect of this movement was to make the French

Sept. 23. concentrate their forces in the basin of Vittoria; and Blake attacked Bilbao with fifteen thousand men, which fell the day after it was invested, while the French withdrew up the valley of Durango, and all the lateral valleys in its vicinity, to the higher parts of the mountains of Navarre. But though these operations were at first successful, yet the natural effects of the presumption and want of foresight of the Spanish government and generals soon developed itself. Blake had engaged in this laborious and dangerous mountain warfare without magazine stores, or any base of operations, and with only seventy rounds of ammunition for each gun. His men, when the winter was approaching and the snow beginning to fall, were without greatcoats, and many without shoes. The bulk of his forces, grouped around Burgos, exposed his right flank to successful attack.†

A combined attack had been arranged between the Spanish generals along the whole circumference which they occupied upon the central mountain position of the French army. But such a complicated movement, difficult and hazardous even with the best disciplined troops, when acting along such an extensive and rugged line of country, was altogether hopeless with the disorderly and ill-appointed bands of the Peninsular patriots. An attack by Castanos, with the Andalusian army, upon the French posts on the Ebro around Logrono, though at the first attended with some success, at length terminated in disaster; and the Spanish division of Pignatelli was driven back with

the loss of all its artillery, and immediately dispersed. Discouraged by this check, Castanos fell back to Calahorra; and dissensions, threatening very serious consequences, broke out between that General and Palafox, who retired with the Arragonese levies towards Saragossa. Meanwhile Blake, whose forces, from the junction of the troops under Romana, which had come up from Corunna, and the Asturians, with whom he was in communication near Santander, were increased to nearly fifty thousand men, commenced a forward movement on the French left in the Biscayan provinces, and stretching himself out by the seacoast, and up the valley of Durango, threatened to interpose between the advanced divisions of Lefebvre and Ney's corps, which lay most exposed, and their communication with the French frontier on the Bidassoa.*

This offensive movement was well conceived, and, if conducted and followed up with the requisite vigour, might have led to great results. As it

Defeat of Blake at Tornos.

was, however, his forces were so scattered, that, though thirty-six thousand were under his immediate orders, only seventeen thousand were collected by Blake in front of the enemy, without any artillery, in the valley of Durango, the remainder being stretched inactive along the seacoast, or separated from the main body by impassable mountain ridges. Alarmed, however, by the probable consequence of an interposition of such a force between the bulk of his troops and their communications with Bayonne and St. Sebastian, Lefebvre resolved to make a general attack upon the enemy, and drive them back to the neighbourhood of Bilbao. Descending from the heights of Durango under cover of a thick fog, he suddenly attacked the Spanish army at daybreak on the 31st of October with such vigour, that the divisions in front were thrown back on those in the rear, and the whole driven in utter confusion to Bilbao, from whence they continued their retreat in the night to Balma-seda, in the direction of the Asturias. Lefebvre followed him up next day, but Blake, having assembled his troops, turned upon his pursuers, and, after some sharp partial engagements, the French retired to Bilbao, of which they were allowed to retain undisturbed possession.†

Matters were in this state in Navarre and Biscay when Napoleon arrived at Vittoria, and instantly, as if by an electric shock, communicated his own unequalled energy to the operations of the army. Disapproving Lefebvre's unsupported attack upon Blake, which promised merely to force him back from the scene of action, without effecting those decisive results which his presence both usually occasioned and at present required, he immediately gave orders for the most vigorous operations. The position of the allied armies promised the greatest results to immediate attack. Blake, with twenty-five thousand defeated and starving mountaineers, was near Espinosa in Biscay; the Conde de Belvidere, with the Etre-maduran levies, twelve thousand strong, was in Burgos; Castanos and Palafox, little dream-

Position of the French and Spanish armies on Napoleon's arrival.

* "The line of the Ebro," says Napoleon, "was actually taken; it must be kept. To advance from that river without an object would create indecision; but why evacuate Burgos—why abandon Tudela? Both were of importance, both politically and morally; the latter as commanding a stone bridge and the canal of Saragossa; the former as the capital of a province, the centre of many communications, a town of great fame, and of relative value to the French army. If occupied in force, it would threaten Palencia, Valladolid, even Madrid itself. If the enemy occupies Burgos, Logrono, and Tudela, the French army will be in a pitiful situation." It is remarkable how early the experienced eye of the French emperor, at the distance of three hundred leagues from the scene of action, discerned the military importance of Burgos, a town then unknown to military fame, but the value of which was afterward so strongly felt by the Duke of Wellington, that he strained every nerve and exposed himself to imminent risk in the close of the brilliant campaign of 1812, in the unsuccessful attempt to effect its reduction.—*Vide Note, Sur les Affaires d'Espagne, August, 1808, taken at Vittoria.*—NAPIER, App. No. iv., p. 18.

ing of the danger which was approaching, were preparing to advance again towards Logrono, and confidently expected to drive the invaders over the Pyrenees, while the English forces, slowly converging towards the scene of action, were still scattered, from Corunna to Madrid, over the half of Spain. Napoleon, on the other hand, had a hundred thousand excellent troops ready for immediate operations, in a circumference of twenty miles round his headquarters at Vittoria,* besides nearly an equal force at a greater distance in Biscay and Navarre.

The plans of the French emperor were immediately formed. Blake, whose eyes were at length opened to the perilous situation in which he was placed, so far in advance, and destitute of all communication with the other Spanish armies, had retired to ESPINOSA, where he had concentrated nearly all his troops, including those which had come with Romana from the Baltic, in a very strong position, while his reserves and park of artillery were stationed in the rear at Reynosa. He had now rejoined his artillery, and had collected twenty-five thousand men; but his troops, half naked and in great part without shoes, were shivering from the inclemency of the weather, and exhausted by incessant marching and countermarching, often without food, for fourteen days. In this state they

Nov. 10. were attacked, on the forenoon of the 10th, by Marshal Victor, with twenty-five thousand men, while Lefebvre, with fifteen thousand, marched upon the Spanish line of retreat. Romana's infantry, posted in a wood on the right, made a gallant resistance, and not only was the action prolonged till nightfall, without any disadvantage, by those gallant veterans, but the Spanish centre, who were protected by the fire of a battery well posted, to which the French had no guns to oppose, had gained ground upon the enemy. Next morn-

Nov. 11. ing, however, the result was very different. Victor, who had changed his columns of attack during the night, renewed the action at daybreak, and directed their efforts against the left, where the Asturian levies were posted. These gallant mountaineers, though almost starving, and but recently imbedded, stood their ground bravely as long as their chiefs, Quiron, Acevedo, and Valdes, remained to head them; but the French, perceiving the influence which they exercised over the minds of their followers, sent forward some sharpshooters under cover of the rocks and thickets in front of the position, who speedily killed the first and severely wounded the two latter. Disheartened by this loss, the Asturians broke and fled. Blake detached a column of grenadiers to support them, but, instead of doing so, they were themselves overwhelmed by the torrent of fugitives, and swept along: in a short time the whole army disbanded, and rushed in the wildest disorder towards the river Trueba, which encircles the rear of the position.† Great numbers perished in the stream, which was deeply swollen with the rains of winter; those

who reached the fords dispersed, and made the best of their way into their own provinces, carrying dismay into all parts of Galicia, Asturias, and Leon, where Romana afterward contrived to rally ten thousand men. With difficulty Blake collected seven thousand men, with whom he fell back to Reynosa, where he endeavoured to make a stand, with the aid of his reserve artillery, which was still stationed there; but this ineffectual attempt only rendered his defeat in the end more complete. Soult, who, as well as Lefebvre, was now upon his traces, despatched a large body of troops on the 10th to cut him off from his retreat towards Leon; and on the 13th he was attacked by the advanced guard of the former marshal, who displayed even more than his wonted vigour on the occasion, completely routed, with the loss of his whole artillery and ammunition, and driven, with a few thousand miserable and spectre-looking followers, into the heart of the Asturian mountains. Meanwhile Bilbao, Santander, and the whole line of the intermediate seacoast, with great stores landed at the latter port by the British, fell into the hands of the enemy.*

While these decisive blows in a manner annihilated the Spanish right, an equally important stroke was delivered by Soult, who had now taken the command of the second corps, against the centre. It consisted of the army of Estremadura, under the Count de Belvidere, with which were united some of the bravest regular troops in Spain: in particular, the Spanish and Walloon Guards, some of the best-appointed regiments of the line, and the Royal Carabineers; and the whole were completely equipped and clothed by the English government. It made, however, even less resistance than the undisciplined levies of Asturias and Galicia. The Spanish soldiers, eighteen thousand strong, of whom eleven thousand were regulars, were posted at Gamonal, in front of Burgos, with twenty pieces of cannon disposed along their front; the right occupied a wood, the left the walled park of Villemer. The action commenced by General Lasalle, with the French horse, driving in the Spanish right and threatening its flank, while Mouton, with a division of veterans, charged rapidly through the trees and assailed their front; Bonnet followed closely with another division immediately in his rear; but such was the vigour and effect of Mouton's attack, that the enemy broke and fled in utter confusion towards Burgos, pursued all the way by Bessières' heavy dragoons, who did dreadful execution among the fugitives, and took all the guns which had been saved from the first attack. Don Juan de Henestrosa, who commanded the Spanish cavalry, to cover the retreat, charged this dreadful body of horse with more gallantry than success; his dragoons, led by youths of the best families in Spain, were unable to withstand the shock of the French cuirassiers, and shared in the general rout. Two thousand Spaniards fell on the field or in the pursuit; all the artillery, consisting of twenty guns, with eight hundred prisoners, fell into the hands of the victors; all the ammunition and

* Nap., i., 385, 387. Tor., ii., 124, 125.

† Great part of the disasters of this defeat were owing to the injudicious selection of a position for battle, with the river in the rear: another example, like that of the Russians at Friedland, of one of the most fatal errors which a general can commit.

* Tor., ii., 126, 135. Nap., i., 391, 393. Jom., ii., 97, 98. South., ii., 380, 393.

stores of the army were taken in Burgos, which was given up to pillage, and the dispersion of the defeated troops was complete.*

Burgos now became the centre of the emperor's operations; headquarters were established there on the 12th, and ten thousand light troops were despatched forward to scour the country, levy contributions, and diffuse a general terror of the French arms. Such was the consternation produced by their advance, that they traversed the open fields in every direction without experiencing the slightest opposition; they swept over the plains of Leon as far as Benavente, Toro, and Tordesillas, spreading everywhere the triumphant proclamations of the emperor, and boasting that, notwithstanding their utmost exertion, the French horsemen could not overtake the English army, which, abandoning its allies without striking a blow, was flying in disgrace to its ships. But while, by these incursions, the attention of the enemy was drawn to the side of Salamanca, the eyes of Napoleon were in reality turned in a different quarter, and it was against Castanos and Palafox that the weight of his forces was directed. The position of the French army seemed to expose them to certain destruction; for Ney's corps, which had been destined to act against the army of Estremadura at Burgos, being rendered disposable by its sudden destruction, was in a situation to make a circuit round their position and cut them off from the line of retreat to New Castile and Madrid. That brave marshal, accordingly, re-enforced by a division from the reserve, was directed to move from Aranda by Soria to Agreda, which was directly in their rear; while Lannes was despatched from Burgos, with two divisions of infantry and one of heavy cavalry from the reserve, to put himself at the head of Moncey's corps, and attack them in front.† Meanwhile Castanos, finding himself separated both from Belvidere and Blake's armies, with the destruction of which he was unacquainted, had adopted the extraordinary plan of forcing a passage through the French forces in his front, and marching by Conchade-Hara and Soria to Burgos, where he was to annihilate the emperor's reserves and rear-guard, and thence pass on to Vittoria to co-operate with Blake in the destruction of the two corps in Biscay.‡

In the midst of these extravagant projects, the hand of fate was upon him. Marshal Ney, who left Aranda on the 19th, entered Soria on the 21st, upon which Castanos retreated towards Tudela, which he reached on the evening of the 22d. There his army formed a junction with that of Arragon, under Palafox, and their united forces amounted to thirty-nine thousand infantry and four thousand cavalry, with forty guns. The generals of the armies of Andalusia and Arragon could not concur in

any plan of common operations; Palafox contending strongly for the defence of Arragon, Castanos for the more prudent plan of retiring before the enemy. Nothing was as yet decided between these conflicting opinions, when it was announced from the outposts that the enemy were already upon them. In haste, the troops were drawn up nearly on the ground which they occupied at the moment, which was along a range of inconsiderable hills, nearly six miles long, stretching from Tudela to Taranzona. The Arragonese, with Palafox, were on the right, leaning on Tudela; the Valencians and Castilians loosely scattered in the centre; the veterans of Andalusia, proud of the laurels of Baylen, on the left, stretching to Taranzona, which they occupied with three divisions, the flower of the army. Lannes, who commanded the French, and had concentrated thirty thousand infantry and five thousand cavalry, with sixty pieces of cannon, instantly perceived the weakness of the enemy's line, and prepared to pierce the long and feebly guarded front in the centre, where it was weakest, and composed of the most inexperienced troops, so as to separate altogether the army of Arragon from that of Andalusia. This well-conceived plan proved entirely successful. General Maurice Mathieu, with a strong body of infantry, and the whole cavalry under Lefebvre Desnouettes, attacked the Valencians and Castilians in the centre with great vigour, and soon compelled them to give ground; but they were in turn charged by the Spanish guards, whom Castanos despatched to their assistance from the left, who threw the assailants into confusion, and the Spanish line in that quarter was gaining ground when they were taken in flank by General Morlot, who had beaten back the Arragonese on the right, and now turned fiercely on the enemy's centre. Aided by such powerful auxiliaries, Maurice Mathieu and Lefebvre Desnouettes regained the advantage, and, in their turn, drove back and threw into confusion the Valencians and Castilians, who had got into disorder by the length of the combat. The centre was speedily routed, and Lefebvre, charging the right with vigour, drove them entirely off the field in confusion, towards Saragossa. Meanwhile, La Pena, with the victors of Baylen on the extreme left, had routed the French under La Grange, to whom he was opposed, but, when following up their success in some disorder, and already confident of victory, the victors were suddenly met by a solid mass of infantry which diverged from the victorious centre of the enemy, and broken; the other divisions of the army of Andalusia, three in number, and embracing twelve thousand soldiers, took no part in the action. They commenced their retreat, however, in good order, when it was evident the battle was lost; but some of the advanced troops of Ney's corps having appeared in their rear, from the side of Soria, and a powder-wagon exploded by accident, the retreat became disorderly, and it was with some difficulty the guns were brought off. As it was, the separation of the Spanish armies was complete: fifteen thousand men, Arragonese, Valencians, and Castilians, had taken refuge in Saragossa, without either guns or ammunition-wagons. Twenty thousand, under Castanos,

* Nap., i., 389, 390. Jom., ii., 96. Tor., ii., 131, 132. St. uth., ii., 395, 396.

† In crossing a mountain range near Tolosa the horse of Marshal Lannes fell with him, and he sustained several severe and dangerous bruises. He was cured in a very singular manner by being wrapped in a warm skin of a newly-slain sheep, and was able in two days to resume the command of the army.—LARREY, *M. moires et Camp.*, iv., 237.

‡ Thib., vii., 160, 161. Tor., ii., 138, 139. Nap., ii., 395, 401.

with all their artillery, fell back, comparatively in good order, to Catalayud, and were immediately ordered up by the central junta to Madrid to defend the capital. Five thousand were killed and wounded or made prisoners on the field; the remainder, with twenty guns, dispersed in the pursuit, and were never more heard of. But if Napoleon's directions had been implicitly followed by Ney, who arrived at Soria on the 22d, and if, instead of remaining in that town as he did inactive for two days, he had advanced in the direction of Catalayud, he would have fallen perpendicularly on the retreating columns of Castanos; and totally destroyed them. This failure on the part of Ney excited great displeasure in Napoleon (who had with reason calculated upon much greater results from the battle), and was attended with important consequences on the future fortunes of the war.*†

The battles of Espinosa, Burgos, and Tudela were not only totally destructive of the Spanish armies in the north, but they rendered, by the dispersion of their forces with which they were attended, the approach to the capital a matter of ease to the French emperor. Blake's troops, of which Romana had now assumed the command, had almost all dispersed, some into Asturias, others into Leon; and it was with the utmost difficulty that that gallant commander had rallied ten thousand of the starving fugitives, without either artillery, ammunition, or stores, in the rugged mountains from which the Ebro takes its rise; the remnant of the army of Estremadura, routed at Burgos, had fallen back, in the utmost confusion, towards the Guadarrama Mountains; while Castanos, with the army of Andalusia, was driven off in a southeasterly direction to Catalayud, in the road to Valencia; and Palafox, with the levies of Arragon and Castile, had sought a refuge behind the walls of Saragossa. Thus, the Spanish armies were not only individually and grievously weakened by the losses they had sustained, but so disjointed and severed as to be incapable of acting in concert, or affording any support to each other; while Napoleon, at the head of a hundred thousand men, occupied a central position in the heart of them all, and was master of the great road leading direct to the capital.‡

It was in such circumstances that the genius of that great general appeared most conspicuous, which never shone with such lustre as in the vigour and ability with which he followed up a beaten enemy. Abandoning the remains of Blake's army to Soult's, and the

care of watching the English troops to Lefebvre's corps, and directing Lannes to observe Saragossa and the discomfited but warlike multitude which it contained, while Ney was to press incessantly on Castanos, and drive him off, as far as possible, in an easterly direction, the emperor himself, with the Imperial Guards, Victor's corps, and the reserve, at least sixty thousand strong, advanced towards Madrid. So skilfully were these various movements combined, that, while each corps had the following up and destroying of its own peculiar antagonist in an especial manner intrusted to its care, the whole combined to protect and support the advance of the main body of the capital: Lefebvre protecting its right flank, Ney its left, while Lannes and Soult secured and protected the rear, at the same time that they disposed of the remnants of the Arragonese and Galician armies.*

Departing from Aranda de Douro on the 28th, the emperor arrived at the foot of the ^{Forcing of} Somo-sierra on the morning of the 30th. Some fieldworks, hastily constructed at the summit of the pass, were garrisoned by a disorderly crowd, composed of the reserve of the divisions of Andalusia which had been sent forward from Madrid, with which were united the remains of the army of Estremadura, in all about twelve thousand men, with sixteen pieces of cannon, under the command of General St. Juan. The guns swept the road along the whole ascent, which was long and very steep; and as it was impossible that the toilsome acclivity could be surmounted by the troops except during a considerable time, a very serious loss was anticipated by the assailants. Preceded, however, by a cloud of sharpshooters, which covered the mountains on either side, a column of three regiments ascended the causeway, while as many assailed the position on its right, and a like number on its left. The fire, however, of the artillery on the summit was very violent, to which it was difficult to reply, as a thick fog, intermingled with smoke, hung over their line on the higher part of the ridge, on entering into which the French found themselves torn by a descending shower of balls from an enemy whom they could not discern. The head of the column on the causeway was already arrested, and hesitation, as always ensues in such an event, was beginning to spread in the rear, when Napoleon, having rode to the bottom of the pass, at once ordered the Polish lancers and chasseurs of the guard, under General Montbrun, to charge. Advancing up the steep ascent at a rapid pace, these brave men opened a way for themselves through the columns of infantry with which it was encumbered, and attacked the battery; the first squadrons, shattered by a terrible discharge, reeled and fell back; but the next, galloping forward before the guns could be reloaded, dashed among the artillerymen, and carried the pass. Meanwhile the Spanish infantry, stationed on either flank, retired, after discharging their muskets at the swarms of tirailleurs by whom they were assailed, and the whole body falling into confusion, soon fled in disorder to Segovia, where a small number only could be rallied by the efforts of

* Jom., ii., 99, 100. Tor., ii., 138, 142. Nap., i., 401, 406. Soult, i., 399, 401.

† Colonel Napier says, "Palafox, with the right wing and centre, fled to Saragossa with such speed that some of the fugitives are said to have arrived there the same evening." It would be desirable that the authority on which this serious charge is made against Palafox should be given, as no foundation appears for it in the military authorities with which I am acquainted. Jomini says merely that after the battle "Palafox took the road to Saragossa;" Torreno, "that Don Joseph Palafox in the morning (*des le matin*) resumed the route to Saragossa." Neither say anything about any of the Arragonese, or Palafox himself, having either fled to Saragossa, or arrived there that night.—See NAPIER, i., 403, 1st ed.; TORENO, ii., 141; JOMINI, iii., 100.

their gallant leader, San Juan, who cut his way, sword in hand, through a body of Polish lancers, by whom he was enveloped.*

Great was the dismay in the Spanish capital when the alarming intelligence arrived, early on the morning of the 1st of December, that the Somosierra pass had been forced, and that Napoleon, with his terrible legions, was advancing with rapid strides against its defenceless walls. The central junta at Aranjuez, at the same time, heard of the disaster, and instantly fixing on Badajoz as their point of union, they set out with all imaginable haste for Talavera de la Reyna in different parties and by different roads, and were fortunate enough to arrive at their place of destination without accident. Meanwhile, the general government of Madrid was intrusted to a provisional junta, of which the Duke del Infantado was head, while the direction of its military defence was in the hands of Don Thomas de Morla, who had early taken a lead in the Cadiz insurrection, but whose subsequent violation of faith to the prisoners taken at Baylen augured ill for the integrity with which he would discharge the arduous duties now intrusted to his care. The regular troops in the city consisted only of three hundred regular soldiers, with two battalions and a single squadron newly levied. Nevertheless, vigorous preparations were made for defence: eight thousand muskets, and a still greater number of pikes, were hastily distributed from the arsenal to the people; heavy cannon were planted on the Retiro and principal streets; the pavement was torn up, barricades constructed, and the most enthusiastic spirit pervaded the multitude. Ammunition was served out in abundance, but some of the cartridges were discovered to be filled with black sand instead of gunpowder: a discovery which, in the excited state of the inhabitants, proved fatal to the Marquis Perales, who was at the head of that department. He had formerly been the idol of the people; but, with their usual inconsistency, upon the first discovery of this fraud, originating, probably, in the cupidity of some inferior agent, a furious mob assailed his house, dragged him into the street, and there murdered him. On the morning of the 2d, the advanced guards of the French arrived on the heights to the north of Madrid; and the emperor, who was extremely desirous of gaining possession of the capital on the anniversary of his coronation, and of the battle of Austerlitz, immediately summoned it to surrender; but the proposal was indignantly rejected. On the same day the Duke del Infantado was fortunate enough to make his escape, under cover of a thick fog, and directed his steps to Guadalaxara, to join the army of Castanos, which had retreated in that direction. During the night the French infantry arrived in great strength around the capital, and on the

Dec. 3. following morning a thick fog overspread both the agitated multitude within, and the host without by which it was menaced. By degrees, however, the mist was dispelled by the ascending rays of the sun, and the emperor directed his columns of attack against the RETIRO, the heights of which completely com-

manded the city. A battery of thirty guns soon made a practicable breach in its weak defence, and a French division advancing to the assault, speedily rushed in and made themselves masters of that important post.*

The agitation in Madrid now became excessive: twenty thousand armed men were within its walls, but almost entirely disorganized; agitated by furious passions, burning with individual ardour, but destitute of the organization and discipline necessary for success against the formidable enemy by whom they were now assailed. The city presented the most frightful scene of disorder: exasperated crowds filled the streets; strong barricades were erected in various quarters; the bells of two hundred churches rang together; a confused murmur, like the sound of a mighty cataract, was heard incessantly, even during the night, which was audible at the distance of miles from the capital; while in the French lines all was silent and orderly, and the step only of the passing sentinel broke the stillness: a striking image of the difference between the disorderly passions which agitate the populace, without being directed by superior intelligence to any useful end, and the experienced discipline which restrains an ardour not less powerful, till the moment for letting it loose with decisive effect has arrived. But the possession of the Retiro, in a military point of view, is possession of Madrid; bombs from its heights can reach the farthest points of the city. Sensible of the impossibility of maintaining the defence, the Spanish authorities were deliberating on the expedience of proposing terms of capitulation, when a flag of truce arrived from Berthier, threatening the utmost severity of military execution if the white flag was not hoisted within two hours. Morla and Ivriarte were, upon that, despatched to the headquarters of the emperor, to negotiate the terms of surrender. He received the former with unusual sternness, and in just but cutting terms reproached him with his violation of good faith towards the unhappy prisoners taken at Baylen.† "Injustice and bad

* Tor., ii., 149, 152. Nap., i., 411, 415. South., ii., 410, 414. Jom., ii., 103.

† When Morla appeared before him, Napoleon addressed Morla in these words: "You in vain seek to shelter yourself under the name of the people; if you cannot now appease them, it is because you have formerly excited and misled them by your falsehoods; return to Madrid, assemble the clergy, the magistrates, the principal inhabitants; tell them that if, by to-morrow morning at six o'clock, the town has not surrendered, it will cease to exist: I neither will nor ought to withdraw my troops. You have massacred the unhappy French prisoners who fell into your hands: within these few days you have suffered two servants of the Russian ambassador to be dragged into the streets and murdered, because they were born in France. The unskilfulness and cowardice of a general had placed in your hands troops who had capitulated on the field of battle, and the capitulation was violated. What sort of a letter did you, M. Morla, write to the general who subscribed that capitulation?" It well became you to speak of pillage, you, who in Roussillon had carried off women, and divided them like booty among your soldiers. What right, besides, had you to hold such language? The capitulation expressly forbade it. What have the English done, who are far from piquing themselves on being strict observers of the law of nations? they complained of the Convention of Cintra, but nevertheless carried it into execution. To violate military conventions is to renounce civilization and put ourselves on a level

* Tor., ii., 145, 146. Nap., i., 409. Jom., ii., 103.

* Alluding to Morla's letter to Dupont of the 10th of August, 1808, in which he sought to vindicate the violation of the capitulation by the plunder of the French soldiers.

faith," said he, "ever in the end recoil upon those who practice them." Prophetic words! of the truth and universal application of which Napoleon himself, on the rock of St. Helena, afterward afforded a memorable example. Filled with consternation at the perilous predicament in which he was individually placed, from the well-founded resentment of the emperor, and inspired with a sense of the necessity of appeasing the wrath of the conqueror by an immediate surrender, Morla returned to the city, and easily persuaded the majority of the junta that submission had become a matter of necessity. A few gallant men, with the Marquis Castellanos and Viscount de Gaeta, disdaining to surrender, withdrew from the city during the night, and took the road for Estremadura. At daybreak the capitulation was signed, and by ten o'clock the principal points of the city were in the possession of the French troops.*

Napoleon did not himself enter Madrid, but established his headquarters at Chamartin, in the neighbourhood of the capital, where he received the submission of the authorities, and fulminated his anathemas against the functionaries who had resisted or swerved from his government. In a short time everything wore the appearance of peace: the theatres were reopened; the shopkeepers displayed their tempting wares, secure in the discipline of the conquerors; the Prado and public walks were crowded with spectators. Numerous deputations, embracing some of the most wealthy and respectable inhabitants of Madrid, waited on the emperor, and renewed their protestations of fidelity to his brother Joseph, who was established at the royal palace of Pardo: it then appeared how completely and fatally the corruptions and enjoyments of opulence and civilized life disqualify men from acting a heroic part in defence of their country.† Measures of great severity were adopted against all the constituted authorities who, after having recognised Joseph as King of Spain, had joined the popular party. The Marquis des Simon, a Frenchman by birth, who had to the last prolonged the conflict after the capitulation had paralyzed all general resistance, and was taken

fighting bravely, when endeavouring to cut his way through at the gate of Fuencarral, was ordered to be shot. He owed his life to the intercession of his daughter, who threw herself at the emperor's feet, and obtained from his clemency a commutation of the sentence. All the members of the Council of Castile who had declared that they had sworn allegiance to Joseph, under Jesuitical mutual reservations, were dismissed, and ordered to be detained prisoners in their own houses. Nor were general measures wanting, calculated to reconcile the nation to the sway of the intrusive monarch. By a solemn decree, the Inquisition was abolished, and all its funds directed to be applied towards the reduction of the public debt; feudal rights were suppressed; all personal restrictions and privileges declared at an end; the number of convents throughout the kingdom was at once reduced a third, and their inmates turned adrift, while all novices were permitted to leave their places of seclusion. One half of the proceeds of the estates of the suppressed convents was to be applied to the public debt, the other to the relief of the cities and towns which had suffered from the French invasion; and all the barriers between province and province, which had so long impeded the internal commerce of the kingdom, were declared at an end. A few days after, the emperor fulminated a bulletin against the English government, which deserves to be recorded, from the singular contrast which its predictions exhibited to the future march of events with which his own destinies were so deeply implicated.*†

Nor was the emperor less actively employed during the fortnight that he remained at Madrid, in dispersing his armies so as to spread them over the greatest possible space, and complete in all the provinces that thorough conquest which had already been effected in the capital. Ney's corps, which had been brought up from Soria, was stationed at Madrid, under his own immediate control, with the guards and reserve; Victor was advanced to Toledo, which, notwithstanding its expressed determi-

Positions of the French corps in the end of December.

with the Bedouins of the Desert. How can you now venture to demand a capitulation, you who have violated that of Baylen? See how injustice and bad faith ever recoil upon those who commit them. I had a fleet at Cadiz: it had come there as to an ally's harbour, and you directed against it the mortars of the town which you commanded. I had a Spanish army in my ranks, but I preferred allowing it to escape on board the English vessels, and precipitating it from the rocks of Espinosa to disarming it. I would rather have seven thousand additional enemies to combat than be wanting in good faith. Return to Madrid: I give you till to-morrow at ten; return then if you are the bearer of submission; if not, you and your troops shall be all put to the sword."—THIBAUDREAU, vii., 165, 166. There can be no doubt that consciousness of his former breach of faith now paralyzed Morla, and impelled him into a second act of pusillanimity, if not treachery, to his own countrymen: so true it is, in Napoleon's words, that "injustice and bad faith ever recoil in the end upon those who commit them." Morla lingered out a few years, abhorred and shunned by all; he died as he had lived, devoured by remorse and sunk in misery.—See TORENO, ii., 155.

† "As to the English armies, I will chase them from the Peninsula. Saragossa, Valencia, Seville, shall be reduced to subjection, either by persuasion or force of arms; there is no longer any obstacle which can long retard the execution of my wishes. The Bourbons can never again reign in Europe; the divisions in the royal family have been fomented by the English. It was not the old King Charles or his favourite whom the Duke del Infantado, the instrument of England, wished to overturn from the throne: his papers recently taken prove what the real object was; it was British preponderance which they wished to establish in Spain. Insensate project! which could have led to no other result but a war without end, and the shedding of oceans of blood. No power influenced by England can exist on the Continent; if there are any which desire it, their wish is insensate, and will, sooner or later, cause their ruin. If you swear allegiance to my brother with sincerity and truth, without equivocation or mental reservation, I will relinquish all the rights which conquest have now afforded me, and make it my first object to conduct myself towards you as a faithful friend. The present generation may differ in opinion; too many passions have been brought into action; but your grandchildren will bless me as their regenerator: they will place among their memorable days that in which I appeared among them, and from those days will date the future prosperity of Spain."—NAPOLEON'S Proclamation to the Spaniards, Dec. 7, 1808. JOMINI, iii., 108, 110.

ntaion to hold out to the uttermost, opened its gates on the first summons, while his light cavalry scoured the plains of La Mancha, carrying devastation and terror to the foot of the Sierra Moreno; Lefebvre advanced to Talavera, on the great road from Badajoz and Elvas; Soult was reposing on the banks of the Carrion, preparing to follow the broken remains of Romana's army into the fastnesses of Galicia; Junot's corps was broken up, and the divisions composing it incorporated with Soult's troops; Moncey was ordered up to Madrid for an expedition against Valencia; while Mortier was directed to advance to support his corps, which was occupied with the siege of Saragossa. Thus the emperor, from his central position at Madrid, was preparing expeditions to subdue the insurrection at once in Andalusia, Estremadura, Galicia, Valencia, and Arragon; following out these measures on his favourite maxim, which had been acted upon with such fatal effect against the Prussians after the battle of Jena, that the true secret of war is to concentrate when a decisive blow is to be struck, but to disperse when the broken remains of the enemy are to be pursued, and the moral effect of victory is to be magnified by the numerous minor successes by which it is followed.

Vast as such a plan of operations undoubtedly was, it was not disproportioned to the resources of the emperor; for the imperial muster-rolls, on October the 10th, showed in the Peninsula the enormous number of three hundred and thirty thousand men and sixty thousand horses, of whom no less than two hundred and fifty thousand were present with the eagles and with their regiments, and the losses since sustained had been more than counterbalanced by the re-enforcements received; so that, after making every allowance for the troops requisite for garrisons and communications, at least a hundred and sixty thousand were disposable for active operations, or above thirty thousand men could be directed against each of the provinces menaced with an attack.*† The disorganized condition of the Spanish armies, the deplorable state of destitution to which they were reduced, the vast distance which separated them from each other, and the want of any efficient central government to combine their operations, rendered it too probable that this vigorous and unrelenting system of conquest would be attended with the desired effect, and that the national resistance of the Spaniards would, in the first moments of consternation consequent on their disasters,† be speedily suppressed in all the provinces; when the career of victory was arrested from a quarter from whence it was least expected, and by an enemy who had been hitherto almost forgotten, from the mistaken view which the emperor entertained of his prowess.

While these disasters were accumulating on the Bold advance the Spanish monarchy, the English of Sir John army, unobserved and unassailed, Moore. had at length been concentrating its

forces. Baird had come up from Corunna, Hope from the Escorial, and Sir John Moore found himself at the head of nearly thirty thousand men, of whom above two thousand were cavalry in admirable condition, and sixty pieces of cannon.* The English general was for long extremely perplexed what to do, in consequence of the imperfect information which he received, and the contradictory nature of the remonstrances addressed to him by Mr. Frere, the British ambassador at Madrid, who strongly urged an immediate advance to the capital, and the evidence which the progress of events around him was daily affording of the utter incapacity of the Spanish armies to contend with the formidable legions of Napoleon. At one time, the intelligence of the successive rout of all the Spanish armies appeared so alarming that orders were given to the troops to retreat, Nov. 29. and Sir David Baird's heavy baggage, which was coming up from Lugo to Astorga, commenced a retrograde movement to the latter place. This determination excited the utmost dissatisfaction in the troops: officers and men loudly and openly murmured against such a resolution, and declared it would be better to sacrifice half the army than retire from so fair a field without striking a blow for the allies who had staked their all in the common cause. The gallant spirit of the general himself secretly recoiled from the mournful resolution, which nothing had made him adopt but an imperious sense of duty to the troops intrusted to his care, the gloomy forebodings consequent on the overwhelming strength of the enemy, and the defeat and dispersion of all the Spanish forces by whom it had been attempted to arrest his progress. These feelings, both in the general and the soldiers, were wrought up to the highest degree when intelligence was received shortly after of the advance of the French to Madrid, of the enthusiastic preparations made for the defence of the capital, and the determination of the inhabitants to bury themselves under its ruins rather than submit to the invader. Giving vent joyfully to the native courage of his disposition, as well as the loudly-expressed wishes of the army, Sir John Moore now sent orders to Sir David Baird to suspend his retreat, and, to the infinite joy of the troops, directions were given indicating a disposition to advance. These preparations were not relaxed, although Colonel Graham, the future hero of Barrosa, returned on the 9th with the disheartening intelligence of the capture of the Retiro and perilous situation of Madrid: the British general knew that his countrymen looked to him for some great exploit, and, though fully aware of the danger of such a step, he resolved to

* The British army, however, had its full proportion of that usual drawback upon all armies, the difference between the actual numbers appearing upon the muster-rolls and the efficient force that could really be brought into the field. The following is the state of the British army from the adjutant-general's list, December 19, 1808:

	Fit for duty.	In hospital.	Detached.	Total.
Cavalry	2,278	182	794	3,254
Infantry	22,222	3786	893	26,871
Artillery	1,358	97		1,455
	25,858	4035	1687	31,580

2275 were left in Portugal, or were on the march between Lugo and Villa-Franca, and must be deducted from this number.—See NAPIER, i., 83, App.

throw himself upon the enemy's communication, and menace Soult, who lay exposed to his blows, with fifteen thousand men, in unsuspecting security in the valley of the Carrion. The

Dec. 11. gallant resolution was no sooner taken than it was acted upon: two days after the British army, completely concentrated, commenced its advance, and Moore, with twenty-five thousand men around his banners, ventured to essay it against Napoleon, who had two hundred thousand under his command.*

The forward march of the English forces, To Sahagun, on the French line of communication. however, was combined as prudence, and indeed necessity, dictated, with preparations for a retreat; and as it was uncertain

which line would be adopted, magazines were formed both on the great road to Lisbon and at Benavente, Astorga, and Lugo in the direction of Galicia. On the 13th, headquarters reached Alaejos, and the advanced posts of cavalry extended to Rueda and Toro, at the former of which places they surprised a French post and made eighty prisoners. Great was the astonishment of these haughty conquerors at finding themselves thus assailed by an enemy whom the boastful proclamations of the emperor had

Dec. 14. led them to believe was in full retreat for his ships. At first, Sir John's march was directed towards Valladolid, in order to facilitate the junction with Baird's corps; but an intercepted despatch from Napoleon on the 14th having made him acquainted with the fall of Madrid, and the unsuspecting security in which Soult's corps lay in the valley of the Carrion, the columns were moved towards Toro and Benavente, and Valderas was assigned as the point of junction for the two armies. At Toro,

Dec. 16. where headquarters were on the 16th, information was received that Romana, who had been informed of the movement and invited to co-operate in it, instead of doing so was, in consequence of the retrograde movement of Sir David Baird a few days before, in full retreat towards the Galician Mountains; the truth was, his troops, from hunger, fatigue, and misery, had dwindled away to eight thousand ragged and disheartened fugitives, totally unfit to take the field with regular forces, and whom he was even ashamed to array by their side. Notwithstanding this disappointment, the

English forces continued to advance; Dec. 20. on the 20th, the junction between Sir David Baird and Sir John Moore was fully effected at Moyorga, and on the 21st the

Dec. 21. united forces were established at Sahagun, near which town Lord Paget, afterward Marquis of Anglesea, at the head of the 10th and 15th hussars, not above four hundred strong, fell in with, and, after a short but brilliant action, totally defeated a body of seven hundred French cavalry, making two colonels and one hundred and sixty men prisoners in twenty minutes.† Soult, now seriously alarmed, hastily called in his detachments from all quarters, and with some difficulty concentrated eighteen thousand men on the banks of the Carrion and be-

tween that and Saldana, where Moore was making preparations for attacking him on the 23d.

Never was more completely evinced than on this occasion the prophetic sagacity of the saying of Napoleon seven months before, that a victory by the allies on the plains of Leon would give a locked-jaw to every French army in Spain. No sooner was the advance of Sir John Moore known at Madrid, than it instantly paralyzed the movements of the whole French armies in the south of Spain. Napoleon immediately despatched orders in all directions to suspend the expeditions into the different provinces which were in preparation. Milhaud's and Lasalle's cuirassiers were arrested at Talavera, Victor's advanced guards were recalled from La Mancha, the expedition against Valencia was abandoned, the preparations against Saragossa suspended, and fifty thousand men, under the emperor in person, including the Imperial Guards, the whole of Ney's corps, and a great part of the reserve, the Dec. 21. flower of the army, were, at a few hours' notice, suddenly marched off in the direction of Somo-sierra.*

On the evening of the 22d, they were at the foot of the Guadarrama Pass; but a violent hurricane of wind and snow enveloped the higher parts of the mountains, where the thermometer was at 10° of cold;† and the general in command of the advance guard, after twelve hours of fruitless toil, reported that the passage was impracticable. The conqueror of the St. Bernard, however, was not so easily to be arrested. Napoleon in person hastened to the advanced posts, and ordered the march to be continued Dec. 23. without interruption, himself setting the example by pressing forward with the leading files on foot. The example animated the men to fresh exertions: amid storms of snow and sleet, which in the higher parts of the passage were truly frightful, the columns pressed on with ceaseless activity, and after two days of incessant labour the difficulties were sur-

Dec. 25. mounted, and the whole were collected on the northern side of the mountains, in the valley of the Douro. Urging on his troops with indefatigable activity, and riding even at that inclement season with the advanced posts in person, the emperor soon arrived at the scene of action; on the 26th headquarters were at Tordesillas, the cavalry were at Valladolid, and Ney's corps at Rio-Secco. Fully anticipating the immediate destruction of the English army, from the immense force now brought to bear against them, Napoleon on the same day wrote to Soult: "The advanced posts of the cavalry are already at Benavente; if the English remain another day in their position they are undone; should they attack you with all their forces, retire a day's march to the rear; the farther they advance the better for us; if they retreat, pursue them closely."

Dec. 26. The march of Ney by Zamora and Rio-Secco

They retreat towards Benavente was so direct on the line of ed, that he early intercepted the Galicia.

British from their communication with Portugal; and if he could have reached the latter town before Sir John Moore, he would have cut him off from the line of retreat to Galicia also, and rendered the situation of the army all but desperate. This catastrophe, however, was prevented by the prudent foresight of the English commander, who, having received vague but alarming accounts of the march of a large French army from the South, suspended his advance on the 23d, and on the 24th commenced his retreat towards Galicia, to the infinite mortification of the soldiers, who were in the highest state of vigour and spirits, and in whom an unbroken series of brilliant successes at the outposts had produced an unbounded confidence in their own prowess, likely, if not met by overwhelming odds, to have

Dec. 26. led to the most important and glorious results. On the 26th, Baird's troops passed the Esla on their retreat, while Moore, who was with the rear-guard to protect the passage of the stores and baggage over the bridge of Castro-Gonzalo, was threatened by a large body of Ney's horsemen. Lord Paget, however, with two squadrons of the 10th, charged and overthrew them, making a hundred prisoners, besides numbers killed and wounded. Indeed, the superiority of the English horse had become so apparent, that they set all odds at defiance, never hesitated to attack the enemy's cavalry, though threefold in number, and had already made five hundred prisoners during the few days they had been engaged in active operations.*

By this timely retreat, Sir John Moore reached Benavente before the enemy; and the hazardous operation of crossing the Esla, then a roaring torrent swollen by melting snow, and over planks laid across the broken arches of the bridge of Castro, in the dark, was successfully performed by General Craufurd with the rear-guard. The army remained two days at that place, reposing from its fatigues under the shelter of its magnificent baronial castle, almost unequalled in Europe for extent and grandeur.† Discipline,

however, had already become seriously relaxed during the retreat, though only of three days' duration, from Sahagun; the spirit of the men had been surprisingly depressed by the thoughts of retiring before the enemy; the officers had in a great degree lost their authority, and disorders, equally fatal to the army and inhabitants, had already commenced. But these evils were accumulating only in the front part of the column, which was suffering merely under the fatigues of the march and the severity of the weather; no decline of spirit or enterprise was perceptible in the rear-guard, which was in presence of the enemy. Pickets of cavalry had been left to guard the fords of the Esla, and on the 28th a body of six hundred horse-

Dec. 28.

men of the Imperial Guard crossed over and began to drive in the rear-guard, stationed in that quarter to repel their incursions. Instantly these gallant horsemen made ready to oppose them, and, though only two hundred in number, repeatedly faced about, and by successive charges, under Colonel Otway, retarded the advance of the enemy till assistance was at hand. At length the enemy, having been drawn sufficiently far into the plain, the 10th, who were formed concealed by some houses, suddenly appeared, and advanced to the assistance of their brave comrades. At the joyful sight of the well-known plumes the retiring horsemen wheeled about, a loud cheer was given, and the whole bore down at full speed upon the enemy. The Imperial Guard, the flower of the French army, wreathed with the trophies of Austerlitz,* were in an instant broken and driven over the Esla, with the loss of a hundred and thirty killed and seventy prisoners, among whom was their commander, General Lefebvre Desnouettes.†

The destruction of the bridge of Castro-Gonzalo was so thoroughly effected Return of the that it delayed for two days the emperor to Pa- advance of the French, who could ris. not cross the stream at other points from its swollen state; but at length, the arches having been restored, Bessières crossed on the 30th, with nine thousand horsemen, and reached Benavente, which had been evacuated by the English on the same day. At the same time, the bridge of Mansilla, guarded by Romana's troops, was forced by a charge of cavalry,

In the midst of this disgraceful scene of unbridled license and military devastation, there is one trait of heroic presence of mind which in some degree redeems the character of the British soldier. Several thousand infantry slept in the long galleries of an immense convent built round a square; the horses of the cavalry and artillery, scarcely less numerous, were in the corridor below, so closely jammed together that no one could pass between them, and there was but one entrance. Two officers, returning at night from the bridge of Castro, being desirous of finding shelter for their men, entered the gate of this convent, and perceived, with horror, that a large window-shutter was on fire, and the flames were spreading to the rafters above, from whence a single spark, falling on the straw under the horses, would ignite the whole, and six thousand men and horses would inevitably perish. Without saying a word, one of them (Captain Lloyd of the 43d) made a sign to his companions to keep silence, and, springing on the nearest horse, ran along the backs of the others till he reached the flaming shutter, which, by great efforts, he tore from its hinges and flung into the courtyard without giving any alarm; which, in such circumstances, would have been hardly less destructive than the flames.—See *Life of a Sergeant*, p. 143; and NAPIER, i., 467.

Gallant action of light cavalry with the enemy, and capture of Lefebvre Desnouettes.

* Lond., i., 247, 253. Nap., i., 462, 464. Tor., i., 188, 189.

† This splendid relic of feudal grandeur is thus described by an eloquent eyewitness, whose pictures, equally vivid in travels as history, has given to prose all the colours of poetry. "The Castle of Benavente is one of the finest monuments of the age of chivalry; nothing in England approaches to it in magnificence. Berkeley, Rahy, even Warwick, are poor fabrics in comparison. With Gothic grandeur, it has the richness of Moorish decoration; open alcoves, where Saracenic arches are supported by pillars of porphyry and granite; cloisters with fountains playing in their courts; jasper columns, and tessellated floors; niches all over, and seats in the walls, overarched in various forms, and enriched with every grotesque adornment of gold and silver, and colours which are hardly less gorgeous. It belonged to the Duke of Ossuna, and the splendour of old times was still continued there. The extent of this magnificent structure may be estimated from this single circumstance, that two regiments, besides artillery, were quartered within its walls: they proved the most destructive enemies that had ever entered them; the officers, who felt and admired the beauties of this venerable pile, attempted in vain to save it from devastation. Everything combustible was seized; fires were lighted against the fine walls, and pictures of unknown value, the works, perhaps, of the greatest Spanish masters, were heaped together as fuel. Fortunately, the archives of the family escaped."—SOUTHEY, i., 499.

and Soult passed over, overspread the plains of Leon with his troops, and captured the town of the same name with great stores belonging to the Spanish government. The whole army, consisting of the guards, reserve, Soult and Ney's corps, seventy thousand strong, including ten thousand horse and a hundred pieces of

cannon, were, on the 1st of January, Jan. 1, 1809. united by the emperor at Astorga.

The union of so great a force in that remote part of the Peninsula was both the highest compliment that could be paid by that great general to the prowess of the English army and the important stroke delivered by its commander, and the strongest proof of the vigour and celerity with which, by long experience and admirable arrangements, the movements of the French troops could be effected. In ten days Napoleon had not only transported fifty thousand men from Madrid to Astorga, a distance of two hundred miles, but crossed the Guadarama range when enveloped in a frightful snow-storm, and the torrent of the Esla when swollen by wintry rains, in each of which operations more than a day's march had been lost, so that the advanced posts of his army, at least, had marched the astonishing number of twenty-five miles a day, when actually in motion, in the depth of winter: an instance of exertion almost unparalleled in modern times.* But they were there left by Napoleon. On the road between Benavente and Astorga, when riding in pursuit at the gallop, with the advanced posts, he was overtaken by a courier with despatches; he instantly dismounted, ordered a bivouac fire to be lighted by the roadside, and, seating himself beside it on the ground, was soon so lost in thought as to be insensible to the snow which fell in thick flakes around him. He had ample subject for meditation: they contained authentic intelligence of the accession of Austria to the European Confederacy, and the rapid preparations which her armies were making for taking the field. On the spot, he wrote an order for calling into immediate activity the second levy of 80,000 conscripts authorized by the senatus consultum of the 10th of October preceding; and proceeding slowly and pensively on to Astorga, remained there for two days, writing innumerable despatches, and regulating at once the pursuit of the English army, the internal affairs of Spain, the organization of the forces of the Rhenish Confederacy, and the development of the gigantic strength of France Jan. 3. for the German war. On the 3d, he returned to Valladolid, where he remained three days, still indefatigably engaged in writing despatches, and then returned, with extraordinary celerity, by Burgos and Bayonne, to Paris,

* It has been greatly exceeded, however, in the same country, in later times, though by a much smaller force. In December, 1836, the Spanish General Gomez marched from the lines of St. Roque, in front of Gibraltar, to Tudela on the Ebro: he left St. Roque on the 24th of November and reached the Ebro on the 17th of December, having repeatedly fought, and been driven to circuitous roads to avoid the enemy on the way. The distance was above five hundred miles, performed in twenty-five days. There is no such instance of sustained effort in modern times. Septimius Severus marched from Vienna to Rome, a distance of 800 miles, in forty days, or twenty miles a day, but he had the glittering prospect of the empire to animate his exertions.—See *Ann. Reg.*, 1836, 379, 380, and GIBBON, ch. iv.

† On leaving Valladolid he rode to Burgos, a distance of thirty-five French leagues, in five hours! This rapidity

where he arrived on the 23d. He took back his guards, but sent on Soult and Ney with two divisions of the reserve, in all about sixty thousand men, to continue the pursuit of the English army, who were falling back by rapid marches, and in great disorder, towards the Galician Mountains.*

The withdrawing of the emperor, however, made no change in the vigour with which the pursuit of the English

Sir John Moore retires to Lugo.

army was continued. Soult, who immediately pressed upon their retiring columns, had twenty thousand infantry and four thousand cavalry under his command; and, though the British army was still nearly twenty thousand strong,† yet the inclemency of the weather and rapidity of the retreat had in a great degree relaxed the bonds of discipline, and diminished the moral strength of the troops. The rear-guard, indeed, still with unabated resolution repelled the attacks of the enemy; but the other troops, who had not the excitement of combat, often sunk under the rigour of the season, or yielded to the temptations of intemperance, which the extensive stores of wine along their line of march too readily afforded. The native and ineradicable vice of northern climates, drunkenness, here appeared in frightful colours: the great wine-vaults of Bembibre proved more fatal than the sword of the enemy; and when the gallant rear-guard, which preserved its ranks unbroken, closed up the array, they had to force their way through a motley crowd of English and Spanish soldiers, stragglers and marauders, who reeled out of the houses in disgusting crowds, or lay stretched on the roadside an easy prey to the enemy's cavalry, which thundered in close pursuit. The condition of the army daily became more deplorable: the frost had been succeeded by a thaw; rain and sleet fell in torrents; the roads were almost broken up; the horses foundered at every step; the few artillery-wagons which had hitherto kept up fell one by one to the rear, and, being immediately blown up to prevent their falling into the enemy's hands, gave melancholy token, by the sound of their explosions, of the work of destruction which was going on. The mountain-passes through which the retreat was conducted presented, indeed, positions at every step in which a few regiments might have arrested, on that single road, an army; but it was, unhappily, thought there was no use in contesting them, as the vastly superior numbers of the enemy, and the advancing columns of Ney's corps, were supposed to enable the pursuers speedily to turn them on either flank; and it is well known to all really acquainted with war, that a mountainous region, in appearance the most defensible,

would appear incredible were it not for the circumstance that the emperor here had his saddle-horses arranged by divisions of nine each at every three or four leagues along the road, so that every eight or ten miles he found fresh relays of his own horses, which were in admirable condition. This was his usual practice wherever there appeared the least chance of his riding on horseback during his journeys. The remainder of the road to Paris he travelled in his carriage. —See THIBAUDEAU, vii., 194.

† Three thousand men, chiefly light troops, had been detached from the main body to Vigo, to facilitate the embarkation on which the English commander was already determined.—NAPIER, i., 473.

is, in reality, often the most indefensible of all districts against a superior and enterprising enemy, led by a skilful general. Sir John Moore was constantly with the rear-guard, doing his utmost to arrest the disorders and protect the retiring columns; and at Villa

Jan. 5. Franca a sharp skirmish ensued with the rear-guard, in which, though the French cavalry were at first successful, they were ultimately repulsed by a heavy fire from the British light troops, with the loss of several hundred men, including General Colbert, who fell while gallantly leading on the vanguard. In other quarters, however, the same discipline was not preserved: disorders went on accumulating with frightful rapidity along the whole line, and such was the general wreck of presence of mind or foresight, that at Nogales the military chest of the army, containing £25,000 in dollars, having stuck fast in the mud, the treasure was rolled in the cask in which it was contained over a precipitous descent, and became the prey of the peasantry, who picked it up at the bottom. All order or subordination was now at an end: the soldiers, exhausted by fatigue or depressed by suffering, sunk down by hundreds on the wayside, and breathed their last, some with prayers, others with curses on their lips; and the army, in frightful disorder, at length reached Lugo, late on the evening of the 6th of January.*

Here, however, Sir John Moore halted, and, in a proclamation issued next day, severely rebuked the insubordination of the troops, and announced his intention of halting to give battle to the enemy. The army, accordingly, was drawn up in a strong position, extending along a ridge of low hills, flanked on either side by precipitous rocks, from the mountains to the bed of the Minho; and it then speedily appeared that the preceding disorders of the march had, at least,

Nov. 8. not been owing to want of courage. Instantly, as if by enchantment, the disorder ceased: joyfully the men fell into their places, the stragglers came up from the rear; arms were cleaned, faces brightened, confidence was restored; and, before the morning of the 8th, nineteen thousand men stood in battle array, impatiently awaiting the attack of the enemy. Soult, however, declined the combat, though on that day he had seventeen thousand infantry, four thousand cavalry, and fifty pieces of artillery in line; and Moore, having gained his object of recruiting his troops, and having little food remaining in the stores of Lugo, broke up in the following night, and retired towards Corunna.†

The night was cold and tempestuous; a severe storm of wind and rain, mixed with sleet, burst upon the troops; and, in the confusion of a nocturnal retreat, two divisions lost their way, and complete disorganization ensued, inasmuch that a large part of the army became little better than a mass of stragglers, who were only prevented from becoming the prey of the pursuers by none of his

cavalry fortunately appearing in sight. Order having, at daylight, been in some degree restored, Sir John Moore collected the army into a solid mass, and the retreat to Corunna was effected without farther molestation from the enemy, the night-march from Lugo having gained to the British twelve hours' start of their pursuers, which they were never afterwards able to regain; but, notwithstanding this, it was nearly as disorderly and harassing as the preceding part had been. As

the troops successively arrived at the heights from whence the sea was visible, and Corunna, with its white citadel and towers, rose upon the view, all eyes were anxiously directed to the bay, in hopes that the joyful sight of a friendly fleet of transports might be seen; but the wide expanse was deserted, and a few coasters and fishing-boats alone were visible on the dreary main. Deeply did every one then lament that a battle had not been fought long before; and, as the officers cast their eyes on the low sandhills in front of the ramparts of the town, on which they well knew the contest for their embarkation must be sustained, they thought with poignant regret of the innumerable positions, a hundred times stronger, which might have been taken up in the course of the retreat for the encounter. Now, however, there was no alternative: the sea was in their front, the enemy in their rear; fight they must to secure the means of embarkation, be the positions favourable or unfavourable. The brigades, as they successively arrived, were passed on into the town, and

Jan. 12. all the means which circumstances would admit of taken to strengthen the land defences, which, though regular, were very weak; the inhabitants cheerfully and honourably joining in the toil, though they well knew, from the preparations which were going forward, that an embarkation was intended. On the day following, two powder-magazines, at a short distance without the walls, containing four thousand barrels of powder, the gift of England, were blown up, with an explosion so terrific, that nothing in the whole course of the war approached to it. The coast resembled the sudden explosion of a volcano; the city was shaken to its foundations, the rocks torn from their bases, the sea was tossed as in a tempest, the earth shook for leagues around; while slowly arose in the air a huge black cloud, shooting forth dazzling sparks, from whence, at a great height, stones burst forth with a prodigious sound, and fell with a sharp rattle in all directions. A stillness yet more awful ensued, broken only by the hoarse and sullen lashing of the still agitated waves on the shore.* On the following Jan. 14. day, the transports from Vigo hove in sight, and soon after stood into the bay; preparations were immediately made for the embarkation of the sick and wounded; the cavalry

* It is from Colonel Napier, an eyewitness, that this eloquent description is taken. Whoever has had the good fortune to see that most sublime of spectacles, an eruption of Vesuvius, will have no difficulty in giving implicit credit to the graphic truth of the picture. The author witnessed one twenty years ago, and the act of transcribing these lines recalls, in all its vividness, the thrilling recollection of the matchless scene.

* Tor., ii., 194, 198. Nap., i., 473, 481. Lond., i., 260, 267. South., ii., 504, 514.

† Nap., i., 485, 486. Tor., ii., 195, 196. Lond., i., 270, 276.

horses were almost all destroyed, and the greater part of the artillery, consisting of fifty-two pieces, put on board; eight British and four Spanish being only reserved for immediate use. Notwithstanding all the sufferings of the retreat, not one gun had been taken by the enemy. Meanwhile, the bulk of the army, still fourteen thousand strong, was drawn up with great care by Sir John Moore, on a range of heights, or, rather, of swelling knolls, which form a sort of amphitheatre around the village of Elvina, at the distance of rather more than a mile from CORUNNA. Hope's division was on the left, its flank covered by the muddy stream of the Mero, commanding the road to Lugo; Baird's next, directly behind Elvina; then the rifles and Fraser's division, which watched the coast-road to St. Jago, and was prepared to support any menaced point; General Paget, half a mile in the rear, with the reserve, at the village of Airis. The French, fully twenty thousand strong, were posted on a higher semicircular ridge, sweeping round a lesser one occupied by the British, at the distance of about a mile; Laborde's division was on the right, Merle's in the centre, Mermet's on the left; their light field-pieces were distributed along the front of the line; the dragoons, under Lahoussaye, Lorge, and Franceschi, to which the English had nothing to oppose, clustered to the left of the infantry, and menaced the British right flank, while a great battery of twelve heavy guns, advantageously posted on a steep eminence between their foot and horse, not twelve hundred yards from Baird's division, was prepared to carry devastation along the whole line.*

From the inactivity of the French army during the two preceding days, Sir John Moore had been led to imagine that they had no serious intention of disquieting his retreat, and preparations on the 16th were making for withdrawing the troops into the town as soon as the darkness would admit of its being done without observation; when, about noon, a general movement was seen along their whole line, and soon after, at two o'clock, their infantry, in four massy columns, was observed to be descending from the heights which they occupied, and advancing with a swift step towards the English position. Perceiving that the hour he had so long and so passionately wished for was at hand, Sir John Moore instantly galloped to the front; the troops everywhere stood to their arms, and were deployed into line, while the French, according to custom, advanced in long and deep columns, preceded by a cloud of light troops. Their onset, as at Vimiero, and in all the subsequent actions of the war, was extremely impetuous. A cloud of skirmishers led the way, which drove in the English advanced posts with great vigour; and, in the confusion of the retreat, made themselves masters of Elvina, directly in front of the centre. As they drew near to the British position, they deployed into line, and it soon appeared that they extended greatly beyond its extreme right; but the 4th regiment, which was there stationed, noways discouraged by this alarming circumstance, threw back its right wing, and presenting a

front in two directions, in which attitude it advanced, was soon warmly engaged with the enemy. Highly delighted with this display of presence of mind, and deeming the right secure when intrusted to such intrepid defenders, Sir John Moore rode up to Baird's division in the centre, which was now come to blows with Mermet's troops, who, having carried Elvina, were bursting through the enclosures which lay between its houses and the British, with loud cries and all the exultation of victory. The action now became extremely warm along the whole line; the French and English centres advanced to within pistol-shot of each other, and, after exchanging a few volleys, the 50th and 42d charged bayonets, and drove the enemy opposed to them in the most gallant style back again through Elvina, and a considerable way up the slope on the other side. But this furious onset being carried too far, and not adequately supported, met with a severe check; the victorious troops, when broken by the enclosures and stone walls on the other side of the village, were assailed in their turn by fresh French regiments, and driven back a second time through its streets, Major Napier, who commanded the 50th, being wounded and made prisoner. But Moore was at hand to repair the disorder; instantly addressing the 42d regiment with the animating words, "Highlanders, remember Egypt!" and bringing up a battalion of the guards to its support, he again led them forward to the charge. The shock was irresistible: borne back at the point of the bayonet, the enemy were again driven into Elvina, from whence, after a desperate struggle, they were finally expelled with great slaughter. In this decisive contest, however, Sir John Moore received a mortal wound from a cannon-shot, and Sir David Baird, struck down at the head of his men, had shortly before been carried from the field in a senseless condition.*

Foiled in this attempt to pierce the centre, Soult renewed his attacks with Delaborde's division on the left, while a heavy column endeavoured to steal unperceived round the British right, where they so greatly outflanked their opponents. But the ground in the left being in favour of the English, all his efforts were defeated with comparative ease; and General Hope, who commanded there, pressing forward in pursuit of the repulsed columns, carried the village of Palavio Abaxo, close under the enemy's original position, which remained in his hands at nightfall; while on the right General Paget, with the reserve, not only at once perceived and advanced to meet the column which was endeavouring to turn his flank, but assailed it with such vigour that it was thrown back upon Lahoussaye's dragoons, and the whole driven in disorder to the foot of the hill on which the great battery was placed. When night, arriving in that wintry season at an early hour, separated the combatants, the enemy was not only repulsed at all points, but the British line was considerably advanced, holding, on the left, Palavio Abaxo; on the centre, Elvina; and on the right, being advanced to the acclivity of their central battery. Had Fraser's troops,

* Nap., i., 487, 488. Tor., i., 199, 200. Lond., i., 278, 280. South., ii., 519, 523. Jom., iii., 116.

* General Hope's account of the battle. Ann. Reg., 1809, p. 372. Nap., i., 494, 496. Lond., i., 285, 286. Tor., ii., 201, 202.

stationed on the coast-road to St. Jago on the extreme right, been at hand to support this splendid advance of the reserve, and an hour more of daylight remained, the enemy would have been routed; had the cavalry been on the field, and the horses not foundered, he would have been thrown back in irretrievable confusion on the swampy stream of the Mero, now flooded by the full tide, and traversed only by a single arch at El Burgo, and totally annihilated. Night, however, having supervened when the success was still incomplete, and the means of embarking unmolested having been gained by the enemy's repulse, General Hope, upon whom the command now devolved,* did not conceive himself warranted in making any change in the preparations for departure, and after dark the troops were withdrawn into the town, where they were all got on board without either confusion or delay.†

Sir John Moore received his death-wound while animating the 42d to the charge. A cannon-ball struck his left breast, and beat him down by its violence to the earth; but his countenance remained unchanged; not a sigh escaped his lips, and, sitting on the ground, he watched with an anxious and steadfast eye the progress of the line. As it advanced, however, and it became manifest that the troops were gaining ground, his countenance brightened, and he reluctantly allowed himself to be led to the rear. Then the dreadful nature of the wound appeared manifest: the shoulder was shattered to pieces; the arm hanging by a film of skin, the breast and lungs almost laid open. As the soldiers placed him on a blanket to carry him from the field, the hilt of his sword was driven into the wound; an officer, destined to celebrity in future times, CAPTAIN HARDINGE, attempted to take it off, but the dying hero exclaimed, "It is as well as it is; I had rather it should go off the field with me." He was carried by the soldiers towards the town, but though the pain of the wound soon became excessive, such was the serenity of his countenance, that those around him expressed a hope of his recovery. "No," said he, "I feel that is impossible." When approaching the ramparts, he several times desired his attendants to stop, and turn him round that he might again see the field of battle; and when the advance of the firing indicated that the British were successful, he expressed his satisfaction, and a smile overspread the features that were relaxing in death. The examination of his wound at his lodgings speed-

ily foreclosed all hopes of recovery, but he never for an instant lost his serenity of mind, and repeatedly expressed his satisfaction when he heard that the enemy were beaten. "You know," said he to his old friend, Colonel Anderson, "that I always wished to die this way." He continued to converse in a calm, and even cheerful voice, on the events of the day, inquired after the safety of his friends and staff, and recommended several for promotion on account of their services during the retreat. Once only his voice faltered, as he spoke of his mother. Life was ebbing fast, and his strength was all but extinct, when he exclaimed, in words which will forever thrill in every British heart, "I hope the people of England will be satisfied: I hope my country will do me justice." Released a few minutes after from his sufferings, he was wrapped by his attendants in his military cloak, and laid in a grave hastily formed on the ramparts of Corunna, where a monument was soon after constructed over his uncoffined remains by the generosity of Marshal Ney.* Not a word was spoken as the melancholy interment by torchlight took place; silently they laid him in his grave, while the distant cannon of the battle fired the funeral honours to his memory.†

On the fall of Sir John Moore, and the wound of Sir David Baird, the command devolved upon General Hope, who conducted the remaining arrangements with that decision and judgment which afterward became so conspicuous in the Peninsular war, and whose eloquent despatch announcing the battle of Corunna and the death of Sir John Moore agitated so profoundly the heart of his country. The boats being all in readiness, the embarkation commenced at ten of night; the troops were silently filed down to the beach, put on board with admirable order, and the whole, except the rear-guard, reached the transports in safety before day. GENERAL BERESFORD, at the head of the rear-guard, two thousand, and GENERAL HILL, who was stationed on the promontory behind the town, both destined to celebrity in future times,

Embarcation of the troops, and their return to England. January 17.

* Moore's Narrative, 354, 371. Nap., i., 499, 500.

† This touching scene will live forever in the British heart, embalmed in the exquisite words of the poet:

Not a drum was heard, not a funeral note,
As his corse to the rampart we hurried;
Not a soldier discharged his farewell shot
O'er the grave where our hero we buried.

We buried him darkly at dead of night,
The sods with our bayonets turning;
By the struggling moonbeam's misty light,
And the lantern dimly burning.

No useless coffin enclosed his breast,
Not in sheet or in shroud we bound him;
But he lay like a warrior taking his rest,
With his martial cloak around him.

Few and short were the prayers we said,
And we spoke not a word of sorrow;
But we steadfastly gazed on the face that was dead,
And we bitterly thought on the morrow.

We thought, as we hallow'd his narrow bed,
And smoothed down his lonely pillow,
That the foe and the stranger would tread o'er his head
And we far away on the billow.

But half of our heavy task was done,
When the clock struck the hour for retiring,
And we heard the distant and random gun,
That the foe was sullenly firing.

Slowly and sadly we laid him down,
From the field of his fame fresh and gory;
We carved not a line, and we raised not a stone,
But we left him alone with his glory.

* Hope's Despatch. Ann. Reg., 1809, p. 373. Nap., i., 498, 499. Lond., i., 287. Tor., ii., 201, 202.

† The British loss at Corunna was from 800 to 1000 men; that of the French was stated by their own officers to Colonel Napier at 3000; Sir John Hope estimated it at 1600, but it was at least 2000: a number which would, doubtless, appear surprisingly large, if the murderous effect of the fire of the British infantry, from the coolness and discipline of the men, were not decisively proved by every action throughout the war. The total loss of the army during the retreat was 4033, of whom 1397 were missing before the position of Lugo, and 2636 from that to the final embarkation of the army, including those who fell at Corunna: of this number 800 stragglers contrived to escape into Portugal, and, being united with the sick left in that country, formed a corps of 1876 men, which afterward did good service both at Oporto and Talavera. Six three-pounders which never were horsed were thrown over the rocks near Villa Franca; the guns used at Corunna, twelve in number, were spiked and buried in the sand, but afterward discovered by the enemy. Not one, from first to last, was taken in fight.—See the general returns quoted in NAPOLEON, i., App., No. 26.

were the last to be withdrawn; the latter did not embark till three o'clock in the afternoon of the following day. The French gave them no annoyance, so strongly had the bloody repulse of the preceding day inspired them with respect for British valour. With a courage and generosity worthy of the highest admiration, the Spaniards manned the ramparts when the last of the English forces were withdrawn, and prolonged the defence for several days, so as to allow the whole sick, wounded, artillery, stores, and even prisoners to be brought away. A few guns placed by the French on the heights of St. Lucie, without the walls, which could not be maintained, alone occasioned, by the fire which they opened upon the vessels in the bay, great confusion among the transports, but without doing any serious damage. At length the last

Jan. 19. of the long files of baggage and stragglers were got on board, and the English fleet, amid the tears of the inhabitants, stood to the northward, and were lost to the sight amid the cold expanse of the watery main. Then, and not till then, the inhabitants of Corunna, feeling it in vain to prolong a defence which such a host had resigned in despair, and having honourably discharged every duty to their discomfited allies, capitulated to Marshal Soult, who, a few days afterward, obtained possession, after a trifling resistance, of the important fortress of Ferrol, with seven sail of the line, and very extensive naval stores.*

No words can convey an adequate idea of the gloom and despondency which prevailed in the British isles when intelligence of this long catalogue of disasters was received. In proportion to the warm and enthusiastic hopes which had been formed of a successful issue to the patriotic cause, had been the anxiety and interest which was felt when the crisis approached. In particular, when Napoleon, at the head of three hundred thousand chosen troops, burst through the Pyrenees, and the brave but undisciplined Spanish levies were brought in contact with his experienced veterans, the public anxiety became almost unbearable. The rout of Espinosa, the overthrow at Burgos, the defeat of Tudela, succeeding each other in rapid succession, were felt the more keenly, that the British nation had been led by the exaggerations of the public journals to form a most erroneous idea, both of the strength of the Spanish and the force of the French armies. Most of all, they were misled by the pleasing illusion, which the experience of every age has proved to be fallacious, but which is probably destined to the end of the world to mislead the enthusiastic portion of mankind, that a certain degree of popular excitement can supply the want of discipline and experience, and that general ardour is more to be relied on than organization and conduct. When, therefore, the Spanish levies, flushed with the trophies of Baylen and Saragossa, were dissipated with more ease than the regular armies of Austria and Moscow; when the Somo-sierra pass was stormed by a charge of lancers, and Madrid fell within three weeks after the campaign had been opened by Napoleon, a sort of despair seized the public

mind, and nothing seemed now capable of withstanding a power which beat down with equal ease the regular forces of Northern, and the enthusiastic levies of Southern Europe. A transient gleam shot across the gloom when Sir John Moore advanced to Sahagun, and the English journals confidently announced that seventy thousand English and Spaniards were rapidly interposing between the emperor and the French frontier, and would possibly make him prisoner in the capital he had won. Proportionally deeper was the gloom when this hope also proved fallacious, when Romana's forty thousand men dwindled into a few thousand starving wanderers, and the British army, instead of making Napoleon prisoner in the heart of Spain, was expelled, after a disastrous retreat, with the loss of its general, from the shores of the Peninsula.

The English had hitherto only known war in its holiday dress: their ideas of it were formed on the pomp of melodramatic representation, or the interest of pacific reviews; and though strongly impressed with a military spirit, they were, from their happy insular situation, strangers to the hardships and the calamities of actual campaigns. The inhabitants of the towns along the Channel had seen the successive expeditions which composed Sir John Moore's army embark in all the pride of military display, with drums beating and colours flying, amid the cheers and tears of a countless host of spectators. When, therefore, they beheld the same regiments return, now reduced to half their numbers, with haggard countenances, ragged accoutrements, and worn-out clothing, they were struck with astonishment and horror; which was soon greatly increased by a malignant fever which the troops brought back with them, the result of fatigue, confinement on ship-board, and mental depression, joined to the dismal and often exaggerated accounts which were spread by the survivors of the hardships and miseries they had undergone. These gloomy narratives riveted every mind by a painful but enchainning interest: they speedily made their way into the public newspapers, and were devoured with unceasing interest by the whole people; the fate of these gallant men became a general subject of commiseration; and the old cry, raised for factious purposes, began to resound through the land,* that England could never contend on the Continent with France, and that the only rational policy for the prosecution of the war was to withdraw entirely behind our wooden walls.

And yet, to a dispassionate observer, it could not but be manifest that, though the campaign had to both parties been deeply checkered by misfortune, it had, in reality, been far more calamitous to the French than the allies; and that the power of Napoleon had received a shock ruder than any which it had yet received since his accession to the supreme authority. The Spanish armies, it is true, had been dispersed on the Ebro, the Somo-sierra forced, Madrid taken, and the British, after a calamitous retreat, been driven to their ships; but the Peninsula was still unsubdued; Saragossa was fortifying its blood-stained battlements; Catalonia was in arms; Valencia and

Horror excited by the appearance of the army on its return.

Reflections on the campaign: its checkered character, but on the whole eminently unfavourable to France.

* Tor., ii., 203, 205. Nap., i., 498, 499. - Lond., i., 289, 291. South., ii., 530, 531.

* Ann. Reg., 1809, 22, 25. Nap., i., 520.

Andalusia recruiting their forces; Portugal was untouched, and the British troops, though in diminished strength, still held the towers of Lisbon. No submission or subjugation had followed the irruption of three hundred thousand men into the Peninsula: driven from their capital, the Spaniards, like their ancestors in the Roman and Moorish wars, were preparing in the provinces to maintain a separate warfare; while the number of their fortresses and chains of mountains, joined to the aid of England, promised them the means of there prolonging a desperate resistance. And what had happened in the same campaign to the hitherto invincible arms of France? One whole corps had laid down its arms with unheard-of disgrace; another had capitulated, and surrendered a kingdom to purchase its retreat; foiled in more than one provincial expedition, the imperial arms had been driven from the capital behind the Ebro, and only regained their lost ground by denuding Germany of its defenders, and exposing for the Peninsular thrones the Rhine itself to invasion. The spell which held the world enchained had been broken; the dangerous secret had been disclosed that French armies could pass under the Caudine Forks. Already the effects of the discovery had become manifest: Europe had been shaken from one extremity to the other by the Peninsular disasters, and Austria, which beheld unmoved the desperate strife of Pultusk and Eylau, encouraged by the immersion of the best French armies in the Peninsula, was preparing to renew the struggle on a scale of unprecedented magnitude.

The movement in advance by Sir John Moore to Sahagun, his rapid subsequent retreat, when surrounded by superior forces, to Benavente, the skill with which he reorganized his shattered army at Lugo, and the firmness with which, disdaining every proposal for a capitulation,* he boldly fronted the enemy at Corunna, and met a glorious death on the field of victory, are worthy of the highest admiration, and will forever secure him a place in the temple of British heroes. Nor is it merely the fond partiality of national gratitude, often mistaken or exaggerated in its opinions, which has secured this distinction: a calm consideration of the consequences of his campaign must, with all impartial observers, lead to the same result. In the whole annals of the Revolutionary war, there is not to be found a single movement more ably conceived, or attended with more important consequences. Levelled against the vital line of the enemy's communications, based on the principles which, unknown to the English general, Napoleon had so emphatically unfolded six months before in his secret despatch to Savary,† it had literally paralyzed every hostile army in Spain; snatched the Spanish monarchy from the verge of destruction, when its own resources were exhausted; and, by drawing Napoleon himself, with his terrible legions, into the northern extremity of the Peninsula, it both gave time to the southern provinces to restore their armies and arm their fortresses, and averted the

war from Portugal, till an opportunity of organizing fresh means of resistance within its frontiers was afforded. But for this bold and well-conceived advance, Andalusia would have been overrun, Valencia taken, Saragossa subdued, within a few weeks; and before the emperor was recalled from the theatre of Peninsular warfare by the Austrian armaments, he would have realized his favourite threat of planting the French eagles on the towers of Lisbon. These great results, however, were attended with proportional dangers: Napoleon, with seventy thousand chosen troops, was speedily sweeping round the audacious enemy who had thus interrupted his designs, and, but for the celerity and skill of the retreat to Astorga, the army which achieved them must speedily have been consigned to destruction.*

But if in these particulars the conduct of Sir John Moore was worthy of unequalled admiration, there are others in ^{Errors which he committed,} which the impartial voice of history must deal out a different measure of eulogium. Admitting that the celerity of the retreat to Astorga was unavoidable, and saved the army from destruction, where was the necessity of the subsequent forced marches to Lugo, when Napoleon had retired with his guards from the pursuit, in dreadful weather, attended as it was with such ruinous effects upon the discipline and spirit of the troops? His ablest defenders admit that there were in the magazines of Villa Franca and Lugo provisions for fourteen days' consumption;† and even if there had been nothing but the resources of the country to be had, subsequent events proved that they were sufficient for the maintenance of the army; for the French found wherewithal to live on and advance through it, even when following in the rear of the British soldiers. There was no necessity for hurrying on from the danger of being turned in flank, for Ney's corps was several days' march behind Soult's in the defile, and the rugged nature of the country rendered it totally impossible for his troops, worn out by a march of unexampled hardship and rapidity from Madrid, to attempt any threatening movement against the British flank. Everything, then, counselled deliberation and order in the retreating columns, and the nature of the road through which they passed, consisting of an ascent several leagues in length, up a bare slope, followed by tremendous passes, continuing for several days' journey, shut in on every side by steep or forest-clad mountains, offered the most favourable opportunities for stopping, by a vigorous resistance on the part of the rear-guard, the active pursuit of the enemy.‡ The rapid restoration of discipline and order, when battle was offered at Lugo, the issue of the fight at Corunna, leave no room for doubt as to what would have been the result of such a conflict; and the example of Moreau's retreat through the Black Forest, in 1796, was not required to show how effectually such a fierce aspect on the part of the retiring force saves the blood and secures the safety of the remainder of the army.§ The luminous fact that the losses sustained by the rear-guard when they

* It was seriously pressed upon his consideration by several officers, when the absence of the transports on the first arrival at Corunna rendered it evident that a battle must be fought for the embarkation, but he indignantly rejected the proposal.—NAPIER, i., 492, 493; SOUTHEY, ii., 520.

† Ante, iii., 65.

* Napoleon subsequently said, at St. Helena, that nothing but the talents and firmness of Sir John Moore saved his army from destruction.—O'MEARA, i., 55.

† Nap., i., 474. ‡ Lond., i., 260, 261. § Ante, i., 437

arrived at Corunna, notwithstanding all the combats they had undergone, were less than those of any other division of equal number in the army,* affords a decisive proof how much would have been gained upon the whole by fighting at an earlier period, when the strength and discipline of the army were still comparatively unbroken.

But most of all, the step adopted by Sir David Baird, though a most gallant officer, in unison with Sir John Moore, in counselling the British government, instead of sending out the strong re-enforcements which they projected, and had in preparation, to Galicia, to forward *empty transports* to bring away the troops, appears to have been unhappy in its consequences. These despatches were sent off in the course of December, and they were not acted upon by the British government without the most severe regret, but at their distance from the scene of action they had no alternative but acquiescence.† But for this fatal step, the English army, upon their retreat to the seacoast, would have found, instead of transports to bring them off, thirteen thousand fresh troops, sufficient to have enabled them to hold out these important fortresses against the enemy, and possibly take a bloody revenge on their pursuers. Ney and Soult would have been retained in Galicia by the presence of thirty thousand men, intrenched in fortified seaports on its coast; the incursion of Soult to Oporto would have been prevented, the battle of Talavera have proved a decisive victory, and the march of Wellington to the Alherche, unmenaced by the descent of Soult, Ney, and Mortier in his rear, would have led him in triumph to Madrid. If the British could not have maintained their ground behind the strong battlements of Ferrol, or the weaker fortifications of Corunna, that might have afforded a good reason for bringing the troops round to Lisbon or Cadiz, but it was none for setting sail to England with the whole expedition, abandoning the contest in the Peninsula as hopeless, when the south was still unsubdued, and leaving ten thousand English soldiers, still in Portugal, to their fate.‡

* Nap., i., 488.

† "The troops which had been embarked on board the transports in England to re-enforce Sir J. Moore's army," said Mr. Canning, then secretary for foreign affairs, in his place in Parliament, "were disembarked in consequence of a distinct requisition from Sir David Baird that he wanted a certain number of transports; and the transports from which these troops had been disembarked were sent out, pursuant to that requisition. It was an afflicting circumstance, that it had become necessary to retard these troops, and send out empty, for the purpose of bringing off the British army, those transports which had been fitted for the purpose of re-enforcement and assault. But at this distance from the scene of action, ministers could not venture to refuse to send out these transports. The sending them out empty cost government a severe pang; no resolution ever gave him more pain. Every dictate of the head was tortured, every feeling of the heart wrung by it; but ministers had no alternative; they were compelled to submit to the hard necessity." The troops so embarked, or in course of embarkation, were 13,000 men. What might not they have achieved, joined to the 17,000 whom Moore led back to Vigo and Corunna!—See *Parl. Deb.*, xii., 1089, 1100. Sir John Moore also concurred in the propriety of withholding the re-enforcements and sending out the transports empty.—See SOUTHEY, ii., 519.

‡ "The road from Astorga to Corunna," says General Jomini, "traverses a long defile of thirty leagues, bounded by high mountains on either side. A slender rear-guard would have sufficed to defend that chaussee, and it was impracticable to manœuvre on either flank of it. That rendered it impossible for Soult to get at the enemy; and Ney, entangled behind him in the defile, could do nothing. This was the more unfortunate, as the English army, having prepared no-

In truth, this desponding conduct on the part of such able and gallant officers affords decisive proof that it was a much deeper and more general cause which was in operation, and that England was now paying the penalty, not of the incapacity of its generals, but of the long-established, and, till the Peninsular war opened, discreditable prudence in military transaction of its government. Accustomed only to land on the Continent for transient expeditions, and to look always, not to their guns and bayonets, but to their ships, as their ultimate refuge, the whole English nation were ignorant of the incalculable effects of invincible tenacity of purpose upon public undertakings, and regarded the strength of the state as consisting chiefly in its naval power, when, in reality, it possessed a military force capable of contending, with fair chances of success, even against the Conqueror of Continental Europe. Like the bulk of mankind in all ages, they judged of the future by the past, and were unaware of those important modifications of the lessons of experience, which the rapid whirl of events in which they were placed was every hour bringing into action. In Sir John Moore's case, this universal, and perhaps unavoidable error, was greatly enhanced by his connexion with the opposition party, by whom the military strength of England had been always underrated, the system of Continental operations uniformly decried, and the power and capacity of the French emperor, great as they were, unworthily magnified. Almost all his despatches, in the later stages of the campaign, evince in the clearest colours the influence of this depressing feeling, to which the false exaggerations and real disasters of the Spaniards afforded at the time too much confirmation. Instead, therefore, of casting a shade on the memory of any of the gallant officers intrusted with the direction of the campaign, let us regard its calamitous issue as the forfeit paid by the nation for the undue circumspection of former years, which had become so universal as to have penetrated the breast and chilled the hopes even of its most intrepid defenders, and inspired them with that disquietude for their country's safety which they would never have felt for their own. Nations, like individuals, never yet withdrew from the ways of error but by the path of suffering: the sins of the fathers are still visited upon the children; the retreat of Sir John Moore was the transition from the paralyzed timidity which refused succours to the Russians after Eylau, to the invincible tenacity which gave durable success to Wellington's campaigns. Happy the nation which can purchase absolution for past errors by so trivial a sacrifice, which can span the gulf from disaster to victory with no greater losses than those sustained in the Corunna retreat; and to whom the path of

It was public opinion which was really to blame.

thing on that line, stood in want of everything, and was in a frightful state of disorder, in consequence of the forced marches which it took for no conceivable reason. He cut the traces of their horses, and abandoned three or four thousand stragglers or dying men, when their line of operations was never menaced. It is impossible to conceive why the English did not defend Corunna. It is not, indeed, a Gibraltar; but against an enemy who had nothing but field-pieces, it surely could have been maintained for some time, the more especially as they could, at any time, throw in succour by sea. I could never understand their haste on that occasion, which the nation, it is true, has well wiped off in subsequent times, but was inferior to no other of the same description."

necessary suffering, commencing by the gift of a momentous benefit, is terminated by a ray of imperishable glory.

The peculiar character of the British and French troops had already clearly manifested itself in the course of this brief but active campaign. In every regular engagement, from first to last, the English had proved successful: they had triumphed equally over the conscripts of Junot and the Imperial Guards of Bessières; the heroes of Austerlitz and Friedland had sunk and quailed beneath the British steel. Considering how inexperienced almost all the English regiments were, and that most of the troops engaged at Rolicca, Vimiero, and Corunna there saw a shot fired for the first time in anger, these successes were extremely remarkable, achieved as they were, sometimes over veteran troops of the enemy, always over those who had the discipline and experience gained by fifteen years of victory to direct their organization and animate their spirits. They point evidently to what subsequent experience so clearly verified, a greater degree of courage at the decisive moment, arising either from some inherent peculiarity of race, or the animating influence of a free constitution and a long train of historic glory. But in other respects the superiority of the enemy was manifest, and all the good effects of achieved victory were liable to be lost on the English army, by the want of due discipline and docility in the troops, or of remissness and inex-

perience on the part of the officers. Place them in a fair field in front of the enemy, and both would honourably discharge their duty; but expose them to the fatigues of a campaign, subject them to the frozen snow or the dripping bivouac, require them to recede before the enemy, and bear the galling reproaches of a pursuer or ally in expectation of the time when the proper season for action arrived, and it was evident that they had still much to learn in the military art. Above all, intoxication, the inherent national vice, too often loosened the bonds of discipline, and exposed the army to the most serious disasters. These disorders explain the calamities of Sir John Moore's retreat, and go far to render blameless his gloomy presentiments as the issue of the campaign. In sobriety, durable activity, perseverance under fatigue, care of their horses, versatility of talent, and cheerfulness in disaster, the French were evidently and painfully the superiors of their undaunted rivals; the British army could never, in the same time and with the same array, have made Napoleon's march from Madrid to Astorga. Such were the varied excellences of the two armies who were destined, in six successive campaigns, to emulate each other's virtues and shun each other's defects; and such the aspect of the war when Great Britain, throwing off the unworthy timidity of former years, first descended as a principal into the fight, and Wellington, alternately the Fabius and Marcellus of the contest, prepared, in the fields illustrated by a former Scipio, the triumphs of a second Zama.

CHAPTER LI.

BRITISH EMPIRE IN INDIA PRIOR TO LORD WELLESLEY'S ADMINISTRATION.

ARGUMENT.

Comparison of the Roman Empire in Europe and British in India.—Wonderful Circumstances attending the British Empire in the East.—Its present Extent, Population, Revenue, and Military Strength.—Physical Description of the Indian Peninsula.—Its Vegetable and Animal Productions.—Extraordinary diplomatic Ability with which India has been governed.—Immense Advantages of the British Rule to the native Population.—Great Diminution of Crime under the British Rule, and Change effected in the Aspect of the Country in the Central and Western Provinces.—Rapid Progress of Wealth, Population, and Comfort, over all India under the English Government.—Increased Taste for British Manufactures over India.—Vast Police Force established in Bengal, and its admirable Effects.—Principles of Indian Taxation.—Management of Land in India.—The Zemindar System.—Its practical Operation.—The Ryotwar System.—The Village System.—Its admirable Effects in all Ages of Oriental History.—Effect of this large Land Revenue on the general System of Taxation.—Complete System of Religious Toleration Established in India.—Vast Diversities of Faith in that Country.—Vast Variety of National Character in India.—Difference of Character owing to physical Causes.—Origin and Composition of the Sepoy Force.—Elevated Rank and Situation of the Sepoy Troops.—General Character of the Indian Army.—Touching Anecdotes of the Generosity of the Sepoy Troops.—Their Fidelity under every Trial and Privation.—Which is owing to the Fidelity of the English Government to their Engagements.—Contrast of the Company's Rule to the devastating Mohammedan Sway which preceded it.—Wonderful Smallness of the Force by which this Empire has been won.—Desperate British Wars during which this Empire has arisen in the East.—Wars in which the Empire was involved during the Growth of the Indian Power.—What were the Causes of their extraordinary Successes.—Conquest was forced upon them by Necessity, not adopted by Inclination.—Sketch of the principal Indian Powers when the British Empire in the East arose.—Origin and early History of the East India Company.—Capture of Calcutta by Surajee Dowlah.—Calcutta retaken, and great Exploits of Clive.—His dethrone-

ment of Surajee Dowlah.—Acquisition of Territory by the Company and Defeat of the Mogul Emperor.—Cession of all Bengal and Bahar to the English.—Origin and Progress of the Madras Presidency.—Sieges of Madras and Pondicherry by the French and English respectively.—Rise and Character of Hyder Ali.—First Rupture between the British and Hyder.—First Campaigns with him, and early Disasters and Peace.—Transactions in the Carnatic down to the Renewal of the War with Hyder in 1780.—Great Successes of Hyder on the Renewal of Hostilities.—The firm Conduct of Warren Hastings and Sir Eyre Coote re-establishes Affairs.—Farther Disasters stemmed by the Energy of Warren Hastings.—Death of Hyder.—War with Tippoo, and Invasion of Mysore from Bombay.—Early Successes and final Disasters of the Invasion.—Siege of Mangalore by Tippoo, which is raised by the British invasion of Mysore, which leads to a Peace.—Change introduced by Tippoo in the Indian Armies.—Its ruinous Effects on the Independence of the Native Powers.—Long-protracted Prosecution of Mr. Hastings.—Proceedings in Parliament on the Subject.—His Trial and Acquittal.—Alternate Change of Public Opinion on the Subject.—Reflections on the cruel Injustice of this Prosecution.—Mr. Fox's India Bill.—Its premature Fate, which occasions the Downfall of his Administration.—Objections to which this Bill was liable.—Mr. Pitt's Indian Bill, which passes into a Law.—Arrangements with the British Government for the Increase of British Forces in the East.—Fresh War with Tippoo.—Lord Cornwallis's first Campaign with him.—Vast Preparations for the Siege of Seringapatam.—Preparations for a decisive Battle under the Walls of that Capital.—Total Defeat of Tippoo.—Dangers of Cornwallis, and his ultimate Rescue.—Concluding Operations of the War.—Treaty of Peace with Tippoo.—Experienced Necessity of adding new Conquests to the British Empire in India.—Pacific Administration and Principles of Sir John Shaw.—Its disastrous Effects.—Intrigues of Tippoo to form a Confederacy against the English.—His overt Acts of Hostility.

VAST and interesting as are the events which have now been traced, springing out of the wars

Comparison of
the Roman
Empire and
British India.

of the French Revolution, they are yet outdone by the spectacle which, at the same period, the Oriental World exhibited. The BRITISH EMPIRE IN INDIA forms, beyond all question, the most dazzling object in that age of wonders; perhaps the most extraordinary phenomenon in the history of the species. Antiquity may be searched in vain for a parallel to its lustre. During the plenitude of its power, the Roman Empire never contained above a hundred and twenty millions of inhabitants, and they were congregated round the shores of the Mediterranean, with a great inland sea to form their interior line of communication, and an army of four hundred thousand men to secure the submission of its multifarious inhabitants. Magnificent causeways emanating from Rome, the centre of authority, reached the farthest extremities of its dominions: the legions not only conquered, but humanized mankind; and the proconsuls, whether they journeyed from the Forum to the wall of Antoninus and the solitudes of Caledonia, or the shores of the Euphrates and the sands of Parthia, the cataracts of the Nile, the banks of the Danube, or the mountains of Atlas, rolled along the great roads with which these indomitable pioneers of civilization had penetrated the wilds of nature. Their immense dominions were the result of three centuries of conquest; and the genius of Scipio, Cæsar, and Severus, not less than the civic virtues of Regulus, Cato, and Cicero, were required to extend and cement the mighty fabric.

Wonderful circumstances attending the British dominion in India.

But in the Eastern world, an empire hardly less extensive or populous, embracing as great a variety of people, and rich in as many millions and provinces, has been conquered by the British arms in less than eighty years, at the distance of above eight thousand miles from the ruling state. That vast region, the fabled scene of opulence and grandeur since the dawn of civilization, from which the arms of Alexander rolled back, which the ferocity of Timour imperfectly vanquished, and the banners of Nadir Shah traversed only to destroy, has been permanently subdued and moulded into a regular province by a company of British merchants, originally settled as obscure traffickers on the shores of Hindostan; who have been dragged to their present perilous height of power by incessant attempts at their destruction by the native princes; whose rise was contemporaneous with numerous and desperate struggles of the British nation with its European rivals, and who never had a fourth part of the disposable national strength at their command. For such a body, in such times, and with such forces, to have acquired so immense a dominion, is one of those prodigies of civilization of which the history of the last half century is so pregnant; with which we are too familiar to be able fully to appreciate the wonder; and which must be viewed by mankind, simplified by distance, and gilded by the colours of history, before its due proportions can be understood.

The British Empire in India, extending now, with few interruptions, and those only of tributary or allied states, from Cape Comorin to the Himalaya Mountains, comprehends by

far the richest and most important part of Southern Asia; is nearly four times in extent the area of France,* and six times that of Great Britain and Ireland; contains above a hundred millions of inhabitants;† and yields a revenue of nearly twenty millions sterling.‡ The land-forces rose in the year 1826, when two bloody wars were to be maintained at the same time, to the enormous amount of 260,000 native troops, including 45,000 cavalry, and 1000 pieces of artillery, besides 31,000 native English; and even under the reduced peace establishment of the present time, they still amount to 194,000, of whom 35,000 are British soldiers §. This immense force, all in the very highest state of discipline and equipment, is raised entirely by voluntary enrolment, without a compulsory conscription ever being resorted to; and so popular is the British service, and so unbounded the general confidence both in the company's stability and its fidelity to its engagements, that the only difficulty the authorities experience is to select the most deserving from the numerous competitors who are desirous of being enrolled under its banners. If public danger threatened, or the Russian eagles approached the Indus, this force might be instantly raised by the same means to a million of armed men. When the British power was threatened with a double attack, and the Rajah of Bhurtpore raised the standard of revolt at the time that the 1825 bulk of their forces were entangled in the jungles of the Irrawaddy, or dying under the fevers of Arracan, no vacillation or weakness appeared in the British councils; with the right hand they humbled what the Orientals styled the giant strength of Ava, while with the left they crushed the rising power of the northern rajahs; and while a larger force than combated in Portugal under Wellington was pursuing the career of conquest in the Burmese Empire, and advancing the British standard almost to the minarets of Ummerapoora, a greater force than the native British who conquered at Waterloo assembled as if by enchantment round the walls of Bhurtpore, and, at the distance of fourteen hundred miles from Calcutta, and ten thousand from the British isles, carried the last and hitherto impregnable stronghold of Hindoo independence.¶ The greatness of Napoleon flits as a brilliant vision across our recollection; the power of Russia stands forth a present object of terror to our senses; but Russia never invaded Persia or Turkey, albeit adjoining her own frontiers, with forces equal to those which England has arrayed in the plains of Hindostan; ¶

* See note A.

† See note B.

‡ See note C.

§ Martin, ix., 90.

¶ Lord Combermere besieged Bhurtpore in 1825 with 36,000 red-coats and 180 pieces of cannon; the force employed in the Burmese Empire, at the same time, was in all 55,000 strong.—MARTIN, viii., 36, and *Ann. Reg.*, 1825. The British and King's German legion at Waterloo were 29,715 infantry, 8219 cavalry, 6054 artillery; the Hanoverians and Brunswickers about 15,000; the Belgians 12,000.—See *Adjutant-general's Report*, 6th Nov., 1816. *Battle of Waterloo*, by a *Near Observer*, ii., 138.

¶ In the war of 1828, and which terminated in the crossing of the Balkan and capture of Adrianople, the Russians could never collect 40,000 men in a single field. In the Persian war of 1824–25, they never had 10,000 men together in one army to the south of the Caucasus. In 1792 and 1800, the English besieged Seringapatam with 42,000 men and 104 pieces of cannon; in 1814, Lord Hastings sent 30,000 men against the Goorkhas on the first range of the Himalaya Mountains.—MARTIN, viii., 33, 51.

Its extent, population, revenue, and military strength.

and the host which followed Napoleon to Austerlitz and Friedland was inferior to that with which Lord Hastings made war on the Mahratta States.*

Imagination itself can scarcely do justice to the varied and magnificent scenery of Hindostan. From the snowy summits of the Himalaya to the green slopes of Cape Comorin, from the steep ghauts of Malabar to the sandy shores of Coromandel, it exhibits a succession of the most noble or beautiful features : at times stupendous mountain ranges, their sides clothed with lofty forests, their peaks reposing in icy stillness ; at others vast plains, rivaling the Delta of Egypt in richness, and, like it, submerged yearly by the fertilizing waters of the Ganges ; here lofty ghauts running parallel, at a short distance from the shore of the ocean, to the edge of its waters, and marking the line of demarcation between the low rich or sandy plains on the seaside, and the elevated tableland, several thousand feet in height, in the interior ; there, rugged hills or thick forests teeming with the riches of a southern sun. The natural boundaries of India are the Himalaya range and mountains of Cabul and Candahar on the north ; the splendid and rapid stream of the Indus, seventeen hundred miles in length, of which seven hundred and sixty are navigable, flowing impetuously from their perennial snows, on the northwest ; the deep and stagnant Irrawaddy, fourteen hundred miles in length, fed by the eastern extremity of the chain, and winding its way to the Bay of Bengal through the rank luxuriance of tropical vegetation, on the northeast ; and the encircling ocean on the coasts of Malabar and Coromandel, on the south. Nature everywhere appears in this highly-favoured region in her most imposing array : the Himalaya Mountains, surmounting even Chimborazo in elevation ; the Indus, rivaling the river of the Amazons in magnitude ; the plain of Bengal, outstripping Mesopotamia itself in fertility, form some of the features of a country which from the earliest times has been the seat of civilization, and the fabled abode of opulence and magnificence.†

All the productions of the globe are to be found, and for the most part flourish and attain to perfection, in the varied climates and soils of this splendid peninsula. The forests, the fruits, the crops of Europe, are recognised by the delighted traveller in the Himalaya Mountains, where the prodigy is exhibited of valleys tolerably peopled, and bearing crops, at the height of sixteen or seventeen thousand feet above the sea, or considerably above the summit of Mount Blanc, or the Great Glochner. The peach, the apricot, the nectarine, even apples, pears, and strawberries, refresh the European, to whom they recall, in a distant land and amid Oriental luxuries, the images and enjoyments of his youth. Wheat, barley, and oats, with noble forests of teak and oak, flourish on the cool slopes of the mount-

ains ; while at their feet the vast plain of Bengal is covered, to an incalculable extent, with double crops yearly of rice or thickets of bamboo canes, fed by the fertilizing floods, which, often to the breadth of a hundred miles, exhibit a sea of waters, interspersed only with tufts of wood, solitary palms, hamlets, and pagodas. Indigo grows in luxuriance in many districts, and forms a staple article of commerce to the country ; sugar thrives as well as in the West Indies, and promises to fill up the gap in the production of the globe occasioned by the disastrous emancipation of the slaves in the western tropical regions ; grapes, melons, pine-apples, figs, dates, mangoes, are everywhere found in profusion, with many other fruits, still more luscious, peculiar to the Eastern Hemisphere. The elephant, at once the strongest, the most sagacious, and the most docile of animals ; the camel, the ship of the desert ; the horse, the companion and fellow-soldier of man, alike flourish in a country where the tiger and the rhinoceros rule the wilds of nature. Even the flowers and birds partake of the splendid character of creation : the roses of Cachmere and Delhi send their highly-prized perfume through the world ; the scarlet flowers of the ixora and mussonda, and innumerable other tropical plants, diffuse a blaze of beauty through the woods ; the scarlet plumage of the flamingo, the varied hue of the parrots, rival the colours of the setting sun. But the woods are silent, or resound only with the harsh scream of birds or the fearful cry of beasts of prey ;* no troops of feathered songsters fill the air with their melodious voices, nor welcome in the breath of spring with the voice of gladness and the notes of love.

In the transactions of Europe, the historian has too good reason frequently to lament the indecision and want of foresight with which both diplomatic negotiations and military operations have been conducted by the English cabinet ; and he is, perhaps, driven to the conclusion that greatness has rather been forced on the state by the energy and virtues of its inhabitants, than conferred upon the inhabitants by the wisdom or ability of the government. But in the East the reverse has from the outset been the case. If the intelligence, vigour, and bravery of the middle and working classes of England, who sent forth their sons to push their fortunes in the plains of Hindostan, has furnished an inexhaustible supply of talent and resolution to conduct their enterprises, the foresight and capacity of the Indian government has almost invariably brought their qualities to bear upon the public service in the most efficient manner. Perhaps there is not to be found in the history of any country so remarkable a succession of able statesmen and warriors as in India have reared the mighty fabric of British greatness. The cool, daring, invincible intrepidity and military genius of LORD CLIVE laid the foundation of the structure ; the quick sagacity, prompt determination, and high moral courage of WARREN HASTINGS rescued it more than once from ruin ; but it was the enlarged views, statesmanlike wisdom, and energetic conduct of MARQUIS WELLESLEY

* In 1817, Marquis Hastings took the field against the Mahratta confederacy at the head of 81,000 regular infantry and 33,000 cavalry, the greatest force ever assembled under one commander on the plains of Hindostan. The French who fought at Austerlitz were 90,000, of all arms ; at Friedland, 60,000.—*Ante*, ii., 368 and 535 ; and MARTIN, viii., 35. † Malte Brun, iii., 5, 11 Martin, viii., 91, 92.

* Hamilton's Account of Hindostan, i., 24, 72. Malte Brun, iii., 32, 33. Martin, viii., 153, 157.

which completed the superstructure, and left to succeeding governors a force which nothing could resist, a moral ascendancy which nothing could counterbalance. MARQUIS HASTINGS has since, with equal ability, followed out the same enlightened principles; crushed the united confederacy of the Mahrattas and Pindarries; vanquished the hill strength of the Goorkhas, and left to his successors a matchless empire, from the Himalaya snows to the Cape Comorin, and from the frontiers of China to the banks of the Indus, united under one rule, obeying one government, and actuated by one common sense of experience and obligation.

Mr. Burke has said that, if the English were to be expelled from India, they would leave no better traces of their dominion than the hyæna or the tiger. Even at the period when this celebrated expression was used, it savoured more of the fire of the orator than the sober judgment of the statesman; but had that great man survived to these times, he would have gratefully retracted the sarcasm, and admitted that, of all the marvels attending the British sway in the East, the most wonderful is the extraordinary blessings which it has conferred upon the inhabitants. Facts, more eloquent than words, statistics, more irresistible than arguments, place this important point beyond the possibility of a doubt. While under its native princes the state of capital in India was so insecure that twelve per cent. was the common, and thirty-six per cent. no unusual rate of interest; under the British rule, the interest of the public debt has, for the first time in Eastern history, been lowered to five per cent., and, at that reduced rate, the capitalists of Arabia and Armenia daily transmit their surplus funds to be purchased into the company's stock, as the most secure investment in the East. Of the public debt of £47,000,000, a large proportion is due to native or Asiatic capitalists; and such is the unbounded confidence in the good faith and probity of the government, that bales stamped with their signet circulate unopened, like coined money, through the vast empire of China. So complete has been the protection, so ample the security enjoyed by the inhabitants of the British provinces, compared with what obtains under their native rajahs, that the people from every part of India flock, as Bishop Heber has observed, to the three presidencies; and the extension of the company's empire, in whatever direction, is immediately followed by a vast concourse of population, and increase of industry, by the settlers from the adjoining native dominions.*

Brilliant as has been the career of England in the European world during the last half century, there are several circumstances in its internal situation which cannot be contemplated without painful feelings. Among these, the constant and uninterrupted increase of crime, through all the vicissitudes of peace and war, unchecked by penal vigilance, undiminished by intellectual cultivation, is one of the most alarming. But under the British empire in the East a very different and much more satisfactory prog-

ress has taken place. Rapid as has been the growth of crime in the European dominions of England during the last half century, its decrease in her Eastern possessions has been still more striking; and the steady, powerful rule of a central government has done as much for the inhabitants of Hindostan as the vices consequent on a corrupted manufacturing population have undone for the people of Great Britain.* From our returns of commitments and crime in many different provinces of India for the last thirty years, it distinctly appears that crime has, during that period, diminished one half, in many places sunk to a sixth, in the East; while it has, in the same time, more than quadrupled in the British islands, and in Ireland multiplied ninefold.† Nor is it difficult to perceive to what cause this remarkable difference is owing. Robbery and plunder, the crimes of violence, were those chiefly prevalent in India, growing out of the lawless habits which ages of misrule had diffused through a large portion of the population. These savage and dangerous crimes have been everywhere severely repressed, in some districts totally extirpated, by the strong and steady arm of the English government. The long-established hordes of robbers have in most places been dissolved; the Pindarries, who so long spread ruin and desolation through Central India, rooted out; the gangs of Dacoits and Looties, who levied a frightful tax on honest industry, transported or broken up. But if this unwonted feeling of security against hostile spoliation is so generally perceptible even in the provinces which have enjoyed the benefit of English protection for the longest period, what must it be to those which have been lately rescued from a state of anarchy, misery, and bloodshed, unparalleled in the modern history of the world!‡

"Nothing," says an intelligent observer, "can be more gratifying to an Englishman than to travel through the central and western provinces, so long the theatre of merciless and oppressive war, and to witness the wonderful change which has everywhere been wrought. Every village in that part of the country was closely surrounded by fortifications, and no man ventured to go to the labours of the plough or the loom without being armed with his sword and shield. Now the forts are useless, and are slowly crumbling into ruin; substantial houses begin, for the first time, to be built in the open plain; cultivation is extended over the distant and undefended fields; the useless encumbrance of defensive armour is laid aside, and the peasant may fearlessly venture to enjoy the wealth and comforts which his industry and labour enable him to acquire. In short, the course of events, within the last fifteen years, has done more than the whole preceding century to improve the condition of the middle and lower classes through the whole of India; to give them a taste for the comforts and conveniences of life, and to relieve their industry from the paralysis under which a long continuance of internal dissension had caused it to sink. Englishmen, who have so long been blessed with internal

Great change effected in the aspect of the country in central and western provinces.

tranquillity, and to whom the idea of an invasion presents only a vague and indistinct notion of confusion, bloodshed, and rapine, can hardly conceive the rapturous delight which animates the Hindoo peasant who has had, from time immemorial, a wretched experience of these frightful realities, or the gratitude he feels to those who protect him from them, who enable him to reap his harvest in security, defend his home from profanation, and his property from the never-ending extortion of the powerful.*

This progress, accordingly, of wealth, comfort, and population during the last twenty years, especially in Central India, has been rapid in a most extraordinary degree; and even that short period of firm pacific administration has gone far to obliterate the deep furrows which the devastating wars and interminable oppression of former times had produced. Old neglected tanks have been cleared out, their banks restored, and again filled with vivifying floods; roads repaired or struck out anew in the most important lines of communication; harbours excavated, bridges erected, aqueducts constructed, with all the advantages of European skill; irrigation spread over the thirsty plains, and cultivation extended far into the open country, at a distance from any villages, the centres, in former times, of all the operations of human labour.† Villages, almost beyond the power of enumeration, have risen up from their ruins in every part of the country; the ryots around them are to be seen cheerfully cutting into the jungle, and chasing the leopard and the tiger from their hereditary haunts;‡ an entirely new feature in Indian society has arisen, a *middle class*, which is gradually approximating to the yeomanry of the Western world, and the never-failing symptoms of a prosperous population have generally appeared; a great increase in the numbers of the people, coexistent with a marked elevation in their standard of comfort and individual prosperity.‡§

The effect of this progressive elevation in the situation of the middle, and improvement in the circumstances of the lower orders, has already been strongly and beneficially felt in the extended commercial intercourse between India and the British islands. The growing taste for British manufactures of almost every kind, as well as the increased capability of the working classes to purchase them, in every part of Hindostan, was long ago remarked by Bishop Heber, and the same gratifying change has, since his time, been noticed by not less competent observers. The gradual rise of the more opulent of the working into a middle class, has spread a taste among them for luxuries and

conveniences to which their fathers, during the many ages of Hindostan oppression, were strangers. The calicoes and long cloths of Manchester and Paisley have now obtained as undisputed possession of the markets of the East as the hardwares of Sheffield, Birmingham, and Leeds; and the abundance and cheapness of British manufactures have diffused a taste for these articles among classes who formerly never had a wish beyond the mere necessities of life. While the industry of Indian artisans was, in former times, exclusively directed to fabricate only the coarsest articles for the poorer, and the most costly luxuries for the richer classes, the rapid increase of the consumption of a superior sort of fabric (still much below the Cachmere shawls and brocades of the rich), unknown till within these twenty years in any part of Hindostan, marks the slow but gradual growth, under British protection, of an intermediate class in society, superior to the naked ryot, but inferior to the pampered zemindar; while, by one of those changes which bespeak the revolutions of ages, and measure the difference in the progress of different quarters of the globe, the cotton of India, transported to the British shores and manufactured by the refinements of European machinery, is sent back to the East, and, by its greater cheapness, has opened to a class who never before could enjoy them, the comforts of the original produce of Hindostan.*†

The extraordinary diminution of crime, especially of a violent kind, in all parts of the Indian Peninsula of late years, and progressive amelioration of the people, is in a great measure to be ascribed to the extensive and powerful police force which is very generally established. The discipline and organization of this civil body is admirable; and such is its extent, that in the provinces of Bengal and Bahar it numbers one hundred and sixty thousand men in its ranks. In most villages there are two or three, in many ten or twelve, of this protecting force permanently established. Europeans may feel astonished at the magnitude of this establishment; but experience has completely demonstrated that it is highly useful, and, indeed, indispensable, amid the habits of rapine and violence to which ages of license and rapine have inured the inhabitants of India. The rapid diminution of crimes of violence in Bengal under the operation of this preventive system, proves that a remedy has been discovered and applied to the prevailing causes of evil in those regions: would that human wisdom could devise an equally effectual preservation against the passion for illicit gain, sensual indulgence, and habitual intoxication, which are now, like a gangrene, overspreading the face of society in the British islands!‡

Taxation in India is for the most part direct; that is, it consists of the rent of Principles of lands belonging in property to the Indian taxation government, and which, from time immemorial, have been devoted to the maintenance of the supreme authority. Of the nine-

† The public works undertaken and carried through by the British government in India, especially in the formation of roads, bridges, aqueducts, canals, harbours, tanks, &c., almost exceed belief; and though less pompously set forth in official reports, equal those which have shed such an imperishable lustre over the reign of Napoleon in Europe. An enumeration of them will be found in the *Parl. Papers* in 1833, and an abstract in MARTIN, ix., 344-349. The roads constructed under Lord W. Bentinck's administration alone, in 1831, were 1784 miles, and 10,000 persons were employed on them.—MARTIN, ix., 349.

teen millions which at present constitute the general revenue of India, nearly eleven millions are drawn in this manner from the rent of the government lands. The principle on which this immense revenue is derived from land has no analogy to the European land-tax, which is a burden superinduced upon the owner of the rent; it is, on the contrary, the rent itself. The modes in which this tax is levied over India are three: either a perpetual settlement with, or fixed rent constantly payable by, the proprietors of land; or a temporary settlement with the heads of villages or townships; or a definite settlement with each individual occupant of the ground. These different modes of taxation are all founded on one principle, which is universally admitted and acknowledged in every part of Hindostan, viz., that government, as the paramount owner of the soil, has right to a certain portion of the gross produce of every foot of cultivated land, which may be commuted generally or partially, by permanent or partial settlements, with classes of men or separate individuals, but never can be wholly alienated by any ruler to the prejudice of his successors. Government, therefore, in India is at once the ruling power and the universal landlord in the state; and hence the general and omnipotent influence which its severity or justice has upon the prosperity and well-being of the people, and the immediate effect of the British sway—by whose agents the collection of rent has been fixed, upon comparatively equitable principles—upon the welfare of the humbler classes.*

When the East India Company came into possession of the Bengal provinces, they found the land revenue everywhere collected by the intervention of officers under the Mohammedan government, who had charge of districts or provinces under the title of *zemindars*. These officers were paid by a per centage on the sums which they collected: the utmost irregularity and abuse generally existed; military force was constantly resorted to to enforce the collection; and some of them held their offices for life only, others transmitted them, by hereditary succession, to their descendants. Misled by the analogy of European institutions, or desirous of laying the foundation for their establishment in the East, Marquis Cornwallis, in 1793, conceived and carried into effect the idea of transforming the zemindars into landed proprietors, by conferring upon them and their descendants an indefeasible right to the territories over which their powers extended, so long as they continued to pay regularly the fixed land-tax to government. The propriety of this change was very much doubted at the time, and gave rise to a long and interesting controversy; but it was, nevertheless, carried into execution, and now forms the basis on which the taxation of two hundred thousand square miles of the Bengal territory, a district thrice the size of Great Britain, is founded. Though framed on the principles of benevolence and moderation, it has, however, like almost all similar institutions borrowed from the analogy of other nations, and a different state of society,

proved altogether ineffective for the principal object in view. The zemindars could not, by the mere regulation of the company, be converted from Asiatic to European habits: instead of acquiring the interests and views of hereditary landholders, they continued to act with the characteristic improvidence of Eastern rulers. To squeeze the last farthing, by any means how unjust soever, from the ryots, and squander it in extravagance or luxury upon themselves or their families, was the general practice: numbers were ruined and dispossessed by the company, who exacted the quit-rent with unrelenting and injudicious rigour;* and thus no step was made towards the formation of a landed aristocracy, while no alleviation was experienced in the burdens of the poor.

The evil, in effect, became so great, that it has in some degree worked out, like ^{Its practical operation.} all other excessive ills, its own cure. The zemindar system has come in the end to benefit a class of landed proprietors, though not the one which Lord Cornwallis originally intended. From the general ruin which overtook these powerful officers, and the terror everywhere inspired by the rigorous exactions of the company, the price of estates fell so low, that at last it became a prudent matter of speculation to buy land, and look to its returns for the interest of the price. A different and more provident class has thus, to a considerable extent, been introduced into the management of estates; and, as the land-rent which they are required to pay continues fixed, they have the strongest possible inducement to increase by good management the surplus which may accrue to themselves and their families. But, unfortunately, they have not learned in the East to look so far into the future as to see that this is to be most effectually done by equitable and just dealings towards the cultivators: the burdens imposed on the ryots are still generally exorbitant, often ruinous; and the benefits of the British government are felt by that numerous and important class rather by the cessation of war and depredation than in any practical diminution of the duties legally exigible from them by their landlords.†

Impressed with these evils, a different system was adopted by Sir Thomas Munro, late Governor of Madras, ^{The ryot-war system.} in his administration of some of the newly-acquired provinces of that presidency. The principle acted on by that able ruler, of whom Mr. Canning justly said that "Asia did not possess a braver warrior, nor Europe a more enlightened statesman," was to consider the ryot, according to the true Oriental principle, as the real proprietor, to dispense altogether with the zemindar or intermediate collector, and to levy the government duties, fixed forever in amount, directly from the cultivator or landholder, whatever was the size of his possession. It is evident that this system is calculated to be much more beneficial than the zemindar one to the cultivators of the soil, because they are thereby brought directly into contact with government, and participate at once, without the intervention of any middleman, in the benefit

* Com. Report, 1832, 2, 29. Martin, ix., 116. Heber, iii., 275.

* Parl. Pap., 1831, 3115, *et seq.*, 1832, p. 21.

† Heber, iii., 273, 275. Mart., ix., 118, 119. Parl. Pap., 1831. Com., 3115, *et seq.*, 1832, p. 21.

of a fixed quit-rent only being exacted from the land. It has, accordingly, found many and able supporters, and in some districts has been found in practice to be attended with the most admirable effects.* But when so powerful a party as government is brought into immediate contact with the cultivators, in a matter of such vital importance as the rent of land, it is indispensable to the success of the system that its demands should be moderate, and enforced with justice and consideration; and, unfortunately, this can hardly be generally expected under an empire of such immense extent as that of Hindostan, in which the supreme authority is situated at such a distance from the theatre of its fiscal operations. The land-tax is usually taken at twelve shillings in the pound, of the nett produce of the soil: an enormous exaction, rendered still more burdensome by the rigour with which it is collected. The project of bringing the cultivator at once into contact with the government, so equitable in theory, has often proved most fallacious in practice; for such is the subdivision of forms in most parts of India, that the immediate collection of the land-revenue by the government collector is out of the question. He is obliged to delegate his duties to a host of subordinate agents, over whose operations or oppression he is little able to keep any effectual control: the treasury officers too often come to esteem a subordinate functionary in proportion to the regularity and amount of his remittances rather than any other quality; the expenses of collection rise enormously with the multiplication of inferior agents, and the ryot has often little reason to congratulate himself on the exchange of a British collector for a native zemindar.†

A third system of land-rents is the *Village system*. This prevails chiefly in the upper districts of India, and is the prevalent institution over the greater part of the East, to which, probably, more than any other cause, the preservation of its population and industry amid the endless devastations of wars is to be ascribed. Each village forms a little community or republic in itself, possessing a certain district of surrounding territory, and paying a certain fixed rent for the whole to government. As long as this is regularly paid the public authorities have no title to interfere in the internal concerns of the community: they elect their own *mocuddims*, or head men, who levy the proportions of the quit-rent from each individual, settle disputes, and allocate to each profession or individual the share of the general produce of the public territory which is to belong to it. As the community is justly desirous of avoiding any pretext for the interference of the state collectors in its internal concerns, they make good the quota of every defaulter from the funds of his neighbours, so as

to exhibit no defalcations in the general return to government. The only point in which the interference of the national authorities is required, is in fixing the limits of the village territories in a question with each other, which is done with great care by surveyors, in presence of the competing parties and their witnesses, and a great concourse of the neighbouring inhabitants. In times of trouble they arm and fortify themselves, drive their cattle within their walls, and often contrive, by the payment of a certain contribution, to avoid the evils of actual pillage, even by the most considerable armies. These villages are, indeed, frequently burned or destroyed by hostile forces, the little community dispersed, and its lands restored to a state of nature; but when better times return, and the means of peaceable occupation are again restored, the remnant reassemble with their children in their paternal inheritance. A generation may pass away, but the succeeding generation return: the sons take the place of their fathers; the same trades and occupations are filled by the descendants of the same individuals; the same division of lands takes place, the very houses are rebuilt on the site of those which had been destroyed, and, emerging from the storm, the community revives, "another and the same."*

It is in these village municipalities that the real secret of the durability of society in the East is to be found. If we contemplate the desolating invasions to which, from the earliest times, the Asiatic monarchies have been exposed from their proximity to the regions of Central Asia; if we reflect on the wide-spread devastation consequent on the twelve dreadful irruptions of the Tartars into Hindostan, and recollect that society, in the intervals of these terrific scourges, has invariably been subjected to the varied but never-ending oppression of different rulers, who seemed to have no other idea of government but to extract as large contributions as possible from the people, it seems surprising how the human race did not become extinct under such a succession of calamities. But amid those multiplied evils the village system has provided an unheeded but enduring and effectual refuge for mankind. Invasion may succeed invasion, horde after horde may sweep over the country, dynasty may overturn dynasty, revolution be followed by revolution; but the wide-spread foundations of rural society are unchanged: the social families bend, but break not, beneath the storm; industry revives in its ancient seats, and in its pristine form, under whatever government ultimately prevails; and the dominant power, intent only on fresh objects of plunder or aggrandizement, rolls past these unheeded fountains of industry and population. The Hindoos, the Patans, the Moguls, the Mahrattas, the Seiks, and the English, have all been masters in turn; but the village communities remain the same. Abuses and oppression, without doubt, may prevail in this as in all other human institutions; but its extensive establishment and long duration in the East prove that it has been found capable by experience of affording tolerable security to the

* See, in particular, a most interesting account of a settlement on these principles in MALCOLM'S *India*, 526-528. It is also much more beneficial to government, as is proved by the fact that, in 1827, the land-tax per head was,

	Per head.	Per square mile.	Population per square mile.
In Bengal,	22 pence.	23 pence.	244
In Madras,	52 —	17 —	77
In Bombay,	60 —	19 —	76

—*Parl. Papers*, quoted in MARTIN, ix., 123.

† Sinclair, 33, 36. *Parl. Pap. Com.*, 3156, 4577, 4579. *Mart.*, ix., 122, 123.

labouring classes; and perhaps by no other means, in the absence of those effective bulwarks of freedom which the intelligence, hereditary succession, and free spirit of Europe create, is the inestimable blessing of protection to humble industry to be so generally and effectually obtained. The whole upper and western provinces of Bengal, the greater part of the Bombay territories, the ceded districts on the Nerbuddah, and the province of Tanjore, comprising about two hundred and sixty thousand square miles, are assessed according to this system.*

The concentration in the hands of government of so large a proportion of the surplus produce of the earth, as is effected by the great land-tax of India, is undoubtedly prejudicial to society, in so far as it prevents the growth of that important class, so well known in European civilization—a body of hereditary, independent landed proprietors; but it is attended by this important advantage, that it renders the other imports of the state extremely trifling. Of the total revenue of £19,500,000, more than a half is derived from the land revenue; and of the indirect taxes, nearly two thirds are laid on the single articles of salt and opium.† When we reflect on the numerous taxes which are levied on almost every article of consumption in Great Britain, this must appear no small recommendation of the Eastern system. It is obviously the same advantage to a nation to have a considerable portion of its revenue derived from crown lands, as it is to have its ecclesiastical or charitable institutions supported by separate property of their own. In either case, the cost of these expensive establishments, essential to the protection, religious instruction, or relief of the people, is laid upon their own funds, instead of being imposed as a burden upon the earnings of the other classes of the community. It is, perhaps, the most remarkable instance of political blindness on record, that the Republican party, both in France and England, should so long have endeavoured, and in the former country successfully, to destroy the property both of the Church and the corporations holding funds devoted to the purposes of charity and education; that is, to terminate the payment of these necessary establishments by their own funds, and throw their maintenance as a tax on the wages of labour. And, without going the length of the opinion that the Oriental system is preferable to the landed proprietors of modern Europe, with the stability which they confer upon society, it may safely be asserted, that the receipt of a considerable portion of the public revenue from landed property, vested in government or public bodies, is an invaluable feature in political institutions, and the very last which a real patriot would seek to subvert.

Religious difference, and the exclusive possession of power by persons of one ecclesiastical establishment, political party, or dominant race, have been found to be the great obstacles to the pacification of the kingdoms of modern Europe; and in the centre of her power,

England has found it impossible to conciliate the affections or overcome the antipathy of the native inhabitants of Ireland. But, in her Eastern empire, political exclusion far more rigid, religious distinctions far more irreconcilable, have, under the able and judicious management of the company, proved no obstacle to the consolidation of a vast and peaceable dominion. In India, notwithstanding the long period that some districts have been in British possession, and the universal peace which reigns from Cape Comorin to the Himalaya Mountains, the natives are still ineligible to offices of trust, both in the civil and military departments. In religion, the principle of separation is still more rigid. Hindostan has, in different ages, been overrun, not merely by conquerors of different races, agreeing only in their ferocity to the vanquished, but by hosts of totally distinct and irreconcilable religious creeds. The mild and pacific followers of Bramah have in different ages been obliged to bow the neck to the fierce idolaters of Caubul, the rigid followers of Shiva, the savage pagans of Tartary, the impetuous fire-worshippers of Persia, the triumphant followers of Mohammed, the disciplined battalions of Christ. These different and hostile religions have imprinted their traces deeply and indelibly on the Hindoo population; and of the two hundred millions who now inhabit the vast Peninsula to the south of the Himalaya Mountains, a considerable proportion still follow the faith of the dominant races from which they severally sprang.

Fifteen millions of Mussulmen, haughty in manners, indolent in character, voluptuous in disposition, even now recall the era when the followers of Mohammed issued from their burning deserts, with the sword in one hand and the Koran in the other, to win, through the blood of conquest, a path to the houis of Paradise; sixty millions of pacific Hindoos on the banks of the Ganges still continue the worship of Bramah and Vishnu, which has endured unchanged for four thousand years; fifteen millions of hardy freebooters, in the upper provinces, follow a mixed creed, in which the tenets of Islamism and the doctrines of the Hindoo faith are strangely compounded together. Heathens and cannibals are found in great numbers on the hilly regions of the northeastern frontier; a numerous fragment of Parsees or fire-worshippers, scattered through various parts of India, still preserve, untainted by foreign usage, the pure tenets, charitable practices, and elevating worship of Zoroaster; Jews are to be seen in many places, whose Old Testament, coming down no farther than the Babylonian Captivity, indicates that they had strayed to the East after that memorable event; while a small number of Christians have preserved inviolate, through eighteen hundred years, the fundamental principles of the Gospel, and traces are to be found in some remote quarters of the lost tribes of the children of Israel.*

At first sight it would be natural to conclude that this extraordinary amalgamation of different religions in one community would produce an insurmountable difficulty in conducting the

† See note I.

* Mart., ix., 207, 233. Sinclair, 40, 48, 49.

Vast varieties of religious belief found in India.

Effect of this religious division in facilitating the government of the country.

government, and that the strength of a united empire could never be obtained with such various and discordant materials. The reverse, however, is so much the case, that it is owing to this more, perhaps, than any other cause, that the subjection of so great a body of natives to the government of a handful of Europeans is to be ascribed. The Indian population is divided into so great a number of different faiths that no one is predominant, or can claim an undisputed pre-eminence over the others; and political power has so long been dissevered from religious belief, that it no longer constitutes a bond of union by which any formidable coalition can be held together. Not only are there to be found Hindoos of every province, and tribe, and dialect, in the ranks of the British native army, but the worshippers of Shiva, the adorers of Vishnu, a multitude of Mohammedans, both of the Soonee and Shiah sects, Protestant and Catholic half-castes, and even Jews and Ghebirs. By this intermixture, unparalleled in history, the chances of any considerable combination, either for the purposes of military revolt or political hostility, have been considerably reduced. Although all classes live together on terms of mutual forbearance, and this amazing diversity of religious sentiment in no way interrupts the chain of military subordination, no sooner are their professional duties at an end than the distinctions of religion and caste return with undiminished influence. When the regimental parade is dismissed, the soldiers break into separate knots, the gradation of caste is restored, the distinctions of faith return: the Sudra sergeant makes his *salaam* to the Brahmin or the Rajpoot private; the Mussulman avoids the Christian, the Shiah the Soonee, the Hindoo all; and an almost impassable barrier of mutual distrust and jealousy obstructs all amalgamation of opinion, or unity of action, even upon those national objects which separately interest the whole body. Thus the heterogeneous and discordant mass is kept in a state of complete subordination by the only power among them which possesses the inestimable advantage of unity of action; and the British government, strong in its established probity, and the good faith with which it observes its engagements both towards its subjects and its enemies, is enabled to maintain an undisputed dominion over its innumerable and multifarious subjects.*

It is a common opinion in Great Britain—where the real nature of our Eastern dominions is unknown to an extent which, *a priori*, would appear incredible—that the whole of India is inhabited by a race of meek and inoffensive Hindoos, who willingly bow the neck to every invader who chooses to oppress them, and are incapable, alike from their character, climate, and ignorance, of opposing any effectual resistance to a European invader. The slightest acquaintance, not merely with Indian, but Asiatic history, must be sufficient to demonstrate the unfounded nature of this opinion. In no part of the world, perhaps, has foreign conquest implanted its traces in more indelible features on

the original population, in none is variety of present character and qualities so conspicuous. So far from the inhabitants of India being all of one description, alike timid and inoffensive, there is within its limits to be found a greater intermixture of races than in any part of the world, and as large a proportion of hardy valour and desperate daring as in any people recorded in history. Bishop Heber justly observes, that there is as great a disparity between the inhabitants of Guzerat, Bengal, the Duab, and the Deccan, as between any four nations of Europe; and that the inhabitants of the presidencies of Madras and Bombay, and of the Deccan, are as different from each other as the French and Portuguese from the Greeks, Germans, or Poles. Independent of the varieties of the proper Indian race, which are innumerable, there are to be found in the peninsula of Hindostan at least *thirty* distinct nations, speaking different languages, and almost entirely unknown to each other. The Mahrattas are as much strangers to the people of Bengal as to the Europeans; the inhabitants of the Carnatic are foreign to both; the Seiks have no resemblance to the Mahrattas; and even the fifteen millions of Mohammedans have no common bond but their religion, and exhibit the descendants of adventurers, from all the nations of Asia, who crowded to the standards of the Prophet. If we penetrate into more distant possessions, the varieties of human character are still more remarkable: the inhabitants of the swamps of Arracan, or the meadows of the Irrawaddy, are as distinct from the highlanders of Nepaul as the rice-growers of the Ganges are from the horsemen of Mysore, or the Pindarries of Malwa. It was in the plains of Bengal alone that the British force met with the genuine Hindoo race, and there victory was of comparatively easy acquisition; but as foreign aggression, or the necessities of their situation, forced them into more distant warfare, they were brought in collision with nations as fierce, and forces as formidable, as any that are arrayed under the banners of Western Europe. The desperate defence of Saragossa, the obstinate valour of Aspern, the enthusiastic gallantry of Tyrol, have all their parallels in the annals of Indian warfare; and the heroism with which Napoleon and his redoubtable followers resisted and overcame these varied modes of hostility, was not greater than that with which the British soldiers and their worthy native allies combated on the plateau of Mysore, the hills of Nepaul, or the plains of Hindostan. The harassing hostility and terrible sweep of the Cossacks were fully equalled by the squadrons of Hyder and the Pindarree hordes; the free-born valour of the Tyrolese was rivalled by the heroic resistance of the Goorkhas; the storm of Badajoz, the devotion of Saragossa, have their parallels in the defence of Bhurtapore and the ramparts of Seringapatam; and the decision and skill which converted the perils of Assaye into a decisive victory were not outdone by the most illustrious deeds of the conqueror of Napoleon.*

Climate and physical circumstances, in addition to original difference of race, have exer-

Difference of character owing to physical causes.

cised their wonted influence on the character of the Indian population. In the flat, hot regions of Bengal, on the shores of the Ganges, and amid the meanderings of its tributary streams, is to be found a timid, gentle, pacific race: educated, but prone to superstition; servile to their superiors, but tyrannical to their inferiors; obsequious, yet treacherous; skilled in the arts of Eastern adulation, but mild and inoffensive in their intercourse with each other. In the elevated regions of the Peninsula, on the other hand, on the table-land of Mysore, in the wild hills of Almorah, on the lofty mountains of Nepaul, the inhabitants are brave, ardent, and impetuous: glowing with ardour, chivalrous to women, courteous to strangers, glorying in deeds of heroism, faithful in their friendships, vehement in their hatred. With these elevated qualities are mingled, however, others which belong to the same national character: a fierce and revengeful temper, a disposition uncultivated and impatient of discipline, habits prone to violence, and nursed to crime by ages of uncontrolled licentiousness. It is in these nations, among the proud Rajpoots, the roving Mahrattas, the daring Affghans, that the restraints of regular government are with most difficulty introduced, and its blessings most sensibly felt by the inhabitants; but it is among them also that the military spirit is most prevalent, and the British government has found its most faithful and intrepid native defenders *

Origin and composition of the sepoy force.

Among all the prodigies attending the British dominions in India, none, perhaps, is so extraordinary as the rise, progress, and fidelity of the SEPOY FORCE. It was in Bombay that these invaluable auxiliaries were originally organized, and the first mention of them in history is when a corps of 100 natives from Bombay, and 400 from Tellicherry, assisted the army at Madras in 1747. From these humble beginnings has arisen the present magnificent native army of India, which at one period amounted to nearly three hundred thousand men, and even now, on a reduced peace establishment, numbers a hundred and ninety-five thousand. Their ranks have from the first been filled indiscriminately with recruits of all nations and religious persuasions; and Mohammedans, Hindoos, Parsees, Jews, and Christians are to be found blended among them, without the distinction of race having ever interfered with the unity of action, or the difference of religion ever shaken fidelity to duty. The whole have throughout been raised entirely by voluntary enrolment, without a conscription or forced levy having ever been found necessary; and, great as the present army is, it could be quadrupled in a few months, if the circumstances of the Indian government required such an augmentation of force. The facility with which vast armies can be raised in the East, when compared to the violent measures by which it has been found necessary in Europe to accomplish the same object, appears at first sight surprising; but it ceases to be so when the effects of the distinction of castes and the relative situation of the sepoy soldiers and the other classes of the community are considered. The military form a distinct caste in all the

Hindoo communities, and, from father to son, deeds of arms are handed down as the only object of honourable ambition, the true incitement to glorious exploit. The Rajpoot of Bengal is born a soldier. The mother recounts acts of heroism to her infant: from earliest youth he is habituated to the use and exercise of arms. Even when still a child, the future warrior is accustomed to handle the sword and dagger, and to look without fear on the implements of death. If his father tills the ground, the sword and shield are placed near the furrow, and moved as his labour advances. The frame of the youth is constantly strengthened by martial exercises: he is habitually temperate in his diet, of a generous though warm disposition, and, if well treated, zealous, faithful, and obedient. It was from this military caste that the chief Indian armies were first formed, and they still form the strength of the native infantry. In process of time, however, as our empire has extended into more distant regions, the military qualities of its varied inhabitants have been called into action; and the desultory activity of the Mahratta horse, not less than the firm intrepidity of the Mysore cavalry, or the chivalrous valour of the Affghan gunners, have contributed to the formation of our mighty dominions.*

Unlike the soldier of Europe, the sepoy is an object of envy to his less fortunate compatriots. His profession gives him the precedence, not less in general estimation than in that of his caste, to persons engaged in civil occupations; and his pay is so considerable as to raise him, both in station and enjoyments, far above his brethren who are left behind him in his native village. Each private sepoy is attended by two servants: in the field there are, at an average, nine followers to every two fighting men: a system which gives to a hundred thousand men, in a campaign, nearly five hundred thousand attendants, and goes far to explain both the prodigious hosts recorded in history, as commanded by Xerxes and Darius, and the facility with which they were routed by a comparatively small body of Greeks, all real soldiers. Such a mode of carrying on war augments to a great degree the difficulty of providing subsistence for so prodigious a multitude as attend every considerable army,† but it renders it comparatively an easy matter to raise a military force. When the pay given to a private soldier is so considerable as to admit of his keeping two servants in the camp, and a still greater number in the field, no want of recruits will ever be experienced: the real difficulty is, to find resources adequate to the support of a large army at that elevated standard. When Cromwell gave half a crown a day to every dragoon, he readily got recruits for the Parliamentary armies.‡

* Quart. Rev., xviii., 414, 415. Orme's Hindostan, i., 72, 104. Mart., ix., 61, 65. Snelcar, 46.

† When General Harris advanced against Seringapatam, in 1799, his army was composed of 35,000 fighting men and 120,000 attendants; and when Marquis Hastings took the field in 1817 against the Mahrattas, his regular forces, amounting to 110,000 men, were swelled by above 500,000 camp followers; among whom, chiefly of the lower grades in society, and persons habituated to the humblest fare, the cholera made the most unheard-of ravages.—MALTE BRUN, iii., 328.

‡ Malte Brun, iii., 328. Martin, ix., 79, 80.

* Malte Brun, iii., 280, 299. Mart., ix., 278, 279.

The Indian infantry can hardly be said to be equal, even when led by British officers, to that of England, and, when left to the direction of their own leaders, evince the general inferiority of the Asiatic race to the European; but it is only in the last extremity or most trying situations that this difference is conspicuous, and for the ordinary duties of a campaign no troops in the world are superior to the sepoys. In many of the most essential duties of a soldier, sobriety during duty, patience under privation, docility in learning, hardihood in undergoing fatigue, steady, enduring valour, and fidelity to their colours under every temptation to swerve from them, the Indian auxiliaries might serve as a model to every service in Europe. Nay, examples are numerous in which, emulous of the deeds of their British comrades, they have performed deeds of daring worthy of being placed beside the most exalted of European glory, and instances are not wanting where they have unhesitatingly faced dangers before which even English troops had recoiled.* The native cavalry is of more recent introduction than the infantry, but it is not less admirable in many of the most valuable qualities: the men are fearless riders, indefatigable in the service of light troops, sober and vigilant; they take exemplary care of their horses, many of which are of the best Persian and Arabian breeds, and in the sword exercise, or single combat, are superior to almost any of the cavaliers of Europe. Nor is the artillery inferior to any in the world, either in the perfection of the material, the condition of the horses, or the coolness, precision, or bravery of the gunners. The immense host is entirely under the direction of British officers, nearly five thousand of whom are employed in this important service; but the non-commissioned officers and subalterns always were natives, and the avenue to more elevated promotion is now opened to the most deserving of their number.† In the shock of a regular charge

alone the native horse is still inferior to the British, a peculiarity which has distinguished the cavalry of the Eastern and Western worlds in every age, from the days of Marathon to those of the Crusades.*

Volumes might be filled with the anecdotes which have occurred within the last eighty years, illustrative of the steady courage and incorruptible fidelity of the sepoy troops. They first rose to eminence in the wars of Lord Clive, Lawrence, Smith, and Coote, in the middle of the last century; and the number of Europeans who were then engaged in Indian warfare was so inconsiderable, that almost the whole glory of their marvellous victories is, in reality, due to the sepoys. The hardships which were undergone at this period by all the soldiers, both native and European, from the defective state, or, rather, total want of a commissariat, were excessive; but, although the British power was then only in its infancy, and little promised future stability to its empire, nothing could shake the fidelity of the sepoy troops. On one occasion, when the provisions of a garrison were very low, and a surrender, in consequence, appeared unavoidable, the Hindoo soldiers entreated their commander to allow them to boil their rice, the only food left for the whole garrison. "Your English soldiers," said they, "can eat from our hands, though we cannot from theirs; we will allow them as their share every grain of the rice, and subsist ourselves by drinking the water in which it has been boiled." In the years 1780, 1781, and 1782, they suffered hardships almost unparalleled: there was hardly a corps that was not twenty months in arrear, and their families, under the pressure of a dreadful famine, were expiring on all sides; nevertheless, their fidelity never gave way under this extreme trial, and they repaid, with gratitude and attachment, the consideration, to them unwonted, with which they were treated by their European officers. The campaigns of Sir Eyre Coote and Lord Clive, in which they bore so prominent a part, still form an object of well-founded pride to the sepoys of Madras; and when a regiment comes into garrison, they lead their children into the great room of the exchange of that capital, to point out the portraits of the chiefs who first led their fathers to victory.†

Towards the close of the war with Tippoo, in 1782, General Mathews, with his whole troops, almost entirely native, were made prisoners. The sultan, sensible of the advantages he might derive from the services of so large a body of disciplined men in his ranks, made every effort to induce the English sepoys to enter his army, but in vain. He then tread severity, and subjected them for long to the most rigorous confinement and unhealthy employments; but nothing could shake their fidelity; and at

* At the first siege of Bhurtpore, in 1805, the 12th regiment of native Bengal infantry was associated with the 75th and 76th British infantry, whose deeds of valour they had emulated at the battle of Laswarree. The British were first led to the assault and gallantly mounted the breach, but they were driven back with dreadful slaughter, and such was the panic inspired by the disaster, that, when they were ordered a second time to advance, the soldiers refused to follow their officers and leave the trenches. The 2d battalion of the 12th native regiment were then ordered to advance; they did so with resolute steps, though well aware of the desperate nature of the service on which they were sent, and cheered, as they passed, the English troops who lay sheltered in the trenches. Such was the heroic valour of their onset that they overcame all opposition, and planted their colours, in sight of the whole army, on the summit of the breach. This work, unfortunately, was cut off by a deep ditch from the body of the fortress, and, finding it impossible to pass that barrier, Lord Lake was reluctantly obliged to order a retreat. It was with great difficulty, however, that the brave sepoys could be prevailed on to retire from the perilous post of honour which they had won, and not till they had sustained a loss of 360 men, being half their total number when they went into action. The British regiment, stung with shame, now implored to be allowed to return to the assault, which was granted, but, notwithstanding their desperate valour, it was still unsuccessful.—See MARTIN, viii., 30, 31, and ix., 69, 70. The author has frequently heard this anecdote from his late lamented brother-in-law, Colonel Gerard, adjutant-general of the Bengal army, who was present on the occasion, an officer to whose talents, zeal, and bravery the wonders of Lord Lake's campaign are in a considerable degree to be ascribed.

† The British officers in the Indian army amount to 4467; the Indian to 3416; but the latter cannot rise to a higher

rank than that of ensign or cornet. The total British troops in India amount at present to 30,915 sabres and bayonets, of whom 19,540 are composed of the queen's regiments, the remainder being English in the service of the East India Company; but the expense of the whole is defrayed by the Indian government.—MARTIN, i., 73, 79–81.

* Martin, ix., 63. Williams's Indian Army, 32, 68 Quart. Rev., xviii., 414, 415.

† Sir J. Malcolm in Quart. Rev., xviii., 389, 396

the peace of 1783, fifteen hundred of these brave men marched a distance of five hundred miles to Madras, to embark and rejoin the army to which they belonged, at Bombay. During the march, the utmost pains were taken by Tippoo's guards to keep the Hindoo privates from their European officers, in the hope that their fidelity might yet sink under the hardships to which they were exposed, but in vain; and not only did they all remain true to their colours, but swam the tanks and rivers by which they were separated from the officers during the night, bringing them all they could save from their little pittance; "for we," they said, "can live on anything, but you require beef and mutton." A battalion of the Bombay 12th regiment mutinied in 1764, on account of some promises made to the soldiers having, as they said, been broken. A severe example was thought necessary, and twenty-eight of the most guilty were sentenced to be blown from the mouth of a cannon. As they were on the point of being executed, three grenadiers who happened to be among them stepped forward and claimed the honour of being blown away from the right guns: "they had always fought on the right," they said, "and they hoped they should be allowed to die at that post of honour."* In the advance of Lord Lake's army to Delhi and Agra in 1804, the hardships and privations which the troops of all sorts endured were such as almost to break down the spirit of the British officers; but the Hindoo privates never showed the least symptoms of faintness or despondence, saying, "Keep up your spirits, sir; we will bring you in safety to Agra." When in square, and sustaining charges of the enemy's horse, it more than once happened, when a musket was fired by a young soldier, that a veteran struck him with the butt-end of his firelock, exclaiming, "Are you mad, to destroy our discipline, and make us like the rabble that are attacking us?" Nor was the same steady courage and devoted fidelity wanting on still more trying occasions, when the national or religious prejudices of the native soldier were brought still more violently in collision with their military duties. At the mutiny of Vellore, which shook the Indian Empire to its foundation, and was brought on by an absurd interference with the religious feelings of the troops, the sabres of the native dragoons were dyed as deep as those of the British in the blood of their unhappy countrymen; and, on occasion of a recent tumult at Bareilly, the capital of Rohilcund, occasioned by the introduction of a necessary but unpopular police-tax, which commanded the sympathy of the whole neighbouring population, a battalion of the 27th native infantry, with four hundred Rohilla horse recently imbedded, were all that could be brought against the insurgents, who were above twelve thousand strong. They continued to resist till two thousand were slain; and, although many

of them were their relations and neighbours, and their priest advanced and invoked them to join their natural friends, only one man was found wanting to his duty, and he was immediately put to death by his comrades, who throughout maintained the most unshaken fidelity and courage.*

The secret of this extraordinary fidelity of the native troops, under every temptation, to a foreign power, professing a different religion, and known only by its successive overthrow of all the native potentates, is to be found in the wise and magnanimous policy with which the East India Company, through every vicissitude of fortune, have made good their engagements, and the inviolable fidelity with which they have rewarded the services of the troops engaged in their ranks. From the earliest times the Indian princes have known no other way of paying their troops than by quartering them on some of the hereditary or conquered provinces of their dominions, where, though military license was allowed every latitude in the exaction of their pay or provisions, the soldiers experienced great difficulty, and were subject to a most vexatious uncertainty in the recovery of their dues. When, therefore, instead of this harassing and oppressive system, the Indian sepoys found that they received their daily pay as regularly as an English soldier; that their wants were all provided for by a vigilant and honest government; that no subaltern fraud or chicanery was permitted to intercept the just rewards of their valour; and that, after a certain number of years' service, they were permitted to retire on ample allowances, or a grant of land which formed a little patrimony to themselves and their descendants,† they were struck with astonishment, and conceived the most unbounded confidence in a power which had thus, for the first time, set them the example of an upright and beneficent administration. Power in India is, even more than elsewhere in the world, founded on opinion; and the belief which gradually spread universally that the East India Company would, with perfect regularity and good faith, discharge all its engagements, formed a magnet of attraction which, in the end, drew almost all the strength and military virtue of the Peninsula to its standards. When minutely examined, it will be found that it was neither the military discipline, nor the scientific acquisitions, nor the political

Which is owing to the fidelity of the English government to its engagements

* Martin, ix., 66, 72. Williams's Indian Army, 272, 304. Malcolm in Quart. Rev., xviii., 389, 415.

† "I have beheld," says Sir John Malcolm, "with more patriotic pride than has ever been excited in my mind by any other act of British policy in India, a tract of country more than a hundred miles in length, upon the banks of the Ganges, which had a few years before been a complete jungle, abandoned for ages to tigers and robbers, covered with cultivated fields and villages, the latter of which were filled with old soldiers and their families, in a manner which showed their deep gratitude and attachment for the comfort and happiness they enjoyed. When we consider the immeasurable quantity of waste land in the dominions of the company, it appears extraordinary that this plan has not been adopted in every part of British India upon a more liberal and enlarged scale. The native soldiers of Bengal are almost all cultivators, and a reward of this nature was peculiarly calculated to attach them. The accomplishment of this object would add in an incalculable degree to the ties which we have upon the fidelity of those by whom our dominion in India is likely to be preserved or lost."—MALCOLM'S *British India*, 1st ed., 526-528.

* "I am sure," says Captain Williams, who was an eyewitness of this remarkable scene, "there was not a dry eye among the marines who executed the sentence, though they had long been accustomed to hard service, and two of them had actually been in the execution party which shot Admiral Byng in 1757. The corps to which they belonged subsequently distinguished itself greatly both at Laswarree and the first siege of Bhurtpore."—WILLIAMS'S *Indian Army*, 247, and *Ante*, iii.

talents of the British which gave them the empire of India, for all these were matched in the ranks of their enemies, recruited and directed as they were by French officers, but their HONESTY AND GOOD FAITH, which filled them with confidence in each other, and inspired the same reliance in the native powers: qualities which, though often overreached in the outset by cunning and perfidy, generally prove more than a match for them in the end, and are destined ultimately to give to the Anglo-Saxon race the dominion of the globe.*

The order and regularity which prevail both in the maintenance of the Indian army, and the administration of its provinces, have produced the greater impression on the natives of the East, from the contrasts which they afford to the hideous scenes of devastation and massacre with which, from the earliest times, conquest had been invariably attended in the plains of Hindostan. Throughout the whole period of the Mohammedan ascendancy in the south of India, the same enormities, the never-failing accompaniments of their presence and power, have occurred as in the northern provinces. The annals of this period give a succession of examples of the same unprovoked and devastating warfare; the same struggles for power among the nobles; the same unbridled lust of conquest in the government; the same perfidy, treason, and assassination in the transactions of courts; the same massacres, oppression, and suffering inflicted on the people. It was no unusual thing for sixty, eighty, or a hundred thousand persons of all ages and sexes to be put to death in a single day; great cities and even capitals were at once destroyed and delivered over tenantless to the alligator and the tiger; the treasures of the native princes were invariably filled with the plunder of their defenceless subjects. The system of Mohammedan exaction, at first under the name of contribution, permanently under that of revenue, being everywhere the same, with the power of rapacious armies to enforce it, the fate of the unhappy people was stamped with permanent wretchedness. Dreadful as were the devastations of war and conquest, they were as nothing compared to the lasting evils of military exaction and cupidity. There was no security whatever either for persons or property: the latter was always considered as the fair object of seizure wherever it was known to exist, and the mass of the people were subject to a state of poverty from which there was no escape; of violence and oppression, against which there was no redress. Wars between the native or Mohammedan princes were perpetual, and the devastation extended not merely to the troops or armed men engaged, but to the whole population: weeping mothers, smiling infants at their breasts, were alike doomed to destruction; the march of troops might be tracked by hillocks of bodies and pyramids of human heads, burning villages, and desolated capitals. Under the Mahratta chiefs, who rose upon the decline of the Tartar dynasty, the same boundless rapacity continued, aggravated by the establishment of above twenty petty chiefs, each

of whom exercised the right of making war on his own account; the work of devastation was perpetual: massacres, conquests, conflagrations, make up the history of India for the last eight hundred years. So universal had this oppression been, and so deeply rooted had its effects become in the habits of the people, that the display of property was universally avoided as the certain forerunner of additional exaction: property was invariably either buried or vested in diamonds, which admitted of easy concealment; of the vast and fertile plains of India not more than a fourth part was cultivated;* the population was hardly a fifth part of what, under a more beneficent government, it might become; while the long-continued drain of the precious metals to the East, so well known to politicians of every age, indicated as clearly the precarious tenure of wealth which rendered concealment of property indispensable, as the recent and unparalleled occurrence of the importation of gold and silver from India demonstrates the arrival of the era for the first time in Eastern history, when the necessity for hoarding has ceased,† and, under British protection, the natural desire for enjoyment can find an unrestrained vent among the natives of Hindostan.

To complete the almost fabulous wonders of this Oriental dominion, it only requires to be added, that it has been achieved by a mercantile company in an island of the Atlantic, possessing no territorial force at home; who merely took into their temporary pay, while in India, such parts of the English troops as could be spared from the contests of European ambition; who never had, at any period, thirty thousand British soldiers in their service, while their civil and military servants did not amount to six thousand; the number of persons under their auspices who proceed yearly to India is never six hundred, and the total number of white inhabitants who reside among the two hundred millions of the sable population is hardly eighty thousand! So enormous, indeed, is the disproportion between the British rulers and their native subjects, that it is literally true what the Hindoos say, that if every one of the followers of Bramah were to throw a handful of earth on the Europeans, they would be buried alive in the midst of their conquests.‡

It augments our astonishment at the wisdom and beneficence of the Indian government, that these marvellous conquests have been gained, and these lasting benefits conferred upon their subjects, during a period checkered by the most desperate wars; when the very existence of the English authority was frequently at stake, and the whole energies of government were necessarily directed, in the first instance, to the preservation of their own national independence. During the growth of this astonishing prosperity in the Indian provinces, the Peninsula has been the seat of almost unceasing warfare. It has witnessed the dreadful invasion of Hyder Ali; the two terrible

Wonderful nature of this empire, won by so small a force.

Desperate wars during which this empire has arisen in the East.

wars with Tippoo Sultaun; the alternations of fortune, from the horrors of the Black Hole at Calcutta to the storming of Seringapatam; the long and bloody Mahratta wars; the Pindarree conflict; the Goorkha campaigns; the capture of Bhurtpore, and the murderous warfare in the Burmese Empire. During the seventy years of its recent and unexampled rise, twelve long and bloody wars have been maintained; the military strength of eighty millions of men, headed and directed by French officers, has been broken, and greatness insensibly forced upon the East India Company, in the perpetual struggle to maintain its existence. The Indian government has been but for a short time in the possession of its vast empire: twenty years only have elapsed since the Mahratta confederacy was finally broken; its efforts for a long period have been directed rather to the acquisition or defence of its territories than their improvement; and yet, during this anxious and agitated period, the progress of the sable multitude who are embraced in its rule has been unexampled in wealth, tranquillity, and public felicity.

It was a maxim with the Romans, from which Wars in which the empire was involved during the growth of the Indian power. they never deviated, not to undertake two great wars at the same period, but rather to submit even to insults and losses for a time than bring a second formidable enemy on their hands. Strongly as this principle is recommended, both by its intrinsic wisdom and the example of that renowned people, it is not always capable of being carried into execution; and the British were frequently compelled in Hindostan, by the pressure of native confederacies, to sustain the most formidable foreign conflicts, at a time when the resources of the monarchy were all required to sustain the fortunes of the state in the contests of European ambition. At the same time that the East India Company, with their brave and faithful sepoys, were successfully combating the immense and disciplined hordes of Hyder Ali and Tippoo Sultaun, the vast American colonies of England, directly ruled by Parliament, were severed from the empire without any considerable external aid, by the mere force of internal discontent; the dissatisfaction of Canada has more than once led to alarming collisions between the central government and the native French population; and the West India islands have been restrained only by the inherent weakness of a slave colony from breaking off all connexion with the parent state. The first rise of our Indian Empire was contemporaneous with the energetic administration of Chatham and the glories of the Seven Years' War: the moral courage and decided conduct of Hastings saved it from destruction, at the very time when the weakness and corruptions of Lord North's administration occasioned the loss of the North American colonies; the contest with the Mysore princes occurred at the same time as that with Revolutionary France, and "Citizen Tippoo" was not the least esteemed ally both of the Directory and the consular government, while the able and vigorous administration of Marquis Wellesley took place when Napoleon was commencing his immortal career in Europe; and Great Britain stretched forth her

mighty arms into the Eastern hemisphere, and struck down the formidable confederacy of the Mahratta princes, at the very moment when she was engaged in a desperate contest for her existence with the conqueror of Continental Europe.

It is an interesting object of inquiry, What was the form of government and system of foreign administration under which those astonishing triumphs were achieved by England in the Eastern hemisphere? Were these triumphs, as the Continental writers and the enemies of the East India Company assert, the result of a continual system of aggression on their part, like the wars of the Romans in ancient, or the conquests of Napoleon or of Russia in modern times; or were they, as their supporters maintain, forced upon them, much against their will, by native combinations and intrigues, which constantly gave them no other alternative but conquest or ruin?

It is observed by a French annalist, and quoted with approbation by the greatest of modern historians, that "in a light of precaution all conquest must be ineffectual unless it could be universal, since the increasing circle must be involved in a larger sphere of hostility."* There can be no doubt that this remark is well founded, and that it sufficiently explains the experienced impossibility which the British, like all other conquering nations, have felt of stopping short in their career, when once commenced, before they had reached the limits assigned by nature to their farther progress. From the time when they first became territorial sovereigns in the East, and a handful of Europeans ventured to rear the standard of independence among the sable multitudes of Asia, they had no alternative but to go on conquering, in a continually increasing circle, till they came to the snows of the Himalaya and the waves of the Indus. But while the British were, unquestionably, equally with the Romans or Napoleon, exposed to this necessity, yet there was a wide difference in their relative situations, and the consequent readiness with which they may be supposed to have embraced the career of conquest, thus in a manner forced upon them. Rome had an inexhaustible stock of vigour and capacity in the numerous bands of experienced soldiers whom she nourished in her bosom; and from the moment that they left the frontiers of the Republic, they subsisted at the expense of the allied or conquered states. France vomited forth a host of ardent, starving insolvents, to regenerate by plundering all mankind; and, borrowing from her predecessors in ancient times the maxim that war should be made to maintain war, experienced not less relief to her finances than security to her institutions, by providing either by death or victory for such a multitude of turbulent defenders. But England had a very different task to execute when she became involved in the task of subjugating Hindostan. The centre of her strength was situated eight thousand miles from the banks of the Ganges; a few thousand soldiers were all she could spare for Eastern from the pressure of Euro-

What were the causes of these extraordinary successes?

Conquest was forced upon the British by necessity, not adopted from inclination.

* Gaillard, quoted by Gibbon, c. 49, ix., 187.

pean or the dangers of American warfare; the power which was involved in Indian hostilities was a mere company of merchants, who looked only to a profitable return for their capital or a rise in the value of their stock, and dreaded nothing so much as the cost of unproductive warfare: for thirty years after they were involved in hostilities; so far from effecting any conquests, they were barely able to defend their own mercantile establishments from destruction; and every foot-soldier they transported from Europe to Hindostan cost thirty, every horseman eighty, pounds sterling. In these circumstances, it requires no argument to demonstrate that foreign aggression could not, in the first instance at least, have been voluntarily entered upon by the East India Company; and, in fact, the slightest acquaintance with their annals is sufficient to show that they stood in every instance, really, if not formally, on the defensive, and that it was in the overthrow of the coalitions formed for their destruction, or the necessary defence of the allies whom previous victory had brought to their side, that the real cause of all their Indian acquisitions is to be found.

When the English, in the middle of the eighteenth century, quitted their commercial establishments at Calcutta and Madras to engage in a perilous contest with the native powers of India, the chief potentates with whom they were brought in contact, either as allies or as enemies, were the following: In the northern parts of the Peninsula, on the banks of the Jumna and the Ganges, which is properly called Hindostan, the once dreaded empire of Timour had sunk into the dust, and the Mogul emperors, on their throne at Delhi, could with difficulty retain even a nominal sway over the powerful rajahs in their vast dominions. The most considerable of these was the Rajah of Bengal and Berar, whose dominions extended over the vast and fertile plains watered by the Ganges, and who boasted of thirty millions of inhabitants who acknowledged his authority. The next formidable potentate on the eastern coast, between Calcutta and Madras, was the Nizam, whose dominions embraced eleven millions of souls, and whose seat of government was Hyderabad. Dread of the Mahrattas, who lay contiguous to this state on the west, and the Sultan of Mysore, who adjoined it on the south, rendered the court of Hyderabad the firm and faithful ally of the East India Company. In the southern part of the Peninsula, the dominions of the Rajah of Mysore extended over a vast extent on the high table-land of Mysore, three or four thousand feet above the sea, and from his strong fortress of Seringapatam he gave the law to sixteen millions of brave men. This dynasty, however, was supplanted, about the same time that the British dominion was established on the banks of the Ganges, by that of Hyder Ali, a soldier of fortune, who usurped his dominions, and added to them various lesser states in its vicinity, and soon communicated to the whole the vigour of enterprise and the thirst for foreign dominion. With this great power serious and bloody wars were waged by the English for above thirty years.

Farther to the north, and on the western coast, the Mahratta confederacy governed a territory of vast extent and boundless resources, though their predatory and restless habits, which engaged them in constant wars with their neighbours and each other, kept the country in great part desolate, and blighted the fairest gifts of nature. If united, the Mahratta chieftains could bring two hundred thousand horsemen, long the scourge of Northern and Central India, into the field; but their constant quarrels with each other rendered it improbable that this vast force would be concentrated against any external enemy. The most renowned of these chieftains were the Rajah of Berar, Scindiah, and Holkar, each of whom could muster sixty thousand men, almost entirely cavalry. They acknowledged allegiance to the Peishwa, who was the head of their confederation, and from his seat of government at Poonah professed to execute treaties and issue orders binding on the whole confederacy; but his authority was little more than nominal, and each of these powerful chieftains took upon himself, without scruple, to make war and conclude alliances on his own account. A vast number of lesser chieftains occupied the intervening country, from the northern frontier of the Mahratta States to the Indus, which was inhabited by different races, the Seiks and Rajpoots, famed in every period of Indian history for their martial qualities, while, in the great Alpine ridge which separated Hindostan from Tartary, the Goorkha and Nepal tribes had found shelter, and maintained, amid forest-steeps and narrow vales, the indomitable valor which, in every part of the world, seems to be the peculiar attribute of the mountain race.

The first charter of incorporation of the East India Company was granted by Queen Elizabeth on the last day of the sixteenth century; but it was not for a hundred and fifty years that they became territorial sovereigns. During the long period that intervened from their first origin till the middle of the eighteenth century, they painfully and industriously pursued a pacific career, neither aspiring after foreign conquest nor accumulating any force to defend even their own factories from aggression. So humbled were their fortunes at this period, that in 1756, when the ferocious tyrant Surajee Dowlah invested and captured Calcutta, the destined Queen of the East, and now the abode of a million of inhabitants, the whole persons made prisoners amounted only to one hundred and forty-six! They were all confined, by his orders, in a dungeon not twenty feet square, with only one window, during an intensely hot night in June. Only twenty-four survived the dreadful suffocation which followed, among whom was Mr. Hollwell, the governor; but the indignation excited throughout England by that inhuman cruelty was unexampled: all classes were animated by a generous desire to avenge the sufferings of their countrymen; and from the horrors of the *Black Hole of Calcutta* the glories of our Indian empire may be said to have taken their rise.*

* Auber's India, i., 53, 54. Martin, vii., 10. Orme, ii., 71, 76.

Sketch of the principal Indian powers when the British Empire arose.

Origin and early history of the East India Company.

1756. Capture of Calcutta by Surajee Dowlah.

The East India Company, at that period, possessed an inconsiderable settlement at Madras, on the eastern coast of India, protected by a fort, called Fort George, and to it the distressed merchants at Calcutta despatched a deputation, earnestly soliciting succour. Fortunately, at that period, the hostilities which were hourly expected with France had caused a considerable body of British troops to be assembled in that city, which, from its comparative vicinity to Pondicherry, the principal seat of French power in the East, was most exposed to danger, and a detachment of nine hundred Europeans and fifteen hundred sepoys was forthwith despatched to restore the British fortunes at the mouth of the Ganges. This inconsiderable band seemed little qualified to combat the vast armies of the Mogul Nabob on the plains of Bengal; but it was under the direction of one of those heroes who appear at distant intervals in history, whose master minds acquire such an ascendancy over mankind as almost to command fortune, and from whose exertions, in circumstances the most adverse, unhopèd-for triumphs often proceed. In the end of December, 1756, COLONEL CLIVE appeared in the mouth of the Ganges, defeated the Mogul detachment sent to oppose his landing, retook Calcutta, and, disregarding the timid exostulation of the council, took upon himself the supreme direction of affairs. It soon appeared how essential the guidance of a chief of such personal and moral courage was to the salvation of our Indian possessions at that critical juncture. Surajee Dowlah in a few weeks returned with increased forces; but Clive stormed his camp and struck such terror into his troops that a treaty was concluded, by which Calcutta was restored to the company, and permission granted to fortify it. From that hour the territorial empire of England in India may be said to have been founded.*

Shortly after this important event, intelligence arrived in India of the commencement of hostilities between France and England, and the government of Calcutta received advices that Surajee Dowlah was preparing to join the former with all his forces. Clive instantly took his determination: he resolved to raise up Meer Jaffier, a renowned military leader in Bengal, to the viceroyship of that province, in the hopes that, owing his elevation to the British, he would be less disposed to join their enemies than the Nabob, who was already their inveterate enemy. Such a treaty was immediately concluded with Meer Jaffier, on terms highly favourable to the English; and shortly after hostilities commenced, by Colonel Clive marching with two thousand men against the French fort of Chandernagore, on the Hooghly, sixteen miles above Calcutta. This fort was soon taken, and several other forts reduced. At length, on the 22d of June, 1757, June, Clive, with his little army, then raised to 900 Europeans, 2000 sepoys, and six guns, came up with the vast array of Surajee, consisting of fifty thousand infantry, eight thousand cavalry, and fifty guns, under French officers. For the first and last time in his life,

Clive called a council or war: the proverb held good, and the council declined to fight;* but the English general consulted only his own heroic character, and led his troops against the enemy. The odds were fearful, but valour and decision can sometimes supply the want of numbers: the British were sheltered, in the early part of the day, by a high bank from the cannon-shot of the enemy; treachery and disaffection reigned in their ranks, and before Clive led his troops in their turn to the attack, the victory was already gained. The Nabob fled on his swiftest elephant; Clive remained master of the Indian camp, artillery, and baggage; and the fate of a kingdom as great as France, containing thirty millions of inhabitants, was determined with the loss of seventy men.†

The British ascendancy on the Ganges was now secured: Meer Jaffier, as the reward of his treachery, was saluted by the conqueror as Nabob of Bengal and Bahar; Surajee was soon made prisoner and slain, and his successor paid for the foreign aid which had gained him the throne, by the grant of an ample territory around Calcutta and the immediate payment of £800,000 as an indemnity for the expenses of the war. The Mogul emperor, alarmed at this formidable irruption of strangers into one of the provinces of his dominions, made an attempt to expel the intruders, and reinstate the former dynasty on the throne; but he was defeated by Meer Jaffier, aided by the company's forces; 22d Feb., 1760. the former was soon after deposed in consequence of his weak and tyrannical disposition, and succeeded by his natural son, Meer Cossim: the Moguls were finally routed by Major Carnac, and the French auxiliaries made prisoners; and the British proceeded from one acquisition to another, till, after several intrigues and revolutions in the native governments of Bengal, sometimes effected by the British influence,

Acquisition of territory by the company, and defeat of the Mogul emperor.

15th June, 1761.

* Clive stated, in his evidence before the House of Commons, "This was the only council of war I ever called, and if I had abided by its decision, it would have been the ruin of the East India Company." The same truth may be observed in all ages and in all transactions, civil and military, where vigour and decision are requisite to success. The shelter of numbers is never sought but by those who have not the moral courage to act on their own conviction: true intrepidity of mind never seeks to divide responsibility; in the multitude of the counsellors there may be safety, but it is safety to the counsellors, not the counselled.—See CLIVE's Evidence before the House of Commons, given in MILL's App. No. vi., and iii., 166.

He assigned the following reasons for his treaty with Meer Jaffier to dethrone Surajee Dowlah: "That, after Chandernagore was attacked, he saw clearly they could not stop there, but *must go on*; that, having established themselves by force and not by the consent of the Nabob, he would endeavour to drive them out again; that they had numberless proofs of his intentions, and some upon record; that he suggested, in consequence, the necessity of a revolution, and Meer Jaffier was pitched upon to be the Nabob instead of Surajee Dowlah." This is precisely the language and principles of Napoleon; this necessity of advancing to avoid being destroyed is the accompaniment of power founded on force in all ages. The British power in India was driven on to greatness by the same necessity which impelled the European conqueror to Moscow and the Kremlin; it is the prodigious difference in the use they made of their power, even when acquired by violence, which, hitherto at least, has saved them from the fate which so soon overtook him.—CLIVE's Evidence, *ut supra*, and MILL, iii., 162.

† Orme, ii., 171, 179. Mill, iii., 165, 169. Martin, viii., 17.

* Orme, ii., 127, 137. Auber, i., 60, 61.

sometimes forced upon them by the inconstancy of the Mohammedan princes, a great battle was fought at Buxar, in which the 23d Oct., 1764. Moguls were totally defeated, with the loss of six thousand killed and one hundred and fifty guns.*

This important victory decided the fate of Bengal: Lord Clive, who had returned to Europe in 1760, soon after was sent out again to Hindostan, and, foreseeing the necessity of the East India Company assuming the government of the whole of that province, if they would preserve their footing on the banks of the Ganges, insisted, as an indispensable preliminary, that its sovereignty should be ceded to the English power. The court of Delhi was too much humbled to be enabled to resist; and after a short negotiation the Mogul emperor signed a treaty, by which he resigned all sovereign claims over Bengal, and part of Bahar and Orissa, in consideration of an annuity of

£325,000 a year; Surajee Dowlah, the Vizier of Oude, was restored to all his dominions, on condition of being taken under British protection, and paying a tribute for the support of the subsidiary force stationed in his capital; while the claims of the family of Meer Jaffier were adjusted by the settlement of a pension of £660,000 on his natural son. Thus in the short space of ten years was the English power on the Ganges raised from the lowest point of depression to an unexampled height of prosperity and glory; the refugees from an insignificant mud-fort at Calcutta were invested with the sovereignty over 150,000 square miles and thirty millions of men; the frightful dungeon of the Black Hole was exchanged for the dominion of the richest part of India; and, in the extremity of human suffering, the foundations laid of an empire destined, in half a century, to overshadow the throne of Baber and Aurengzebe.†

While the genius of Clive, supported by the commanding spirit of Chatham and the resolutions of the local government, was thus spreading the British dominion on the banks of the Ganges, the English had to sustain a still more obstinate contest in the southern part of India. Madras, on the coast of Coromandel, was, so early as the year 1653, invested with the dignity of a presidency, though at that period its garrison was limited by an express resolution of the Court of Directors to ten men. This insignificant town was the object of fierce contests between the English and French in the middle of the eighteenth century: the war which broke out in Europe in 1744 was as warmly contested in the East as the West; and a strong French military and naval force besieged and took it in 1746, its weak garrison of two hundred soldiers being allowed to retire by capitulation. Clive, then a clerk in a mercantile house at Madras, first embraced the profession of arms at this siege, and, after the capture of the town, escaped in the disguise of a Moor to Fort St. David, a fortress sixteen miles dis-

tant, where the remnant of the British successfully made a stand, and the talents of the young soldier materially contributed to the defeat which followed of the French, seventeen hundred strong, by two hundred British soldiers. Madras continued in possession of the French till the peace of Aix-la-Chapelle in 1749, when it was restored to the English dominion. Although, however, the direct war between England and France was terminated by this treaty, yet the mutual jealousy of these powers led to the continuance of a smothered and ill-disguised hostility in the East; the rival potentates struggled for the ascendancy in the councils of the Carnatic, a vast district, five hundred miles in length and a hundred in breadth, stretching along the coast of Coromandel, comprising the dominions and dependencies of the Nabob of Arcot. For several years the skill and address of M. Dupleix, the French commander, prevailed; but at length the daring courage of Colonel Clive, and the diplomatic ability of Major Lawrence, counterbalanced his influence. This, however, was more than counterbalanced in the Deccan, where M. Du Bussy had gained firm possession of an extensive district, six hundred miles in length, and yielding a million sterling of revenue for the French crown.*

No sooner had hostilities broken out a second time in Europe between France and England, in 1756, than the cabinet of Versailles made a strenuous effort to root out the British settlements on the coast of Coromandel.

The expedition fitted out from Pondicherry, the chief French stronghold, for this purpose consisted of eight thousand men, of whom more than half were Europeans, under Lally; and after capturing Fort St. David, to which the British had retired on the former war, besieged Madras in form, and the garrison, consisting of eighteen hundred European and two thousand sepoy troops, had to sustain a variety of desperate assaults, almost without intermission, for two months. At length the siege was raised, when the brave garrison were nearly reduced to extremities, by the arrival of the English fleet with six hundred fresh troops. Lally retired precipitately, and the British immediately carried the war into the enemy's territories. Colonel, afterward Sir Eyre Coote, invested and took the important fortress of Wandimash in the Carnatic; and Lally, having collected all his forces to regain that stronghold, was met and totally defeated by Coote, with 6000 men, who made

General Bussy and several of the ablest French officers prisoners, and took twenty pieces of cannon. This great victory proved decisive of the fate of the French power in India. Lally was soon after shut up in his capital, after losing all the detached forts which he held in the province: he was closely blockaded by sea and land by the victorious armies and fleets of England; and at length, after a protracted siege of eight months, in which the gallant Frenchman exerted all the resources of courage and skill to avert his fate, his resources were exhausted; he was compelled to capit-

* Orme, ii. 347, 365. Auber, i., 90, 94.

ulate, and in the middle of January the British standards were hoisted on the towers of Pondicherry.*

The downfall of the French power in India first brought the English into contact with a still more formidable enemy than the ambitious rivals who had so long disputed with them the palm of European ascendancy. On the high tableland of Mysore, elevated three or four thousand feet above the level of Madras, are to be found a race of men, very different from the inhabitants of the level plains of India, breathing a purer air, hardened by a cooler temperature, inured to more manly occupations. The inhabitants of Mysore are bold, restless, and impetuous, roving in disposition, predatory in habit, warlike in character, whose fierce poverty had for ages "insulted the plenty of the vales beneath." HYDER ALI was originally a private soldier in the army of the rajah of this district, and he received the command of three hundred men, in consequence of his gallantry at a siege in one of the hill forts of a neighbouring rajah. He was one of those domineering characters whom nature appears to have formed to command, and who, in troubled times, so often make their way, despite every obstacle, to the head of affairs. So illiterate as to be unable either to read or write, he was yet possessed of the ambition to desire, the daring to seize, and the capacity to wield supreme power; and the natural sagacity of his mind more than supplied what, in others, is the fruit of lengthened study, or the dear-bought result of the experience of the world.† Active, indefatigable, and intrepid, he fearlessly incurred danger and underwent fatigue in the pursuit of ambition: liberal of money, affable in manner, discerning in character, he soon won the affections of his followers, and attracted to his standards that host of adventurers who, in the East, are ever ready to swell the trains of conquest: faithless in disposition, regardless of oaths, unscrupulous in action, he was distinguished by that singular mixture of great and wicked qualities which in every age, from the days of Cæsar to those of Napoleon, has marked the character of those who raise themselves amid blood and tumult from a private station to the command of their country. He appeared at that era, ever so favourable to usurpers, when the established government is falling to pieces from the weakness and vices of its possessors, and the experienced evils of anarchy at once prepare the throne for an audacious soldier, and induce men to range themselves in willing multitudes under his banners. His career began as a subaltern at the head of two hundred foot and fifty horse; but he was soon vested with the command of the important fortress of Dindigul, and rapidly attracted numbers to his standard, by the success of his operations and the boundless license which he permitted to his followers in plunder-

ing the adjacent territories. He experienced many reverses, but rose superior to them all, and went on from one acquisition to another, till he had entirely subverted the ancient government, seized the great commercial city of Bednore, with its treasures, estimated at twelve millions sterling, placed himself on the throne of Seringapatam, and established his authority over almost the whole southern parts of the Indian Peninsula.*

Hyder had established amicable relations with the French in the Carnatic during the period of their influence in India; but the early destruction of their power after the commencement of his importance prevented any rupture for a number of years from taking place. At length, however, the growing importance of the Mysore usurper on the one hand, and the preponderating strength of the company on the other, necessarily led these two great powers into collision: hostilities with Hyder were resolved on, and, as a precautionary measure, a treaty offensive and defensive was concluded with the Nizam, a rajah whose dominions were more immediately exposed to his incursions, by which Lord Clive engaged to support him, if attacked, with a considerable body of European and sepoy troops. The directors at home, less impressed than the authorities on the spot with the indispensable necessity of advancing in power if they would avoid destruction, evinced the utmost repugnance at this treaty, and distinctly foretold that, if offensive wars were once engaged in, the British would be drawn on from one conquest to another, till they could find no security but in the subjection of the whole, and would be involved in destruction by the very magnitude of their acquisitions.† But ere their pacific instructions could reach their destination the die was already cast, and the dreadful war with Hyder Ali had commenced.‡

Within a few weeks after its opening, the British were rewarded for their aggression by the defection of their faithless ally the Nizam, who deserted to the Mysore chief with all his forces; and at the same time intelligence was received that he had accommodated all his differences in the north with the Mah-rattas, so that the confederacy which the English had projected against Hyder was now turned against themselves. The united forces of Hyder and the Nizam, forty thousand strong, approached Madras, and ravaged the country up to the very gates of

First rupture between the British and Hyder.

First campaigns with him, and early disasters.

Aug., 1767

* Orme, ii., 480, 724. Martin, viii., 43, 44. Auber, i., 102, 104.

† He was entirely ignorant of arithmetic; but such was the power he possessed of mental calculation, that he could outstrip, in arriving at a result even of complicated figures, the most skilful arithmeticians; and none of his followers could deceive him in his estimate of the amount of the plunder which should be brought into his treasury.—MILL, iii., 407.

* Wilks's Historical Sketches, 240, 449, 472. Mill, iii., 404, 417. Martin, viii., 46, 47. Auber, ii., 112, 115.

† "If once we pass the bounds of defensive warfare, we shall be led from one acquisition to another, till we shall find no security but in the subjection of the whole, which, by dividing your force, would lose you the whole, and end in our extirpation from Hindostan." And again, in another despatch, "We utterly disapprove and condemn offensive wars." The same principles were constantly followed by the Court of Directors, both during the administration of Warren Hastings and Marquis Wellesley; but these great statesmen early perceived that it was in vain for a handful of foreigners to stop short in the career of conquest, and that, like Napoleon, they were constantly placed in the alternative of universal dominion or total ruin.—Directors' Despatch, 22d April, 1768; AUBER, i., 223-226.

‡ Mill, iii., 414, 470. Auber, i., 249.

the fortress; and, though Colonel Smith, with the British and sepoy troops, defeated them with the loss of sixty pieces of cannon, want of cavalry prevented him from obtaining any decisive success in the face of the innumerable squadrons of the Mysore horse. The hostile incursion was repeated in the following year, when he laid waste the company's territory in so savage a manner, that, like the countries desolated by Timour or Genghis Khan, nothing remained but bleached skeletons and smoking ruins to attest where the dwellings of man had been. In the midst of these successes, Hyder opened a communication with the French authorities of Pondicherry, to whom he announced the approaching destruction of the English power in the Peninsula; while the East India directors at home, panic-struck by the magnitude of the disasters already incurred, and the interminable prospect of wars and difficulties which opened before them, renewed in earnest terms the necessity of resuming the now almost hopeless prospect of effecting an accommodation. At length he struck a decisive blow. Sending all his heavy cannon and baggage home from Pondicherry, which during his incursions he had twice visited to confer with the French, he put himself at the head of six thousand of his swiftest horse, drew the English army by a series of able movements to a considerable distance from April, 1769. Madras, and then, by a rapid march of a hundred and twenty miles in three days, interposed between them and that capital, and approached to Mount St. Thomé, in its immediate vicinity. The council was filled with consternation: although the fortress could have held out till the arrival of the English army, the open town and villas in its vicinity were exposed to immediate destruction, and they gladly embraced the overtures of accommodation which, like Napoleon, he made in the moment of his greatest success, and concluded peace on the invader's terms. By this treaty it was provided that both parties should make a mutual restitution of their conquests, and that, in case of attack, they should afford each other mutual aid and assistance.*

The principal object of Hyder in concluding thus suddenly this important treaty was to obtain for his usurped throne the countenance of the English power: the same motive which was Napoleon's inducement, immediately after obtaining the consular power, in making proposals of peace to Great Britain. He soon after, accordingly, made a requisition for the junction of a small body of English soldiers to his forces, in order to demonstrate to the native powers the reality of the alliance. The company's affairs received so serious a shock by this inglorious treaty, that their stock fell at once sixty per cent. Hyder, some years afterward, became involved in wars with his powerful northern neighbours, the Mahrattas, in which he was at first reduced to great straits, and he made an earnest requisition for assistance to the company in terms of the treaty of 1769; but the Madras council contrived, on one pretence or another, to elude the

demand, to the inconveniences of which they were now fully awakened. July, 1776. These repeated refusals excited great jealousy in the breast of the Mysore chief, the more especially as he was well aware that the English had, in the interval since the cessation of hostilities, greatly augmented their army, especially in cavalry, in which it had formerly experienced so lamentable a deficiency, and that they had now thirty thousand well-disciplined men in the presidency. Accordingly, in June, 1780, he descended into the Carnatic, at the head of the most powerful and best-appointed army which ever had appeared in India, consisting of twenty thousand regular infantry and seventy thousand horse, of whom nearly one half were disciplined in the European method. So suddenly and with such secrecy were his measures taken, that the dreadful torrent was in motion before the English were so much as aware of its existence; and the government of Madras were apprized of the approach of the enemy for the first time by vast columns of smoke rising from burning villages in the Carnatic, which, converging from different directions, threatened to wrap the capital in conflagration.*

The success of Hyder in this tremendous inroad was almost equal to that of Great successes of Hyder in Calcutta twenty-four years before. the Carnatic. With a degree of daring and military skill which rivalled that of Napoleon himself, he interposed with his whole forces between the two English armies, the one commanded by Colonel Baillie, the other by Sir Hector Monro, who were approaching each other, and only six miles distant; overwhelmed the former, when caught in ambuscade, by the multitude and vehement charges of his horse, literally trampling the English infantry under foot with his terrible squadrons and ponderous elephants,† and compelled the latter to retreat, and leave open the whole 3d Nov., 1780, fortresses of the Carnatic to his attacks. The Indian chief was not slow in following up this extraordinary tide of success: Arcot was speedily reduced; the whole open country ravaged, and siege laid to Wandimash, Vellore, Chingle-

* Martin, viii., 47, 48. Auber, i., 540, 579. Mill, iv., 145, 153.

† The valour displayed on this occasion by Colonel Baillie with his little band of followers, consisting only of 400 European and 2000 sepoys, never was exceeded even in the glorious fields of Indian warfare. Surrounded on all sides by the countless squadrons of Hyder's horse, torn in pieces by a terrible fire from sixty pieces of cannon, borne down by the weight and fury of the armed elephants, they yet long resisted with vigour such as more than once balanced the fortunes of the day, and threw Hyder into such perplexity that, but for the advice of Lally, he would have drawn off in despair. The accidental explosion of two ammunition-wagons early deprived them of their reserve ammunition; but, nevertheless, they continued the combat with heroic resolution to the last, forming a square which repelled thirteen different attacks of the Mysore horse, the men raising themselves, in many cases, from the ground to resist the enemy with their bayonets, while the officers kept them at bay with their swords. Two hundred were made prisoners, for the most part desperately wounded, including the commander himself and his principal officers. They owed their lives to the humane interposition of Lally and the other French officers in the service of Hyder, who also did all in their power to mitigate the horrors of the captivity, more terrible far than death, which they afterward underwent in the Mysorean dungeons.—See *Narrative of the Sufferings of those who fell into Hyder's hands after the battle of Conjeeram*, Sept. 10, 1780. *Mem. of War in Asia*, ii 102-188. MILL, iv., 185, 186.

* Mill, iii., 414, 424. Auber, i., 249, 250.

put, and all the strongholds of the Carnatic. Parties of the Mysorean horse approached to the gates of Madras: the whole villas in its vicinity were deserted, and preparations were even made in the presidency for crossing the surf at the bar and abandoning the Carnatic forever.*

It is invariably on a crisis of this kind that the really great acquire an ascendancy: the timid shrink from responsibility, the multitude clamour for submission; the brave and intrepid stand forth as the deserving leaders of mankind. The council of Madras, in the last extremity, applied to the government of Calcutta for aid; and WARREN HASTINGS was at its head. Instantly summoning up all his resources, he rose superior to the danger: despatched Sir Eyre Coote, with five hundred Europeans and an equal number of sepoys, to the succour of Madras, Nov. 7th, 1780.

and superseding the council, whose improvidence or incapacity had brought the public fortunes to such a pass, took upon himself the supreme direction of affairs both in his own and the sister presidency. Nothing could exceed the disastrous state of affairs when Sir Eyre Coote now took the field against Hyder. His whole force did not exceed seven thousand men, of whom only one thousand seven hundred were Europeans; and he had to oppose above a hundred thousand enemies, of whom eighty thousand were admirable horse, and three thousand French auxiliaries who had recently landed from Europe, in hopes, by the aid of so renowned a chieftain, of restoring their fallen fortunes in the East. By a conduct, however, at once prudent and intrepid, he succeeded in re-establishing affairs in the Carnatic: the sieges of Wandimash, Vellore, and the other beleaguered fortresses, were raised by Hyder, at the approach of this new and more formidable enemy; and at length, after a variety of operations attended with various success, a decisive battle was fought between

the opposing forces on the seacoast near Porto Novo, where the English had proceeded, in order to stop the incursions of the Mysoreans in the direction of Cuddalore. The contest lasted six hours, and success was for a long period so nearly balanced that the whole reserves of the English were brought into action; but at length, by incredible exertions, Hyder's forces were repulsed at all

points, and driven off the field in such confusion, that, if Sir Eyre Coote had possessed an adequate force of cavalry, he would have been involved in total ruin.†

This great success, however, was balanced by a bloody action fought on the very ground where Baillie had so recently been defeated, in which, although neither party could boast decisive success, the English, upon the whole, were worsted, and Hyder, as they retreated during the night, had good ground for proclaiming it to all India as a decided victory. The affairs of Madras were now reduced to extremities: Lord Macartney, who had just arrived there as gov-

ernor, in vain made proposals of peace to the victorious chief; another murderous and indecisive action took place in the end of September; there was not a rupee in the treasury, nor the means of fitting out an additional soldier; the supreme government at Calcutta was as much straitened in finances, in consequence of a burdensome war with the Mah-rattas, as the Madras presidency, and nothing but the unconquerable firmness and energy of Mr. Hastings's administration preserved the affairs of the company from total ruin. By his indefatigable efforts, the resources of Lord Macartney were so much augmented that his lordship was enabled, in November, to undertake the important enterprise of attacking Negabatam, a stronghold of Hyder's on the seacoast which gave him an easy entry into the Carnatic; and with such vigour were the operations conducted, that in a few weeks the place was taken, and the garrison of seven thousand men made prisoners. The British, upon this, regained their superiority over the enemy in the field, and Sir Eyre Coote, taking advantage of it, pushed on and relieved Vellore, to the infinite joy of the garri-

son, who had been sixteen months closely blockaded, and were then reduced to the last extremities. Sir Eyre Coote, whose valour and conduct had done so much towards the re-establishment of affairs in the Carnatic, soon after reduced Chittor and drove the enemy entirely out of the Tanjore. He afterward fought, with checkered success, several other actions with his old antagonist, Hyder. Colonel Braithwaite, with two thousand men, was totally defeated by Tippoos SAIB, Hyder's son. at the head of ten thousand horse

and twenty pieces of cannon, on the banks of the Cole River in the Tanjore, and the humane interposition of Lally and the French auxiliary officers alone preserved the prisoners from destruction; while, after a bloody action, Hyder in person was repulsed by Sir Eyre Coote, near Arnee, a few months after. This was the last contest between these two redoubtable antagonists: Sir Eyre was soon after obliged, by bad health, to return to Calcutta, and Hyder, in the midst of the most active operations, in conjunction with the French fleet of twelve sail of the line, which had arrived off the coast, was summoned to another world, and died at Chitore at the advanced age of eighty-two.*

Peace had been concluded between the Bombay government and the Mahrattas in the May preceding, which enabled the governor-general to assist the Madras presidency with large succours; and offensive operations were commenced at all points against Tippoo, who had succeeded to his father's dominions, and all his animosity against the English government. The contest, however, was still extremely equally balanced, and the government at Madras was far from exhibiting the unanimity and vigour which the importance of the occasion demanded. In vain Lord Macartney, who was aware of the slender tie by which Oriental armies are held together, urged General Stuart, who had suc-

Farther disasters stemmed by the energy of Mr. Hastings. Death of Hyder.

* Mill, iv., 168, 171. Martin, viii., 48, 49. Auber, i., 580, 582. † Mill, iv., 224, 228. Auber, i., 624, 626.

* Auber, i., 600, 631. Mill, iv., 210, 225.

ceeded Sir Eyre Coote in the command of the army, to take advantage of the consternation produced by the death of Hyder and absence of Tippoo, and instantly attack the enemy. The precious moments were lost : dissension broke out between the civil and military authorities, and Tippoo joined his army and established himself on his father's throne in the beginning of January. He was recalled, however, to the centre of his dominions, obliged to evacuate all his father's conquests in the Carnatic, and abandon and blow up Arcot, in consequence of the appearance of a formidable enemy in the vitals of his power. The Bombay government, having considerable disposable forces, in consequence of the Mahratta peace, had detached a powerful body, under Colonel Humberstone and General Matthews, into the Mysore country. These enterprising officers carried Onore by storm, on the seacoast, mounted the great pass called the Hussaingurly Ghaut, four thousand feet high, surmounted by a road slowly ascending through cliffs and precipices for five miles, drove the enemy from all the batteries and forts, hitherto deemed impregnable, by which it was defended, and rapidly advancing along the table-land of Mysore, at the summit made themselves masters of the rich city of Bednore, with a vast treasure, by capitulation, carried Ananpore and Bangalore by assault, and spread terror throughout the whole centre of Tippoo's dominions.*

This formidable irruption completely relieved the Carnatic, which had hitherto been almost exclusively the seat of hostilities, from the invasion by which it had been for a series of years so cruelly ravaged, and by depriving Tippoo of the treasure at Bednore, amounting to above a million sterling, severely crippled his power; but it led, in the first instance, to a cruel and unexpected reverse. The magnitude of the spoil taken at Bednore threw the apple of discord among the victors: General Matthews refused to devote any portion of it to the pay of the troops, though they were above eighteen months in arrear; Colonel Humberstone and several of the leading officers threw up their commands, and returned to lay their complaints before the government at Bombay; the army was ruinously dispersed to occupy all the towns which had been taken, and, in the midst of this scene of cupidity and dissension, Tippoo suddenly appeared among them at the head of fifty thousand men. Matthews, with two thousand infantry, was defeated before Bednore, and soon after forced to surrender in that town. The prisoners were put in irons, marched off, like felons, to a dreadful imprisonment in the dungeons of Mysore; the whole towns taken by the British in the high country were regained, and the remnant of their forces, driven down the passes, threw themselves into the important fortress of Mangalore on the seacoast below the Ghauts, where they were immediately invested by the victorious troops of the sultan.†

The governments of Madras and Bombay, alive to the vital importance of withdrawing Tippoo's attention from this siege by diversions

in other parts of his dominions, put in motion two different expeditions from the Malabar and Coromandel coasts, into the country of Coimbatore, in the centre of his do-

Siege of Mangalore raised by the British invasion of Mysore.

minions, and endeavoured to stir up a civil war there by supporting the cause of the deposed Rajah of Mysore, whom Hyder had dispossessed. This project proved entirely successful. Colonel Fullarton, who commanded the southern army, acted with great vigour and intelligence, reduced Palacatcherry, one of the strongest places in India, commanding an important pass on the seacoast, made himself master of Coimbatore on the high road to Seringapatam, the centre of the sultan's power, and menaced that capital itself. At the same time the northern army made considerable progress on the other side, and both, converging towards the capital, had the conquest of Seringapatam full in view. The superiority of the British forces in the field was now apparent; the conclusion of a peace between France and England, of which intelligence had lately arrived in India, had deprived Tippoo of all hope of European aid, and the gallantry of the brave garrison of Mangalore had baffled all the efforts of his vast army, and exposed them to dreadful losses by sickness during the rainy months. Discouraged by so many untoward circumstances, the bold spirit and inveterate hostility of the sultan at length yielded: after several insincere attempts at an accommodation, a real negotiation was set on foot in the close of 1783; and though the pacification came too late to save Mangalore, the brave garrison of which, after sustaining a siege of seven months against sixty thousand men, had at length been forced by famine to capitulate on the honourable terms of marching to the nearest English territories with all their arms and accoutrements, yet it was in the end concluded, and delivered the English from the most formidable war they have ever sustained for the empire of the East.*

Which leads to a peace.

On the 11th of March, 1784, peace was concluded on the equitable terms of a mutual restitution of conquests.

March 11, 1784.

It is seldom, says Gibbon, that the father and the son, he who has borne the weight and he who has been brought up in the lustre of the diadem, exhibit equal capacity for the administration of affairs. Tippoo inherited from his father all his activity and vigour, all his cruelty and perfidy, and, if possible, more than his hatred and inveteracy against the English; but he was by no means his equal either in military genius or in the capacity of winning the affections and commanding the respect of mankind. Above all, he was not equally impressed as his great predecessor with the expedience of combating the invaders with the national arms of the East, and wearing out the disciplined and invincible battalions of Europe by those innumerable horsemen in whom, from the earliest times, the real strength of Asia has consisted. Almost all Hyder's successes were gained by his cavalry: it was when severed from his infantry and heavy artillery, and attended only by a few fly-

Change introduced by Tippoo in the Indian armies.

* Mill, iv., 224, 231. Auber, iv., 624, 631.

† Mill, iv., 232, 239. Auber, i., 629, 632.

ing guns, that his forces were most formidable ; and it augments our admiration of the firmness and discipline with which the British and sepoy regiments under Coote withstood his assaults, when we recollect that they had to resist for days and weeks together, under the rays of a tropical sun, the incessant charges of a cavalry rivaling that of the Parthians in swiftness, equalling that of the Mamelukes in daring, approaching to that of the Tartars in numbers. But it was the very excess of the admiration which their great qualities awakened among the native powers which proved the ruin of Tippoo, and in the end gave the British the empire of the East. The officers of the Mysore court were so much struck by the extraordinary spectacle of a few thousand disciplined men successfully resisting the thundering charges of thirty or forty thousand admirable horsemen, that they conceived that the secret lay not in their character, but their tactics ; and naturally enough imagined that, if they could give to their own numbers and daring the discipline and steadiness of Europe, they would prove irresistible.

Hence the general adoption, not only in the Mysore, but the other Indian states, of the European tactics, arms, and discipline—a change of all others the most ruinous to their arms, and which, in subsequent times, has proved fatal to the independence of Turkey. Every people will find safety best in their own peculiar and national forces : the adoption of the tactics and military systems of another race will generally share the fate of the transplantation of a constitution to a different people ; it was neither by imitating the Roman legions that the Parthians defeated the invasions of Crassus and Julian, nor by rivaling the heavily-armed crusaders of Europe that Saladin baffled the heroism of Richard, nor by vanquishing the French infantry that Alexander forced Napoleon into the Moscow retreat. Light horse ever have been, and ever will be, the main strength of the Asiatic monarchies ; and when they rely on such defenders, and they are conducted by competent skill, they have hitherto proved invincible. It is the adoption of the system of European warfare which has uniformly proved their ruin. Hyder's horse, like the Parthian or Scythian cavalry, might be repulsed, but they could not be destroyed : the European squares toiled in vain after their fugitive squadrons, and, when worn out by incessant marching, found themselves enveloped by an indefatigable and long-invisible enemy. But Tippoo's battalions could not so easily escape : protection to their guns and ammunition-wagons required that they should stand the shock of regular soldiers. Asiatic vehemence strove in vain to withstand European valour : the strength of the East was lost without that of the West being gained ; and in the attempt to substitute the one for the other, the throne of Mysore fell to the earth.*

* In the war with Hyder, in 1768, Colonel Wood, who commanded the British forces, found it impossible to bring him to a pitched battle. In vain the Madras government tried to equip him with a light train of artillery and a body of chosen men, in hopes that, by the velocity of their advance, they might succeed in bringing him to action : all their efforts were defeated by the rapidity and secrecy of

Soon after the Indian empire of the East India Company had been engaged in these desperate contests for their very existence on the plains of the Carnatic, the statesman whose firmness and ability had brought them through the crisis was exposed to an unparalleled persecution from the people on whom he had conferred so inestimable a benefit. In the confusion and vicissitudes of an empire thus suddenly elevated to greatness in a distant hemisphere, without any adequate restraint either on private cupidity or public ambition, many deeds of injustice had been committed, many private fortunes made by means which would not bear the light, many acts of oppression perpetrated in the name, and sometimes under the pressure, of state necessity. All these misdeeds, inseparable from an empire rising under such peculiar and unparalleled circumstances, were visited on the head of Mr. Hastings : faction fastened on the East as the chosen field of its ambitious efforts, where the lever was to be found by which the inestimable prize of Indian opulence was to be wrested from the hands of its present possessors ; the sacred names of justice and equity, of religion and humanity, were prostituted as a cloak to the selfishness of private ambition ; and the whole efforts of a powerful party in the British islands devoted, for a long course of years, to the persecution of the statesman who had saved our empire in the East from destruction.

Early in 1782, the House of Commons, on the motion of Mr. Dundas, and under the influence of the Rockingham administration, adopted a resolution condemnatory of Mr. Hastings's administration, which led to a vote of recall by the East India Company ; and although the latter resolution was, after the death of the Marquis of Rockingham, the head of the ministry, rescinded by a large majority of the East India proprietors, yet the investigation resolved on by the Commons was prosecuted with increased vigour by the coalition ministry of Mr. Fox and Lord North, by which the former cabinet was succeeded. Mr. Hastings finally resigned his office, and returned to this country early

his movements. At length Wood, completely exhausted with the pursuit, hoping to rouse the sultan's pride, wrote him a letter, stating "that it was disgraceful for a great prince, at the head of a large army, to fly before a detachment of infantry and a few pieces of cannon, unsupported by cavalry." Hyder, however, returned the following characteristic answer : "I have received your letter, in which you invite me to an action with your army. Give me the same sort of troops that you command, and your wishes shall be accomplished. You will, in time, come to understand my mode of warfare. Shall I risk my cavalry, which cost a thousand rupees each horse, against your cannonballs, which cost two pence ? No ! I will march your troops until their legs shall become the size of their bodies ; you shall not have a blade of grass nor a drop of water. I will hear of you every time your drum beats ; but you shall not know where I am once a month. I will give your army battle, but it must be when I please, not when you please." Hyder was as good as his word. He laid waste the country, and, retiring before Colonel Wood, drew him on till his little army was exhausted with fatigue and privations, and in that weakened state attacked him, captured all his artillery, and reduced him to such straits that nothing but the opportune arrival of succours under Colonel Smith saved him from a total defeat. Had Tippoo's armies been formed on the same model, his descendants would, in all probability, have been still on the throne of Seringapatam.—See MARTIN, viii., 46, note.

Mr. Hastings's long-protracted prosecution.

May 30, 1782.

Proceedings in Parliament on the subject.

June 14.

Oct. 31.

Feb. 1, 1785.

in 1785, and in the following year the prosecution commenced under the administration of Mr. Pitt, who had succeeded to the helm. The impeachment was solemnly voted by a large majority of the Commons: proceedings soon after commenced with extraordinary solemnity before the House of Lords, and were protracted for many years in Westminster Hall, with a degree of zeal and talent altogether unexampled in the British Senate.*

Never before had such an assemblage of talent, eloquence, and influence been exerted in any judicial proceeding. The powerful declamation and impassioned oratory of Mr. Fox, the burning thoughts and thrilling words of Mr. Burke, the playful wit and fervent declamation of Mr. Sheridan, gave lustre to the progress of the prosecution; while the cool judgment and sagacious mind of Mr. Pitt interposed with decisive effect in the earlier stages of the proceedings against the accused.† During one hundred and thirty days that the trial lasted, diffused over seven years, the public interest was unabated: Westminster Hall was thronged with all the rank, and wit, and beauty of the realm; and though it terminated in his acquittal by a majority of eight to one on all the charges, yet the national mind was seriously impressed with the numerous accusations enforced with so much eloquence: his private fortune was almost ruined in the contest, and nothing but the liberality of the East India Company, who nobly supported him against such a torrent of obloquy with unshaken firmness, preserved the otherwise unbe-

friendied statesman from total ruin.* The sovereign of Hindostan, the man who might have placed himself on the throne of Aurengzebe, and severed the empire of the East from the British crown during the perils of the American war, was bowed to the earth by the stroke: he remained for twenty years in retirement in the country, and sank at last unennobled into the grave. Aug. 4, 1818.

But truth is great, and will prevail. Time rolled on, and brought its wonted changes on its wings. The passionate declamations of Mr. Burke were forgotten; the thrilling words of Mr. Fox had passed away; the moral courage of Mr. Pitt had become doubted in the transaction; but the great achievements, the far-seeing wisdom, the patriotic disinterestedness of Mr. Hastings had slowly regained their ascendancy over general thought; many of the deeds proved against him, it was seen, had been imposed on him by secret instructions, others originated in overbearing necessity; the poverty of the illustrious statesman pleaded eloquently in his favour; the magnitude of his services rose in irresistible force to the recollection; and a few years before his death he was made a privy councillor, from a growing sense of the injustice he had experienced. When he appeared, in 1813, at the bar of the House of Commons, to give evidence on the renewal of the company's charter, the whole members spontaneously rose up in token of respect to the victim of their former persecution; and when he was called from this checkered scene, his statue was, with general consent, placed by his unshaken friends, the East India Directors, among those of the illustrious men who had founded and enlarged the empire of the East.††

Bright, indeed, is the memory of a statesman

* The East India Company lent Mr. Hastings £50,000 for eighteen years, without interest, to meet the expenses of his trial, and settled on him a pension of £4000 for twenty-eight years, from June 24, 1785, being till the expiration of their charter; and it was continued on its renewal in 1813.—*Debates of Lords on Mr. Hastings's Trial*, 495; MILL, v., 230.

† Auber, i., 683, 697. Mill, iv., 40, 256. Parl. Hist. 1788, 1795.

‡ A few hours before Mr. Hastings's death, he wrote to the East India Directors, "I have called you by the only appellation that language can express me, 'Var Wooffadar,' my profitable friend; for such, with every other quality of friendship, I have ever experienced yours in all our mutual intercourse, and my heart has returned it, unprofitably, I own, but with equal sentiments of the purest affection. My own conscience assuredly attests me that I myself have not been wanting in my duty to my respectable employers. I quit the world and their service, to which I shall conceive myself, to the latest moment that I still draw my breath, still devotedly attached, and in the firm belief that, in the efficient body of directors, I have not one individual ill affected towards me. I do not express my full feelings: I believe them all to be kindly, generously disposed towards me; and to the larger constituent body I can only express a hope that, if there be any of a different sentiment, the number is but few; for they have supported me when I thought myself abandoned by all other powers from whom I ever thought myself entitled to any benefit. My latest prayers shall be offered for their service, for that of my beloved country, and for that, also, whose interest both have so long committed to my partial guardianship, and for which I feel a sentiment in my departing hours not alien from that which is due from every subject to his own."

In January, 1820, a proposition was submitted to the East India Directors by their chairman, Campbell Majoribank, Esq. After enumerating the great services of Mr. Hastings, he asked, "How were these great services rewarded? He was not allowed even to repose in dignified retirement; he was dragged forward to contend with public accusations,

* Auber, i., 683, 692. Mill, v., 40, 100. Parliamentary Deb., 1786.

† In the earlier stages of the proceedings against Mr. Hastings, Mr. Pitt voted with him, and, in consequence, a considerable part of the accusations were negatived by the House of Commons; and his friends looked forward with reason to a total absolution. Not only on several preliminary questions, but on the great question of the Rohilla war, he had the support of government, and these charges were negatived in the House of Commons by a majority of 119 to 67. But, in regard to the charge of extortion from the Rajah of Benares, he suddenly took part with the Whig prosecutors, stigmatizing the fine levied on that potentate—£500,000—as enormous and oppressive, and declaring, in regard to these transactions, "The conduct of Mr. Hastings had been so cruel, unjust, and oppressive, that it was impossible that he, as a man of honour or honesty, having any regard to faith or conscience, could any longer resist; and, therefore, he had fully satisfied his conscience that Warren Hastings, in the case in question, had been guilty of such enormities and misdemeanours as constitute a crime sufficient to call for an impeachment." This sudden and unexpected change of measure on the part of Mr. Pitt was decisive against Mr. Hastings, as it immediately brought the majority in the lower house against him; and it led, in consequence, to many vehement reflections on the conduct of the minister by the friends of the illustrious accused; and, without disputing that the fine was excessive, it must be allowed that it was imposed on a refractory delinquent, who had failed in the duty which his allegiance required; that it was determined on under the overbearing pressure of state necessity; that the exhaustion of the treasury, and the pressing dangers in the Carnatic, imperatively required an immediate supply of money, which could be obtained in no other way; that the funds thus acquired proved the salvation of India, by enabling Sir Eyre Coote to make head against Hyder, and were all applied by Mr. Hastings to public purposes; and that, if justice and not persecution had been the object of the House of Commons, it would have been better obtained by a vote of restitution or reparation from the English Legislature to the injured rajah, than by the adoption of vindictive proceedings against the statesman who, in this matter, did evil that good might come of it.—See *Parl. Hist.*, 1786, xxvii., 108-112; MILL, v., 55, 56; and WRAXALL'S *Mem.*, ii., p. 174, 201.

Ultimate
change of pub-
lic opinion on
the subject.

Reflections on the cruel injustice of this prosecution.

who has statues erected to his memory forty years after his power has terminated, and thirty after all the vehemence of a powerful faction, and all the fury of popular outcry had been raised to consign him to destruction. To how many men, once the idol of the people during the plenitude of their power, will similar monuments, after the lapse of such a period, be raised? Persecution of its most illustrious citizens, of the greatest benefactors of their country, has ever been the disgrace of free states: the sacrifice of Sir Robert Calder, who saved England from Napoleon's invasion; of Lord Melville, who prepared for it the triumph of Trafalgar; of the Duke of York, who laid the foundation of Wellington's victories; of Warren Hastings, who preserved the empire of the East, prove that the people of this country are governed by the same principles which consigned Themistocles to Asiatic exile, banished Aristides because it was tiresome to hear him called the Just, and doomed Scipio Africanus, the conqueror of Carthage, to an unhonoured sepulture in a foreign land. But the friends of freedom may console themselves with the reflection that, if popular institutions sometimes expose their best citizens to the effects of these occasional fits of national insanity, they furnish the only sure security for the ultimate triumph of just principles; that, if despotic power discerns more correctly the real character of its servants, it is liable to no external correction from the growing influence of equitable feelings after the decay of transitory passion; and that, if the historian of England, under other direction, would not have had to record the impeachment of the statesman who had saved its Eastern dominions from destruction, there would not have been permitted to him the grateful duty of contributing, against the united efforts of Whigs and Tories, against all the acrimony of selfish ambition, and all the fury of public passion, to rescue the memory of a great Eastern statesman from unmerited obloquy.

These frequent and interesting discussions on Indian affairs, however characteristic of the grievous injustice of the Bill. Its premature fate. which the efforts of party frequently inflict on individuals in all popular communities, were, however, attended with one important and salutary consequence—that it drew the attention both of government and the nation to the administration of our Indian dominions, and the absolute necessity of assuming a more direct control than could be maintained by a

and rewarded with two-and-twenty articles of impeachment. He (Mr. M.) would not enter on the proceedings which distressed and harassed the feelings of that great man: they were at an end, and the feelings which excited them and that great man himself were now no more; but this he thought himself allowed to say, that those proceedings were contrary to the practice and spirit of the laws of this happy nation."

It was unanimously resolved, "That, as the last testimony of approbation of the long, zealous, and successful services of the late Right Hon. Warren Hastings, in maintaining, without diminution, the British possessions in India against the combined efforts of European, Mohammedan, and Mahratta enemies, the statue of that distinguished servant of the East India Company be placed among the statesmen and heroes who have contributed, in their several stations, to the recovery, preservation, and security of the British power and authority in India."—See ACBER, I., 695, 696.

mere body of directors of a trading company over the numerous servants, civil and military, of their vast and growing possessions. This opinion, which had been strongly impressed upon the public mind by the serious and protracted disasters in the campaigns with Hyder in 1780 and 1781, was already general with all parties before the fall of Lord North's ministry; and when Mr. Fox succeeded to the head of affairs in 1783, all parties were already prepared for a great and important change in the government of our Eastern empire.* But the designs of that able and ambitious statesman far outstripped either the reason or necessity of the case. He proposed, in his famous India Bill, which convulsed the nation from end to end, and in its ultimate results occasioned the downfall of his administration, to vest the exclusive right of governing India in seven directors to be named in the act, that is, appointed by the Legislature under the direction of the ministry for the time. The vacancies in these commissioners were to be filled up by the House of Commons under the same direction. The ferment raised by this prodigious change in the country was unprecedented in the eighteenth century: Mr. Pitt, from the first, denounced it as tyrannical, unconstitutional, and subversive of the public liberties; the sagacious mind of George III. at once perceived that it would render the present ministers, to whom he was secretly hostile, irremovable in their places, and put Mr. Fox at the head of a powerful empire, an *impe-rium in imperio*, which would soon overshadow the British diadem. By the combined exertions of the crown and the Tory party this important innovation was defeated, after it had passed the lower house, by a small majority of nineteen in the House of Peers, and this defeat was immediately followed by the dismissal of Mr. Fox and his whole administration.†

The ground taken by the king and the Tory party against this celebrated bill was its unconstitutional tendency, by vesting the patronage of so large a portion of the empire in directors appointed, not by the executive, but the House of Commons; and it was this consideration which gave them the decisive majority which they obtained upon the dissolution of Parliament in the April following. Nevertheless, it is now apparent that, though at that period unperceived or unnoticed, the greatest danger of the proposed change would have arisen, not from this cause, but from the direct control thereby conferred over our Indian empire on the British Legislature. If the vacillating and improvident policy on many occasions forced even upon the resolute and clear-sighted mind of Mr. Pitt, by the unreflecting habits, and, on material questions, popular control of the House of Commons—and still more the total want of foresight in all financial measures since

Which occasions the downfall of his administration. Dec. 15, 1783.

Objections to which this bill was liable.

April, 1789.

* Mr. Pitt, in November, 1783, when the coalition ministry were still in power, called on Mr. Fox "to bring forward a plan, not of temporary palliation or timorous expedient, but vigorous and effectual, suited to the magnitude, the importance, and the alarming exigence of the case"—*Parl. Hist.*, xxiv., 129.

† *Parl. Deb.*, xxiv., 122, 195

the peace of Paris, on the part both of government and the Legislature, be compared with the steady rule, invincible firmness, and wise anticipations of our Indian government during the same period, no doubt can remain that the interest of the East would inevitably have been sacrificed by the change; that the ministerial directors, acting under the guidance of the House of Commons, could never have carried into execution those prompt and vigorous resolutions indispensable for the preservation of dominions so critically situated as those in Hindostan, and so far removed from the resources of the ruling state; and that no government under the direct control of a popular assembly would have been permitted to engage in those vast undertakings, or incur the expense of those gigantic establishments, which were necessary to ward off future danger, or obtain present success, over the immense extent of our Indian dominions.*

Although, however, Mr. Fox's India Bill was Mr. Pitt's India rejected, yet the numerous abuses Bill, which be- of our Indian dominions, as well comes a law. as the imminent hazard which they

had run during the war with Hyder Ali from the want of a firmly-constituted central government, were too fresh in the public recollection to permit the existing state of matters to continue. Mr. Pitt, accordingly, was no sooner installed in power than he brought forward an India Bill of his own, which, it was hoped, would prove exempt from the objections to which its predecessor had been exposed, and, at the same time, remedy the serious evils to which the administration of affairs in India had

hitherto been liable. This bill passed 13th Aug., both houses, and formed the basis of 1784.

the system under which, with some subsequent but inconsiderable amendments, the affairs of the East have been administered from that period down to the present time. By it the court of directors, appointed by the East India Company, remained as before, and to them the general administration of Indian affairs was still intrusted. The great change introduced was the institution of the *Board of Control*, a body composed of six members of the Privy Council, chosen by the king; the chancellor of the exchequer and one of the secretaries of state being two, in whom the power of directing and controlling the proceedings of the Indian Empire were vested. The duties of this board, which were very loosely defined, and which have come all to centre in the president, an officer who has become a fourth secretary of state for the Indian Empire, were defined to be, "from time to time to check, superintend, and control all acts, operations, and concerns which in any wise relate to the civil

or military government, or revenues of the territories and possessions of the East India Company." These powers were ample enough, but in practice they have led to little more than a control of the company in the more important political or military concerns of the East, leaving the directors in possession of the practical direction of affairs in ordinary cases. All vacancies in official situations, with the exception of the governor-general of India, governors of Madras and Bombay, and commanders-in-chief, which were to be filled up by the British government, were left at the disposal of the East India Directors. A most important provision was made in the institution of a secret committee, who were to send to India in duplicate such despatches as they might receive from the Board of Control, and in the establishment of the supreme government at Calcutta, with a controlling power over the other presidencies: a change which at once introduced unity of action into all parts of the Peninsula. It cannot be affirmed that this anomalous constitution will stand the test of theoretical examination, or that a distribution of supreme power between a governor-general and two subordinate governors in the East, and a board of control and body of directors in the British islands, gave any fair prospect either of unity of purpose or efficiency of action. Nevertheless, if experience, the great test of truth, be consulted, and the splendid progress of the Indian Empire of Great Britain since it was directed in this manner be alone considered, there is reason to hold this system of government one of the most perfect that ever was devised by human wisdom for the advancement and confirmation of political greatness.*

It soon appeared how much the vigour and efficiency of Indian administration had been increased by the important changes made in its central government. By Mr. Pitt's India Bill, all ideas of foreign conquest in the East had been studiously repressed, it having been declared that "to pursue schemes of conquest or extension of dominion in India are measures repugnant to the wish, the honour, and the policy of the nation." But this declaration, in appearance so just and practicable, differed widely from the conduct which extraneous events shortly after forced upon the British government; and, in truth, an extended view of human affairs, as well as the past experience of our Indian possessions, might even then have shown the impracticability of following out such a course of policy, and convinced our rulers that a foreign people, settled as aliens and conquerors on the soil of Hindostan, could maintain themselves only by the sword. In order to carry into execution the pacific views of government, a nobleman of high rank and character, Lord Cornwallis, was sent out by Mr. Pitt, who united in his person the two offices of governor-general and commander-in-chief, so as to give the greatest possible unity to the action of government; but no sooner had he arrived there than he discovered that Tippoo was intriguing with the other native powers for the subversion of

Arrangement with the British government for the increase of the British force in India.

* This is not the place to discuss the details of Mr. Fox's bill: but it does not appear to have been calculated to afford any practical remedy for most of the evils under which the administration of Indian affairs at that period laboured; and, accordingly, it is observed with great candour by Mr. Mill, whose leaning to the popular side is well known, "The bills of Mr. Fox, many and celebrated as were the men who united their wisdom to compose them, manifest a feeble effort in legislation. They demonstrate that the authors of them, however celebrated for their skill in speaking, were not remarkable for their powers of thought. For the right exercise of the powers of government in India not one new security was provided, and it would not be very easy to prove that any strength was added to the old."—MILL'S *British India*, iv., 480.

* See 24 Geo. III., c. 24. 26 Geo. III., c. 16. Auber, ii 1, 16. Parl. Deb., xxiv., 1085, 1215.

our Indian dominion; and, as a rupture with France was apprehended at that juncture, four strong regiments were despatched to India; and, as the company complained of the expense which this additional force entailed upon their finances, a bill was brought into Parliament by Mr. Pitt, which fixed the number of king's troops which might be ordered to India by the Board of Control, at the expense of the company, at eight thousand, besides twelve thousand European forces in the company's service.*

The wisdom of this great addition to the native European force in India, as well as the increased vigour and efficiency of the supreme government, speedily appeared in the next war which broke out. Tippoo, whose hostility to the English was well known to be inveterate, and who had long been watched with jealous eyes by the Madras presidency, at length commenced an attack upon the Rajah of Travancore, a prince in alliance with the British, and actually supported by a subsidiary force of their troops; and at first, from the total want of preparation which had arisen from the pacific policy so strongly inculcated upon the Indian authorities by the government at home, he obtained very great success, and totally subdued the rajah against whom he had commenced hostilities. Perceiving that the British character was now at stake in the Peninsula, and being well aware that a power founded on opinion must instantly sink into insignificance, if the idea gets abroad that its allies may be insulted with impunity, Lord Cornwallis immediately took the most energetic measures to reassert the honour of the British name. Fifteen thousand men were collected in the Carnatic under General Meadows, while eight thousand more were to ascend the Ghauts from the side of Bombay, under General Abercromby. So obvious was the necessity of this war, so flagrant the aggressive acts which Tippoo had committed, that, notwithstanding their general aversion to hostile measures, from the expense with which they were attended, and their recent declaration of pacific intentions, on this occasion both the English Parliament and the Court of Directors passed resolutions cordially approving of the conduct of Lord Cornwallis in the transaction.† Treas-

ties of alliance were at the same time entered into with the Peishaw and the Nizam, native powers, whose jealousy of the Mysore chief had been of long standing; and hostilities commenced, which were at first attended with checkered success: General Meadows having taken Caroor and other towns, and Tippoo having surprised Colonel Floyd, and burst into the Carnatic, where he committed the most dreadful ravages.*

The energies of government, however, were now thoroughly aroused. In December, 1791, Lord Cornwallis embarked in person for Madras; the Bengal sepoys were with great difficulty reconciled to a sea voyage, and great re-enforcements, with the commander-in-chief, safely landed in the southern presidency. It was resolved to commence operations with the siege of Bangalore, one of the strongest fortresses in Mysore, and commanding the most eligible pass from the coast to the centre of Tippoo's dominions. In the end of January the grand army moved forward: the important pass of Coorg, leading up the Ghauts, was occupied within a month after; Bangalore was invested in the beginning of March, and carried by assault on the 21st. Encouraged by this great success, Lord Cornwallis again pushed on direct to Seringapatam, although the advanced period of the season and scanty supplies of the army rendered it a service of considerable peril, which was increased rather than diminished by the junction, shortly after, of ten thousand of the Nizam's horse, who, without rendering any service to the army, consumed every particle of grass and forage within its reach. Still the English general continued to press forward, and at length reached the fortified position of the enemy, on strong ground, about six miles in front of Seringapatam. An attack was immediately resolved on, but Tippoo, who conducted his defence with great skill, did not await the formidable onset of the assaulting columns, and, after inflicting a severe loss on the assailants by the fire of his artillery, withdrew all his forces within the works of the fortress. The English were now within sight of the capital of Mysore, and decisive success seemed almost within their reach. They were in no condition, however, to undertake the siege: the supplies of the army were exhausted; the promised co-operation of the Mahrattas had failed; of General Abercromby, who was to advance from the side of Bombay, no advices had been received; and the famished state of the bullock train precluded the possibility of getting up the heavy artillery or siege equipage. Orders were therefore given to retreat, and both armies retired with heavy hearts and considerable loss of stores and men; but the opportune arrival of the advanced guard of the Mahratta contingent on the second day of the march, which at first caused great alarm, suspended the retrograde movement, and the army encamped, for the rainy season, in the neighbourhood of Seringapatam.†

* Auber, ii., 45, 65.

† It is remarkable that the most violent declaimer against this war in the House of Peers, as uncalculated for, inexpedient, and unjust, was Lord Rawdon, afterward Marquis of Hastings, who himself, in 1817, with much less provocation, was drawn into the great contest with the Mahrattas, which terminated so gloriously for the British arms. So dangerous is it to judge of distant transactions from party prejudice or preconceived European ideas.—See *Parl. Hist.*, 1791, xxix., 119–159. On this occasion Lord Forchester, the nobleman who opened the debate against the war, said, “I have proved that it has been the uniform policy of the directors and of the Legislature to avoid wars of conquest in India, and to confine the company to the limits of their present territories, and the management of their commercial interests.”—*Ibid.*, 133. In 1815, Lord Hastings, then Governor-general of India, observed, in a very valuable minute on India finance, “It was by preponderance of power that those mines of wealth were acquired by the company, and by preponderance of power alone could they be retained. The supposition that the British power could discard the means of strength, and yet enjoy the fruits of it, was one that would speedily and certainly be dissipated: in the state of India, were we to be feeble, our rule would be contemptible and a very short one.”—LORD HASTINGS'S *Minute on Revenue*, 15th Sept., 1815; AUBER, ii., 352.

* Auber, ii., 103, 111. *Parl. Hist.*, xxix., 119, 159. *Mill*, v., 257, 314.

† *Mill*, v., 314, 325. Auber, ii., 118, 121. *Wilks*, iii., 115, 146.

The attack on the capital of Mysore, however, was only suspended by this untoward event : in the autumn following, Lord Cornwallis was again in motion, having in the preceding months, after the termination of the rains, made himself master of several important forts which commanded or threatened his communications with the Carnatic. A most important blow was struck by a detachment of

British against a general of Tippoo's, who had taken post in the woods, near Simoga, in order to disturb the siege of that place, which was commencing, and who was defeated with the loss of ten thousand men : a disaster which led to the surrender of that fortress shortly after. Meanwhile Abercromby, with a powerful force, amply provided with all the muniments of war,

broke up from Bombay, surmounted, with incredible labour, the ascent of the Poodicherrum Ghaut, and was in readiness to take his part in the combined enterprise. In the end of January Lord Cornwallis's army moved forward towards Seringapatam, no longer depending on the doubtful aid of the Mahratta chiefs, but presenting a vast array of native British and sepoy troops, such as had never before been presented on the plains of India. Eleven thousand English, thirty thousand regular sepoys, with eighty-four pieces of cannon, exhibited a force worthy of contending for the empire of the East. Nor was this force, considerable as it was, disproportioned to the magnitude and hazard of the enterprise in which they were engaged ; for not only were the ramparts of Seringapatam of surpassing strength, but Tippoo lay in front of them at the head of fifty thousand regular infantry and five thousand horse, in a strong position, defended by numerous fortifications, and one hundred and fifty pieces of heavy artillery.*

No sooner had Lord Cornwallis reconnoitred the enemy's position than he resolved to commence an attack, and the assault was fixed for that very night. The army was formed in three divisions : his lordship in person commanded the centre, General Meadows the right, Colonel Maxwell the left. Seringapatam is situated on an island formed by two branches of the River Cavery, which enclose between them a space four miles in length and a mile and a half in breadth. On the eastern portion of the island Tippoo had constructed, without the walls, but within reach of them, in case of disaster, a strongly-fortified camp supported by numerous fieldworks and batteries, and without this stronghold, beyond the river, the bulk of the sultan's army was encamped, on elevated ground, covered on one side by a large tank, on the other by a small river which falls into the Cavery, and supported on the side next the enemy by six large redoubts. Three hundred pieces of cannon were mounted on the interior fortifications and the walls of the fortress, besides one hundred and fifty on the exterior line, and a thick hedge, formed of bamboos and prickly shrubs, connecting the works, formed a most serious obstacle

to the attacking columns, from presenting no resistance to cannon-shot, and being altogether impervious to foot-soldiers. To attack such a force, so posted, in the dark, and subject to the chances and confusion of a nocturnal assault, must be considered one of the most daring deeds even in the annals of Indian heroism.*

At eight o'clock the order was given to march. The evening was calm and serene, the moon shone bright, and the troops advanced swiftly and steadily, but in perfect silence, while the reserve, with the whole artillery and ammunition-train, struck their tents and stood to their guns in breathless anxiety. The surprise was complete : so admirably was silence preserved that the centre came upon the enemy wholly unawares, forced their way through the bound hedge, and, carrying everything before them, pushed through the camp, passed the ford of the Cavery, crossed over to the opposite side, and taking the batteries, which had opened their fire upon the other division in the inner intrenchment in the rear, drove the gunners from their pieces. The right wing, under General Meadows, also cut through the bound hedge about half past eleven, while the left, with ease, carried the Carighaut Hill : the roar of artillery was heard on all sides, while the flash of musketry now illuminated the whole extent of the horizon. Panic-struck at the celerity and vigour of the attack, which had penetrated their works in so many different quarters at once, the enemy gave way on all sides, when fortune was nearly restored by one of those accidents to which all nocturnal attacks are subject, and the centre, with its noble commander, was nearly cut off. The right wing, under Meadows, had been grievously impeded in its march within the bound hedge by several rice enclosures and watercourses, which could not be crossed without great difficulty, and, in consequence, for two hours he was unable to reach the advanced point to which Cornwallis had arrived in the island in the early part of the night. Meanwhile, Tippoo's troops began to recover from their consternation, and as day dawned, and they perceived that the body which had penetrated into the centre of their intrenchments did not exceed five thousand men, they closed in on all sides, and commenced, with overwhelming numbers, an attack upon this band of heroes.†

Preparations for a decisive battle under the walls of Seringapatam, Feb. 6, 1792.

The British troops, however, animated by the presence of their commander-in-chief, made a gallant defence : the repeated and furious onsets of the enemy were repulsed by a rolling fire, enforced, when necessary, by the bayonet, and at length, when daylight dawned, and the guns of the fortress began to be turned upon them, they retired towards Carighaut Hill in perfect order, and took post beyond their destructive range. Meanwhile, the troops of Meadows having by a mistake of their guides been brought close to the Mosque redoubt, which was meant to have been passed without molestation, transported by the ardour of the moment, commenced an assault, which, at first, was repulsed with heavy loss ; the troops, however,

Dangers of Cornwallis, and his ultimate rescue.

* Mill, v., 360, 361. Wilks, iii., 172, 180.

returned to the charge, and that formidable work was at length carried amid cheers which were heard over the whole camp. Animated by the joyful sound, Cornwallis's men stood their ground with invincible firmness, while Meadows was no sooner disengaged from the perilous contest into which he had been unwillingly drawn, than he pressed on with renewed alacrity to the relief of the main body, which he was well aware, from the weight of the firing in that direction, must be engaged in a very serious contest; and, as morning broke, the two divisions met and mutually saluted each other as victors.* The victory was complete. Out of six of the enemy's redoubts, four were in the hands of the victors: Tippoo, in an early part of the night, had taken refuge in his capital; the intrenched camp, with above a hundred pieces of cannon, was abandoned; four thousand men had fallen and nearly twenty thousand more had disbanded and left their colours, while the loss of the victors did not amount to six hundred men.†

On the following morning Tippoo made a desperate attempt to regain the sultan's redoubt, which was so near the capital as to be commanded in rear by its guns; and a body of two thousand chosen horse came on with appalling cries to storm the gorge, before the slender garrison, consisting only of a hundred and fifty men, could barricade it; but they were repulsed by the steady gallantry and ceaseless fire of this heroic band. Upon this the enemy retreated entirely within the fort, and soon after the army obtained an important accession of strength by the arrival of Abercromby with two thousand Europeans and four thousand sepoy troops. Operations were now commenced in form against the fortress: the first parallel was begun Feb. 18. and completed on the night of the 18th; the splendid gardens and shady walks of the country palace, in which the sultan so much delighted, were destroyed, and the palace itself converted into a great hospital; and at length, when the breaching batteries were in readiness and armed with fifty pieces of heavy cannon, the sultan concluded a treaty on such terms as Lord Cornwallis chose to prescribe, and hostilities terminated. Such, however, was the ardour of the troops, especially the sepoys, who were engaged in the trenches, that it was with the greatest difficulty they

could be prevailed on to cease firing, and when the European troops enforced the command, they retired sullen and dejected to their tents; while Tippoo's men by a vain bravado continued discharging cannon for some time after the British lines were silent, as if to demonstrate that they had not been the first to give in in the contest.*

By the treaty of peace which followed, Tippoo was compelled to submit to the Treaty with cession of half his dominions to the Tippoo, 19th British, the Nizam, and the Mahratta, 1792. to pay £3,500,000, as the expenses of the war; to deliver up all the prisoners made in Hyder's time, some of whom still lingered in a miserable captivity; and to surrender his two sons as hostages. The young princes were immediately after courteously received and splendidly treated by the British government. Lord Cornwallis, whose health had for some time been declining, and who had postponed his return to England only on account of the contest in the Mysore, soon after returned to his native country, having, during his short government, added 24,000 square miles to its Eastern dominions.†

Human affairs are everywhere governed at bottom by the same principle: the varieties of colour, language, and civilization, are but the different hues which conceal the operation of passions and interests which are forever identical among mankind. Differing widely in its origin and its effects upon social happiness, the British empire in India bears, in many respects, a very close analogy to the contemporaneous French domination in Europe; and in none more than in the experienced necessity of advancing, in order to avoid destruction, which was felt equally strongly by the Emperor Napoleon and the English governors-general of India. The reason in both cases was the same, viz., that a power had got a footing in the midst of other states, so formidable in its character, and so much at variance in its principles with the policy of the powers by whom it was surrounded, that of necessity it was engaged in constant hostilities, and had no security for existence but in the continual extension of its dominions, or increased terrors of its name. The East India Company had fondly flattered themselves that Tippoo, being thus humbled, would lay aside his hereditary hostility to the English power, just as Napoleon seems to have imagined that, after the spoliation of Tilsit, he might rely upon the forced submission or cured inveteracy of Prussia, and the result to both was the same.

Sir John Shore, a most respectable civil servant of the company, who was appointed governor-general after the retirement of Lord Cornwallis, was strongly imbued with these maxims of the necessity of pursuing a pacific policy in India, and avoiding all causes of collision with the native powers, which were so general both with the government, the directors, and the people at home, and which had been so strongly enforced upon the local authorities by the Board of Control. Ample opportunities soon occurred for putting the expedience of

Experienced necessity of further conquests in India.

Pacific administration and principles of Sir John Shore.

* When the enemy had surrounded Lord Cornwallis in the middle of the night, and a heavy fire had set in on all sides, he said to those around him, "If General Meadows is above ground this will bring him." Nor was he mistaken. True as the magnet to the pole, his gallant lieutenant pressed to the scene of danger, and, attracted by the sound, reached in time the theatre of that desperate conflict. The unanimity and heartfelt mutual admiration of these two great men is, as Mill has justly observed, one of the finest features of this campaign, and is particularly worthy of admiration on the part of Meadows, considering that Cornwallis, by assuming the direction in person, deprived him of the honour of a separate command in so momentous a service. What a striking circumstance, that he so soon after should have the means of rescuing his noble and respected commander-in-chief from destruction! But India is the theatre of romantic adventure as well as of heroic and disinterested exploits; and a most inadequate conception will be formed of British character or glory, till the memorable history of its empire in the East is given by an historian worthy of so magnificent a theme.—See MILL, v., 367, note.

† Lord Cornwallis's Despatches, 4th March, 1792. Ann. Reg. Mill, v., 372, 374. Auber, ii., 120, 124.

* Auber, ii., 123, 124. Mill, v., 377, 378. Wilks, iii., 225, 235.

their apparently reasonable and just principles to the test. Shortly after the conclusion of the peace with Tippoo, differences broke out between the Mahrattas and the Nizam; and the English government, as the old ally of the latter prince, were strongly urged by his partisans to support him, as they had done the Rajah of Travancore, in the contest.* This, however, Sir J. Shore, acting on the pacific system, refused, and even declined to permit the Nizam to employ in his warfare with the Mahrattas the battalions which were placed as a protecting force in his territories.

The consequences of this temporizing conduct might easily have been foreseen. The Nizam, after a short contest, was overthrown by the superior force of the Mahrattas (who could bring twenty thousand cavalry, forty thousand infantry, and two hundred guns into the field), and compelled to make peace on very disadvantageous terms. Such was the March, 1794.

dissatisfaction produced very naturally at the court of the Nizam, by this desertion of their ally at the most perilous crisis, that they soon after signified a wish to be relieved of the presence of the British subsidiary force, which was complied with; and the Nizam immediately threw himself without reserve into the arms of the French resident, M. Raymond, and augmented the organized force in his dominions, under the direction of officers of the French Republic, to twenty-three battalions and twelve pieces of artillery. These troops carried the colours of the French Republic, and the cap of liberty was engraven on their buttons. Thus, by the timid policy of the British government at that crisis, not only was the power and influence of the Mahrattas materially increased, but their old and faithful ally, the Nizam, converted from a friend into an embittered enemy, and the moral sway resulting from the glorious termination of the war with Mysore seriously impaired.†

Tippoo was not slow in turning to the best advantage this unexpected course of events in his favour. Already had exaggerated reports of the growing power and conquests of the great Republic reached the courts of Hindostan; and numerous French agents had found their way to all the native powers, who represented in glowing colours the favourable opportunity which now presented itself for expelling the English from the Peninsula, and re-establishing on a durable basis the independence of all the Indian states. The Mysorean chief, whose cunning and perfidy were equal to his ability, strove, in the first instance, by professions of eternal gratitude and attachment, to disarm the suspicions of the British government, and he succeeded so far that, in two years after the treaty of Seringapatam, his two sons were restored to his embraces. No sooner had he got free from this restraint than he sent a secret circular to the different native powers of India, proposing to them all to unite in a common league for the expulsion of the English from Hindostan; received with unbounded confidence the agents

who had been despatched to the court of Seringapatam by the French Directory; and even sent emissaries to the distant court of Caubul, beyond the Himalaya snows, to confirm Zemaun Schah, the restless and ambitious chief of that formidable people, in his declared design of invading the northern parts of India, and re-instating, in its original splendour, the throne of the Moguls. Meanwhile, his own activity was indefatigable, and his preparations were complete: his army was on the best footing, and constantly ready to take the field; and while the Mahrattas and the Nizam had, by mutual dissensions, broken up the triple league of which he had formerly experienced the weight, and the former had fallen entirely under the guidance of the large French force in his capital, the military strength and political consideration of Mysore were more formidable than ever.*

Matters were at length brought to a crisis by the sultan's taking the extraordinary step, in spring, 1798, of sending Tippoo's overt ambassadors to the Isle of France to negotiate with the French authorities for the expulsion of the English from India, and effect the levy of a subsidiary European force to assist him in his designs, and afterward publicly receiving the troops then raised at Mangalore, and conducting them with great pomp to his capital. It was impossible to doubt, after this decisive step, that he was only awaiting the favourable moment for commencing his operations; the more especially when, at the very same period, a French armament of unprecedented magnitude sailed from Toulon for the Nile, and both the Directory and Napoleon publicly spoke of their communications with the redoubted Mysorean chief as their principal inducement for giving it that direction, and "Citizen Tippoo" was openly announced as the powerful ally who was to co-operate in the ultimate objects of the expedition.†† It was evident, therefore, that a

* Wellesley's Despatches, i., 25, 82, 83. Malcolm, 185, 186.

† Wellesley's Despatches, i., xi., Introduction. Auber, ii., 167. Gurw., i., 7.

‡ The following were the terms of this remarkable proclamation by General Hypolite Malartie, governor of the Isle of France: "Tippoo Sultan Jan. 30, 1798. has despatched two ambassadors to us with particular letters to the colonial assembly, to all the generals employed under this government, and to the executive Directory. 1. He desires an alliance offensive and defensive with the French, and proposes to maintain at his charge, as long as the war shall last in India, the troops which may be sent him. 2. He declares that he has made every preparation to receive the succours which may be sent to him. 3. In a word, he only waits the moment when the French shall come to his assistance to declare war against the English, whom he ardently desires to expel from India. 4. This power desires also to be assisted by the free citizens of colour: we therefore invite all such who are willing to serve under his flag to enrol themselves."—WELLESLEY'S Despatches, ix., x., Introduction.

On the 20th of July, 1798, Tippoo transmitted to the Directory at Paris a note of proposals for an alliance offensive and defensive, "in order to obtain such an accession of force as, joined to mine, may enable me to attack and annihilate forever our common enemies in Asia; and may the heavens and the earth meet ere the alliance of the two nations shall suffer the smallest diminution." The proposals were, 1. That the French should furnish a subsidiary force of ten or fifteen thousand troops of every description, with an adequate naval force. 2. That the sultan should furnish military stores, horses, bullocks, provisions, and all other necessities. 3. That the expedition should be directed to Porto Novo, or some other point on the coast of Coromandel, where it will be joined by an army under the command

* Malcolm, 136, 154. Auber, ii., 137, 142.

† Malcolm's India, 136, 177. Auber, ii., 137, 145.

crisis of the most dangerous kind was approaching, and that, too, at the very time when the diminution in the consideration of the English in India, and the weakening of their alliances among the native powers, had rendered them least capable of bearing the shock. But the hand of Fate was upon the curtain. At this perilous moment the sons of Britain were not

wanting to herself. Sprung from one family, two illustrious men were now entering upon the theatre, who were destined to carry its glory to the highest point of exaltation, and leave an empire, both in the East and West, unrivalled in the extent of its dominions, unequalled in the impression it was destined to produce upon the fortunes of mankind.

CHAPTER LII.

ADMINISTRATION OF MARQUIS WELLESLEY, AND FIRST APPEARANCE OF WELLINGTON IN INDIA.

ARGUMENT.

Birth of the Duke of Wellington and Marquis Wellesley.—Illustrious Men then rising into Manhood in England and France.—Wellington's Education and first Military Services.—His Talents are distinguished during the Retreat from Flanders.—Excellent Effect of this Campaign on his Mind.—He is sent to India, and first Entry on separate Command there.—His Character as a public Man.—His Military Character.—Difficulties with which he had to contend in that Capacity.—Admirable Ability and Skill with which he overcame them.—Character of Marquis Wellesley, and of his Indian Administration.—Statesman-like Wisdom with which it was accompanied.—Character of Lord Melville.—His great Abilities and vast Information on Indian Affairs.—Lord Wellesley's first Objects of Policy, and early Perception of the Necessity of War.—He is unable, from financial and military Difficulties, to commence immediate Hostilities.—Rapid Effect of his Administration in improving Affairs.—Successful Reduction of the French subsidiary Force at Hyderabad.—Its great Effects in India.—Prodigious Energy of Lord Wellesley in overcoming the Difficulties of his Situation.—Commencement of Hostilities against Tippee, and his Defeat by the Bombay Army.—General Harris's Advance to Seringapatam, and Defeat of the Sultan.—Investment of that Capital.—Progress of the Siege, and Repulse of Colonel Wellesley.—Assault and Storm of the Fortress.—Death of Tippee.—Immense Importance of the Blow thus struck.—Appointment of Colonel Wellesley as Governor of Seringapatam.—Judicious Arrangements consequent on the Fall of Mysore.—Rise and formidable Force of Doondiah Waugh.—His Defeat and Overthrow by Colonel Wellesley.—Alliances with the Nizam, Persia, and the Imam of Muscat.—Expedition of Sir D. Baird from India to Egypt.—Great Acquisition of Territory from the Vizier of Oude.—Assumption of the Government of the Carnatic.—Causes of the Rupture with the Maharrattas.—Character and Situation of the Rajah of Berar and Scindiah, and of Holkar.—Reasons for a Maharratta War.—Perron's French Force.—Collection of Forces, and Delivery of Poonah by General Wellesley.—War with Scindiah and the Rajah of Berar.—Lord Wellesley's Plan of Operations.—Defeat of Perron's Force, and Storming of Alighur.—Battle of Delhi.—Lord Lake's strong Opinion on the Necessity of European Troops in India.—Alliance with the Mogul Emperor, and Surrender of the French Chiefs.—Battle and Fall of Agra.—Humane Conduct of the British Troops.—Battle of Laswarro.—Desperate Fight and final Victory of the English.—Conquest of the Cuttack.—Operations in the Deccan under General Wellesley.—Movements which led to the Battle of Assaye.—Battle of Assaye.—Imminent Danger and final Victory of the English.—Operations after the Battle.—Battle of Argaum.—Siege and Fall of Gawilghur, which compels Scindiah to sue for Peace.—Its Terms.—Peculiar

Difficulties of the Government on the Conclusion of the War.—Negotiations and Rupture with Holkar.—Commencement of the War with that Chief.—Its arduous Character.—His Strength, and its Causes.—Defeat and Capture of Mohammed Khan.—Plan of the Campaign against Holkar.—Its Errors and early Disasters.—Holkar's able Conduct against Colonel Monson in Bundelcund.—Advance of Monson's Division.—His Disasters and Defeat.—Desperate Action on the Bannas River, and Conclusion of the Retreat.—Alarming Fermentation produced through the whole of India.—Generous Conduct and able Resolutions of Lord Wellesley and Lord Lake.—Advance of Holkar to Delhi.—His Repulse and Retreat.—Battle of Dieg.—Pursuit and Defeat of Holkar at Furrukabad.—Siege and Capture of Dieg.—Siege and unsuccessful Assault of Bhurtpore.—Repeated Assaults, and their Defeats.—Reasons on both Sides which led to an Accommodation with that Chieftain.—Peace with the Rajah of Bhurtpore.—Holkar, expelled from Bhurtpore, joins Scindiah.—Operations in Cuttack, Bundelcund, and against Meer Khan; and against Scindiah, who sues for Peace.—Lord Wellesley returns to England.—Second Administration, and Death of Marquis Cornwallis.—Arrival of Sir G. Barlow.—Treaty of Peace with Holkar and Scindiah.—Review of Lord Wellesley's Administration.—Return of Wellington to Europe.—Reflections on the Rise of the British Power in India.—Causes of its extraordinary Progress.—It was owing to the Union of Democratic Energy with Aristocratic Foresight.—Causes of this unusual Combination.—Circumstances which will eventually subvert our Eastern Dominion.—Great and lasting Benefits it has produced in Human Affairs.

ARTHUR WELLESLEY, afterward Duke of WELLINGTON, was born on the 1st Birth of Wellington, and Earl of Mornington, and he was de- Marquis Wellesley-scended, by his mother's side, from an ancient and noble family. His elder brother, who succeeded to the hereditary honours, afterward was created MARQUIS WELLESLEY, so that one family enjoyed the rare felicity of giving birth to the statesman whose energetic councils established the empire of England in the Eastern, and the warrior whose immortal deeds proved the salvation of Europe in the Western hemisphere.*

The young soldier was regularly educated for the profession of his choice, and received his first commission in the year 1787, being then in the eight- Illustrious men then rising into manhood in England and France. teenth year of his age. Napoleon had entered the artillery two years before, at the age of sixteen, and was then musing on the heroes of Plutarch. Sir Walter Scott, at the age of seventeen, was then relieving the tedium of legal education by wandering over the mountains of his native land, and dreaming of Ariosto and Amadis, in the grassy vale of St. Leonard's, near Edinburgh; Viscount Chateaubriand was inhaling the spirit of devotion and chivalry, and wandering, in anticipation, as a pilgrim to the Holy Land, amid

of the king in person. 4. All conquests which shall be made from the common enemy, excepting the dominions of the sultan which have been wrested from him by the English, shall be equally divided between the two contracting parties.—WELLESLEY'S *Despatches*, 711, 712, *Appendix*.

Napoleon's letters to Tippee, upon landing in Egypt, already alluded to,* was in the following terms: "Cairo, 25th Jan., 1799. You have already been made acquainted with my arrival on the shores of the Red Sea, with an innumerable and invincible army, filled with the desire to deliver you from the iron yoke of England. I hasten to convey to you my desire that you should give me, by the way of Mascut or Mokha, intelligence of the political circumstances in which you find yourself placed. I desire even that you will send to Suez, or Grand Cairo, some able man in whom you have confidence, with whom I may confer. BONAPARTE."—*Corresp. Confid. de Napoleon*, vii., 192.

* Scherer, i., 1. Gurw., i., 1.

the solitude of La Vendée; Goëthe, profound and imaginative, was reflecting on the destiny of man on earth, like a cloud which "turns up its silver lining to the moon;" Schiller was embodying in immortal verse the shadows of history and the creations of fancy; and the ardent spirit of Nelson was chafing on inaction, and counting the weary hours of a pacific West Indian station. Little did any of them think of each other, or anticipate the heart-stirring scenes which were soon about to arise, in the course of which their names were to shine forth like stars in the firmament, and their genius acquire immortal renown. There were giants in the earth in those days.*

Mr. Arthur Wellesley, educated at Eton, studied for a short time at the Military Academy of Angers, in France, but he was soon removed from that seminary to take part in the active duties of his profession. As subaltern and captain he served both in the cavalry and infantry; in spring, 1793, he was promoted to the majority of the 33d regiment, and in autumn of the same year he became, by purchase, its lieutenant-colonel. At the head of that regiment he first entered upon active service, by sailing from Cork, in May, 1794, and landing at Ostend in the beginning of June following, with orders to join Lord Moira's corps, which was assembling in that place, to re-enforce the Duke of York, who was in the field near Tournay. That ill-fated prince, however, was then hard pressed by the vast army of the Republicans, under Pichegru,† and, as he was under the necessity of retreating, it was justly deemed inadvisable to attempt the retention of a fortress so far in advance as Ostend, and Lord Moira marched by Bruges and Ghent to Scheldt, and crossing that river at the Tête de Flandre, joined the English army encamped around Antwerp.‡

The multiplied disasters of that unhappy campaign soon brought Colonel Wellesley into contact with the enemy, and taught him the art of war in the best of all schools, that of great operations and adverse fortune. The English army, now entirely separated from that of the Austrians, who had marched off towards the Rhine, were in no sufficient strength to face the immense masses of the Republicans in any considerable combat; but a number of detached actions took place with the rear-guard, in which the spirit and intelligence of Colonel Wellesley speedily became conspicuous. On the River Neethe, in a warm affair near the village of Jan. 5, 1795. Boxtel, and in a hot skirmish on the shores of the Waal, the 33d did good service: the ability with which they were conducted excited general remark, and Colonel Wellesley was in consequence promoted to the command of a brigade of three regiments in the ulterior retreat from the Leck to the Issel. They were no longer, indeed, pursued by the enemy, who had turned aside for the memorable invasion of Holland;

but the rudeness of the elements proved a more formidable adversary than the bayonets of the Republicans. The route of the army lay through the inhospitable provinces of Guelderland and Over Issel: the country consisted of flat and desert heaths; few houses were to be found on the road, and these scattered, singly, or in small hamlets, affording no shelter to any considerable body of men. Over this dreary tract the British troops marched during the dreadful winter of 1794-5, through an unbroken wilderness of snow, with the thermometer frequently down at 15° and 20° below zero of Fahrenheit, and, when it was somewhat milder, a fierce and biting north wind blowing direct in the faces of the soldiers. In this trying crisis, Colonel Wellesley commanded the rear-guard: his activity and vigilance arrested, in a great degree, the disorders which prevailed; and, in his first essay in arms, he experienced severities equal to the far-famed horrors of the Moscow retreat.**

Short as was the first campaign of the Duke of Wellington, it was the best Excellent effect of this campaign on his mind. school that had been presented for nearly a century for the formation of a great commander. War was there exhibited on a grand scale: it was in an army of sixty-eight battalions and eighty squadrons that he had served. The indomitable courage and admirable spirit of the British soldiers had there appeared in their full lustre; but the natural results of these great qualities were completely prevented by the defects, at that period, of their military organization; by total ignorance of warlike measures in the cabinet which planned their movements; a destructive minuteness of direction, arising from too little confidence on the part of government in their generals in the field; a general want of experience in officers of all ranks in the most ordinary operations of a campaign; and, above all, the ruinous parsimony which, in all states subject to a really popular government, breaks down, on the return of peace, the military force, by which alone, on the next resumption of hostilities, early success can be secured. These defects appeared in painful contrast to the brilliant and efficient state of the more experienced German armies, which, with national resources noways superior, and troops far inferior, both in courage and energy, were able to keep the field with more perseverance, and, in the end, achieve successes to which the British soldiers could hardly hope to arrive. These considerations forcibly impressed themselves on the mind of the young officer, and he was early led to revolve in his mind those necessary changes in the direction and discipline of the army which, matured by the diligence and vigour of the Duke of York, ultimately led the British nation to an unparalleled pitch of strength and glory.‡

It was not long before an opportunity presented itself for witnessing the capability of British soldiers when subjected to an abler direction, and led by more experienced officers. After the return of the troops from

Colonel Wellesley sent to India, and first entry on command there.

Flanders to England, the 33d regiment was ordered to the West Indies; but contrary winds prevented the transports on which it was embarked from sailing, and their destination was soon after changed for the East. Colonel Wellesley arrived with his corps at Calcutta in January, 1797. During the voyage out it was observed that he spent most of his time in reading; and after he landed in India, he was indefatigable in acquiring information regarding the situation and resources of the country in which he was to serve, so that when he was called, as he early was, to high command, he was perfectly acquainted, as his correspondence from the first demonstrates, both with the peculiarities of Indian warfare and the intricacies of Indian politics.* And when his division of the army took the field in January, 1799, against Tipoo Suldaun, the fine condition and perfect discipline of the men, as well as the skill and judgment of the arrangements made for their supplies, called forth the warm commendations of the commander-in-chief, who little thought what a hero he was then ushering the name into the world.†

The name of no commander in the long array of British greatness will occupy so large a space in the annals of the world as that of Wellington; and yet there are few whose public character possesses, with so many excellences, so simple and unblemished a complexion. It is to the purity and elevation of his principles, in every public situation, that this enviable distinction is to be ascribed. Intrusted early in life with high command, and subjected from the first to serious responsibility, he possessed that singleness of heart and integrity of purpose which, even more than talent or audacity, are the foundation of true moral courage, and the only pure path to public greatness: a sense of duty, a feeling of honour, a generous patriotism, a forgetfulness of self, constituted the spring of all his actions. He was ambitious, but it was to serve his king and country only; fearless, because his whole heart was wound up in these noble objects; disinterested, because the enriching of himself or his family never for a moment crossed his mind; insensible to private fame when it interfered with public duty, indifferent to popular obloquy when it arose from rectitude of conduct. Like the Roman patriot, he eschewed rather to be than appear deserving. "Esse quam videri bonus malebat, ita quo minus gloriam petebat eo magis adsequebatur."‡ Greatness was forced upon him, both in military and political life, rather because he

was felt to be the worthiest, than because he desired to be the first; he was the architect of his own fortune, but he became so almost unconsciously, while solely engrossed in constructing that of his country. He has left undone many things, as a soldier, which might have added to his fame, and done many things, as a statesman, which were fatal to his power; but he omitted the first because they would have endangered his country, and committed the second because he felt them to be essential to its salvation. It is to the honour of England, and of human nature, that such a man should have risen at such a time to the rule of her armies and her councils; but he experienced, with Themistocles and Scipio Africanus, the mutable tenure of popular applause, and the base ingratitude of those whom he had saved. Having triumphed over the arms of the threatened tyrant, he was equally immovable in the presence of the insane citizens; and it is hard to say whether his greatness appeared most when he struck down the conqueror of Europe on the field of Waterloo, or was himself with difficulty rescued from death on its anniversary, eighteen years afterward, in the streets of London.

A constant recollection of these circumstances, and of the peculiar and very difficult task which was committed to his charge, is necessary in forming a correct estimate of the Duke of Wellington's military achievements. The brilliancy of his course is well known: an unbroken series of triumphs from Vimiero to Toulouse; the entire expulsion of the French from the Peninsula; the planting of the British standard in the heart of France; the successive defeat of those veteran marshals who had so long conquered in every country of Europe; the overthrow of Waterloo; the hurling of Napoleon from his throne; and the termination, in one day, of the military empire founded on twenty years of conquest. But these results, great and imperishable as they are, convey no adequate idea, either of the difficulties with which Wellington had to contend, or of the merit due to his transcendent exertions. With an army seldom superior in number to a single corps of the French marshals; with troops dispirited by recent disasters, and wholly unaided by practical experience; without any compulsory law to recruit his ranks, or any strong national passion for war to supply its wants, he was called on to combat successively vast armies, composed, in great part, of veteran soldiers, perpetually filled by the terrible powers of the conscription, headed by chiefs who, risen from the ranks, and practically acquainted with the duties of war in all its grades, had fought their way from the grenadier's musket to the marshal's baton, and were followed by men who, trained in the same school, were animated by the same ambition. Still more, he was the general of a nation in which the chivalrous and mercantile qualities are strongly blended together; which, justly proud of its historic glory, is unreasonably jealous of its military expenditure; which, covetous beyond measure of warlike renown, is ruinously impatient of pacific preparation; which starves its establishment when danger

His military character.

Difficulties with which he had to contend in that capacity.

* Gurw., i., 2, 3. Scher., i., 9, 10. Wellesley's Despatches, i., 425.

† "I have much satisfaction in acquainting your lordship that the very handsome appearance and perfect discipline of the troops under the orders of the Hon. Colonel Wellesley do honour to themselves and to him, while the judicious and masterly arrangements as to supplies, which opened an abundant free market, and inspired confidence in dealers of every description, were no less creditable to Colonel Wellesley than advantageous to the public service, and deservedly entitle him to my marked approbation." How early is the real character of great men shown when once thrown into important situations! This might have passed for a description of Wellington's arrangements for the supply of his army in the south of France in spring, 1814.—General HARRIS to the Governor-general in Council, Feb. 2, 1799; WELLESLEY'S Despatches, i., 425.

‡ Sall., Bell. Cat.

is over, and yet frets at defeat when its terrors are present; which dreams, in war, of Cressy and Agincourt, and ruminates, in peace, on economic reduction. He combated at the head of an alliance formed of heterogeneous states, composed of discordant materials, in which ancient animosities and religious divisions were imperfectly suppressed by recent fervour or present danger; in which corruption often paralyzed the arm of patriotism, and jealousy withheld the resources of power. He acted under the direction of a ministry which, albeit zealous and active, was alike inexperienced in hostility and unskilled in combinations; in presence of an opposition which, powerful in eloquence, supported by faction, was prejudiced against the war, and indefatigable to arrest it; for the interests of a people who, although ardent in the cause and enthusiastic in its support, were impatient of disaster and prone to depression, and whose military resources, how great soever, were dissipated in the protection of a colonial empire which encircled the earth.

Nothing but the most consummate prudence, as well as ability in conduct, could, with such means, have achieved victory over such an enemy; and the character of Wellington was singularly fitted for the task. Capable, when the occasion required or opportunity was afforded, of the most daring enterprises, he was yet cautious and wary in his general conduct; prodigal of his own labour, regardless of his own person, he was avaricious only of the blood of his soldiers; endowed by nature with an indomitable soul, a constitution of iron, he possessed that tenacity of purpose and indefatigable activity which is ever necessary to great achievements; prudent in council, sagacious in design, he was yet prompt and decided in action; no general ever revolved the probable dangers of an enterprise more anxiously before undertaking it, none possessed in a higher degree the eagle eye, the arm of steel, necessary to carry it into execution. By the steady application of these rare qualities, he was enabled to raise the British military force from an unworthy state of depression to an unparalleled pitch of glory; to educate, in presence of the enemy, not only his soldiers in the field, but his rulers in the cabinet; to silence, by avoiding disaster, the clamour of his enemies; to strengthen, by progressive success, the ascendancy of his friends; to augment, by the exhibition of its results, the energy of the government; to rouse, by deeds of glory, the enthusiasm of the people. Skilfully seizing the opportunity of victory, he studiously avoided the chances of defeat; aware that a single disaster would at once endanger his prospects, discourage his countrymen, and strengthen his opponents, he was content to forego many opportunities of earning fame, and stifle many desires to grasp at glory; magnanimously checking the aspirations of genius, he trusted for ultimate success rather to perseverance in a wise, than audacity in a daring course. He thus succeeded, during six successive campaigns, with a comparatively inconsiderable army, in maintaining his ground against the vast and veteran forces of Napoleon, in defeating successively all his marshals, and baffling successively all

his enterprises, and finally rousing such an enthusiastic spirit in the British empire as enabled its government to put forth its immense resources on a scale worthy of its present greatness and ancient renown, and terminate a contest of twenty years by planting the English standard on the walls of Paris.

To have given birth to such a man, is a sufficient distinction for one family; but Wellington is not the only illustrious character which England owes to the house of Mornington. It is hard to say whether, in a different line, in the management of the cabinet, the civil government of men, and the far-seeing sagacity of a consummate statesman, Marquis WELLESLEY is not equally remarkable. He was the elder brother of the family, and gave early promise, both at school and college, of those brilliant qualities which afterward shone forth with such lustre in the administration of India. His talents for business soon introduced him to the notice of government, but his predilection was so strongly evinced from the first for Oriental affairs, that nature appeared to have expressly formed him for the command of the East. At an age when most of his contemporaries were acquainted with the affairs of India only through the uncertain medium of distant report, or the casual hints of private conversation, he was fully master of the politics of Hindostan, and had already formed those clear and luminous views of the condition and situation of our power there, which enabled him, from the very outset of his career, to direct with so steady a hand the complicated mazes of Indian diplomacy. He had for several years been an active member of the Board of Control, then under the able direction of Lord Melville, and had acquired, from his remarkable proficiency in the subject, a large share in the confidence of government; but it was not in any of the public offices, it was not from the inspiration of Leadenhall-street, that he drew the enlarged and statesmanlike views which from the first characterized his Eastern administration. It was in the solitude of study that the knowledge was obtained; it was from the sages and historians of antiquity that the spirit was inhaled; it was in the fire of his own genius that the light was found.

The maxims on which Marquis Wellesley acted in the East were the same Character of his Indian administration. with those which Napoleon perceived to be indispensable to his existence in Europe, and which, in former times, had given the Romans the empire of the world. He at once perceived that the British sway in India was founded entirely on opinion; that twenty or thirty thousand Europeans, scattered among a hundred million of Asiatics, must have acquired their supremacy by fascinating the mind; that this moral sway could be maintained only by fidelity to engagement and fearlessness in conduct; and that, in such circumstances, the most prudent course was generally the most audacious. Disregarding, therefore, entirely that temporizing policy which the government at home had taken such pains to impress upon its rulers, which Cornwallis had triumphed over only by disregarding, and Sir John Shore had obeyed only to destroy, he re-

solved, at all hazards, to maintain the British faith inviolate, to strike terror into his enemies by the vigour of his measures, and secure victory by never despairing and being always worthy of it. He recollected the words of Cato, "Quanto vos attentior ea agetis tanto illis animus infirmior erit; si paullulum modo vos languere viderint, jam omnes feroces aderunt."*

But vigour and resolution are not alone capable of achieving success, though they are generally essential towards it: wisdom in combination, foresight in council, prudence in preparation, are also indispensable; and it was in the union of these invaluable qualities, with the courage of the hero and the heart of the patriot, that Marquis Wellesley was unrivalled. Boldly assuming the lead, he kept it without difficulty, because he was felt to be the first; ardently devoted to his country, he inspired a portion of the sacred fire into all his followers; † discerning in the estimation of character, he selected from the many men in his service the most gifted; penetrated with the most lofty, as well as the soundest views, he communicated his own statesmanlike principles both to the direction of the councils and the guidance of the armies of India. In vigour of resolution, moral courage, diplomatic ability, and military combination, he was the first of British statesmen, even in the days of Pitt and Fox. Never, perhaps, in so short a time, was such a change produced on the character of public administration, the vigour of national councils, or the success of national arms, as by his Eastern rule. He found them vacillating, he left them decided; he found the public service weakened by corruption, he left it teeming with energy; he found the East India Company striving only to defend their possessions on the coast, he left them seated on the throne of Aurengzebe. So vast a change effected in a few years, is one of the most remarkable instances which history affords of the impress which a lofty character can communicate to the sphere of its influence; and, like the corresponding and simultaneous elevation of France under the guidance of Napoleon, may tend to modify the ideas which philosophic minds are apt to entertain of the entire government of human affairs by general causes, and to make us suspect that, in working out its mysterious designs, Providence not unfrequently makes use of the agency of individual greatness.

Another statesman, possessed of less brilliant, but equally important qualities, presided over the direction of Indian affairs in this coun-

* Sall., Bell. Cat.

† "So entirely devoted am I," said Lord Wellesley, "to the indispensable duty of providing a large force in the field and an efficient system of alliance, that my estimate of character, and my sentiments of respect, and even of affection, in this country, are regulated absolutely by the degree of zeal and alacrity which I find in those who are to assist me in this great struggle. Nor can I conceive a more firm foundation, or a more honourable bond of friendship, than a common share in the labours, difficulties, and honour of defending and saving so valuable a part of the British Empire. This is the nature of the connexion which I seek with your lordship, and these are the sentiments which render me so averse to those men who appear negligent, or reluctant, or irresolute in a conjuncture which ought to extinguish all partialities, all private resentments and affections, and unite and animate all talents and exertions in one common cause." — MARQUIS WELLESLEY TO LORD CLIVE, governor of Madras, 14th of Nov., 1798. *WELL. Despatches*, i., 344.

try during the most momentous period of Lord Wellesley's gov- Character of Lord Melville.
ernment, and had long contributed essentially, by the enlarged and statesmanlike views with which he himself was impressed, to train the mind of the future ruler of the East to those great conceptions which, from the very first, distinguished his administration. HENRY DUNDAS, afterward LORD VISCOUNT MELVILLE, was descended from the house of Arniston in Scotland: a family which, since the Revolution, had enjoyed a large share of the legal honours and offices in that country, and had early risen, alike from his talents and his connexions, to the office of lord-advocate. But his force of mind and ambition impelled him into a more elevated career. In 1782 he entered Parliament, and from that time, for the next twenty-five years, enjoyed to a greater degree than any other person the confidence and friendship of Mr. Pitt. In 1792 he was promoted to the important situation of president of the Board of Control, and from that period down to Mr. Pitt's retirement in 1800, had the almost exclusive direction of Eastern affairs. When that great man resumed the helm in 1804, he was made first lord of the admiralty, and by his indefatigable energy soon restored the navy from the state of decay into which it had fallen during the shortsighted parsimony of the Addington administration: so that the same statesman enjoyed the rare distinction of framing the policy which produced Lord Wellesley's triumphs in India, and launching the fleets which extinguished the navy of France amid the shoals of Trafalgar.

Lord Melville's talents were of the highest order, but they were of the solid His great abilities and vast information on Indian affairs.
and useful rather than the brilliant and attractive kind. A powerful debater from strength of intellect and vigour of thought, he overcame by these qualities the disadvantages of a Northern accent, a deficiency in imaginative or oratorical qualities, and the prejudices against his country, which were general in England, till the genius of Sir Walter Scott and the increasing intercourse between the two nations converted it into a sometimes indulgent partiality. But if he could not rival Mr. Fox or Mr. Sheridan in the fire of genius or graces of eloquence, he excelled them in many sterling qualities which constitute a great statesman; and the want of which is too often, to its grievous loss, thought to be compensated in Great Britain by the more showy but inferior accomplishments which command and seduce a popular assembly. To vast powers of application he united a sound judgment and a retentive memory; the native force of his mind made him seize at once the strong points of a subject; his prodigious information rendered him thoroughly master of its details. Nowhere is to be found a more comprehensive and statesmanlike series of instructions than is presented in his Indian correspondence: it has been declared by an equally competent judge and unbiased opponent, that in these and Marquis Wellesley's Despatches is to be sought the whole materials both of history and information on our Eastern dominions.* All the features of Lord Wellesley's administration are to be

* Lord Brougham, *Edin. Review*, No. 139

there found chalked out with prophetic wisdom, even before that illustrious man left the British shores. The true principles of colonial government are developed with a master's hand and a statesman's wisdom; all his subsequent measures obtained the cordial support of that able auxiliary in the British cabinet. It may safely be affirmed that, if England ever lose the empire of the seas, it will be from departing from his maxims in the management of the navy; if she is stripped of her Indian Empire, from forgetting his principles of colonial administration.*

The general objects of his policy are clearly pointed out in his letters from the Cape of Good Hope, in February, 1798, to Lord Melville: a series of state papers drawn up before he had set foot in India, which will bear a comparison with any in the world for sound and enlarged views of complicated politics. He at once perceived that the advantages of the triple alliance against Tippoo Sultaun, and the ascendancy acquired by the glorious victory of Lord Cornwallis before Seringapatam, had been in a great measure lost by the timid policy of the succeeding administration, and therefore the first object of his endeavours was to recover the ascendancy which had been so unhappily impaired, and take measures against the powers which had risen upon its ruins. The destruction of the French subsidiary force at Hyderabad and restoration of our influence at the court of the Nizam; the arrangement by mediation of the differences among the Mahratta powers; the removal of the league which was to prove a counterpoise to the ascendancy of Tippoo, and the separation of his territories, if hostilities became unavoidable, from the coast, so as to detach him from French intrigue or co-operation, were the objects which presented themselves to his mind, not so much as steps to power as essential to existence.†

No sooner had he landed in India, however, than he perceived that the open alliance of Tippoo with the French, joined to the success of their expedition to Egypt and the increase to their influence among the native powers which Napoleon's victories had produced, rendered an early attack on the Mysore chief indispensable.‡ Had he possessed

He is unable, from financial and military difficulties, to commence immediate hostilities.

than he perceived that the open alliance of Tippoo with the French, joined to the success of their expedition to Egypt and the increase to their influence among the native powers which Napoleon's victories had produced, rendered an early attack on the Mysore chief indispensable.‡ Had he possessed

* "It is of the last importance to keep up the means of a large importation from India: not only from the encouragement it affords to the navigation and shipping of the kingdom, and the addition which it makes annually to the wealth and capital of the country, and being a fruitful source of revenue, but its necessity as immediately connected with the prosperity of our Indian provinces. It is to the increased exports from India to Europe that we are to attribute the increase of Indian prosperity, industry, population, and revenue, and the manufacturers of that country would immediately be reduced to a deplorable state if any check were ever given to their annual exports to this country."—*LORD MELVILLE TO LORD WELLESLEY, August, 1799. Wel. Desp., ii., 102.* It is on this principle, a fair reciprocity of advantages, that all really wise colonial administrations must be founded, and by it alone that such distant possessions can be permanently preserved; but how different is this view from the sacrifice of all colonial interest to cheap purchasing by the mother state, which, under the free-trade system, has almost exclusively regulated our policy for the last fifteen years!

† Wellesley's Despatches to Lord Melville, Feb. 28, 1798, i., 1, 34, 81, 91.

‡ Sir Thomas Monro, one of the ablest men that India

ed the means, he would immediately have commenced hostilities before the Sultaun's preparations were completed; but, unfortunately, the state of the government finances and military establishment at Madras, where the principal efforts required to be made, rendered that altogether impracticable. So low had the credit of the company fallen at that presidency, that their eight per cent. paper had sunk to a discount of eighteen or twenty per cent.; the finances, both there and at Bombay, were completely exhausted; the present deficiency was eighteen lacks of pagodas (£480,000); bills designed to supply the want of specie had multiplied so much that they had alarmingly depreciated; only fourteen thousand men of all arms could be drawn together for the attack on Tippoo; a war was pronounced impracticable without at least six months' previous preparation; the frontier fortresses were without provisions, the army without stores, equipment, or transport train; and, so far from being in a condition to equip it for the field, the government had hardly the means of moving it from Madras to the Mysore territory. These evils were also felt, though in a lesser degree, at Calcutta: the general treasury was drained by the incessant demands of the sister presidencies, and that general despondency prevailed which is so often both the forerunner and the cause of national disaster.*†

But it soon appeared how powerful is the influence of a gifted and magnanimous mind upon national fortunes, if called into action at a time when the heart of the nation is sound, and those symptoms of debility have arisen, not from the decline of public virtues, but the timidity or misdirection of those who have been placed at the head of affairs. Many months had not elapsed before Lord Wellesley had communicated the impress of his zeal and energy to every branch of the public service. Disregarding altogether the sinister forebodings and gloomy representations of the Madras government, he laboured assiduously to augment the military force and restore the financial resources of that important part of our Eastern dominions: by never yielding to difficulties, he soon found none; by boldly assuming the lead in diplomacy, he speedily acquired the command. All classes, both at home and abroad, rapidly discovered the character of the man with whom they were now brought in contact: British patriotism was roused by the clear indications which were afforded of capacity at the head of affairs; Asiatic hostility sunk before the ascendancy of European talent; Indian jealousy before the force of English courage. The army was rapidly augmented;

Rapid effect of Lord Wellesley's administration in improving affairs.

has ever produced, was of the same opinion at this period. "Men read books," says he, "and because they find all warlike nations have had their downfall, they declaim against conquest as not only dangerous, but unprofitable; but there are times and situations where, conquest not only brings a revenue greatly beyond its expenses, but also additional security. Let us advance to the Kistna: we shall triple our revenue, our barrier will then be both stronger and shorter. The dissensions and revolutions of the native governments will point out the time when it is proper for us to become actors. While Tippoo's power exists we shall be perpetually in danger of losing what we have."—*SIR THOS. MONRO TO EARL OF MORNINGTON, June 7, 1798; MONRO'S Memoirs, i., 234; and AUBER, ii., 174.*

* *Mém. of the Madras Government, 6th July, 1798. Wellesley's Desp., i., 72, 79, 191.*

† See Note A.

the frontier fortresses were armed and victualled; the bullock-service and commissariat put on a respectable footing; a powerful battering-train was collected at Madras; voluntary subscriptions on a magnificent scale, at all the three presidencies, bespoke at once the public spirit and opulence of the inhabitants; corps of European volunteers were formed, and soon acquired a great degree of efficiency, while a subsidiary treaty, concluded with the Nizam in the beginning of September, restored the British influence at the court of Hyderabad, and gave public proof of the renewal of British influence among the native powers.*

Sept. 1, 1798.

The first vigorous stroke was directed against the French subsidiary force, now fourteen thousand strong, which had so long exercised a domineering influence at the court of the Nizam. Fortunately for the interests of England, the same over-

bearing character which has in every age made the permanent rule of the French insupportable to a vanquished people had already manifested itself; and the Nizam, now reposing confidence in the support of the English government, had become exceedingly desirous of ridding himself of his obnoxious defenders. By the new treaty of Hyderabad, the British subsidiary troops, formerly two thousand, were to be augmented to six thousand men, and they were under the direction of Colonel Kirkpatrick, an officer whose skill and prudence were equal to the difficult and important task committed to his charge. The increased force entered the Nizam's territories in the beginning of October, reached Hyderabad on the 10th, joined a large body of the Nizam's horse, and surrounded the French camp on the 22d. A mutiny had broken out in the corps on the preceding day, and the sepoys had arrested their officers; in this state of insubordination no authority existed capable of withstanding the British troops, and the whole French officers were, without bloodshed, delivered up to the English authorities, on condition of their private property being preserved and their being immediately transported to France: conditions which were immediately and faithfully executed.†

This bold and important stroke was immediately attended with most important effects. The French influence at the native courts received a rude shock, while that of the English was proportionably augmented; the natives of the subsidiary corps almost all entered the British ranks, and formed an important addition to the sepoy force; while the Nizam, overjoyed at his delivery from such supercilious defenders, renewed his ancient and cordial alliance with the East India Company. It soon appeared how necessary this decisive stroke had been, and what was the magnitude of the dangers which would soon have assailed the British power if the war had not in this manner been at once carried into the enemy's territory. Secret information was received that Scindiah had entered into correspondence with Tippoo and the

French: the Peishwa was ascertained to have supported his views against the company and the Nizam; the inveterate hostility of the Sul-taun of Mysore was well known, and his preparations, though secretly conducted, were daily assuming a more formidable character; Zemaun Schah, by the terrors of an Afghan invasion, operated as a powerful diversion, and rendered it necessary to station a large force on the northern frontiers of Hindostan; a deep-laid plot was on foot for expelling the English from Bengal, Bahar, and all their provinces on the banks of the Ganges, in which most of the Mohammedan chiefs of those countries were implicated; while the whole Mahratta potentates were secretly intriguing against the British power, and only awaited the expected arrival of the French from Egypt to join openly in the general confederacy against it.*

The indefatigable activity and commanding energy of Lord Mornington, however, enabled him to make head against all these difficulties; and he soon made such progress in the military preparations as enabled him, early in 1799, to anticipate the designs of his enemies, by striking a decisive blow at the heart of their power. The army collected at Madras was raised, before the close of the preceding year, to thirty thousand fighting men, with an immense battering-train: a noble force, in an incomparable state of discipline and equipment, while a co-operating body of six thousand men, in equally admirable condition, were ready to advance from Bombay under General Stuart. Explanations were demanded from Tippoo of his hostile measures, particularly his sending ambassadors to the Isle of France; but no reply was received, although the British government gave ample proof of their disposition to act with fidelity according to the existing treaties, by relinquishing to him, at this very crisis, the territory of Wynnaad, a disputed district which, on Lord Wellington's arrival in India, was in the possession of the British authorities, without any adequate title. A proposition on the part of the governor-general to open an amicable negotiation through Colonel Doveton having been eluded with characteristic artifice by the Sul-taun, and the military preparations being complete, Marquis Wellesley, early in January, proceeded to Madras in person, and on the 10th of February the army, under General Harris, entered the Mysore territory, while, shortly after, General Stuart also advanced with his co-operating force from the side of Bombay.‡

Notwithstanding the depth and extent of his plans, Tippoo was on this occasion taken by surprise. He had not anticipated the vigour and celerity of the new governor-general, and calculated upon being permitted to choose his own time, as on former occasions, for the commencement of hostilities, which he would have

* Lord Wellesley to General Harris, 23d of Feb., 1799, Desp., i., 581; and to the Directors, 22d of April, 1799, *ibid.*, i., 535.

† Tippoo wrote, in answer to the communication announcing Major Doveton's mission, "That, being frequently disposed to make excursions and hunt, he was accordingly proceeding upon a hunting excursion; but that he would be pleased that the governor-general would be so good as to despatch Major Doveton to him unattended, or slightly attended."—Tippoo to Governor-general, February 9, 1799; WELLESLEY'S Desp., i., 452.

Its great effects in India.

deferred till his preparations were complete, and the extensive confederacy in the course of formation was encouraged by the presence of a French auxiliary force. His military power, however, was already very great: Seringapatam was in a formidable state of defence, and he had above fifty thousand men in a central position under arms. Finding, therefore, that his territories were menaced on two sides at once, he judiciously resolved to direct his efforts, in the first instance, against the least considerable of the invading armies; and with that view moved against General Stuart, even before he had crossed the Bombay frontier. The Sultaun's force on this occasion amounted to twelve thousand men, the flower of his army; but, though the weight of the contest fell on two thousand European and sepoy troops, they were defeated in half an hour, and quickly retired to the neighbourhood of Seringapatam, with the loss of fifteen hundred killed and wounded.*

The progress of the grand army, thirty thousand strong, which advanced from the side of Madras, was at first very slow, owing to the immense battering and siege equipage which followed in its train, and the sickness which almost uniformly seizes the transport cattle when they leave the coast and ascend the high table-land of Mysore. They experienced, however, very little molestation from the Sultaun until the 27th of March, when a general engagement took place. Tipoo's army occupied a range of heights beyond the little town of Malavilly, and a distant exchange of cannon-shot from the batteries on either side at length led to a general action. Colonel Wellesley (Wellington) commanded the division on the left, and General Floyd the centre. Owing to the exhausted state of the bullocks which drew the artillery, a delay occurred in the formation of the line, of which the Mysore horse took advantage to make a daring charge on Colonel Wellesley's division, which moved on to the attack, and was considerably in advance, and separated by a wide gap from the centre.† A huge mass of cavalry, supported by the bravest of Tipoo's turbaned infantry, bore down on the English division, and filled the opening; but the 33d were ordered to reserve their fire till within pistol-shot, when they delivered it with decisive effect, and immediately charged with the bayonet, while the red-plumed dragoons of Floyd soon after coming up from the centre, charged them on the other flank, and completed the rout. Two thousand of the enemy fell in

the battle or the pursuit, while the loss of the victors did not exceed three hundred.*

No farther obstacle now remained to prevent the British from taking up their ^{Investment of} ground before Seringapatam, which ^{Seringapatam.} was done on the 5th of April. The April 5. assembled host, which was soon joined by the corps under General Stuart, from Bombay, presented a formidable appearance, and exhibited a splendid proof of the magnitude and resources of the British empire in the East. Thirty-five thousand fighting men, a hundred pieces of battering cannon, and camp followers in the usual Asiatic proportion of four to one soldier, formed a stupendous array of above a hundred and fifty thousand men, assembled on the high table-land of Mysore, three thousand feet above the level of the sea, and above eight thousand miles from the parent European state. The greatness of this effort will not be duly appreciated unless it is recollected that at the same moment twenty thousand admirable troops, under Sir James Craig, lay in the territories of Oude, to guard the northern provinces of India from Zemaun Schah; that the army was collected in the Mediterranean which so soon after expelled the French from Egypt, and the fleet was afloat which was to dissolve, by the cannon of Nelson, the Northern coalition.†

The efforts of Lord Cornwallis had been directed against the northern face of the fortress of Seringapatam, and ^{Progress of the} Tipoo, anticipating an attack in the ^{siege, and re-} same quarter, had greatly strengthened the defences in that direction. These preparations, however, were rendered altogether unavailing by the able movement of General Harris, previous to taking up his ground before the town, in suddenly crossing the Cavery by a neglected ford, and appearing before its southern front: a quarter in which the country was not yet ravaged, the fortifications in a comparatively neglected state, and the communication with the Bombay army direct and easy. The camp was formed opposite to the southwestern side of the fortress, the army from Bombay effected its junction on the 9th, and the approaches were conducted with great vigour. In the course of these operations, much annoyance was experienced from an advanced post of the Sultaun's, placed on a rocky eminence near the walls, from whence a destructive fire, chiefly with rockets, was kept up on the parties working in the trenches. In order to put a stop to this harassing warfare, an attack on the post during the night was resolved on, and intrusted to Colonel Wellesley and Colonel Shaw. This nocturnal encounter would be of little importance, were it not rendered remarkable by a circumstance as rare as it is memorable, and worthy of being recorded for the encouragement of young officers exposed to early disaster—a failure by Wellington.‡

Both divisions marched a little after it was dark: Colonel Shaw succeeded in getting possession of a ruined village, within forty yards of the aqueduct from whence the firing issued; but Colonel Wellesley, on entering the rocky

* Well. Desp., i., 505, 508. Scherer, i., 21, 23.

† Colonel Wellesley, on this occasion, was not intended by General Harris to make the attack, but to wait till the onset was made by the right and centre, and orders to that effect were sent him by the commander-in-chief. When they were delivered, however, he saw, from the confusion into which the enemy in his front had fallen, that the attack could be made with more prospect of success by his division, and he said so to the officer who bore the despatches. He agreed with him, but stated that he had only to deliver his orders; but that he would report the circumstance, and Colonel Wellesley's opinion, to General Harris; and that, if he did not hear from him to the contrary in ten minutes, he might conclude the suggestion was approved of. Nothing was heard during that time, and Colonel Wellesley made the attack, which proved successful. "I was a little annoyed," said the duke in London, in 1823, "at the time, that this circumstance was not noticed by Harris in his official despatches, but I now see he was quite right not to mention it."

‡ Wellesley's Desp., i., 534, 540. Gurw., i., 23, 25.

eminence, near the Sultanpettah Tope, was assailed on all sides with so severe a fire, that both the 33d regiment and sepoy battalion, which he commanded, were thrown into disorder, and he was obliged to fall back to the camp; and such was the confusion which prevailed, owing to the darkness of the night, that he arrived there accompanied only by Colonel Mackenzie. The young officer proceeded at midnight to the general's tent, at first much agitated, but finding General Harris not yet awake, he threw himself on the table of the tent and *fell asleep*: a fact in such a moment singularly characteristic of the imperturbable character of the future hero of Torres Vedras. General Harris next morning drew out the troops for a second attack, and offered the command to General Baird, but that generous officer suggested that Colonel Wellesley should again be intrusted with the command. General Harris happily allowed him an opportunity of obliterating his failure, by resuming the command; and at ten next morning

April 6. Colonel Wellesley, with the Scotch brigade and two battalions of sepoys, again advanced against the Tope, which was soon carried in gallant style, while Colonel Shaw, at the same time, drove the Mysoreans from their post on the side of the ruined village. But for this circumstance, and the elevation of mind which prompted both General Harris and General Baird to overlook this casual failure, and intrust the next attack to the defeated officer, the fate of the world might have been different, and the star of the future conqueror of Napoleon extinguished in an obscure nocturnal encounter in an Indian watercourse.*†

The approaches to the fortress being much facilitated by this success, the operations of the siege were conducted with great rapidity. Several formidable sallies of the Mysore horse were repulsed by the steadiness of the besiegers' infantry, and the admirable vigilance exhibited in all parts of the trenches, the most exposed part of which were under Colonel Wellesley's direction. At length, on the 30th of April, the breaching batteries opened on one of the bastions, which was soon shaken by a severe cross fire from different sides; the curtain on the right was soon levelled; a great magazine of rockets blew up in the town on the morning of the 2d of May, and spread terror and devastation far and wide by its tremendous ex-

* Wellesley's Desp., 20th April, 1799, i., 534, 540. Gurwood, i., 23, 24.

† General, afterward Sir David Baird, in particular, delicately suggested that Colonel Wellesley should be intrusted with the second attack: an instance of magnanimity in a superior officer, who might, if actuated by selfish feelings, have been anxious rather to throw into the shade a rival for the honours of the siege, worthy of the highest admiration. This fact is mentioned in Hook's *Memoirs of Sir David Baird*, and some doubt is thrown upon it in Gurwood's *Despatches of Wellington*; though that gallant officer admits that Baird's elevated character was perfectly capable of so honourable a course. But, for the honour of human nature, the author is happy to be able to give it an entire confirmation, having repeatedly heard the anecdote from a most gallant officer who was present on the occasion, and afterward contributed, in no small degree, to the glories of Delhi and Laswaree: Colonel Gerard, afterward adjutant-general of the Bengal army, then engaged in the siege, the author's lamented brother-in-law, to whose talents and virtues, durably recorded in the exploits of that band of heroes, he has a melancholy pleasure in bearing this public testimony.—See Hook's *Memoirs of Sir David Baird*, i., 193; and Gurwood, i., 25, note.

plosion. Early on the morning of the 4th, the troops destined for the assault were placed in the trenches; and the hour of one o'clock May 4. in the afternoon was chosen for the attack, when the sultry heat usually disposed the Asiatics to repose. Two thousand five hundred Europeans and eighteen hundred natives formed the storming party, under the command of General Baird. They had a fearful prospect before them, for two-and-twenty thousand veteran troops composed the garrison, and the bastions, of uncommon strength, were armed with two hundred and forty pieces of cannon.* "Follow me, my brave fellows, and prove yourselves worthy of the name of British soldiers!" was the brief address of that noble officer to his gallant followers, as, leaping sword in hand out of the trenches, he descended the slope which led to the rocky bed of the Cavery, and required to be crossed before the foot of the breach was reached. He was rapidly followed by the forlorn hope, which soon led the host, and was immediately succeeded by the assaulting column in close array. But the enemy were at their post: all was ready for the assault, every battery was manned, and from every bastion and gun which bore on the assailants a close and deadly fire was directed, which speedily thinned their ranks, and would have caused any other troops to recoil. On, however, the British rushed, followed by their brave allies, through the deadly storm; in five minutes the river was crossed, in five more the breach was mounted; a crimson torrent streamed over the ruin; a sally on the flank of the assaulting column by a chosen body of Tippoo's guards was repulsed; and, as Baird was leading his men up the entangled steep, a loud shout and a waiving of the British colours on its summits announced that the fortress was won, and the capital of Mysore fallen. Dividing his men into two columns, under Colonels Sherbrooke and Dunlop, Baird soon swept the ramparts both to the right and left; the brave Asiatics were by degrees forced back, though not without desperate resistance, to the palace, where a dreadful slaughter took place. It at length surrendered, with two of Tippoo's sons, when the firing had ceased at other points; while the sultan himself, who had endeavoured to escape at one of the gates of the town, which was assaulted by the sepoys, was some time afterward found dead under a heap of several hundred slain, composed in part of the principal officers of his palace, who had been driven into a confined space, and mowed down by a cross fire of musketry. He was shot by a private soldier when stretched on his palanquin, after having been wounded himself, and had his horse killed under him; while Baird, who for three years had been detained a captive in chains in his dungeons, had the glorious triumph of taking vengeance for his wrongs, by generously protecting and soothing the fears of the youthful sons of his redoubted antagonist.†

Tippoo could never be brought to believe that the English would venture to storm Seringapatam, and he looked forward with confidence to

* Baird's Life, i., 367, 378. Well. Desp., i., 697, 698.

† Baird's Desp., i. Well. Desp., i., 697, 699. Harris's Desp., 7th May, 1799. Ibid., 569. Hook's Life of Baird, i., 367, 386. Scher., i., 29, 33.

the setting in of the heavy rains which were soon approaching, to compel them to raise the siege. He was brave, liberal, and popular during his father's life; but his reign was felt as tyrannical and oppressive by his subjects, which, however, as is often the case in the East, they ascribed rather to the cupidity of his ministers than his own disposition. The Bramins had predicted that the 4th of May would prove an inauspicious day to him; he made them large presents on that very day, and asked them for their prayers. He was sitting at dinner under a covered shed, to avert the rays of the sun, when the alarm was given. He instantly washed his hands, called for his arms, and, mounting his horse, rode towards the breach. On the way he received intelligence that Syed Goffar, his best officer, was killed. "Syed Goffar was never afraid of death," he exclaimed: "let Mohammed Cassim take charge of his division." His corpse was found under a mountain of slain, stripped of all its ornaments and clothing, but with the trusty amulet which he always wore still bound round his right arm. He had received three wounds in the body and one in the temple; but the countenance was not distorted, the eyes open, and the expression that of stern composure. The body was still warm, and for a minute Colonel Wellesley, who was present, thought he was still alive; but the pulse had ceased to beat, which had so long throbbed for the independence of India.*

The storming of Seringapatam was one of the greatest blows ever struck by any nation, and demonstrated at once of what vast efforts the British Empire was capable, when directed by capacity and led by resolution. The immediate fruits of victory were immense: the formidable fortress, the centre of Tippoo's power, garrisoned by twenty-two thousand regular troops, with all his treasures and military resources, had fallen; the whole arsenal and foundries of the kingdom of Mysore were taken, and the artillery they contained amounted to the enormous number of 451 brass and 478 iron guns, besides 287 mounted on the works. Above 520,000 pounds of powder and 424,000 round shot also fell into the hands of the victors: the military resources, on the whole, resembled rather those of an old-established European monarchy than of an Indian potentate recently elevated to greatness. But these trophies, great as they were, constituted the least considerable fruits of this memorable conquest: its moral consequences were far more lasting and important. In one day a race of usurpers had been extinguished, and a powerful empire overthrown; a rival to the British power struck down, and a tyrant of the native princes slain; a military monarchy subverted, and a stroke paralyzing all India delivered. The loss in the assault was very trifling, amounting only to three hundred and eighty-seven killed and wounded, though fourteen hundred had fallen since the commencement of the siege; but the proportion in which it was divided indicated upon whom the weight of the contest had fallen, and how superior in the deadly breach European energy was to

Asiatic valour; for of that number three hundred and forty were British, and only forty-seven native soldiers.*

Colonel Wellesley was not engaged in the storm, but he commanded the reserve, which did not require to be called into action, and viewed, merely with impatient regret, the heart-stirring scene. He was next day, however, appointed governor of the town by General Harris, which appointment was confirmed by Lord Wellesley, and constitutes one of the few blots on his administration. History, indeed, apart from biographical discussion, has little cause to lament an appointment which early called into active service the great civil as well as military qualities of the Duke of Wellington, and which were immediately exerted with such vigour and effect in arresting the plunder and disorders consequent on the storm, that in a few days the shops were all reopened, and the bazars were as crowded as they had been during the most flourishing days of the Mysore dynasty. But individual injustice is not to be always excused by the merits of the preferred functionary; and unquestionably the hero of Seringapatam, the gallant officer who led the assault, was entitled to a very different fate from that of being superseded in the command almost before the sweat was wiped from the brow which he had adorned with the laurels of victory.†

The political arrangements consequent on the fall of Mysore rivalled in ability and wisdom the vigour with which the military operations had been directed. The body of Tippoo was interred, with the honours due to his rank, in his father's mausoleum: his sons obtained a splendid establishment from the prudent generosity of the victors; the principal Mohammedan officers of the Mysore family, the main strength of the monarchy, were conciliated by being permitted to retain their rank, offices, and emoluments under the new government; the heir of the ancient rajahs of Mysore, whom Hyder had dispossessed, was restored to the sovereignty of the country, with a larger territory than any of his ancestors had possessed; the Nizam was rewarded for his fidelity by a large accession of territory taken from the conquests made by the Hyder family; the Peishwa was confirmed in his alliance by a grant somewhat more than a half of what had been allotted to the Nizam, although his conduct during the war had been so equivocal as to have forfeited all claim to the generosity of the British government, and rendered his participation in the spoil a matter merely of policy; while to the company were reserved the rich territories of Tippoo on either coast, below the Ghauts, the forts commanding those important passes into the high table-land of Mysore, with the fortress and island of Seringapatam in its centre: acquisitions which entirely encircled the dominions of the new Rajah of Mysore by the British possessions, and rendered his forces a subsidiary addition to those of the company. With such judgment were these arrangements

Appointment of Colonel Wellesley as Governor of Seringapatam.

Judicious arrangements consequent on the fall of Mysore.

* Wellesley's *Desp.*, i., 709, App., and 572. Scherer, i., 39.

† Hook's *Life of Baird*, i., 226. Scherer, i., 34.

* Scherer, i., 31, 37.

effected by the directions of Lord Wellesley, and under the immediate superintendence of Colonel Wellesley, and so considerable were the territories which were at the disposal of the victorious power, that all parties were fully satisfied with their acquisitions. The families of Hyder Ali and Tippoo Sultaun enjoyed more magnificent establishments than they had even done during the late reign: the infant Rajah of Mysore was elevated from a hovel to a palace, and reinstated in more than his ancestral splendour; the Mohammedan officers of the fallen dynasty, surprised by the continuance of all the honours and offices which they had formerly enjoyed, were impressed with the strongest sense of the generosity of the British government; while the substantial power of Mysore had passed, with a territory yielding five hundred and sixty thousand pounds sterling a year, to the munificent victors,* and Marquis Wellesley, the distributor of all this magnificence, put the purest gem in the diadem of glory with which his brows were encircled,† by refusing for himself and his family any portion of the extensive prize-money derived from the public stores taken at Seringapatam, which had fallen into the hands of the victorious army.‡

Little difficulty was experienced in effecting the pacific settlement of the Mysore after the death of Tippoo, the principal rajahs having hastened to make their submission after they heard of the favourable terms offered by the conqueror to the nobles; and the judgment as well as firmness of Colonel Wellesley, upon whom, as Governor of Mysore, the principal part of that important duty devolved, was alike conspicuous. One, however, Doondiah Waugh, a partisan of great energy and activity, was imprudently liberated during the confusion consequent on the storm of Seringapatam, and, having collected a band of freebooters and disbanded soldiers from the wreck of Tippoo's army, long maintained, with indefatigable perseverance, a desultory warfare. He first retired into the rich province of Bednore, which he plundered, during the paralysis of government consequent on the fall of the Mysore dynasty, with merciless severity; but Colonel Stevenson and Col-

onel Dalrymple having advanced against him at the head of light bodies of cavalry and infantry, he was defeated in several encounters, the forts which he had occupied carried by assault, and himself driven, with a few followers, into the neutral Mahratta territory. Doondiah, however, though defeated, was not subdued. Meeting with no very friendly reception from the Mahratta chiefs, he again, in the succeeding year, hoisted the colours of independence, and soon attracted to his standard multitudes of those roving adventurers who, in India, are ever ready to join any chieftain of renown who promises them impunity and plunder.*

Colonel Wellesley was so fully aware of the necessity of not permitting such a leader to accumulate a considerable force in provinces but recently subjected to European rule, and abounding with disorderly characters of every description, that, though he had recently refused the command of the projected expedition against Batavia from a sense of the importance of his duties in Mysore, he took the field against him in person, and soon brought the contest to a successful termination. Doondiah having entered the Peishwa's territories in May, 1800, he immediately moved against him with a body of light infantry, two regiments of British and two of native dragoons. A victory recently gained over a considerable body of Mahratta horse had greatly elated the spirits of Doondiah and his followers; he was rapidly following in the footsteps of Hyder Ali in the formation of a dynasty; and, in the anticipation of boundless dominion, he had already assumed the title of "King of the World." But the hand of fate was upon him. Advancing with a celerity which exceeded the far-famed swiftness of the Indian chief, marching frequently twenty-five or thirty miles a day, even under the burning sun and over the waterless plains of India, Colonel Wellesley at length came up with the enemy, who retired at his approach. Hangal, into which he had thrown a garrison, was stormed; Dummul, garrisoned by a thousand choice troops, carried by escalade; a division of his army, four thousand strong, attacked and routed, early on the morning of the 30th, on the banks of the Malpoorba, the whole artillery, baggage, and camels being taken; and at length intelligence was received that Doondiah himself, with five thousand horse, lay at Conaghur, about thirty miles distant from Colonel Wellesley's cavalry. The latter made a forced march to reach him before it was dark, but the jaded state of the horses rendered it impossible to get nearer than nine miles; two hours before daylight, however, on the following morning, he was again in motion, and at five o'clock met the "King of the World," as he was marching to the westward, without any expectation of the British being at hand. Colonel Wellesley had only the 19th and 22d dragoons, and two regiments of native horse, in all about twelve hundred men; but with these he instantly advanced to the attack. Forming his troops into one line, so as not to be outflanked by the superior numbers of the enemy, who were quadruple his own force,

* The territory acquired by Tippoo's conquest at this juncture by the company was 20,000 square miles, while the Rajah of Mysore was reinstated in 29,250. The cession made by Tippoo on occasion of Lord Cornwallis's treaty was 24,000 square miles. England contains 43,000 square miles.—MARTIN'S *Map of India, Colonial Library*, and *WELL. Desp.* i., p. 1.

† Lord Well. *Desp.* to Directors, 3d Aug., 1799, ii., 72, 101.

‡ His letter on this subject is as follows: "I understand that, if the reserved part of the prize taken at Seringapatam, consisting of prize-money and ordnance, should come into the possession of the company, it is their intention to grant the whole to the army, reserving £100,000, to be afterward granted to me. I am satisfied that, upon reflection, you will perceive that the accepting such a grant would place me in a very humiliating situation with respect to the army; and, independent of any question of my character, or of the dignity and vigour of my government, I should be miserable if I could ever feel that I had been enriched at the expense of those who must ever be the objects of my affection, admiration, and gratitude, and who are justly entitled to the exclusive possession of all that a munificent king and an admiring country can bestow. Even if the independence of my family were at stake, which I thank God is not, I never could consent to establish it on an arrangement injurious to the conquerors of Mysore."—LORD WELLESLEY to Henry Dundas, 20th April, 1800, *Desp.* ii., 262, 263.

* Auber, ii., 196, 197. Scherer, i., 42, 43

and leading the charge himself, the British general resolutely bore down upon the foe. Doondiah's men were hardy veterans, skilfully drawn up in a strong position; but they quailed before the terrible charge of the British horse, and broke ere the hostile squadrons were upon them. The whole force was dispersed in the pursuit, and Doondiah himself slain: a decisive event, which at once terminated the war, and afforded no small exultation to the English soldiers,* who brought back his body in triumph, lashed to a galloper gun, to the camp.

The effect of these brilliant successes soon appeared in the alliances which were courted with the company by the Asiatic powers. The Nizam, who had obtained so large an accession of territory by the partition treaty of Mysore, soon found himself unequal to the task of governing his newly-acquired territories, which were filled with warlike hordes, whom the strong arm of military power alone could retain in subjection, and he solicited, in consequence, to be relieved of a burden which his character and resources were alike incapable of bearing. A treaty, offensive and defensive, was accordingly concluded

with that potentate soon after he had entered into possession of his new dominions, by which the company guaranteed the integrity of his dominions against all attacks from whatever quarter, and, to add to the security which he so ardently desired, agreed to augment the subsidiary force stationed at Hyderabad by two additional regiments of infantry and one of cavalry; while the Nizam ceded to the company the whole territories which he had acquired by the treaties of Seringapatam in 1792, and Mysore in 1799, of which he had never been able to obtain more than a nominal possession. The territories thus acquired by the company amounted to 25,950 square miles, or more than half of all England, and yielded a revenue of £450,000. The Rajah of Tanjore, anxious to shelter himself under a similar protection, entered into a treaty of the same description, and in return ceded territories, for the maintenance of his subsidiary force, amounting to 4000 square miles.† The Portuguese settlement of Goa was voluntarily surrendered by its debilitated possessors to the English authorities, and the descendants of the ancient discoverers and conquerors of India acknowledged the rising supremacy of the Anglo-Saxon race.

Amicable relations were at the same time established with the Imaum of Muscat, a powerful chief, having a considerable naval force and vast maritime coast in the Persian Gulf and on the shores of Arabia, and the King of Persia, which terminated in the conclusion of a most important treaty, both commercial and political, with the court of Ispahan. By its valuable privileges were secured to British trade in the interior of Asia, and a barrier was provided against the only powers which at that period were thought to

threaten the provinces of Hindostan. It was agreed that, in the event of any inroad being threatened by the Affghans, or any hostile measures attempted by France, Persia would make common cause with England in arresting the invader. No stipulations were deemed necessary against Russia, though all history told that it was from that quarter that all the serious invasions of India had emanated, and although only two years before a treaty had been concluded between Napoleon and the Emperor Paul for the transport of a force of thirty-five thousand French and fifty thousand Russian troops, from the banks of the Rhine and of the Wolga to those of the Indus.* So shortsighted are the views even of the ablest statesmen and diplomatists when, carried away by the pressing, and perhaps accidental dangers of the moment, they overlook the durable causes which, in every age, elevate and direct the waves of conquest.†

Delivered from all domestic dangers by these prosperous events, Lord Wellesley was enabled to direct the now colossal strength of the Indian Empire to foreign objects. Such was the extent of resources at the disposal of government, that, without weakening the force to any considerable degree at any of the presidencies, he was enabled to fit out an expedition at Bombay, consisting of seven thousand men, to take part in the great concerted attack by the British government upon the French in Egypt. Sir D. Baird, as a just reward for his heroic conduct at Seringapatam, received the command, and sailed from Bombay on the 30th of March. Colonel Wellesley had been appointed second in command, and he looked forward with exultation to the service for which he was destined, but a severe illness rendered it impossible for him to follow out his destination. General Baird, therefore, proceeded alone, and Colonel Wellesley, to whom the importance and romantic character of the expedition had rendered it an object of the highest interest, continued during his recovery to write letters to his brave commanding officer, containing suggestions for the conduct of the campaign and precautions against its dangers, highly characteristic of the sagacious foresight of his mind. General Baird conducted the expedition with admirable skill, and contributed in no small degree, by his opportune arrival, to the surrender of the French force at Cairo and the triumphant issue of the Egyptian campaign;‡ while fate, which here seemed to have blasted Colonel Wellesley in the brightest epoch of his career, was only reserving him for higher destinies, and preparing, in the triumph of Assaye, the opening of that career which was destined to bring the war to a triumphant conclusion.§

Civil transactions, however, of the most important nature, highly conducive to the power and stability of the British Empire in the East, ensued before the sword was again drawn

on the plains of Hindostan. The kingdom of Oude had long been the seat of a large British force, both on account of the internal weakness of its government and the importance of its situation on the northern frontier of India, and the first likely to fall a victim to foreign invasion. By existing treaties, the company were at liberty to augment the subsidiary force serving in that province, if they deemed such increase requisite for the security of the two states; and the mutinous, turbulent disposition both of the vizier's soldiers and subjects, as well as his inextricable pecuniary embarrassments, had long made it too apparent that it was indispensably necessary for the very existence of society in these provinces, the security of our northern frontier, as well as the payment of the subsidized force, that the weakness and corruption of the native government should be exchanged for the vigour and equity of British rule. The native prince, however, though well aware of his inability either to conduct his own administration or discharge his engagements to the British government, evinced the utmost repugnance to make the proposed cessions of territory in discharge of his obligations to maintain a subsidiary force; but at length his scruples were overcome by the firmness and ability of the British diplomatic agent, Mr. Henry Wellesley, and a treaty was concluded at Lucknow, by which his high-

Sept. 6.

ness ceded to the British government all the frontier provinces of Oude, particularly Goorackpore and the lower Doab, containing thirty-two thousand square miles, or three fourths of the area of England. The revenue of the ceded districts, at the time of the treaty, was estimated at considerably less than the subsidy which the Nawaub was bound to furnish for the pay of the subsidiary force, by which alone his authority had been maintained; but the British government was amply indemnified for this temporary loss by the value of the ceded districts, which, under the firm government of the company, soon rose to triple their former value, while the native prince obtained the benefit of an alliance, offensive and defensive, with the company, and a permanent force of thirteen thousand men to defend his remaining territories; and the inhabitants of the transferred provinces received the incalculable advantage of exchanging a corrupt and oppressive native for an honest and energetic European government.*

Another transaction of a similar character, about the same period, put the British in possession of territories of equal value in the Carnatic. Among many other important papers discovered in the secret archives of Tippoo Sultan at Seringapatam, was a correspondence in cipher between that ambitious chief and the Nawaub of the Carnatic, Omdut-ul-Onraah, which left no doubt that the latter had been engaged in a hostile combination against the British government.† The

situation of the rich and fertile district of the Carnatic, so near to the British provinces on the Madras coast, rendered it of the highest importance that no hidden enemy should exist in that quarter; and, as the authority of the Nawaub had been little more than nominal for a number of years past, Lord Clive, the governor of Madras, received orders to take military possession of the country in June, 1801. The old Nawaub died about that time, and after a difficult negotiation with his son, who had succeeded to his dominions, a treaty was at length concluded, by which the British obtained July 31, 1801. the entire command of his dominions, under the condition only of providing an income suitable to the splendour and dignity of the deposed family. This condition, like all others of a similar character, was faithfully complied with; and though, in making the cession, the young Nawaub unquestionably yielded to compulsion, yet he obtained for himself a peaceable affluence and splendid establishment; for his country, the termination of a distracted rule and a ruinous oppression; and for his subjects, blessings which they never could have obtained under a native dynasty. The territories thus acquired amounted to twenty-seven thousand square miles, and were of the richest description, extending on the plains from the foot of the Mysore Mountains to the coast of Coromandel.*

But there never was a juster observation than the one already noticed, that con- Causes of the quest, to induce security, must be rapture with universal; for anything short of that the Mahrattas. only induces additional causes of

jealousy, and a wider sphere of hostility. By destroying the power of Tippoo and reducing the Nizam to a mere tributary condition, the English had done what Napoleon had achieved by crushing Prussia, humbling Austria, and establishing the Confederation of the Rhine; they had rendered inevitable a contest with a more formidable power than either, and induced a struggle for life or death with the most powerful nations in India. The formation of alliances, offensive and defensive, with the Nizam and the Rajah of Mysore, necessarily brought the British government into contact with their restless and enterprising neighbours the MAHRATTAS, and made them succeed to all the complicated diplomatic relations between the courts of Hyderabad, Seringapatam, and Poonah. It is needless to examine minutely the causes of the jealousy and ultimate rupture which ensued between them. That the Mahrattas, a powerful confederacy, inflamed by conquest, inured to rapine, whose hand was against every man and every man's hand against them, and who could bring two hundred thousand horsemen into the field, should view with apprehension the rapid advances of the English to supreme dominion, is not surprising; the only thing to

tentate and the Mahrattas and the English, which had been the principal means, in 1792, of reducing the power of Tippoo. The English were denominated *Taza Waruds*, or the new-comers; the Nizam himself *Fleece*, or nothing; and the Mahrattas *Pooch*, or contemptible. By the 10th article of the treaty of 1792, he was bound "not to enter into any negotiation or political correspondence with any European or native power whatever without the consent of the company."—MALCOLM'S *India*, 337, 339.

* Sultan's Treaty, Well. Desp., ii., 599. Malcolm, 322, 325. Auber, ii., 227, 231.

† This correspondence, the cipher to which was accidentally discovered, was very curious. It contained decisive evidence that the Nawaub had severely reprobated the Nizam's alliance with the English, as contrary to the dictates of religion; as well as the triple alliance between that po-

wonder at is, that, like the European powers in regard to Napoleon, they should so long have looked supinely on while the redoubtable stranger beat down successively every native power within his reach. They owed, as already mentioned, a nominal allegiance to the Peishwa, who was the head of their confederacy, and held his seat of government on the Musnud, or throne, at Poonah; and it was with him that all the treaties and diplomatic intercourse, both of the company and the native powers, had been held. But his authority, like that of the emperor in the Germanic confederacy, was more nominal than real; and the principal chiefs in this warlike, restless race, acted as much on their own account as the cabinets of Vienna, Berlin, or Munich.* Three of these had recently risen to eminence, and formed the chief powers with whom the English had to contend in the arduous conflict which followed: the Rajahs of BERAR, SCINDIAH, and HOLKAR.

The Rajah of Berar had established a sway over all the territory from the sea on the western shore of the Bay of Bengal to the dominions of the Nizam on the southwest. His capital was at Nagpoor, and he could bring twenty thousand disciplined cavalry, and half that number of infantry, into the field. Scindiah's power was much more considerable. Besides eighteen thousand admirable horse, he had sixteen battalions of regular infantry under the command of European officers, and above two hundred pieces of cannon ready for action. Holkar's territories were farther removed from the scene of action, being situated between the dominions of the Scindiah and Bombay, but his power was greater than either of the other chieftains. He could with ease bring eighty thousand men into the field; and, though the greater part of them were cavalry, they were only on that account the more formidable to an invading enemy. The families of the two latter of these chiefs had been of recent elevation; the founder of that of Scindiah, the grandfather of the present rajah, had originally been a cultivator, and owed his rise, when a private soldier in the guard of the Peishwa, to the accidental circumstance of being discovered by his sovereign, when left at the door in charge of his slippers, asleep, with the slippers clasped with fixed hands to his breast: a proof of fidelity to his humble duty which justly attracted the attention of the monarch. Both the present rajah and his father had been the resolute opposers of the English power; and, though they wielded at will the resources of the Peishwa, they were careful to observe all the ceremonials of respect to that decayed potentate. When Scindiah was at the head of sixteen regular battalions, a hundred thousand horse, and two hundred pieces of cannon, he placed himself at the court of the Peishwa below all the hereditary nobles of the state, declined to sit down in their presence, and, untying a bundle of slippers, said, "This is my occupation: it was my father's." But, though thus humble in matters of form, no man was more vigorous and energetic in the real business of government. He was the nominal subject, but real

master of the unfortunate Mogul emperor, Schah Aulum; the ostensible friend, but secret enemy of his rival Holkar; the professed inferior, but actual superior and oppressor of the Rajpoot chiefs of Central India; the enrolled soldier, but tyrannic ruler of the declining throne of the Peishwa.*

The family of Holkar were of the shepherd tribe; the first who rose above the class of peasants was Mulhar Row, born in 1693. By the vigour and ability which they displayed, his ancestors gradually rose to eminence under the Mahratta chiefs, and, at the death of Tukajie, the head of the family, in 1797, two legitimate and two natural sons appeared to contest the palm of supremacy. Jeswunt Row was the youngest of the latter class; and in the first civil contest which ensued with his legitimate brothers he was totally defeated, and obliged to fly with only a few followers. The native vigour of his character, however, rose superior to all his difficulties; after undergoing the most extraordinary vicissitudes of fortune, in the course of which he on one occasion quelled a revolt among his Pindarrie followers by springing from his horse, and with his own hand loading and discharging a fieldpiece among them, he at length succeeded in all his designs, and, under the title of guardian to the infant son of his elder legitimate brother, in effect obtained the command of the whole possessions of the Holkar family. For some time he was engaged in hostilities with Scindiah; but no sooner was his power fully established, than these two formidable chieftains united their forces against the Peishwa, the acknowledged head of their confederacy. The combined armies encountered those of the Peishwa in the neighbourhood of Poonah; 25th October, 1800. Scindiah's forces commenced the action, and his troops at first met with a repulse; while Holkar, with his cavalry mounted, watched the conflict from the heights in the rear. Instantly mounting his horse, the brave chief bade all who did not intend to conquer or die to return to their wives and children; for himself, he was resolved not to survive defeat. Bearing down with his squadrons, yet fresh, on the wearied foe, Holkar soon restored the combat, and finally routed the Peishwa's troops with great slaughter. The unhappy monarch was obliged to fly from his capital, which was soon occupied by his enemies, and the august head of the Mahrattas appeared as a suppliant in the British territories.†

Lord Wellesley justly deemed this a favourable opportunity to establish a proper balance of power among the Mahratta states, and erect a barrier between their most enterprising chiefs and the British dependances. It had long been a leading object of English policy to prevent the establishment of any considerable power in India with whom the French might form dangerous connexions; and already a sort of military state had risen up, of the most formidable character, under French officers, and under Scindiah's protection, on the banks of

* Auber, ii., 272, 277. Lord Wellesley to the Secret Committee, Sept., 1803, iii., 372.

the Jumna. Perron, a French officer in the service of that chieftain, had organized a formidable force, consisting of thirty thousand infantry and eight thousand cavalry, admirably equipped and disciplined, with a train of a hundred and fifty pieces of cannon of brass, and one hundred and twenty iron guns, entirely under the direction of officers of his own country, and disposed equally to second the hostile views of the Mahratta confederacy, or forward those of Napoleon for the subversion of the British power in the East. For the maintenance of this subsidiary force he had obtained a grant of a rich and extensive territory yielding £1,700,000 a year of revenue, extending from the banks of the Jumna towards those of the Indus, through the Punjab, and comprising Agra, Delhi, and a large portion of the Doab, or alluvial plain between the Jumna and the Ganges. It was not the least important circumstance in this military establishment that it gave M. Perron the entire command of the person of the unfortunate Shah Aulum, the degraded heir of the throne of Delhi, and promised, at no distant period, to put the French emperor in possession of the rights of the house of Timour over the Indian peninsula.*

The Peishwa was not insensible of the need in which he stood of British protection to maintain his precarious authority over the unruly Mahratta chiefs; but dread of the hostility of Scindiah and Holkar, joined to a secret jealousy of the rising power of those aspiring foreigners, had hitherto prevented him from closing with the advances made to him by the governor-general; and he had even declined to accept the share of the spoils of Mysore, which, in order to conciliate his cabinet, had, notwithstanding their dubious conduct in the war with Tippoo, been offered by the British government. The decisive overthrow received from Scindiah and Holkar, however, and the desperate state of his affairs in consequence of their invasion, entirely overcame these scruples; and, on the morning of the day on which he evacuated his capital, the fugitive monarch eagerly solicited the aid of a British subsidiary force to enable him to make head against his rebellious feudatories. He was cordially received, therefore, by the English authorities; and, having escaped out of his dominions, he embarked on board a British vessel, and landed safely at Bombay. The result of these disastrous circumstances was the conclusion of the treaty of Bassieu, between the company and the Peishwa, in virtue of which a close alliance, offensive and defensive, was contracted by the two powers, and the latter agreed to receive a subsidiary force, to be maintained at his expense, of six thousand men.†

This crisis was rightly considered by Lord Wellesley to require the immediate application of the most vigorous measures. In contemplation of its arrival, he had already collected a body of twenty thousand men un-

der General Stuart, at Hurrighur, a town of the Madras presidency, near the Mahratta frontier; while General, afterward Lord LAKE, received the command of the principal force, called the army of Bengal, which was stationed in Oude. The Madras army, however, was afterward divided into two parts, and the command of the advanced guard, consisting of ten thousand European and sepoy troops, with two thousand of the Mysore horse, was intrusted to Colonel Wellesley, whose admirable disposition during the war with Doondiah had both won for him the confidence of the troops and conciliated the good-will of the native powers. With this force, that enterprising officer broke up from Hurrighur on the 9th of March, and, after crossing the Tumbudra River, entered the Mahratta territory. He was everywhere received by the people as a deliverer: the peasants, won by the strict discipline of his troops, and the regular payment for provisions in the former campaign, flocked in crowds with supplies to the camp; while the whole inhabitants, worn out with the incessant oppression of the Mahratta sway, welcomed, with loud shouts, the troops who were to introduce in its room the steadiness of British rule and the efficiency of British protection. Holkar had left Poonah some time before, with the bulk of his forces, and the garrison which he had left in that capital abandoned it on the approach of the British forces. Colonel Wellesley, therefore, deemed it unnecessary to wait the tardy movements of the infantry; and, aware of the importance of gaining possession of the capital before Scindiah could assemble forces for its relief, or the threats of burning it, which they had uttered, could be executed, put himself at the head of the cavalry, and, advancing by forced marches, reached Poonah on the 19th of April, and entered the city amid the acclamations of the inhabitants, whom, by an extraordinary effort, he had saved from the vengeance of the retiring enemy. In the thirty-two hours immediately preceding he had marched at the head of his horse above sixty miles: an instance of sustained effort, under the burning sun of India, which never has been exceeded in history.*

The effects of this vigorous step were soon apparent. The Peishwa, relieved from his compulsory exile in Bombay, returned to his dominions, and was re-seated with much pomp, in presence of the British army, on the Musnud, or hereditary throne of the Mahrattas. His principal feudatories renewed their allegiance to him, and even, in some instances, joined their troops to the British forces; and it was for a short time hoped that this great stroke of securing the Peishwa to the British interest, by the strong bond of experienced necessity, would be accomplished without the effusion of human blood. It soon appeared, however, that those hopes were fallacious. The jealousies and animosities of the Mahratta chiefs had been subdued by the approach of common danger; and it speedily became manifest, from the great accumulation of forces which assembled on the frontiers of the Nizam's territories, that hostile

* Malcolm, 308. Wellesley's Desp., iii., 29, 31, Introd. Auber, ii., 286, 287. Gurw., i., 87.

† Wellesley's Desp., iii., 33, 36. Malcolm, 290, 291. Auber, ii., 287, 289.

ities on a very extended scale were in contemplation. Lord Wellesley's preparations were immediate, and proportioned to the imminence of the danger. General Lake assumed the command of the principal army, twenty-five thousand strong, which had assembled in Oude; while Colonel Wellesley, now promoted to the rank of general, drew near to the threatening mass of forces which was collected on the Nizam's frontier. A long negotiation ensued, conducted by Colonel Collins, the British resident at the court of Scindiah, the professed aim of which was to smooth away the subjects of jealousy which had arisen between the two powers; its real object to gain time for Scindiah, till the preparations of the Rajah of Berar were completed, and his approach had enabled

May 27. the combined forces to take the field. At length, in the end of May, Scindiah, being much pressed to give an explanation of his armaments, or direct the withdrawal of his troops, broke up the conference by declaring, "After my interview with the Rajah of Berar, you shall be informed whether we will have peace or war." It was evident to the persons who conducted this negotiation that the success of the Mahratta confederacy with Hyder in 1780, which had brought the Madras presidency to the brink of ruin, had inspired the chiefs of that nation with a most extravagant opinion of their own importance; that they were wholly unaware of the vast intermediate progress which the British power had made, and deemed that the renewal of hostilities on their part was to be immediately followed by the siege of Madras and expulsion of the English from India. Perceiving this, and being convinced that a rupture was inevitable, Lord Wellesley committed full diplomatic powers to his generals in the field; and General Wellesley demanded, in July 22. peremptory terms, an explanation of his intentions, and removal of his forces from Scindiah to a less threatening station. The rajah, in his turn, insisted upon the withdrawal of the British forces, to which General Wellesley at once agreed; but, when the time for carrying the mutual retreat into effect arrived, the Mahratta showed no disposition to move, and the British government received information that the combined chiefs had resolved not to retire Aug. 3. from their threatening position. Upon this, the resident quitted Scindiah's court, and war began both in the Oude frontier under Lord Lake, and that of the Nizam under General Wellesley.*†

* Wellesley's *Desp.*, iii., 38, 41, *Intro.*, and 344, 346. Malcolm, 293, 307. Auber, ii., 291, 299.

† The substance of this important negotiation was thus pithily summed up by the Duke of Wellington, in a letter to Scindiah at this period: "The British government did not threaten to commit hostilities against you, but you threatened to commence hostilities against them and their allies; and, when called upon to explain your intentions, you declared that it was doubtful whether there would be peace or war, and, in conformity with your threats and declared doubts, you assembled a large army in a station contiguous to the Nizam frontier. On this ground I called upon you to withdraw your army to its usual stations, if your pacific declarations were sincere; but, instead of complying with this reasonable requisition, you have proposed that I should withdraw the troops which are intended to defend the territories of the allies against your designs; and that you and the Rajah of Berar should be suffered to remain with your troops assembled, in readiness to take advantage of their absence. This proposition is unreasonable and inadmissible, and you must stand to the consequences of the

The campaign which followed, though it lasted only five months, was one of the most brilliant in the British annals, and conducted our Eastern empire, by an uninterrupted series of victories, to the proud pre-eminence which it has ever since retained. General Lake's instructions, dictated by that clear perception of the vital point of retack, which, as much as his admirable foresight, characterized all Marquis Wellesley's combinations, were to concentrate all his efforts, in the first instance, upon the destruction of M. Perron's formidable force on the banks of the Jumna; next, to get possession of Delhi and Agra, with the person of Shah Aulum, the Mogul emperor; and, finally, to form alliances with the Rajpoots and other native powers beyond the Jumna, so as to exclude Scindiah from the northern parts of India. General Wellesley was directed to move against the combined forces of Scindiah and the Rajah of Berar, on the Nizam's frontier, and distract their attention by vigorous operations, while the decisive blows were struck by General Lake at the centre of their power, and subsidiary operations were to be conducted by Colonel Campbell against the province of Cuttack, and the city of Jaggernaut, with the view of adding that important district, the link between the Bengal and Madras provinces, to the British dominions.*

General Lake's army commenced its march from the ceded provinces of Cawn- Defeat of Perron's force, and storm of Allighur. Aug. 28. pore on the 7th of August, and on the 28th, as he drew near to Perron's force, he received a letter from that officer, proposing to enter into an arrangement, by which he himself and the troops under his command might remain neutral in the contest which was approaching; but the terms proposed were deemed inadmissible, and the flag of truce returned without effecting any arrangement. On the day following, 29th Aug. the English came up with the whole of Perron's force, drawn up in a strong position, covering the important fort of Allighur. They were immediately attacked by the British army with the greatest vigour, and, after a short resistance, put to flight. The fortress of Allighur was next besieged; and, as the extraordinary strength of its fortifications, armed with one hundred and eighty guns, rendered operations in form a very tedious undertaking, General Lake, after a few days' cannonading, 4th Sept. resolved to hazard the perilous attempt of an escalade. The ditch, to use his own expression, was so large as to float a seventy-four, and the garrison, four thousand strong, both disciplined and resolute; but all these difficulties were overcome by the devoted gallantry of the storming party, headed by the 76th regiment, led by Colonel Monson; and after a bloody struggle, an hour in duration, the gates were blown open, and the British colours hoisted on the walls of the fortress.†

measures which I find myself obliged to adopt to repel your aggressions. I offered you peace upon terms of equality, and honourable to all parties; you have chosen war, and are responsible for all the consequences."—Gen. WELLESLEY TO SCINDIAH, Aug. 6, 1803. *Well. Desp.*, iii., 277.

* Auber, ii., 301, 305. Wellesley's *Desp.*, iii., 210, 215. † Lord Lake's *Desp.*, Sept. 4, 1803. *Well. Desp.*, iii., 291, 294. Auber, ii., 306.

Brilliant as was this opening of the campaign, it was speedily succeeded by other successes still more important. Advancing rapidly towards Delhi, General Lake was met by General Perron, who entered into a separate negotiation, and soon passed through the British camp on his way to embark for France, with the large fortune which he had made in the Mahratta service. But he Sept. 11. was succeeded in the command of the French subsidiary force by M. Louis, who, instead of showing any disposition to come to an accommodation, advanced in great force, and with a most formidable train of artillery. The British army, after a fatiguing march of eighteen miles, on the 11th of September found the enemy, twenty thousand strong, including sixteen thousand disciplined in the European method, with a hundred pieces of cannon, posted on a strong ridge which covered the approaches to the city of Delhi. The troops which General Lake had at his immediate disposal, as the whole of the army had not come up, did not exceed five thousand men; but with this handful of heroes he did not hesitate instantly to advance to the attack. When the men came within range, they were received by a tremendous fire, first of round and chain-shot, and afterward of grape and musketry. Advancing, however, without flinching, through the dreadful storm, the British waited till the order was given, at the distance of a hundred yards, to fire; and then, after pouring in a close and well-directed volley, rushed forward with the bayonet, and in a few minutes drove the enemy from their guns and from the field in the utmost confusion. Sixty-eight pieces of heavy artillery, thirty-seven tumbrils, and eleven standards were taken; but such was the severity of the fire to which they were exposed during their rapid advance, that in that short time four hundred of the British army were killed and wounded, and it was to the steady intrepidity of the 76th regiment that General Lake mainly ascribed the glorious result of the battle.*†

* Lord Lake's Despatch, Sept. 12 and 13, 1803. Well. Despatch, iii., 308, 313.

† The following passage in Lord Lake's private despatch to Lord Wellesley on this occasion contains a remark of permanent interest, more especially in anticipation of the future progress of events in the Indian Peninsula: "I cannot avoid saying, in the most confidential manner, that, in the event of a foreign foe coming into this country, without a very great addition of force in Europeans the consequences will be fatal, as there ought always to be at least one European battalion to four native ones: this I think necessary. I have seen a great deal of these people lately, and am quite convinced that, without king's troops, very little is to be expected: in short, the infantry of this army, as well as cavalry, should be remodelled."—*Confidential Despatch*, Sept. 12, 1803. Well. Despatch, iii., 312. This wise advice has been since entirely thrown away: because government did not venture, in the face of popular clamour for reduction and retrenchment, to keep up the British troops in India at their former level, far less to augment them to double their amount, as they should have been, to preserve the proper balance between the European and native forces. It was immediately after the battle of Austerlitz that Napoleon, gifted with the sagacity which amounts to prescience, formed his designs for the fortification of Paris; and it was immediately after the battle of Delhi that Lord Lake impressed upon government the necessity of a great augmentation in the European forces in India. The future to the one has passed; and Napoleon, as we shall see in the sequel, fell, because dread of offending the Parisian populace prevented him from carrying into execution what he felt to be essential to the salvation of their independence: the fu-

The immediate consequence of this victory was the capture of Delhi, the ancient capital of Hindostan, and seat of the Mogul emperors, which was taken possession of without resistance on the following day, and the liberation of the Emperor Shah Alum from the degrading servitude in which he had long been retained by the Mahratta and French authorities. The English general was received by the descendant of Timour, seated on his throne with great pomp, in presence of all the dignitaries of the empire; and experience in the end proved that he had made a most beneficial change of his own interest; for, if the original Tartar conqueror would have had much to regret in the deprivation of real power with which his circumstances were attended, his enfeebled successors would have seen much to envy in the perfect security and unbounded luxury which he enjoyed under the liberal protection of his generous allies. The British power derived great moral influence and consideration from this auspicious alliance, and the name of the Emperor of Delhi proved of more service in the end than ever his arms could have been. But an event of more immediate importance to the success of the campaign soon after occurred. M. Louis, and five other chiefs of the French subsidiary force, despairing of their cause, delivered themselves up to the British, and were marched off to Calcutta; while the remainder of the troops under their orders, in a great degree destitute of leaders, retired, though in good order, towards Agra.*

Thither they were speedily followed by General Lake with the British army; Battle and fall and on the 10th of October a general attack was made on their strong positions, intersected by ravines, covering the city from the south. The gallant sepoy troops, emulating the conduct of their European brethren in arms, under the guidance of Lieutenant-colonel Gerard, the adjutant-general of the army, drove the enemy in the finest style from the rugged ground which they occupied, and, pursuing their advantages hotly, ascended the glacis, and gained possession of the town, though not without sustaining a heavy loss. Two days afterward, two thousand five hundred of the enemy came over and entered the British service; and the breaching batteries having been completed, and the fire commenced with great effect on the ramparts, the garrison, six thousand strong, soon after surrendered at discretion. By this decisive blow, the last stronghold and great arsenal of the enemy fell into our hands.† The stores captured were immense: one hundred and sixty pieces of brass and iron cannon were taken, with all their equipments and ammunition; while the discipline observed by the troops in the midst of their triumphs was so extraordinary, and afforded such a contrast to the license

Alliance with the Mogul emperor, and surrender of the French chiefs. Sept. 16.

Oct. 17.

ture to us is still to come, though the prospect is enveloped in clouds, and sinister omens may already be discerned in the heavens; but posterity will see whether the British Empire is to be an exception to the rule, and stability is to be given to our power by concessions to popular clamour, which have proved fatal to the greatest of those which have preceded us. * Well. Despatch, iii., 316, 318, 319.

and devastation usually attendant on military success in Hindostan, that it contributed, even more than their astonishing victories, to the belief that they were, and the wish that they should continue to be, invincible.*

This early and unparalleled series of successes secured the submission or alliance of all the native potentates in the north of Hindostan; and a treaty of alliance was concluded with the Rajah of

Battle of Laswaree. Oct. 10. Bhurtpore, and another with Runjeet

Oct. 21. Sing, the Rajah of Lahore, in consequence of which fifteen hundred of the latter's horse joined the British camp. Mean-

while, however, Scindiah moved up Nov. 1. fourteen battalions of his best regular infantry from the Deccan by forced marches

into the northern provinces; and these troops, having joined some regiments which had escaped from the wreck of Delhi and Agra, and received an ample supply of artillery, formed a formidable force, which it was of the last importance to destroy before its numbers were still farther augmented by additions from other quarters.

Leaving behind him, therefore, his artillery, and the greater part of his infantry, General Lake set out with the cavalry and light infantry, by forced marches, in pursuit of the enemy.

After several fatiguing days' journey, he reached the spot they had quitted the day before, and received intelligence that they were not more than forty miles from the British camp. Setting out at midnight, he accomplished that distance, at the head of his cavalry, in the next twenty-four hours, and

about noon, on the 1st of November, Nov. 1. came up with the enemy, sixteen thousand strong, with seventy pieces of cannon, advantageously posted with their right upon a rivulet, which required to be crossed before their position was reached, and their left resting on the village of LASWAREE. The dust, which obscured all the ground in advance of the enemy as soon as the rivulet was crossed, prevented the English general from seeing the ex-

tent of the formidable array of guns which protected his front, and, in his anxiety to cut off his retreat to the neighbouring hills, he resolved upon an immediate assault with the cavalry alone, before any part of the infantry had come up. The attack was made, and at first with brilliant success. Wearied as they were, the British and native horse forced the enemy's line at several points, penetrated into the village, and even carried a part of the artillery;* but, being unsupported by infantry and cannon, these gallant horsemen could make no reply to the severe fire of artillery and musketry with which they were assailed; the taken guns could not be withdrawn for want of bullocks, and, after sustaining a severe loss, they were obliged to evacuate all the ground they had gained, and retire to a short distance from the field.

Encouraged by this success, but yet fearful of the onset of the British infantry, when it came up, the enemy sent to say that, if certain terms were allowed them, they would deliver up their guns. General Lake, being doubtful of the issue of a second attack, acceded to the proposal, and gave them an hour to carry it into effect; during which time he formed his little army, consisting of the 76th regiment and seven weak battalions of sepoys, with a few galloper guns, and three regiments of British and five of native cavalry, in all four thousand infantry and three thousand five hundred horse, into two columns; and when the time allowed expired, moved on to the attack. The 76th regiment headed the array, and was directed to move against the enemy's left flank and assault the village of Laswaree; the second column of infantry and all the cavalry were to support the onset of the first, and take advantage of any confusion which might appear in the enemy's line. With an undaunted step, the 76th, with General Lake and all his staff at their head, advanced against the terrible line of cannon which was planted along the enemy's front; so admirable was their steadiness that a staff officer observed at the moment, as they approached the fire, that an arrow discharged at one end of the line would go through half the feathers of the regiment.† No sooner, however, were they arrived within range of canister shot than they were received by so tremendous a fire that in a few minutes a third of their number were struck down; and, at this awful moment, a large body of the enemy's horse bore down to the charge. A close and well-directed volley from this heroic regiment, however, who had never yet fired a shot, repulsed the attack; but, as they retired only to a little distance, and still preserved a menacing attitude on the flank of the advancing column, General Lake ordered them to be charged by the British cavalry.‡

This momentous duty was instantly and ably performed by the 29th regiment of English dragoons, who, by a brilliant charge, overthrew the Mahratta horse, and, by clearing the flank of

Desperate action and final victory of the English.

* "All the inhabitants of this place (Delhi), who for a time fled, perceiving that no ravages had been committed by the troops, returned to their habitations last night. I am informed from all quarters that the inhabitants beheld with astonishment this proof of the discipline and good conduct of the army, and declare that hitherto it has been unknown in Hindostan that a victorious army should pass through a country without destroying by fire, and committing every excess the most injurious to the inhabitants; but, on the contrary, from the regularity observed by us, our approach is a blessing, instead of bringing with it, as they at first feared, all the horrors of war, attended by rapine and murder; that their cattle remain in their fields without being molested, and the inhabitants in their houses receive every protection."—Lord Lake to Lord Wellesley, 2d Oct., 1803; *WELL. Desp.*, iii., 426, 427.

On this occasion, also, Lord Lake reiterates his observation of the indispensable necessity of having a large proportion of British troops to achieve success in India. "The sepoys," says he, "have behaved excessively well; but from my observations on this day, as well as every other, it is impossible to do great things in a gallant and quick style without Europeans; therefore, if they do not in England think it necessary to send British troops in the proportion of one to three sepoy regiments, which is, in fact, as one to six, they will stand a good chance of losing their possessions in India, if a French force once get a footing in India. You may perceive, from the loss of European officers in sepoy regiments, how necessary it is for them to expose themselves; in fact, everything has been done by the example and exertions of the officers, and without which we had not been where we are."—Lord Lake to Lord Wellesley, Oct. 10, 1803; *WELL. Desp.*, iii., 396.

* Lord Lake's *Desp.*, Nov. 2, 1803. *Well. Desp.*, iii., 441, 442.

† I received this striking anecdote from the adjutant-general of the army, Lieutenant-colonel Gerard, to whom the words in the text were addressed by Major Lake, the gallant son of the commander-in-chief.

‡ Lord Lake's *Desp.* Nov. 2, 1803. *Well. Desp.*, iii., 445, 446.

the column of infantry, enabled the successive regiments, as they came up, to deploy. The whole now moved forward at a rapid pace against the enemy's batteries, and sustaining, without flinching, the continued and terrific fire of his artillery, at length, by a sudden rush, made themselves masters of the guns. Aug. 10. Then the left wing did not fly, but commenced, in admirable order, a regular retreat, which, however, was ultimately changed into a rout by the repeated and impetuous charges of the British and native horse, under Colonel Vandeleur. So obstinate was the resistance, so complete the victory, that, of seventeen regular battalions who had engaged in the battle, the whole, with the exception of two thousand prisoners, were either killed or wounded; all the guns, seventy in number, forty-four colours, and the whole ammunition and baggage, taken. By this decisive overthrow, not only was the power of Scindiah in the northern provinces completely broken, but the French influence and authority on the banks of the Jumna, which had suddenly grown up to so formidable a height, finally destroyed. But the success was dearly bought by the British army: above eight hundred of that band of heroes had fallen, or were wounded in the fight; the battle was the most severe that had yet been fought in India; Lord Lake avowed, in his secret despatches to the governor-general, that, if the enemy's sepoy had had an adequate appointment of French officers, the result would have been extremely doubtful, and that the victory was owing entirely to the incomparable valour of the native English troops.*†

Successes of a subordinate kind, but, nevertheless, material in the issue of the campaign, at the same time took place in the eastern provinces.

In the beginning of September, a British force under Colonel Harcourt broke up from the Bengal frontier, invaded Cuttack, and a short time after reached the far-famed city of Jaggernaut. Heavy rains for some weeks afterward prevented farther operations; but in the end of the month they again advanced, and occupied, without resistance, the town of Cuttack, and some days afterward stormed the citadel; and this rich and highly important province, a link lying on the seacoast between the presidencies of Bengal and Madras, was permanently added to the British dominions.‡

While this splendid succession of victories was establishing the British power in the north of India, triumphs of an equally brilliant kind signalized their efforts in the western provinces. Operations commenced in the Deccan with the invasion of the territories of the Rajah of Berar, by General Wellesley, on the 8th of August. On the following day he arrived at the town of Achmednugger, a

strong fortress defended by lofty walls of masonry, supported by towers: without hesitating an instant, he directed an escalade, which was bravely executed, and proved successful without any very serious loss. Batteries were immediately erected against the citadel, and with such effect that it surrendered at discretion in two days, the garrison of fourteen hundred men being made prisoners. Scindiah and the Rajah of Berar now advanced towards the invader, who soon after took possession, without resistance, of the noble city of Aurungabad. Scindiah, upon that, moved as if to threaten Hyderabad; but General Wellesley, by marching eastward along the banks of the Godavery, effectually frustrated his designs, and at the same time covered the advance of two important convoys which were coming up to his army. Jalna, an important fort on the frontier of the Mahratta territory, was soon after carried by Colonel Stevenson by assault; and a few days after he surprised a considerable detachment of the enemy by a nocturnal attack, and routed them with very heavy loss; while, on the side of Bombay, the fortress of Baroach was carried by storm by Colonel Woodington. But more decisive events were approaching. The confederate chieftains, who hitherto had merely hovered round the British troops with clouds of horse, followed by a few thousand irregular foot, were now joined by the flower of their forces: sixteen battalions of Scindiah's regular infantry and an immense train of artillery, under French officers, entered their camp,* and they exhibited an imposing array of fifty thousand men, of whom thirty thousand were admirable horse, with a hundred pieces of cannon.

This formidable concentration of force evidenced the necessity of combined operations to the British generals, and for this purpose a conference took place between General Wellesley and Colonel Stevenson on the 21st of September. It was then agreed that a joint attack should be made on the enemy, who were about a day and a half's journey off, and reported to be encamped at Bokerdun. The two generals separated on the day following, and advanced towards the concerted point by different routes: Colonel Stevenson by the western, General Wellesley by the eastern road, having a range of hills between them. The motive for this separation, though it may be doubted whether it was a sufficient one for a division in the neighbourhood of so great a force, was the difficulty of getting forward the united army through the narrow defiles by which both roads passed, and the chance that, if they both moved by one line, the enemy would retire by another, and the opportunity of striking a decisive blow be lost. In moving forward thus parallel to each other, the two corps were not more than twelve miles asunder; but the intervening hills rendered any mutual support impossible. Upon arriving within five miles of the enemy, General Wellesley received intelligence that their horse had retreated, and that the infantry alone remained, exposed to the chance of defeat if quickly assailed. As

* Lord Lake's Desp., Nov. 2, 1803. Well. Desp., iii., 435, 446.

† "The action of yesterday has convinced me how impossible it is to do anything without British troops; and of them there ought to be a very great proportion. The returns of yesterday will, I fear, prove the necessity of what I say too fully."—LORD LAKE TO LORD WELLESLEY, *Secret Despatch*, 2d Nov., 1803; WELL. Desp., iii., 446.

‡ Well. Desp., iii., 432, 433.

* Gurw., i., 299, 301, 366, 370. Scherer, i., 55, 56.

the chief strength of the Mahrattas lay in their cavalry, the English general resolved upon an immediate attack, and despatched orders to Colonel Stevenson to co-operate in the proposed enterprise. When he arrived, however, in sight of the enemy, he found their whole army, infantry and cavalry, with an immense artillery, drawn in a strong position, with the River Kaitna, which could be crossed over only by a single ford, flowing along their front. The sight was enough to appal the stoutest heart: thirty thousand horse, in one magnificent mass, crowded the right; a dense array of infantry, powerfully supported by artillery, formed the centre and left; the gunners were beside their pieces, and a hundred pieces of cannon, in front of the line, stood ready to vomit forth death upon the assailants. Wellington paused for a moment, impressed, but not daunted, by the sight; his whole force, as Colonel Stevenson had not come up, did not exceed eight thousand men, of whom sixteen hundred were cavalry; the effective native British were not above fifteen hundred, and he had only seventeen pieces of cannon. But, feeling at once that a retreat in presence of so prodigious a force of cavalry was impossible, and that the most audacious course was, in such circumstances, the most prudent, he ordered an immediate attack. "*Dux cautus et providens Scipio, victus necessitatibus, temerarium capit consilium, ut statim hosti obviam iret; et, quocumque occurreret loco, prælium consereret. 'Scio,' inquit, 'audax videri consilium; sed in rebus asperis et tenui spe, fortissima quæque consilia tutissima sunt: quia, si in occasione momento ejus prætervolat opportunitas, cunctatus paululum fueris, nequidquam mox omisam quæras.'*"*

Wellington wisely determined to direct his attack against the Mahratta left, as the infantry, which were there crowded together, presented less formidable obstacles than the immense mass of horse which glittered on the right. With this view, the British troops were moved off to their own right, the lateral movement being covered by the cavalry and the Mysore horse; and the whole crossed the Kaitna at the ford, and immediately formed in two lines, with the cavalry in reserve, on the enemy's extreme left. The confederates, upon this, altered their front, and, instead of remaining parallel to the Kaitna, formed a diagonal line across the plain from that river to the village of ASSAYE. The guns were disposed along the whole front, and presented one immense battery, formidable alike by the number and weight of its metal. With the pickets of the 85th and whole 74th in front on the right, and the 78th on the left, the British line marched swiftly forward to the attack; but, when they came within range, their guns were almost immediately dismounted by the superior fire of the enemy's artillery. Nothing, however, could arrest the steady advance of the pickets and 74th regiment, who moved direct upon Assaye; but, as they approached the enemy and got within reach of their grapeshot, the execution became so severe that frightful chasms were soon made in their ranks, and a

large body of Mahratta horse, which had got round the village unperceived, taking advantage of the openings thus made, dashed through with fearful effect, and a forest of uplifted sabres were seen in the centre of the British line.*†

All seemed lost; but at that critical moment Wellington ordered up the British and native cavalry, under Colonel Maxwell. On they came at the gallop: the gallant 19th dragoons, headed by their heroic leader, bore down upon the Mahratta horse, now disordered by success, with irresistible force, and drove them off the field headlong into the Juah. The 74th and pickets, relieved from their oppressors, now rallied with admirable discipline; and, the second line coming up, a great part of the guns which had spread such havoc through the field were taken. Still, however, the enemy held Assaye with a large body of infantry, and the cannon placed around it thundered on the attacking corps with terrific effect; but at that critical moment Wellington, having taken the guns on the left, assailed it with the 78th and a regiment of native horse with such resolution, that that important post was at length carried by storm. In this desperate conflict Wellington, who led on the 78th regiment, had a horse shot under him. The enemy resisted to the very last, the artillerymen being bayoneted at their guns; the infantry in many places lying in files on the ground, as they had stood in their ranks. During the retreat a large body of foot-soldiers collected together, and for a short time showed a determined front; but they were dispersed by a brilliant charge of Colonel Maxwell with the unconquerable 19th, in which that gallant officer lost his life. Some of Scindiah's gunners, when the flight was general, fell on the earth and feigned to be dead, to avoid the sabres of the cavalry; but no sooner had the horsemen passed than they started up, turned the guns about, and opened a destructive fire on the backs of the advancing enemy. Indignant at the fraud, the British soldiers wheeled about, again stormed the batteries, and bayoneted the deceitful gunners at their pieces. At length they fled on all sides, just as night set in, leaving in the hands of the British ninety-seven pieces of cannon, and almost all the ammunition and stores of the army. The Mahrattas had two thousand men slain on the field and six thousand wounded; but the British loss was very severe, and the victor found himself weakened by above fifteen hundred killed and wounded, including more than a third of the whole British force.‡

* Wellesley's Letter to Sir T. Munro. Gurw., i., 401, and Mem. Ibid., i., 391, 394.

† The extraordinary loss sustained by the 74th on this occasion was chiefly owing to the officer who led the pickets not having followed out Wellington's instructions, which were to make the attack on Assaye by a circuitous sweep, which would have kept the men for the greater part of the way out of the reach of cannon-shot, instead of which, carried away by an heroic courage, he moved direct upon the village, over a space swept like a glacié by the cannon of the enemy. "I lament," said Wellington, "the consequences of this mistake; but I must acknowledge, it was not possible for a man to lead a body into a hotter fire than he did the pickets on that day against Assaye. One company of the pickets alone, consisting of one officer and fifty men, lost the officer and forty-four rank and file."—WELL., Mem., 24th Sept., 1803. Gurw., i., 393, 403.

‡ Gen. Wellesley's Despatch to Sir T. Munro. Gurw., i., 401, 403, and i., 386. Well. Despatch, iii., 669. Scher., i., 60, 61.

* Liv., lib. xxv., c. 34, 38. General Wellesley's Despatch, 1st Nov., 1803, and 24th Sept., 1803. Well. Despatch, iii., 372. Gurw., i., 401, 386. Scherer, i., 57, 58.

"Never," says Southey, "was victory gained under so many disadvantages; superior arms and discipline have often provided against as great a numerical difference, but it would be describing the least part of this day's glory to say that the number of the enemy was as five to one; they had disciplined troops in the field, under European officers, who more than doubled the British force; they had a hundred pieces of cannon, which were served with fearful skill, and which the British, without the aid of artillery, twice won with the bayonet."^{*}†

After this decisive overthrow, the confederates retired twelve miles from the field of battle, where they passed the night; but no sooner did they hear of the approach of Colonel Stevenson, who, with eight thousand men, was advancing against them, than they fled headlong down the Ghauts, and reached the bottom in great confusion, without either cannon or ammunition. These losses, however, were soon restored, and the exhausted state of both corps of the British army rendered any effective pursuit of an enemy still so immensely superior in cavalry, altogether impossible. Colonel Stevenson soon after reduced Asseeghur, an important

21st Oct. fortress in the Rajah of Berar's dominions; while Wellington, by a series of masterly manœuvres, defended the territories of his allies, the Nizam and Soubadar of the Deccan, and threw back the clouds of the Mahratta horse on their own territories. After some weeks marching and countermarching, Scindiah, disgusted with a war in which no plunder was to be obtained, and of which the burden, as well as dangers, fell entirely on his own dominions, made proposals for peace.

11th Nov. An armistice, on certain terms, was agreed to by the British general; but the conditions not having been complied with by the Mahratta chiefs, he resolved not to

23d Nov. lose the opportunity which presented itself of determining their indecision by striking a decisive blow against their united forces before they were thoroughly recovered from their late defeat. Having effected a junction

25th Nov. with Colonel Stevenson, the whole moved against the enemy; and late on the evening of the 28th, after a fatiguing march in a sultry day, when the Mysore horse, which were skirmishing with the Mahratta cavalry in front, cleared away, a long line of cavalry, infantry, and artillery could be distinctly perceived, extending about five miles in length, in the plains in front of ARGAUM. Though the men were much exhausted by the heat, Wellington deemed the opportunity too favourable to be lost; for he had fourteen battalions of infantry, and six regiments of cavalry, in all about fourteen thousand men, besides four thousand irregular horse, and the enemy did not exceed forty thousand. Rapidly, therefore, the formation was made, the infantry, with the 74th and 78th on the right, and in advance, so as to enter first into action; the cavalry in the sec-

ond line following the first in echelon; the Mysore and Mogul horse on the left, thrown back, so as rather to protect the rear than enter into the fight, and opposite to the immense mass of Mahratta horse, which crowded the enemy's right wing.*

As the British line advanced, the European regiments in front were received by a heavy fire from the batteries placed along the front of the enemy's line, and shortly after they were assailed in flank with the utmost fury by a large body of Persians, who engaged in a close conflict, hand to hand, with the British, in which, after a fierce struggle, the Asiatic cimeter yielded to the European bayonet, and the assailants were almost wholly destroyed. Three battalions of sepoy, however, who succeeded next in the column, no sooner came into cannon-shot than they disbanded and fled, though they had advanced bravely through a much heavier fire at Assaye. Wellington, however, was at hand to repair the confusion: rallying them, and advancing at their head himself, he soon restored the day; a disorderly charge of Scindiah's horse on the left of the line was repulsed by the steadiness of another battalion of the native troops; and the British regiments in advance having carried the principal batteries which played upon their line, the whole Mahratta force went off in confusion, leaving in the hands of the victors thirty-eight pieces of cannon and all their ammunition. Had there been an hour more of daylight, or the delay consequent on the breaking of the sepoy regiments not occurred, the whole of the enemy would have been destroyed, as it was, the pursuit was actively continued for many miles by the British cavalry, by moonlight, and all their elephants and baggage taken. But that singular failure, even in veteran soldiers who had formerly distinguished themselves, demonstrates the necessity of a large proportion of European to native troops in all Indian campaigns; for we have the authority of Wellington for the assertion, that, if he had not been at hand to repair the disorder, the day would have been lost.†

On the very day after the battle, Wellington marched to invest Gawilghur. This celebrated fortress is situated in a capture of range of mountains between the sources of the rivers Poorna and Taptee, and stands on a lofty pile of rocky eminences, surrounded by a triple circuit of walls, rising from the edge of inaccessible precipices. The entrance to this almost impregnable stronghold are by three narrow and steep paths, winding for a long ascent through the cross-fire of batteries, and intersected at various points by strong iron gates. After reconnoitring the different sides of this formidable fortress, Wellington resolved to attack it on the northern front, where the ground is comparatively level, though to reach that quarter required a circuit of thirty miles, over rugged intervening mountains. Thither the heavy ordnance and stores were dragged, over heights hitherto deemed impassable for all but foot-soldiers, through roads made by themselves;

* Quarterly Rev., xiii., 225.

† "Their fire," said the Duke of Wellington, "was so heavy, I much doubted, at the time, whether I should be able to prevail on the troops to advance; and all agree that the battle was the fiercest that has ever been seen in India; our troops behaved admirably, the sepoys astonished me." — WELLINGTON & MAJOR MALCOLM, Oct. 3, 1803. GURW., i., 437.

* Wellington's Despatch. Gurw., i., 528, 531.

† Wellington to Major Shaw, 2d Dec., 1803. Gurw., i., 529, 534.

Nov. 13. and at length, after considerable exertion, a sufficient number of cannon were placed in the trenches on that side to commence battering. With such vigour was the fire sustained, though nine heavy guns only had been brought round, that by the evening of the 14th the breach in the outer wall was declared practicable. Arrangements were immediately made for the storm, which were carried into execution on the following morning with the most perfect success. The troops on the north side, headed by the flank companies of the 94th regiment, mounted the breach with irresistible vigour, while a false attack on the south distracted the attention of the enemy. The inner wall was surmounted by escalade, the inner gates blow open, and, at the moment when the fugitive garrison were attempting to escape by the southern ports, they were met by the victorious British, who in that quarter also had made their way in, and all made prisoners.*

The capture of this stronghold, deemed over which compels all India impregnable, following Scindiah to sue such a train of disasters, at length for peace. Dec. 17, 1803. broke the proud spirit of the Mahratta princes. Negotiations in real earnest were now resumed, and a treaty was concluded two days afterward between Wellington and the Rajah of Berar. By this pacification it was stipulated that the rajah should cede to the company all the territories which he had possessed in the Deccan, the province of Cuttack, and various districts to Dec. 30, 1803. the south of the hills of Gawilghur; while, by a subsequent treaty with Scindiah, all his territories in the Doab, between the Jumna and the Ganges, its terms. the fortresses of Baroach and Achmednuggur, with their circumjacent territories, the whole district below the Adjutee Hills and the Godavery River, were made over to the company. By these glorious treaties territories amounting to 32,000 square miles, and yielding, even under all the disadvantages of the Mahratta rule, nearly three millions sterling a year of revenue, including Delhi, the ancient capital of the Mogul emperors, Agra, Gwalior, and many other fortresses, were acquired by the British government,† and their influence rendered paramount through the whole north of Hindostan.‡

The termination of the Mahratta war, though it established the political supremacy of the British in India, and spread the fame of their valour over all Asia, yet left the government involved in considerable difficulties. The expenses of moving such large bodies of men to

such immense distances was very great; and as the English, reversing the usual principles of Indian warfare, uniformly paid for everything which they required, their march, though hailed with blessings by the natives of the conquered provinces, proved extremely burdensome to the company's treasury. The dangers of the Mahratta war had been strongly felt in India, and seriously exaggerated in the mother-country; the company's stock had fallen, in consequence, since the commencement of hostilities, from two hundred and fifteen to one hundred and sixty; no less than £1,700,000 in specie had been remitted by the Court of Directors in the course of the year; and, large as this sum was, it was exceeded by the wants of the Indian treasury. Mercantile men, unacquainted with the real state of affairs in the East, who estimated the propriety of all measures by their effect upon the value of their stock or the amount of their dividends, and were incapable of appreciating the present sacrifices requisite to produce ultimate security to so vast a dominion, murmured loudly at these effects of Lord Wellesley's administration, and the opinion became general in Great Britain that his inordinate ambition had involved us in endless wars, which would ultimately prove fatal to our empire in the East. So vexatious were the restrictions with which his administration was surrounded, and so disproportioned the ideas of the directors to the grandeur or the real nature of their situation, that he tendered his resignation to government, and was only prevailed on to continue at the head of affairs in India on an assurance that, as soon as the present complicated transactions with the Mahrattas were brought to a conclusion, he would be relieved from his duties.*

Meanwhile, a treaty had been concluded with Scindiah, by which it was stipulated that he should cede Gualior and Gohud, and receive a subsidiary force; in other words, become entirely dependant on the British government. Negotiations and rupture with Holkar. 27th of Feb., 1804. These events, however, brought the English in contact with a still more formidable power, whose hostility it hitherto had been their studious care to avoid. Holkar commanded a powerful army, which was posted in a threatening position on the frontier of Scindiah's territory; and, as he held several valuable possessions in the Doab which had recently been ceded to the British government, it was indispensable to come to some terms to accommodate the conflicting interests of the parties. Though that wily chieftain, with the characteristic dissimulation of a Mahratta, professed the utmost desire to cultivate the friendship of the company, it soon appeared that he had resolved on the most determined hostility. Secret information reached the governor-general that he was underhand instigating the tributaries and dependants of the English to enter into a confederacy against them; and he even wrote to General Wellesley threatening to overrun the British provinces with an innumerable army.† At length, he openly sent an agent to

* Wellington's Desp., 15th Dec., 1803. Gurw., i., 550, 554.

† See the Trials in Gurw., i., 555, 571, and Auber, i., 323, 326.

‡ By these treaties certain districts were to be ceded by the Mahratta chiefs to the Nizam. His minister, Mohiput Ram, was most anxious to obtain information as to what particular countries or districts were likely to be ceded, and, at a secret conference, offered Wellington ten lacs of rupees (£70,000) to obtain it. "Can you keep a secret?" asked the English general. "Yes," replied Mohiput Ram. "And so can I," answered the general. So universal is corruption at the native courts, that they have no conception that any functionary, how high soever, is above it. The conquests of the English were mainly ascribed by them to the incorruptible integrity of their officers, and the fidelity to engagements of their government.—AUBER, ii., 325.

* Auber, ii., 333, 341. Well. Desp., iii., 3, 24, Intrôd.

† "Countries of many hundred miles in extent shall be overrun and plundered. Lord Lake shall not have leisure to

Scindiah's camp to solicit that chieftain to renew hostilities with the British, and, at the same time, he began plundering the territories of their ally, the Rajah of Jypore. Justly considering these acts as equivalent to a declaration of war, the commander-in-chief advanced into Holkar's territory.*

General Wellesley was invested with the general direction of affairs, military as well as political, in the Deccan and the territories of the Peishwa and Mahratta chiefs; but he had no longer any active command in the war, and the chief weight of the contest fell on General Lake in the northern provinces. Arduous as the conflict with Tipoo Sultaun and Scindiah had been, this last strife was still more formidable, from the recurrence of the Asiatic chief to that system of warfare in which the strength of the East, from the earliest ages, has consisted. Without despising the aid of disciplined battalions and a powerful train of artillery, it was the policy of Holkar to trust chiefly to his cavalry; to relieve his army of those encumbrances which retarded their march, and seldom failed to fall a prey in regular battles to the swift advance and daring courage of the British soldiers; and to trust for success to the encompassing the European hosts, like the Roman legions by the Parthian cavalry, with clouds of light horse, who could not be reached by the heavy-armed European squadrons. True, these irregular bodies could not withstand the charge of the English or sepoy dragoons, any more than the Saracens could the shock of the steel-clad crusaders of Europe; but they seldom awaited their approach, and, by hovering round their columns and cutting off their foraging and watering parties, frequently reduced to extreme distress bodies of men before whom they could not have stood a quarter of an hour in regular combat.†

Holkar's territories, though extensive, lay in different parts of the Deccan and Hindostan; they were for the most part in a neglected state, from the devastation and military license to which, from time immemorial, all the Mahratta provinces had been subjected; he was a usurper of his brother's rights, his family had never risen to the rank of considerable potentates, and his present power was mainly owing to the vast concourse of predatory horsemen who, on the conclusion of peace by Scindiah and the Rajah of Berar, flocked to his standard as the only one which promised a continuance of violence and plunder. Vast bodies of these irregular but formidable freebooters swarmed in all the northern parts of the Deccan and over Hindostan; and

breathe for a moment; and calamities will fall on backs of human beings in continual war by the attacks of my army, which overwhelms like the waves of the sea."—HOLKAR to GENERAL WELLESLEY, Feb. 21, 1804; MALCOLM, 315. In his letters to the Indian chiefs, tributary of England, he uniformly styled the English "infidel Christians, the enemies of the Christian faith;" "sedition men, whom they should be prepared to do distinguished service against;" and "that it is the object of the religion and the rule of Mussulmen, that the whole body of the faithful having assembled together, they should be employed, heart and soul, in extirpating the profligate infidels."—See *intercepted Corresp.* of HOLKAR, WELL. Desp., iv., 48, 49.

† Malcolm, 316. Auber, ii., 345.

the number of them, amounting to little short of a hundred thousand, whom Holkar had collected under his banners, was so disproportioned to the resources of his dominions that foreign conquest had become to him, as to Napoleon, a matter of necessity. Bands of these plunderers, before they were attracted by the reputation of the Mahratta chief, had already appeared in various quarters, spreading terror and devastation wherever they went; and one, ten thousand strong, which had passed the Kistna, burst into the British dependances and was making for the Toomboodra, with the design of crossing the company's frontier, was overtaken by General Campbell, and entirely routed Dec. 30, 1803. by a skilfully-conducted surprise before sunrise, with the loss of three thousand killed and wounded. Twenty thousand head of cattle taken in their camp demonstrated the vast extent of the depredation which in a few days these marauding horsemen could commit. Mohammed Beg Khan, the leader of the party, was wounded and made prisoner, and the whole body dispersed.*

Important as this early success was in arresting the destructive inroads of the Mahratta freebooters, it was attended with one bad effect, in leading the British commanders to underrate the enemy with whom they had to deal; inducing the belief that the strength of their confederacy had been broken, by the reduction of Scindiah and the Rajah of Berar's power, and that, by a simultaneous invasion of his territories by comparatively small bodies of troops, converging from different directions, Holkar would speedily be reduced to submission. The plan of the campaign was arranged on these principles. Lord Lake, with the army of Bengal, about ten thousand strong, was to advance from the neighbourhood of Delhi, westward into Holkar's country; while lesser bodies, acting in concert with Scindiah's forces, pressed upon it from the Guzerat, Malwa, and the Deccan. Colonel Murray, with two European and six native regiments, about six thousand men, was to advance from Guzerat; while Colonel Monson, with the 76th regiment and four battalions of sepoys, about three thousand men, moved upon Jyenagur, in order to menace the rear of Holkar's main army, which was ravaging the country in that neighbourhood. These movements had the effect of inducing the Mahratta chief to retreat, which he did to the westward, with extraordinary rapidity, while General Lake, following in his footsteps, carried by assault the important fort of Rampoora, and expelled the enemy from all his possessions in that part of Hindostan. So completely was government impressed with the idea that Holkar could nowhere face the British troops, and that a short campaign at the close of the rainy season would effectually reduce his power, that the troops, on its commencement, were everywhere withdrawn to their original stations: General Lake returned to his cantonments near Delhi, while Colonel Monson was left at Malwa, above two hundred miles in advance, in a position which it was

Plan of the campaign against Holkar. Its errors and early disasters.

* General Campbell's Desp., Dec. 30, 1803., Well. Desp., iv., 2, 3.

thought would effectually preclude the possibility of the predatory chieftain's return into Hindostan.*†

Holkar's conduct now demonstrated that he was intimately acquainted with the art of war, the principles of which are often as thoroughly understood by illiterate chieftains, to whom native sagacity and practical experience have unfolded them, as by those who have most learnedly studied the enterprises of others. Rapidly concentrating his desultory bands, he fell with an overwhelming force, as soon as the decline of the rainy season would admit of military operations, upon Colonel Monson's division; while a subordinate force, five thousand strong, made a diversion by an irruption into the province of Bundelcund. A

British detachment, under Colonel Smith, of three hundred men, was there almost entirely cut off by the sudden attack of these freebooters, and with it six guns and a considerable quantity of ammunition captured: a disgrace which was the more sensibly felt, as Colonel Fawcett, who, with five battalions, lay within a few miles, and had, by imprudently separating his infantry from his artillery, brought about this disaster, instead of attempting to avenge it, commenced a retreat. Such was the consternation produced by this unwonted calamity, that it was only by the firm countenance and intrepid conduct of Captain Baillie, who commanded a small subsidiary force at Banda, the capital, in the southern portion of the province, that subordination was maintained; and the Mahrattas at length retired, finding a farther advance hazardous, leaving their course everywhere marked by conflagration and ruin.†

This disgrace was but the prelude to still greater misfortunes, in which, however, the high character and undaunted courage of the British troops remained untarnished. Colonel Monson, having been joined by the troops under General Don which had captured Rampoor, which raised his force to about four thousand men, with fifteen guns, besides three thousand irregular horse, advanced through the strong pass of Mokundra, which commanded the entrance through the mountains into Hindostan from the westward; and, contrary to the directions of General Lake, who had stationed him only to protect that defile, still pushing on fifty miles farther, carried by assault the important fortress of Henglaisgush, a stronghold of Holkar's, though garrisoned by eleven hundred of his best troops. The Mahratta chief, meanwhile, lay at Malwa with his whole disposable force, which exceeded forty thousand men, and of whom

twenty thousand were disciplined infantry, with one hundred and sixty guns. With this immense body he rapidly approached the English general; and the exaggerated rumours which preceded his march as to the strength of the Mahratta host, impressed the latter with the idea that he had no chance of safety but in an immediate retreat. Colonel Murray, who, with a powerful force, including fifteen hundred Europeans, was to have advanced from the Guzerat into such a position as to have been able to render him assistance if required, had, instead of performing his part of the general plan, been unfortunately induced to fall back; and thus Monson was left alone to withstand the whole shock of Holkar's force. His troops, however, though not a fourth part of the enemy in point of number, were highly disciplined, admirably equipped, and inured to victory; and, by a daring advance upon the Mahratta chief, especially when embarrassed with getting his immense artillery across the Chumbul River, then swollen by rains, he might, perhaps, have achieved as decisive success as, with a similar numerical inferiority, Wellington and Lake obtained at Assaye and Laswaree.*

But it then appeared of what importance is military skill and moral resolution in Indian warfare, and how much the brilliant career of Lord Wellesley's victories had been dependant on the daring energy which, seizing the initiative, never lost it till the enemy was destroyed. Monson was as brave as any officer in the English army; second to none in undaunted valour at storming a breach, but he wanted the rarer quality of moral intrepidity, and the power of adopting great designs on his own responsibility. On the 6th of July, Holkar was engaged in crossing the Chumbul; the fortunate moment of attack never to be recalled was allowed to escape, and two days afterward the English general commenced his retreat. He did what ordinary officers would have done at Assaye, when it was ascertained Stevenson's division could not come up; and what was the result? In a few hours the subsidiary horse, now four thousand strong, which was left to observe the enemy, was enveloped by clouds of the Mahratta cavalry, and, after a bloody struggle, cut to pieces with their gallant commander, Lieutenant Lucan, whose individual heroism long averted the disaster. The infantry and guns retired without molestation to the strong Mokundra pass, and several attacks made by Holkar on the outposts stationed there were repulsed with great slaughter. Despairing, however, after the recent disaster, of being able to make good the pass against the enemy when his infantry and numerous artillery should come up, Monson resumed his retreat, a few days after, to Kotah, and from thence to Rampoor, with great precipitation. Such were the obstacles presented by the horrible state of the roads and incessant rains, during the latter part of this journey,† that the whole guns, fifteen in number, were abandoned, and fell into the enemy's hands.

* Lord Wellesley to Secret Committee, June, 1804, Well Desp., iv., 115, 127.

† "The necessity of repelling Holkar's banditti from the frontier of Hindostan, and of reducing him to a peaceable conduct, will not lead to any serious interruption of peace, and will probably tend to consolidate our connexion with Scindiah. The commander-in-chief, with the greater part of the main army in Hindostan, has returned to the cantonment of Cawnpore, and my attention is now directed to the desirable object of withdrawing the whole army from the field, and reducing the military charges."—Lord WELLESLEY to Lord CASTLEREAGH, 9th July, 1804, Well. Desp., iv., 131.

† Lord Lake's Account, Well. Desp., v., 288, 290. Lord Wellesley to Secret Committee, ibid., iv., 327, 330.

No sooner was General Lake apprized of the commencement of this retreat, than he despatched two fresh battalions and three thousand irregular horse to re-enforce his lieutenant; and with such expedition did

they advance, that they reached Rampoora a few days after the retiring column had arrived there. Still Monson deemed it impossible to make a stand; and on the 21st of August, after leaving a sufficient garrison in that fortress, he resumed his march for the British frontier. On the day following, his progress was stopped by the Bannas River, which was so swelled by the rains as to be no longer fordable; and during the delay occasioned by this obstacle, the whole of the enemy's force arrived close to the British detachment. Their situation was now truly frightful: in their front was a raging torrent, in their rear twenty thousand horsemen, continually receiving fresh accessions of strength in infantry and guns, as they successively came up. The river having at length become fordable,

four battalions crossed over; and the enemy, seeing his advantage, immediately commenced a furious attack on the single battalion and pickets, which now remained alone on the other side. With such heroic constancy, however, was this unequal contest maintained by these brave men, that they not only repulsed the whole attacks made upon them, but, pursuing their success, captured several of the enemy's guns: an event which clearly demonstrated what results might have followed the adoption of a vigorous offensive in the outset, when the troops were undiminished in strength and unbroken in spirit.* As it was, however, this little phalanx, being unsupported, was unable to follow up its success, and, in the course of falling back to the river and effecting their passage, had to sustain an arduous conflict, and experienced a frightful loss.

Meanwhile Captain Nicholl, with the treasure of the army and six companies of sepoys, who had been first ferried across, proceeded to Khooshalghur, where they were attacked by a large body of Scindiah's troops, who, with the characteristic faithlessness and rapacity of Maharrattas, assailed their allies in their distress, in hope of plunder, and, being beat off, openly joined Holkar's camp. Almost all the irregular horse, which had come up to Rampoora, soon after deserted to the enemy; and even some companies of sepoys, shaken by the horrors of the retreat, abandoned their colours and followed their example, though in general the conduct of these faithful troops was exemplary in the extreme. Abandoned by his horse,

Colonel Monson, on his route from Khooshalghur to the British frontier, formed his whole men into an oblong square, with the ammunition and bullocks in the centre, and in that order retreated for several days, almost always fighting with the enemy, and surrounded by fifteen thousand indefatigable horsemen, who were constantly repulsed with invincible constancy by the rolling fire of the sepoys. At length, however, this vigorous pursuit was discontinued: the firm array of the

British dissolved as they entered their own territories; great numbers perished of fatigue or by the sword of the pursuers, others allowed themselves to fall into the hands of the enemy, and the sad remnant of a brilliant division, which had altogether mustered, with its reinforcements on the retreat,* six thousand regular and as many irregular troops, now reduced to a thousand or twelve hundred men without cannon or ammunition, arrived at Agra, in a scattered and disorderly manner, about the end of August.

Then was seen in clear colours the precarious tenure by which our empire in India is held, and the indispensable necessity of those vigorous measures in former times, which, to an inexperienced observer, might wear the aspect of rashness. The overthrow of Monson's division resounded through Hindostan from sea to sea. Great as had been the disasters of the retreat, they were magnified by the voice of fame, ever ready to augment the extent of public and private calamity; and the sinister reports of the native powers, whose wishes, father to their thoughts, represented the British empire in India as tottering to its fall. The general consternation was increased by the cruelties exercised by Holkar on the prisoners of all descriptions who fell into his hands: the Europeans were immediately put to death, and the natives who refused to enter his service mutilated in the most shocking manner. Everywhere an alarming fermentation was apparent. The conduct of several of the allied states was such as to afford just grounds to distrust their fidelity; that of others was verging on open hostility. Scindiah, so far from acting up to the spirit, or even letter of his alliance, was secretly intriguing, and even publicly assisting the enemy; the Rajah of Bhurtpore, already repenting of his recent treaty, was supporting him with his treasures and his arms; the spirit of disaffection was found to have spread to some of the chiefs of the British newly-acquired provinces;† even the fidelity of the sepoys was not everywhere proof against the seductions or threats of the enemy; and that general despondency prevailed which is so often at once the forerunner and the cause of public calamity.

But the British government in India was at that period in the hands of men whom no reverse could daunt, whose energy and foresight were equal to any emergency. Generously resolving to take their full share in the responsibility of all the measures which had turned out so unfortunately, determining to screen the commander from all blame, even for those details of execution which were necessarily intrusted to himself, they set vigorously to stem the progress of disaster.‡ The causes which had led to it were obvious: it was the reversing the principles which had produced the triumphs of Delhi

Alarming fermentation through the whole of India.

Generous conduct and able resolutions of Lord Wellesley and Lord Lake.

* Colonel Monson's Desp. Well. Desp., iv., 199.

and Laswaree. These glorious days were the result of striking with an adequate force at the heart of the enemy's power, and suspending, or even neglecting, all minor considerations to accomplish that grand object; the present misfortunes were the consequence of attacking from four different quarters at once, with forces inadequate to victory, if singly brought into action; trusting for success to their combined operation, and advancing one column, single and unsupported, into the heart of the enemy's power. The British victories had been the result of the strategy which caused Napoleon to triumph at Ulm and Jena: their misfortunes, of the system which, for twenty years, had chained disaster to the Austrian standard. Wellesley resolved instantly to return to this enlightened plan of operations, from which, in an evil hour, under the influence of undue contempt of the enemy, he had departed.* "The success of your noble triumphs of last year," said he to Lord Lake, "proceeded chiefly from your vigorous system of attack. In every war the native states will always gain courage in proportion as we shall allow them to attack us, and I know that you will always bear this principle in mind, especially against such a power as Holkar."

Proceeding on these just and manly principles, every exertion was made to re-Holkar to enforce the main army under Lord Delhi.

Lake, then lying at Cawnpore, and put it into a condition speedily to take the field. It was full time that some decisive effort should be made to retrieve affairs, for the British empire in Hindostan was, in truth, in a

very critical situation. Rapidly following up his success, Holkar pursued the

remains of the beaten army to the banks of the Jumna; and on the British cavalry under Lord Lake approaching his position, they drew off, the infantry and guns taking the direction of Delhi, while the horse engaged the attention of the English troops by endeavouring to cut off

their baggage. On the 8th of October the enemy's main force arrived before the imperial city, and summoned the garrison, consisting only of one battalion and a half of sepoys, with a few irregulars, to surrender; while his emissaries used every exertion to excite the native chiefs in the Doab to revolt against their European masters, and with such success as seriously embarrassed the operations of the British army, especially in the vital article of obtaining supplies.†

For seven days Holkar continued before Delhi, battering its extensive and ruinous walls with the utmost vigour; but such was the resolution of the little garrison under Colonels Ochterlony and Burn, that they not only repulsed repeated assaults, but, sallying forth, carried a battery which was violently shaking the rampart, and spiked the guns. At length the Mahrattas, despairing of storming the city, and intimidated by the approach of Lord Lake with the Bengal

army, raised the siege, and retired by slow marches through the hills in the direction of Dieg. The English general had

now the fairest prospect of bringing the enemy's whole force to action, with every chance of success; for the prodigious train of artillery which accompanied him rendered his retreat very slow, and ten thousand infantry and three thousand cavalry, including about two thousand five hundred Europeans, followed the British standards. But a total failure of supplies, arising from the disaffection or treachery of the native chiefs, by whom they were to have been furnished, rendered it impossible to continue the pursuit for some days; and during that time Holkar got out of the reach of immediate attack, and, crossing the Jumna with his whole force, proceeded to ravage the country, and stir up resistance to the English beyond that river. Suddenly recrossing it, however, with his cavalry alone, a few days after, he advanced by forced marches to attack Colonel Burn, who, with a detachment, had been sent to Seranhpore, after the retreat of the enemy from the neighbourhood of Delhi.*

General, now Lord Lake, upon this, made a corresponding division of his force.

Putting himself at the head of the horse artillery, two thousand cavalry, and fifteen hundred light-armed infantry, he pursued in person Holkar's horse on the one side of the river; General Fraser, with eight thousand infantry, a thousand cavalry, and eighteen guns, was intrusted with the task of attacking his foot-soldiers and artillery on the other. That gallant officer, having at length, by great exertions, obtained the requisite supplies, commenced his march from Delhi, and on the 13th of November came up with the

Mahratta army, consisting of twenty-four battalions of regular infantry, a hundred and sixty pieces of cannon, and three thousand irregular horse, in all above twenty-five thousand men. This formidable force was drawn up with considerable skill, in a strong position, with their left resting on the fortress of Dieg, their right upon a walled village, situated on a height about two miles distant; an extensive morass, altogether impassable, covered the greater part of their front, a large expanse of water protected from attack the whole of their rear; while their immense artillery was so disposed as to bear with a concentric fire on the narrow isthmus by which alone their line could be assailed.†

Noways daunted by these formidable obstacles, General Fraser resolved to make the attack on the following morning. At daybreak the troops advanced to the charge, headed by the unconquerable 76th, led on by that general in person. They had to make a long circuit round the morass before they reached the point at which it could be passed; during the whole of which they were exposed to a galling cannonade in flank from the enemy's artillery, which, as they approached the isthmus leading to the village, became dreadfully severe. Rushing impetuously on, however, the 76th, followed by the native infantry, ascending the hill, stormed the village with irresistible gallantry.

* Lord Lake to Lord Wellesley, July, 1805, Well. Desp., v., 293, 297. Lord Well. to Secret Committee, Well. Desp., iv., 345, 348.

† Monson's Desp., Nov. 14, 1804, Well. Desp., iv., 233. Lord Lake's Desp., v., 298, 301.

* Lord Wellesley to Lord Lake, Sept. 11, 1804, Well. Desp., iv., 207, and 191, 192.

† Well. Desp., v., 293, 297; iv., 343, 348.

From the village, General Fraser advanced upon the main body of the enemy, who faced about, and were now posted between the morass and the lake, with the fort of Dieg in their rear, and several heights, crowned with artillery to defend the approach to it, interspersed in the intervening space. Such, however, was the vigour of the attack led by Fraser and Monson, that, though the enormous batteries of the enemy played with a concentric fire of round, chain, and grapeshot, on the advancing column, it pushed on through the awful storm, carrying everything before it from right to left of the enemy's whole position, and, storming successfully all the batteries, drove them at length, in utter confusion, into the fortress of Dieg. Nothing but the heavy fire from its ramparts prevented the whole artillery of the enemy in the field from being captured; as it was, eighty-seven guns and twenty-four tumbrils were taken; two thousand fell on the field, and great numbers perished in the lake, into which they had fled to avoid the bloody sabres of the English cavalry. The British loss was about seven hundred killed and wounded; among the latter of whom was the brave General Fraser, to whose decision and intrepidity the success was in a great degree owing; while Colonel Monson, the second in command, who succeeded to the direction of the army upon his fall, amply demonstrated, by his skill and bravery, that his former misfortunes had not been owing to any want of heroic courage. Among the guns taken were, to the inexpressible delight of the soldiers, as well as of that brave man, thirteen of those which had been lost in the late calamitous retreat.*

While this important success was gained over the infantry and artillery of Pursuit and defeat of Holkar at Furruckabad. Holkar, a triumph equally decisive attended the operations of Lord Lake in person against his cavalry. That enterprising chief having, as already mentioned, crossed the Jumna with ten thousand sand horse, made for a ford of the Ganges near Hurdwar, with the design of carrying the war into Rohileund and the provinces beyond that river. No sooner, however, did he learn that Lord Lake, with a chosen body of cavalry, was marching against him, than he suddenly changed his course, and, flying down the Doab by rapid marches, reached Furruckabad on the evening of the 16th of November. Rapid, however, as were the movements of the Mahratta chief, they were exceeded by those of the English general, who, having crossed the Jumna in pursuit on the 1st of November, continued to follow his indefatigable adversary with such vigour for the next seventeen days, that he not only effectually prevented him from devastating the country, except in the immediate line of retreat, but kept constantly at the distance only of a single march in his rear. During the whole of this period both armies marched twenty-three or twenty-four miles daily, even under the burning sun of Hindostan. At length, on the evening of the 16th of November, Lord Lake received intelligence that Holkar, after having been repulsed in an attack on Futteghur, had

encamped for the night under the walls of Furruckabad, twenty-nine miles distant. Though the troops had already marched thirty miles on that day, Lord Lake immediately formed the resolution of making a forced march in the night, and surprising the enemy in their camp before daybreak on the following morning.*

No sooner was the order to move delivered to the troops at nightfall than all fatigues were forgotten, and, instead of lying down to rest, they joyfully prepared to resume their march during the sultry hours and thick darkness of an Indian night. The fires in the enemy's camp, and the accurate information of the guides, conducted them direct to the ground which the Mahrattas occupied. As they approached the camp the utmost silence was observed in the British columns: the horse artillery only were moved to the front, and advanced slowly and cautiously to within range of their tents. All was buried in sleep in the Mahratta lines; the watchfires had almost all burned out, and a few drowsy sentinels alone were watching in the east for the first appearance of dawn. Suddenly the guns opened upon them, and the sleeping army was roused by the rattle of grapeshot falling in the tents among the horses, and through the bivouacs. So complete was the surprise, so universal the consternation, that very little resistance was attempted. Before the squadrons could be formed, or the horses in many places unpicketed, the British dragoons were upon them; and well, in that hour, did the sabres of the 8th, 27th, and 29th avenge the savage cruelty of Holkar's followers upon the captives in Monson's retreat. The enemy were thrown into irretrievable confusion by this impetuous attack, and, rushing promiscuously out of the camp, fled in all directions, hotly pursued by the British and native horse. Great numbers were slain in the pursuit as well as on the field, and still more abandoned their colours and dispersed, deeming the cause of Holkar hopeless, after so decisive an overthrow. Of the mighty host which had so lately swept like a torrent over Hindostan, a few thousand horse only escaped with their leader across the Jumna, and joined the defeated remains of their infantry within the walls of Dieg. Holkar himself was on the point of falling into the hands of the British dragoons, and owed his escape entirely to the accidental explosion of an ammunition-wagon, which, almost by a miracle, blew his pursuers off their horses, while he himself passed unhurt. Of the victors, the greater part had ridden seventy miles during the preceding twenty-four hours, when they took up their ground after the pursuit,† besides fighting the whole of Holkar's cavalry: an achievement far exceeding anything recorded of the boasted celerity of Napoleon's squadrons, and which is probably unparalleled in modern war.

Colonel Monson, whose vigour and bravery in the field was far from being accompanied by a similar degree of capacity and resolution in leading an army, had formed the design of retreating,

Siege and capture of Dieg.

Dec. 23. after the victory of Dieg, to Muttra for supplies, of which his troops stood much in need, and which were procured with extreme difficulty, owing to the hostile disposition of the inhabitants in the country, and arrived there on the 26th of November. But Lord Lake, who at once perceived the prejudicial effect which such a retrograde movement after a battle would have, by giving the enemy a plausible

Dec. 1. ground to represent it as a defeat, immediately repaired to the spot, and, reinforcing the infantry with his victorious cavalry, again moved forward his whole army, and proceeded in the direction of Dieg, where the broken remains of Holkar's army were now all assembled. On the 4th the troops arrived under the walls of that fortress, and operations were commenced against it as soon as the battering-train came up from Agra, which

Dec. 8. arrived on the 8th. The siege was prosecuted with the utmost activity, and, a breach having been pronounced practicable, the lines around the town were first stormed by

Dec. 23. the 76th regiment, and on the day following the fortress itself surrendered at discretion. By this important blow the whole of Holkar's remaining artillery, amounting to eighty pieces, many of them of very heavy calibre, with immense stores of ammunition, were taken; but that redoubtable chief himself escaped with four thousand horse, and took refuge in BHURTPORE,* the rajah of which, Runjeet Sing, had, during the last three months, treacherously embraced his cause, and deserted the British alliance.

Nothing remained to complete this glorious

Siege and unsuccessful assault of Bhurtpore. contest but the reduction of this celebrated fortress, an object become, of the highest importance, both on account of the signal

treachery of the rajah, who, on the first reverse, had violated his pledged faith to the company, by whom he had been loaded with benefits, and of its containing the person and last resources of Holkar, who had waged so desperate a contest with the British forces. Thither, accordingly, Lord Lake moved immediately after the fall of Dieg; and the battering-train having speedily made a breach in the walls, the

January 9th, 1805. assault took place in the evening of the 9th of January. The water in

the ditch proved exceedingly deep, and, during the time spent in throwing in fascines, the troops were exposed to a most destructive fire from the rampart on the opposite side. At length, however, they succeeded in passing over, but all their efforts to gain the summit of the breach proved ineffectual. The wall, which was of tough mud, was imperfectly ruined; the scaling-ladders were found to be too short; and, after sustaining a very heavy loss, the troops were compelled to return to

Jan. 21. their trenches. A second storm, some days afterward, met with still less success: the brave men reached the edge of the ditch, but it proved to be so broad and deep that all attempts to fill it up were fruitless; and, after sustaining for above an hour

Jan. 23. a dreadful fire within pistol-shot from the ramparts, the assaulting column was again obliged to retire. An attempt was soon after

made by the whole of Holkar's remaining cavalry, and that of Meer Khan, another noted Mahratta freebooter,* to cut off a valuable convoy on its way from Muttra to the British camp. The convoy, with its covering force, was hard beset by an immense body of cavalry, in a village, when the approach of the 27th light dragoons and a regiment of native horse enabled them to sally out and totally rout the assailants. Meer Khan's equipage, with all his arms and a complete suit of armour, fell into the hands of the victors.

The siege was now prosecuted with fresh vigour by the English army, which was re-enforced by a division, five thousand strong, from Bombay, which raised the besieging force

Repeated assaults on Bhurtpore, which were repulsed.

to twenty thousand men, while the efforts of the besieged, who were greatly elevated by their former success, were proportionally increased. It was soon discovered that the troops of the rajah were among the bravest and most resolute of Hindostan, comprising, in addition to the remnant of Holkar's followers, the *Jats*, or military caste of Bhurtpore, who yielded to none in Asia the palm of resolution and valour.

After a month's additional operations, Feb. 20. the breach was deemed sufficiently wide

to warrant a third assault, which was made by the 75th and 76th regiments, supported by three sepoy battalions, under Colonel Don; while two other subordinate attacks were made at the same time, one on the enemy's trenches outside the town, and another and the Beem-Narain gate, which, it was thought, might be carried by escalade. The attack on the trenches proved entirely successful, and they were carried, with all their artillery, by Captain Grant; but the other two sustained a bloody repulse. The scaling-ladders of the party destined to attack the gate were found to be too short, or were destroyed by the terrible discharges of grape which issued from its defences; and, despite all their efforts, the brave 75th and 76th were forced down with dreadful slaughter from the breach. They were ordered out again to the assault, but the troops were so staggered by the frightful scene that they refused to leave their trenches, and the heroic 12th regiment of sepoys† marched past them with loud cheers to the breach. Such was the vigour of their onset, that they reached the summit in spite of every obstacle, and the British colours were seen for a few minutes waving on the bastion, while the 76th, stung with shame, again advanced to the assault. The bastion proved to be separated by a deep ditch from the body of the place, and the guns from the neighbouring ramparts enfiladed the outwork so completely, that the valiant band, after losing half their numbers, were in the end driven down the breach, weeping with generous indignation at seeing the prize of their heroic valour thus torn from them. The attempt was renewed Feb. 21. on the following day with no better success. The whole of the European infantry in the army, about two thousand five hundred strong, with three battalions of native infantry, were employed in the assault under the command of Colonel Monson. Such, however, was

* Well. Desp., iv., 662, 663. Lord Well. to Secret Committee, March, 1805, Well. Desp., iv., 392.

* Lord Lake's Desp., Jan. 10, 21, 23, 1805, Well. Desp., iv., 264, 267.

† See *Ante*, iii., p. 131.

the height and difficulty of the breach, and such the resolute resistance opposed by the enemy, that all their efforts proved unsuccessful. A small number only could mount abreast, from the narrowness of the ruined part of the wall; and, as they pushed up, they were crushed under logs of wood, or torn in pieces by combustibles thrown among them by the besieged; while the few who reached the top were swept off by discharges of grape, which poured in by a cross fire from either side.* After two hours employed in this murderous and fruitless contest, in which prodigies of valour were performed on both sides, the troops were drawn off; and, after six weeks of open trenches, and four desperate assaults, which cost above three thousand brave men, the native colours still waved on the walls of Bhurtpore.

Although, however, the British troops had, at the close of their long career of victory, met with this unexpected check, yet many reasons concurred to recommend submission to the hitherto unsubdued rajah.

His territory was wholly occupied by the enemy, his resources cut off, his stores and magazines rapidly diminishing, and, even if he should be so fortunate as to withstand a repetition of the furious assaults from which he had so recently and narrowly escaped, he was well aware that, by the slower, but more certain process of blockade and famine, he would in the end inevitably be reduced. On the other hand, various considerations, equally forcible, concurred in recommending an accommodation with the perfidious rajah to the English government. Though Scindiah had, in the outset of the negotiation, consented to the cession of Gwalior and Gohud, with its adjacent territory, to the company, and even signed a treaty

Feb. 24, 1804.

in which they were formally ceded to them, yet he had never been reconciled to the loss of that important fortress; and, from the first moment that hostilities commenced with Holkar, it became evident that he was waiting only for a favourable moment to come to an open rupture with the English government, or take advantage of its difficulties to obtain their restitution. Troops under his banner had openly attacked the escort of the treasure in Colonel Monson's retreat; the language of his court had been so menacing, the conduct of his government so suspicious, that not only had a long and angry negotiation taken place with the acting resident, but General Wellesley had been directed to move the subsidiary force in the Deccan, eight thousand strong, to the frontier of Scindiah's territories. The prince himself, who was a weak, sensual man, had fallen entirely under the government of his minister and father-in-law, Surajee Row Ghautka, a man of the most profligate character, who was indefatigable in his endeavours to embroil his master with the British government. Under the influence of these violent counsels, matters were fast approaching a crisis: the cession of Gwalior was openly required, with menaces of joining the enemy if the demand were not acceded to; and at length he announced a determination to interfere as an armed mediator be-

tween Holkar and the English, and moved a large force to the neighbourhood of Bhurtpore to support his demands during its long-protracted siege. The conduct of the Rajah of Berar had also become extremely questionable: hostilities, evidently excited by him, had already taken place in the Cuttack and Bundelcund; and symptoms began openly to appear in all quarters, of that general disposition to throw off the British authority, which naturally arose from the exaggerated reports which had been spread of Holkar's successes.*

Under the influence of those concurring motives on both sides, there was little difficulty of coming to an accommodation with the Rajah of Bhurtpore.

The English government became sensible of the expediency of abandoning their declared intention of punishing him by the total loss of his dominions for his unpardonable defection, and limiting their resentment to the reduction of his military power and ability to do farther mischief; while he saw the necessity of abandoning the alliance of Holkar and expelling him from his dominions. The terms ultimately agreed to, at the earnest suit of the enemy, were, that the rajah should pay twenty lacs of rupees, by instalments, in four years; that he should never hold any correspondence with the enemies of the British power, whether in Europe or Asia; and that, as a security for the faithful performance of these conditions, he should forthwith surrender one of his sons as a hostage, and make over the fortress of Dieg to the British troops, and submit any difference he might have with any other power to their arbitration, and obtain from them a guarantee for his remaining possessions. These conditions appeared to the governor-general and council to be honourable to the British arms, and to provide for the main object of the present contest, viz., the separation of the Rajah of Bhurtpore from Holkar's interests, and the severing of the latter chieftain from the resources which his fortresses and treasures afforded. The treaty was therefore ratified by the governor-general, and on the day on which it was signed the rajah's son arrived in the British camp, and Holkar was compelled to leave Bhurtpore.†

As the forces of this once formidable chieftain were now reduced to three or four thousand horse, without either stores or guns, and his possessions in every part of India had been occupied by the British troops, he had no alternative but to throw himself upon the protection of his ancient enemy, Scindiah, who had recently, under his father-in-law's counsels, appeared as an armed mediator in his favour. He accordingly joined Scindiah's camp, with his remaining followers, immediately after his expulsion from Bhurtpore. The Mahratta horse had previously reassembled in small bodies in the vicinity of that town in consequence of the absence of the great bulk of the British cavalry, which had been detached from the Grand Army to stop the incursion of Meer Khan, who had

broken into the Doab, and was committing great devastations. On the 1st of April, Lord

April 1. Lake having received intelligence that a considerable body of the enemy had assembled in a position about sixty miles from Bhurtpore, made a forced march to surprise them in their camp, and he was so fortunate as to come up with, utterly rout, and disperse them, with the loss of a thousand slain, and return to his camp the same day, after a march in twelve hours of fifty miles. A few days after, four thousand of the enemy, with a few guns, were attacked by Captain Royle, in a strong position under the walls of Adaulutnaghour, and totally defeated, with the loss of their artillery and baggage. By these repeated defeats the whole of this formidable predatory cavalry was dispersed or destroyed, with the exception of the small body which accompanied Holkar into Scindiah's camp.*

April 8. Nor had the incursion of Meer Khan into Rohilcund and the Doab, or the detached efforts of the Mahrattas in other quarters, been more successful. The Rajahs of Koorkha and Kunkha, in the Cuttack, instigated by the Rajah of Berar, made an incursion into the British dominions, but they were repulsed, pursued into their own territories, and Khoordah carried by assault, by a force under the command of Colonel Harcourt. Bundelcund was for some weeks agitated by the intrigues of Scindiah, who secretly instigated its chiefs to revolt, in order to give more weight to his armed intervention in favour of Holkar;

Khan.

but though this division, in the outset, had some success, in consequence of the absence of the British cavalry at the siege of Bhurtpore, yet it was of short duration. The approach of a considerable British force speedily reduced them to submission. More difficulty was experienced from the incursion of Meer Khan, who broke into Rohilcund at the head of fifteen thousand horse, and in the middle of February occupied its capital, Moradabad. Three regiments of British, and three of native horse, were immediately despatched by Lord Lake from the Grand Army before Bhurtpore, and marched with extraordinary expedition to arrest the enemy. They arrived in time to rescue a little garrison of three hundred sepoys, which still held good the house of Mr. Leycester, the collector for the district, and compelled the enemy to retire. Meer Khan fled to the hills, closely pursued by the British horse, under General Smith, who, after a variety of painful marches, came up with the enemy in the beginning of March, and completely destroyed the flower of his army; and on the 10th of the same month they sustained a second defeat from Colonel Burn, at the head of thirteen hundred irregular horse, and lost all their baggage. Disheartened by these disasters, and finding no disposition to join him, as he had expected, in the inhabitants of Rohilcund, Meer Khan retired across the Ganges by the same ford by which he had crossed it, and, after traversing the Doab, recrossed the Jumna in the end of March, having

in the course of his expedition lost half his forces.*

No sooner was the treaty with the Rajah of Bhurtpore signed, than Lord Lake marched with his whole force to watch Scindiah's movements, whom Holkar had joined, and effected a junction with the detachment under the command of Colonel Martindell. This wily rajah, finding the whole weight of the contest likely to fall upon him, and that he had derived no solid support from Holkar's force, immediately retired from his advanced position, and expressed an anxious and now sincere desire for an accommodation. A long negotiation ensued, in the outset of which the demands of the haughty chieftain were so extravagant as to be utterly inadmissible; and Lord Wellesley bequeathed it as his last advice to

Operations against Scindiah, who sues for peace.

Lord Wellesley returns to England.

July 30. Lord Wellesley returns to England. him, or any of the Mahratta chiefs, but on such terms as might maintain the power and reputation of the British government, and deprive them of the means of continuing the system of plunder and devastation by which their confederacy had hitherto been upheld;† and Lord Cornwallis, his successor, having arrived, this great statesman was relieved from the cares of sovereignty, and embarked at Calcutta on his return to England, amid the deep regrets of all classes of the people, leaving a name imperishable in the rolls alike of European and Asiatic fame.‡

These principles, however, were not equally impressed by personal observation upon his successors. The East India Company and the Board of Control, far removed from the scene of action, mainly solicitous about the husbanding of the national resources for the desperate contest with Napoleon in Europe, and unaware that a similar necessity existed to uphold the British supremacy in the East, had directed the succeeding governor-general to use his utmost efforts to bring the costly and distressing contest with the Mahratta powers to an early termination. Lord Cornwallis, however, did not live to carry these instructions into effect. The health of this distinguished nobleman, which had been declining before he left England, rapidly sunk under the heat and labours of India; and he expired at Benares, on the 5th of October, without having brought the negotiations to a termination. They were resumed in the same pacific spirit by his successor, Sir George Barlow: treaties were, in

Arrival of Sir G. Barlow.

* Lord Wellesley to Secret Committee, March, 1805, Well. Desp., v., 142, 155.

† "Adverting to the restless disposition and predatory habits of Holkar, it is not probable that he will be induced to consent to any arrangement which shall deprive him of the means of ranging the territories of Hindostan, at the head of a body of plunderers, except only in the last extremity of ruined fortune. Whatever might be the expedience, under other circumstances than those which at present exist, of offering to Holkar terms of accommodation, without previous submission and solicitation on his part, at present the offer of terms such as Holkar would accept would be manifestly injurious to the reputation, and ultimately hazardous to the security of the British government."—Lord Wellesley to Secret Committee, 25th June, 1805, Well. Desp., v., 269, 270.

‡ Lord Wellesley to Secret Committee, July, 1805, v., 269, 270.

* Lord Wellesley to Secret Committee, 13th May, 1805, v., 155, 159.

Nov. 23, 1805. November, concluded with Scindiah, and with Holkar in the beginning of January. These treaties were, indeed, honourable to the British arms: they provided an effectual barrier against the Mahratta invasions, and secured the peace of India for twelve years. But Lord Wellesley's principles proved, in the end, to be well founded: pacific habits were found to be inconsistent with even a nominal independence on the part of these restless chieftains; conciliation impossible with men who had been inured to rapine by centuries of violence. The necessity of thorough subjugation was at last experienced, and it was then accomplished in the most effectual manner. It was reserved for the nobleman who had been most fierce in his invectives upon Lord Cornwallis's first war with Tippoo, to complete the conquest of the Mahratta powers; for a companion in arms of Wellington, to plant the British standard on the walls of Bhurtpore.*

The principal articles in the treaty with Scindiah were, that all the conditions with Scindiah of the former treaty, except in so far as expressly altered, were to continue in full force; that the claim of the company to Gwalior and Gohud should be abandoned by the British government, and the River Chumbul form the boundary of the two states, from Kotah on the west to Gohud on the east; and Scindiah was to relinquish all claim to the countries to the northward of that river, and the British to the south. Various money payments, undertaken by the company in a former treaty, were by this one remitted; and the British agreed not to restore to Holkar any of his possessions in the province of Malwa. Holkar, driven to the banks of the Hyphasis, and in extreme distress, sent to sue for peace, which was granted to him on the following conditions: That he should renounce all right to the districts of Rampoor and Boondée, on the north of the Chumbul, as well as in Koonah and Bundelcund; that he was to entertain no European in his employment without the consent of the British government, and never admit Surajee Ghautka into his counsels or service. Contrary to the earnest advice of Lord Lake, Sir George Barlow, the new governor-general, so far gratuitously modified these conditions, to which the Mahratta chiefs had consented, as to restore the provinces of Rampoor and Boondée to Holkar, and to abandon the defensive alliance which had been concluded with the Rajah of Jypore. This last measure was not adopted without the warmest remonstrances on the part both of Lord Lake and the abandoned rajah, who observed to the British resident, with truth, "That this was the first time, since the English government had been established in India, that it had been known to make its faith subservient to its convenience." But everything announced that the master spirit had fled from the helm when Lord Wellesley embarked for England: advantages conceded by our enemies were gratuitously abandoned in the vain idea of conciliation, and the objects to be gained by a pacific policy; a treaty signed, to which the illustrious states-

man who had conquered the means of dictating it would never have consented; and future burdensome and hazardous wars entailed upon the empire, to avoid the necessity of a suitable assertion of the British supremacy at the present moment.*

The administration of Marquis Wellesley exceeds, in the brilliancy and importance of the events by which it was distinguished, any recorded in British history. In the space of seven years triumphs were then accumulated which would have given lustre to an ordinary century of success. Within that short period a formidable French force, fourteen thousand strong, which had wellnigh subverted the British influence at the court of their ancient ally, the Nizam, was disarmed; the empire of Tippoo Sultaun, which had so often brought it to the brink of ruin, subverted; the Peishwa restored to his hereditary rank in the Mahratta confederacy, and secured to the British interests; the power of Scindiah and the Rajah of Berar crushed, and their thrones preserved only by the magnanimity of the conqueror; the vast force organized by French officers, of forty thousand disciplined soldiers on the banks of the Jumna, totally destroyed; and Holkar himself, with the last remnant of the Mahratta horse, driven entirely from his dominions, and compelled, a needy suppliant, to sue for peace, and owe the restitution of his provinces to the perhaps misplaced generosity of the conqueror. He added provinces to the British empire in India, during his short administration, larger than the kingdom of France, extended its influence over territories more extensive than the whole of Germany, and successively vanquished four fierce and warlike nations, who could bring three hundred thousand men into the field.

From maintaining with difficulty a precarious footing at the foot of the Ghauts, on the Malabar and Coromandel coasts, the British government was seated on the throne of Mysore; from resting only on the banks of the Ganges, it had come to spread its influence to the Indus and the Himalaya: it numbered among its provincial towns Delhi and Agra, the once splendid capitals of Hindostan; among its stipendiary princes, the Sultaun of Mysore and the descendant of the imperial house of Timour. These great successes were gained by an empire which never had twenty thousand European soldiers under its banners; which was engaged at home, at the moment, in a mortal conflict with the conqueror of the greatest Continental states; and found in its fidelity to its engagements, the justice of its rule, its constancy in difficulty, its magnanimity in disaster, the means of rousing the native population in its behalf, and compensating the want of British soldiers by the justice of British government, the ability of British councils, and the daring of British officers. Impressed with these ideas, future ages will dwell on this epoch as one of the most glorious in British, one of the most marvellous in European, annals; and deem the last words of the British inhabitants of Calcutta to Lord Wellesley, on his departure for Europe, as not the florid language of panegyric, but the sober

* Malcolm, 388, 427. Auber, ii., 361, 461.

* Malcolm, 416, 439. Auber, ii., 395 409.

dictates of truth. "The events of the last seven years have marked the period of your government as the most important epoch in the history of European power in India. Your discernment in seeing the exigencies of the country and of the times in which you were called upon to act; the promptitude and determination with which you have seized upon the opportunities of acting; your just conception and masterly use of our intrinsic strength, have eminently contributed, in conjunction with the zeal, the discipline, and the courage of our armies, to decide upon these great events, and to establish from one extremity of this empire to the other the ascendancy of the British name and dominion."*

General Wellesley had, a few months before his brother, set sail for the British islands. His important duties as Governor of Mysore had prevented him from taking an active part in the war with Holkar; although the judicious distribution of troops which he had made in the Deccan had secured the protection of the British provinces in that quarter, and contributed powerfully to overawe the southern Mahratta powers, and keep Scindiah and the Rajah of Berar from breaking out into open hostility. But, though not personally engaged, his active and watchful spirit observed with intense interest the progress of the contest; his counsel and experience proved of essential service both to the government and the armies; and his letters on the subject remain to this day an enduring monument of judgment, foresight, and penetration.† His able and impartial government of Mysore, and the tributary and allied states connected with it, had endeared him to the native inhabitants, while his extensive local knowledge and indefatigable activity in civil administration had justly commanded the admiration of all ranks of European functionaries. But he was dissatisfied with the restrictions sometimes imposed upon him by the government at home, and prompted to return to Europe by that hidden law which so often makes the temporary vexations of men, selected by Providence for special purposes, the means of turning them into their appointed theatre; he felt the influence of that mysterious yearning, which, even in the midst of honours and power, prompts the destined actors in great events to pant for higher glories, and desire the trial of more formidable dangers. Addresses showered upon him from all quarters when his approaching departure was known: the inhabitants of Calcutta voted him a splendid sword, and erected a monument in their capital to the battle of Assaye; but among all his honours none was more touching than the parting address of the native inhabitants of Seringapatam, which seemed almost inspired with a prophetic spirit. They "implored the God of all castes and of all nations to hear their constant prayer; and wherever greater affairs than the government of them might call him, to bestow on him health, happiness, and glory."‡

The progress of the British empire in India

bears, in many respects, a close resemblance to that of Napoleon in Europe; and the "necessity of conquest to existence" which was so strongly felt, and forcibly expressed, by Lord Clive, Lord Cornwallis, Lord Wellesley, and Lord Hastings, should make us view with a charitable eye the corresponding invincible impulse under which the European conqueror continually acted. Both empires were founded on opinion and supported by military force; both brought a race of conquerors to supreme dominion, in opposition to the established rights and vested interests of the higher classes; both had to contend with physical force superior to their own, and prevailed chiefly by espousing the cause of one part of the native powers against the other; both were compelled, at first, to supply inferiority of numbers by superiority in energy and rapidity of movement; both felt that the charm of invincibility once broken was forever lost, and that the first step in serious retreat was the commencement of ruin. Both had gained their chief increase of power during periods of peace; the strength of both appeared more terrible, on the first renewal of hostilities, than it had been when they last terminated; and it was hard to say whether the open hostility or withering alliance of either was most fatal to the independence of the adjoining states.

But while, in these respects, these two empires were remarkably analogous to each other, in one vital particular of their principles of action and rules of administration were directly at variance, and it is to this difference that the different durations of their existence is to be ascribed. The French in Europe conquered only to oppress; seducing words, indeed, preceded their approach, but cruel exactions accompanied their footsteps—desolation and suffering followed their columns; the vanquished states experienced only increased severity of rule by the sway of the tricolour flag. The English in India, on the contrary, conquered only to save: the oppression of Asiatic rule, the ferocity of authorized plunder, disappeared before their banners; multitudes flocked from the adjoining states to enjoy the blessings of their protection; the advance of their frontier was marked by the smiling aspect of villages rebuilt, fields recultivated, the jungle and the forest receding before human habitations. And the difference in the practical result of the two governments has been decisively established, by the difference of the strength which they have exhibited in resisting the shocks of adverse fortune; for, while the empire of Napoleon sunk as rapidly as it rose, and was prostrated on the first serious reverse before the aroused indignation of mankind, the British dominion in Asia, like the Roman in Europe, has stood secure in the affections of its innumerable inhabitants, and, though separated by half the globe from the parent state, has risen superior, during almost a century, to the accumulated force of all its enemies.

After the most attentive consideration of the circumstances attending the rise and establishment of this extraordinary dominion, under Lord Clive, Warren Hastings, Lord Cornwallis,

Analogy of the British empire in India, and Napoleon's in Europe.

Their essential point of difference.

Reflections on the rise of the British power in India.

† *Gurw.*, ii., 457, 607.

‡ *Gurw.*, ii., 606, 608. Scherer, i., 66.

and Marquis Wellesley, it seems almost inexplicable to what cause its marvellous progress has been owing. It was not to the magnitude of the forces sent out by the mother-country, for they were few, and furnished in the most parsimonious spirit; it was not to the weakness of the conquered states, for they were vast and opulent empires, wellnigh equalling in numbers and resources all those of Europe put together; it was not to their want of courage or discipline, for they had all the resources of European military art, and fought with a courage which sometimes rivalled even the far-famed prowess of British soldiers. The means of combating with resources at first slender, and always dependant for their existence on the capacity and energy of the Indian government, were found in the moral courage and far-seeing sagacity of our Eastern administration, and the unconquerable valour of our British officers, who brought a degenerate race into the field, and taught them, by their spirit and example, to emulate the heroic deeds of their European brethren in arms. The history of the world can hardly exhibit a parallel to the vigour and intrepidity of that political administration—the courage and daring of those military exploits. And, perhaps, on reviewing their achievements, the British, like the Roman annalist, may be induced to conclude that it is to the extraordinary virtue and talent of a few leading men that these wonderful successes have been owing. “*Mihi multa legenti multa audienti, quæ populus Romanus domi militæque, mari atque terra, præclara facinora fecit, forte lubuit attendere, quæ res maxime, tanta negotia sustinuisse. Sciebam sæpe, numero parva manu, cum magnis legionibus hostium contendisse; cognoveram, parvis copiis, bella gesta cum opulentis regibus; ad hoc sæpe fortunæ violentiam tolerasse; facundia Græcos, gloria belli Gallos, ante Romanos fuisse. Ac mihi, multum agitant, constabat paucorum civium egregiam virtutem cuncta patravisse; eoque factum, ut divitiis paupertas, multitudinem paucitas superaret.*”*

Much, however, as the strenuous virtue of individuals may have contributed to the greatness of the British Empire in Asia, as it did of the Roman dominion in Europe, it will not of itself explain the phenomenon. This strenuous virtue itself is the wonder which requires solution. How did it happen that Great Britain, during the course of eighty years, should have been able to furnish a race of statesmen adequate to the conception of such mighty projects; of warriors equal to the execution of such glorious deeds; men capable of seizing with unflinching courage the moment of action, of combining with profound sagacity the means of conquest, of executing with undaunted resolution the directions of genius? Still more, how was this constellation of talent exhibited when the state was involved in bloody and arduous conflicts in the Western hemisphere, and shone with the brightest lustre at the very moment when all the resources of the state seemed concentrated for the defence of the heart of the empire? It was the boast of the Romans that their Republican constitution, by training all the citizens to civil or military duties, either as leaders or followers,

provided an inexhaustible fund of virtue and ability for the service of the state; and that the loss even of the largest army or the most skillful commanders could, without difficulty, be supplied by the multitudes in every rank whom the avocations of freedom had trained to every pacific or warlike duty. In British India, equally as in ancient Rome, the influence of the same undying energy and universal capacity may be described. The natives say that the company has always conquered because it was *always young*; and such, in truth, was ever its character. In no other state of society but that in which a large mixture of the Democratic element has spread energy and the spirit of exertion through every rank, is to be found for so considerable a period so large a share of the undecaying youth of the human race.

But this element has usually been found in human affairs to be inconsistent with durable greatness. It has either burned with such fierceness as to consume, in a few years, the vitals of the state, or dwindled into a selfish or shortsighted passion for economy, to gratify the jealousy of the middle classes of society, fatal in the end to its independence. In moments of general excitement, and when danger was obvious to the senses, Democratic societies have often been capable of the most extraordinary exertions; it is in previous preparation, sagacious foresight, and the power of present self-denial for future good, that they have in general proved deficient. That England, in its European administration, has experienced throughout the contest with revolutionary France its full share both of the strength and weakness incident to Democratic societies, is evident from the consideration that, if the unforeseen economy of the Commons had not, during the preceding peace, when danger was remote, reduced the national strength to a pitiable degree of weakness, Paris could with ease have been taken in the first campaign; and that, if the inherent energy of Democratic vigour, when danger is present, had not supported the country during its latter stages, the independence of Britain and the last remnant of European freedom, notwithstanding all the efforts of the aristocracy, must have sunk beneath the arms of Napoleon. No one can doubt that, if a popular house of commons or unbridled press had existed at Calcutta and Madras, to coerce or restrain the Indian government in its political energy or military establishment, as was the case in the British isles, the British empire in the East must have been speedily prostrated, any more than that, if its able councils and gallant armies had not been supported by popular vigour at home, even the energy of Lord Wellesley, the daring of Lord Lake, must alike have sunk before the strength of the Asiatic dynasties.

The Eastern empire of England, on the other hand, has exhibited no such vicissitudes; it has never felt the want of either of aristocratic foresight in preparation, or of Democratic vigour in execution; it has ever been distinguished alike by the resolution in council, and tenacity of purpose, which characterize patrician, and the energy in action and inexhaustible resources which are

It was owing to union of Democratic energy with aristocratic foresight.

Causes of this extraordinary progress.

Causes of this extraordinary combination.

* Sall., *Bel. Cat.*, sec. 32.

produced in plebeian governments. This extraordinary combination, peculiar, in the whole history of the species, to the British Empire in Asia and the Roman in Europe, is evidently owing to the causes which, in both, during a brief period, rendered aristocratic direction of affairs coexistent with Democratic execution of its purposes : a state of things so unusual, and threatened by so many dangers ; an equilibrium so unstable, that its continuance, even for the brief time it endured in both, is perhaps to be ascribed only to Divine interposition. And it is evident that, if the same combination had existed, in uncontrolled operation, in the government at home ; if the unconquerable popular energy of England had been permanently directed by foresight and resolution equal to that which was displayed in the East ; if no popular jealousy or impatience had existed, to extinguish, on the termination of war, the force which had gained its triumphs, and the fleets and armies of Marlborough, Chatham, Nelson, and Wellington, had been suffered to remain at the disposal of a vigilant executive, to perpetuate the ascendancy they had acquired ; if the two hundred ships of the line, and three hundred thousand warriors, once belonging to England, had been permanently directed by the energetic foresight of a Chatham, a Burke, or a Wellesley, to external purposes, the British European Empire in modern, must have proved as irresistible as the Roman in ancient times, and the emulation of independent states been extinguished in the slumber of universal dominion.

But no such gigantic empire was intended by Providence to lull the ardent spirit of Europe, till it had performed its destined work of spreading the seeds of civilization and religion through the habitable globe. To Great Britain, a durable colonial ascendancy is given ; but it will be found, not among the sable inhabitants of Hindostan, but the free descendants of the Anglo-Saxon race in the American and Australian wilds. The extraordinary combination of circumstances which gave us the empire of the East could not remain permanent : aristocratic constancy and Democratic vigour can coexist only for a brief space, even in the most favoured nation. Already the great organic change of 1832, and the extension of the direct influence of British popular power upon Eastern administration, have gone far to shake the splendid fabric. When the time arrives, as arrive it will, that adverse interests, ignorant philanthropy, or prejudiced feeling, in the dominant island, shall interfere with vested rights, violate existing engagements, or force on premature changes in the East, as they have already done in the West Indies, the discontent of the inhabitants will break out into inextinguishable revolt. When the national strength is prostrated to gratify the jealousy of popular ascendancy in the Asiatic, as it has long been in the European world, the last hour of our Indian empire has struck. Distant provinces may be long ruled by a wise, vigorous,

and paternal central government, but they cannot remain for any considerable time under the sway of a remote and tyrannical Democratic society. The interests of the masses are, in such a case, directly brought into collision : the prejudices, the passions of the ruling multitude, soon prove insupportable to the inhabitants of the subject realm ; the very spirit which the central empire has generated, becomes the expansive force which tears its colonial dependences asunder. Whether the existing contest between the different classes of society in the British islands terminates in the lasting ascendant of the multitude, or the establishment, by Democratic support, of a centralized despotism, the result will be equally fatal to our Eastern supremacy : in the first case, by terminating the steady rule of aristocratic foresight ; in the last, by drying up the fountains of popular support.

But whatever may be the ultimate fate of the British Empire in India, it will not fall without having left an imperishable name, and bequeathed enduring benefits to the human race. First of all the Christian family, England has set its foot in the East, not to enslave, but to bless ; alone of all the conquering nations in the world, she has erected, amid Asiatic bondage, the glorious fabric of European freedom. To assert that her dominion has tended only to social happiness, that justice has regulated all her measures, and equity pervaded every part of her administration, would be to assert more than ever has, or ever will be produced by human nature. But when interest has ceased to blind, or panegyric to mislead, the sober voice of impartial truth will confess that her sway in Hindostan has contributed, in an extraordinary degree, to correct the disorders of society ; to extricate from hopeless oppression the labouring, to restrain by just administration the long-established tyranny of the higher orders ; and that public happiness was never so equally diffused, general prosperity never so thoroughly established among all ranks, as under the British rule, since the descendants of Shem first came to sojourn on the banks of the Ganges. Already the fame of its equitable sway and thorough protection of all classes has spread far, and sunk deep into the mind of the East ; Mohammedan prejudice has been shaken by the exhibition, amid its severities, of Christian beneficence ; and even the ancient fabric of Hindoo superstition yielded to the ascendant of European enterprise. Whether the appointed time has arrived for the conversion of the worshippers of Brahma to the precepts of a purer faith, and the vast plains of Hindostan are to be peopled by the followers of the Cross, as yet lies buried in the womb of fate ; but, whatever may be the destiny of Asia, the British standard has not appeared on its plains in vain ; the remembrance of the blessed days of its rule will never be forgotten, and more glorious even than the triumph of her arms have been the seeds of future freedom, which the justice and integrity of English government have sown in the regions of the sun.

Great and lasting benefits it has already produced in human affairs.

CHAPTER LIII.

CAMPAIGN OF ABENSBERG, LANDSHUT, AND ECKMUHL

ARGUMENT.

Influence of the Aristocratic and Democratic Principles on the two contending Parties in Europe.—Policy of the Austrian Cabinet since the Peace of Presburg.—Important Decree, ordering the Formation of the Landwehr, in June, 1808.—Napoleon's Remonstrances against it.—Deceitful Pacific Professions of Austria at Erfurth.—Intelligence of the Preparations of Austria induces Napoleon to halt in Spain.—Division of Opinion in the Austrian Cabinet on the War.—Arguments for and against it.—Amount and Distribution of the French Force in Germany in the Spring of 1809.—Efforts of Austria to obtain the Accession of Russia to the Confederacy.—Prussia resolves to remain Neutral.—General Effervescence in Germany in Aid of the Austrian Cause.—Character of Metternich, the Austrian Ambassador at Paris.—Angry Interchange of Notes between the French and Austrian Cabinets.—Deep Umbrage taken by Austria at the Conferences of Erfurth.—Measures taken for the Concentration of the French Army.—Preparations and Forces of Austria.—Last Diplomatic Communications at Paris.—Spirit which animated all Classes in the Austrian Empire.—Austrian Plan of the Campaign.—Plans of Napoleon.—Commencement of Hostilities by the Austrians.—First Movements of the Austrians, and imminent Danger of the French.—Faulty Movements of Berthier to arrest their Progress.—Advance of the Austrians almost cuts in two the French Army.—Movements of the two Armies towards each other.—Napoleon's Plan of Operations, and its great Dangers.—Action between Davoust and Hohenzollern, at Thum.—Positions of the two Armies on the Night of the 19th.—Napoleon's Address to the German Confederates.—Combat of Abensberg.—Hiller pursued to Landshut.—Is again beaten by the Emperor.—Operations of Davoust and the Archduke Charles in the Centre.—Attack and Capture of Ratibon by the Austrians.—Preparatory Movements on both Sides with a view to a general Battle.—Description of the Field of Battle.—Battle of Eckmühl.—Victory of Napoleon.—Desperate Cavalry Actions in front of Ratibon.—The Archduke retreats across the Danube.—Operations against Ratibon by the French, and wound of Napoleon.—Its Assault and Capture.—Great Results of these Actions.—Indefatigable Activity of Napoleon and his Soldiers were the principal Cause of these Successes.—Impressive Scene in the conferring of military Honours at Ratibon.—Defeat of the Bavarians by Hiller.—Successful Operations of the Archduke John in Italy.—Total Defeat of Eugene Beauharnois at Sacile.—Important Effects of this Victory on the Italian Campaign.—Hopes which the Commencement of the Campaign afforded to the Allies.

As the history of Europe during the eventful year which succeeded the French Revolution contains, in the domestic transactions of every state possessing the shadow even of free institutions, a perpetual recurrence of the strife between the aristocratic and Democratic principles; so the military annals of the same period illustrate the effect of these contending powers on the course of external events, and the issue of warlike measures. In the results of military operations, not less than the consequences of social convulsion, we perceive the influence of the same antagonist principles; the long-continued successes of the one, not less than the persevering firmness of the other, clearly illustrate the action of those great antagonist powers which in every age have divided between them the government of mankind. France, buoyant with the energy and radiant with the enthusiasm of a revolution, was for long triumphant; but the fever of passion is transient, the suggestions of interest permanent in their effects;

and in the vehement exertions which the Democratic principle there made, externally and internally, to achieve success, the foundation was necessarily laid for disappointment and change within, exhaustion and ultimate disaster without. Austria, less powerfully agitated in the outset, was directed by principles calculated to be more uniform in their operation, and more effective in the end: recurring to the aid of popular enthusiasm only when driven to it by necessity, and guided throughout by aristocratic foresight, she did not so soon wear out the scorching flame which shakes the world; like a skilful combatant, she gave ground and yielded, till the strength of her antagonist had exhausted itself by exertion; and thus succeeded at last, not only in appearing with undiminished strength on the theatre of combat, but rousing to her standard the still unexhausted vigour of popular excitation.

Since the gallant but unsuccessful attempt made by the imperial government in 1805, the cabinet of Vienna had adhered with cautious prudence to a system of neutrality. Even the extraordinary temptation afforded by the disasters of the Polish campaign, and the opportunity, thence arising, of striking a decisive blow when the forces of the East and the West were engaged in doubtful hostility on the banks of the Alle, had not been able to rouse it to immediate exertion. Austria armed, indeed, and assumed a menacing attitude, but not a sword was drawn; and the rapid termination of the contest by the disaster of Friedland, put an entire stop to any projects of hostility which a decided victory in that quarter by the Muscovite arms, or even the transfer of the war into the interior of Russia, might probably have occasioned. But during this interval the government was not idle. Under the able guidance of the Archduke Charles, the war department assumed an extraordinary degree of activity; the vast chasms which the campaigns of Ulm and Austerlitz had occasioned in the ranks were filled up by voluntary recruiting, or the prisoners who at length were restored by the French government; and, with a patriotism and wisdom worthy of the very highest admiration, the treasury, at the very time when the state was overburdened with the enormous contribution of four millions sterling, imposed by the victorious French troops, purchased from their retiring armies the greater part of the immense park of two thousand pieces of cannon, which they were removing from the arsenal of Vienna. During the whole of 1806 and 1807, the efforts of the war department were incessant, without any ostentatious display, to restore the horses of the cavalry and artillery, and replenish the arsenals and magazines, which had been nearly emptied by the efforts or spoliation of the last campaign; but the attention of the archduke was, in an especial

Policy of the imperial cabinet since the peace of Presburg.

manner, drawn to the remodelling of the infantry, the real basis of all powerful military establishments. The French organization into corps de armée, under the command of marshals, and divisions under them of generals, each with a certain proportion of cavalry and artillery, so as to render it a little army complete in itself; that admirable system which Napoleon had adopted from the ancient conquerors of the world,* was introduced into the imperial service; while the younger and more ardent officers, with the Archduke John at their head, eagerly supported still more energetic steps: formed plans of national defence and internal communication; warmly recommended the adoption of measures calculated to rouse the national enthusiasm in the public defence; and already contemplated those heroic sacrifices, in the event of another invasion, which afterward, under Wellington in Portugal and Alexander in Russia, led to such memorable results.†

It was the presence of the Grand Army of France, two hundred thousand strong, in the north and west of Germany, which long overawed the imperial government, and prevented the adoption of any steps

which could give umbrage to Napoleon; but with the transfer of a large part of that immense force to the Peninsula, after the breaking out of the war in that direction, this oppressive load was materially diminished. The able statesman who directed the imperial councils immediately perceived that a powerful diversion was now likely to be created in the quarter where the French emperor least expected it, and where he was most desirous of obtaining a solid support; and they readily anticipated that England would not be slow in availing herself of this unexpected revolution of fortune in her favour, and descending in strength upon that theatre of warfare, where the sea would prove the best possible base for military operations, and the scanty internal resources of the country would render it impossible to keep the armies of France together for any length of time in sufficient strength for their expulsion. In order to be in a situation to improve any chances which might thus arise in their favour,

the cabinet of Vienna no sooner heard of the breaking out of the Spanish contest than they issued a decree by which a militia, raised by conscription, under the name of *Landwehr*, was instituted. The general enthusiasm in favour of the monarchy, about, it was hoped, to resume its place in the theatre of Europe, soon raised this admirable force from 200,000, fixed by the law for its German possessions, to 300,000 men. In addition to this, the Hungarian Diet voted twelve thousand recruits for the regular army for the year 1807, and eighty thousand for 1808, besides an insurrection, or levy *en masse*, of eighty thousand men, of whom thirty thousand were excellent cavalry. These immense military preparations, in addition to a regular standing army now raised to 350,000 men, were sufficient to demonstrate the existence of some great national project; and they were rendered still

more formidable by the activity which prevailed in completing the remounting of the cavalry and artillery, and arming the fortresses, both on the frontier and in the interior; as well as the enthusiastic feelings which this universal note of military preparation had awakened in all classes of the monarchy.*

Napoleon was no sooner informed of these serious military changes, than he addressed the most pressing remonstrances to the imperial cabinet; and in the midst of the increasing intricacy of the Peninsular affairs, and all the whirl of a rapid journey from Bayonne, by Bordeaux, to Paris, repeatedly demanded a categorical explanation of armaments so well calculated to disturb the peace of Europe. At the same time, he addressed a circular to the princes of the Confederation of the Rhine, in which he called on them "to make ready their contingents, and prevent a war without a pretext as without an object, by showing to Austria that they were prepared for it." No sooner had he arrived in Paris than he addressed a public remonstrance on 15th Aug the same subject to Metternich, the Austrian ambassador, in presence of all the diplomatists of Europe. The imperial government made loud professions of pacific intentions, but did not for an hour discontinue their military preparations. Napoleon was not deceived: the coincidence of these formidable armaments with the insurrection in Spain, and the disasters of Vimera and Baylew, was too evident to elude the most ordinary sagacity;† but he dissembled his resentment, and contented himself with ordering the princes of the confederation to keep their contingents together, and strengthening to the utmost the armies in Germany, so as to replace the veterans who were withdrawn in such numbers for the war in the Peninsula.

It was, in a great measure, to overawe Austria that Napoleon pressed the Emperor Alexander to meet him at Erfurth; and he flattered himself that, however tempting the opportunity afforded by the Spanish insurrection might be, the cabinet of Vienna would hesitate before they engaged in hostilities with the two most powerful military states of the Continent. The preparations of Austria being not yet complete, it was deemed advisable to gain time; and, in order to accomplish this object, M. de Vincent was despatched with a letter to the coalesced emperors in that city, so full of protestations of amity,‡ that Napoleon authorized the princes of the confederation to dismiss their contingents, with the advice, merely, to reassemble them as soon as ever Austria resumed her hostile attitude. To the Emperor Francis he re-

Napoleon's remonstrances against these measures.
24th July.

Deceitful pacific professions of Austria at Erfurth

* Pelet, i., 37, 38. Hard., x., 296, 297. Archduke John, Feldzug, 1809, 10, 12. Jom., iii., 138, 141.

† Pelet, i., 39, 40. Hard., x., 295, 296.

‡ "He flattered himself that the Emperor Napoleon had never ceased to be convinced that, if false insinuations, in regard to the organic changes which he had deemed it necessary to introduce into his monarchy, had for a moment thrown doubts on the continuance of his amicable relations, the explanations which Count Metternich had made on that subject had entirely dissipated them. The Baron Vincent was charged to confirm them, and to afford every explanation that could be desired."—FRANCIS to NAPOLEON, 21st Sept., 1808; SCHOELL, ix., 216.

* Ante, ii., 323.

† Pelet, Guerre de 1809, i., 36, 37. Der Erzherzog Johans Feldzug in Jahre 1809, 8

turned an answer earnestly counselling moderation and pacific views;* and having thus, as he hoped, dispelled, or at least delayed, the cloud which threatened to burst in the east of Germany,† he by a formal decree dissolved the Grand Army, and directed a considerable part of the troops composing it, particularly the corps of Soult and Ney, with the Imperial Guards, to Spain, where they achieved the successes which have already been detailed.

Notwithstanding the disasters, however, which befell the Spaniards, the cabinet of Vienna was not discouraged. During the winter, measures evidently indicating a hostile spirit were adopted: the harbour of Trieste was opened to the English and Spanish flag; large purchases of arms were there made by the agents of the insurgents; articles hostile to Napoleon began to appear in the public journals, which, being all under the control of the police, indicated more or less the disposition of government; and the Austrian ambassador declined to accede to a proposal made at Paris by Count Romanzow, for the conclusion of a treaty involving a triple guarantee between the courts of St. Petersburg, Vienna, and the Tuileries. Secret amicable relations had been established with Great Britain, the common refuge of all those, however hostilely disposed in former times, on the Continent, who found the tyranny of France growing insupportable. But, though the cabinet of St. James tendered the offer of their assistance in subsidies, they strongly counselled the imperial government not to take the irrevocable step unless the resources of the monarchy were clearly equal to the struggle which awaited them. But the vigour of the English administration, notwithstanding their prudent advice, was such as eminently to inspire confidence; the spectacle of fifty thousand British soldiers taking the field in the Peninsular campaigns, was as unusual as it was animating, and promised a diversion of a very different kind from those which had terminated in such disaster on the plains of Flanders or the Bay of Quiberon. At length there appeared, in the middle of December, a declaration of the King of England, which openly alluded to the hostile preparations of Austria, and assigned the prejudicial effect of Great Britain withdrawing at such a moment from the contest, as a powerful reason for declining the mediation of France and

Russia, offered at Erfurth;* and the same courier who, on the 1st of January, 1809, brought this important state paper to Napoleon, conveyed, at the same time, decisive intelligence in regard to the hostile preparations and general movement in the Austrian States. He immediately halted, as already mentioned, at As-torga: returned with extraordinary expedition to Valladolid, where he shut himself up for two days with Maret, his minister for foreign affairs; despatched eighty-four messengers in different directions,† with orders to concentrate his forces in Germany, and call out the full contingents of the Rhenish Confederacy; and returned, without delay, himself to Paris.

The Austrian cabinet, meanwhile, notwithstanding their hostile preparations, were as yet undecided as to the course which they should finally adopt. The extreme peril which the monarchy had already undergone in the wars with Napoleon, as well as the uncertain nature of the diversion which they could expect from so tumultuary a force as the Spanish insurrection, naturally excited the most anxious solicitude, and induced many of the warmest and wisest patriots to pause before they engaged in a contest which, if unsuccessful, might prove the last which the country might ever have to sustain. Opinions were much divided, not only in the cabinet, but the nation, on the subject. At the head of the party inclined to preserve peace was the Archduke Charles, whose great military exploits and able administration as director of the war department necessarily gave his opinion the greatest weight, and who had felt too frequently the weight of the French arms not to appreciate fully the danger of again provoking their hostility. On the other hand, the war party found an able and energetic advocate in Count Stadion, the prime minister, who was cordially seconded by the majority of the nobility, and ardently supported by the great body of the people. It was known, also, that the emperor himself inclined to the same opinion. The question was vehemently argued, not only in the cabinet, but in all the private circles of the metropolis.

On the one hand, it was argued that the military preparations of the monarchy were still incomplete, and its finances in the most deplorable state of confusion; that Prussia, whatever her inclinations might be, was incapable of rendering any efficient assistance, and Russia too closely united with the French emperor to offer any hope of co-operation; that the Spanish insurgents could not be expected long to hold out against the immense forces which Napoleon had now directed against them, and, accordingly, had been defeated in every encounter since he

* "He could assure his imperial majesty that he was seriously afraid that he should see hostilities renewed: the war faction had pushed Austria to the most violent measures, and misfortunes even greater than the preceding ones. If, however, the measures of the Emperor Francis were such as to indicate confidence, they would inspire it. Truth and simplicity have now become the best politicians: he had communicated to him his apprehensions, in order that they might be instantly dissipated: when he had it in his power to have dismembered the Austrian dominions, he had not done so: he was ever ready, on the contrary, to guaranty their integrity. The last levy *en masse* would have occasioned a war if he had believed it was raised in concert with Russia. He had just disbanded the camp of the Confederation of the Rhine: one hundred thousand of his troops were about to renew their threatening attitude against England. Let your imperial majesty, therefore, abstain from all hostile armaments which could give umbrage to the French cabinet, or operate as a diversion in favour of Great Britain."—THIBAUDEAU, vii., 73, 74.

† Thib. v., 200, 201. Pelet, i., 42, 47.

* If, among the nations which maintain against France a precarious and doubtful independence, there are any who, at this moment, hesitate between the ruin which will result from a prolonged inaction and the contingent dangers which may arise from a courageous effort to escape from it, the deceitful prospect of a peace between Great Britain and France could not fail to be singularly disastrous. The vain hope of a return of tranquillity might suspend their preparations, or the fear of being abandoned to their own resources shake their resolution.—Dec. 16th, 1808, King's Speech, *Parl. Deb.*

† Ante, iii., 104. Thib., vii., 200, 202. Hard., x., 297, 298. Pelet, i., 45, 48.

in person directed their movements; and the English auxiliaries, deprived of the solid base of Peninsular co-operation, would necessarily be driven, as on former occasions, to their ships. What madness, then, for the sake of a transient and uncertain success, to incur a certain and unavoidable danger, and expose the Austrian monarchy, as it would soon be, alone and unaided, to the blows of a conqueror too strongly irritated to allow the hope that, after disaster, moderate terms would again be allowed to the vanquished. On the other hand, it was strongly contended that so favourable an opportunity of reinstating the Empire in the rank it formerly held in Europe never could again be looked for, and was, in fact, more advantageous than could possibly have been expected; that the great majority of the French veteran troops had been directed to the Peninsula, and were now either buried in the mountains of Galicia, or inextricably involved in the heart of Spain; that sixty thousand French conscripts alone remained in Germany, and the Rhenish confederates could not be relied on by the stranger when the standards of the Fatherland were openly unfurled; that the confusion of the finances was of no importance, when the subsidies of England could with certainty be relied on to furnish the necessary supplies, and the incompleteness of the military preparations of little moment when the now awakened fervour of the nation was attracting all ranks in crowds to the national standard; that it was in vain to refer to the long-dreaded prowess of the French armies, when the disaster of Baylew and the defeat of Cintra had dispelled the charm of their invincibility; that there could be no question that the hour of Europe's deliverance was approaching; the only question was, whether Austria was to remain passive during the strife, and bear no part either in the glories by which it was to be achieved or the spoils with which it would be attended. These considerations, speaking as they did to the generous and enthusiastic feelings of our nature, and supported by the great influence of the emperor, the ministry, and the principal nobility, at length prevailed over the cautious reserve and prudent foresight of the Archduke Charles, and war was resolved on. In truth, the public fervour had risen to such a height that it could no longer be delayed, and, like many other of the most important steps in the history of all nations, its consequences, be they good or be they bad, were unavoidable.*

The French forces in Germany, when the contest was thus renewed, were far from being considerable, and it was chiefly an exaggerated impression of the extent to which they had been reduced which induced the cabinet of Vienna, at that period, to throw off the mask. The total amount, in September, 1808, on paper, was one hundred and sixty thousand men, of whom forty thousand were cavalry; but the number actually present with the eagles was only a hundred and forty thousand, of whom only a hundred and ten thousand were native French, the remainder being Poles, Saxons, and Dutch. After the departure of three divisions of Soult's

corps for the Peninsula, in the end of October, the remainder, eighty thousand strong, assumed the name of the army of the Rhine, and were quartered at Magdebourg, Bareuth, Hanover, and Stettin, and in the fortresses on the Oder. But to this force of imperial France there was to be added nearly one hundred thousand men from the Rhenish Confederacy; so that, after making every allowance for detachments and garrisons, a hundred and fifty thousand men might be relied on for active operations on the Inn, or in the valley of the Danube.*

The imperial cabinet made the utmost efforts to obtain the accession of Russia to the new confederacy; and for this purpose despatched a young officer of diplomatic talent, engaging address, and noble figure, reserved for exalted destinies in future times, PRINCE SCHWARTZENBERG, to St. Petersburg. Stadion had been previously made aware, by secret communications from Baron Stein, the Duke de Serra Capriola, and others, that, notwithstanding Alexander's chivalrous admiration of Napoleon, he still retained at bottom the same opinions as to the necessity of ultimately joining in the confederacy for the deliverance of Europe; and he was not without hopes that the present opportunity, when so large a portion of the French armies were engaged in the Peninsula, would appear to the cabinet of St. Petersburg a fair one for taking the lead in the great undertaking. But all the efforts of Schwarzenberg were in vain: Alexander had given his word to the French emperor, and, though capable of the utmost dissimulation so far as the mere obligations of cabinets were concerned, the Czar was scrupulously faithful to any personal engagements which he had undertaken. He was occupied, moreover, with great schemes of ambition both on his northern and southern frontier, and little inclined to forego present and certain conquests in Finland and Moldavia for the problematical advantages of a contest in the heart of Germany. All attempts to engage Russia in the confederacy, therefore, proved abortive; and the utmost which the Austrian envoy could obtain from the imperial cabinet was a secret assurance that Russia, if compelled to take a part in the strife, would not at least bring forward any formidable force against the Austrian legions.*

Prussia had no objects of present ambition to obtain by remaining quiescent during the approaching conflict, and the wrongs of Tilsit were too recent and serious not to have left the strongest desire for liberation and vengeance in every Prussian heart. No sooner, therefore, had it become manifest that Austria was arming, than public feeling became strongly excited in all the Prussian States, and the government was violently urged by a powerful party, both in and out of the cabinet, to seize the present favourable opportunity of regaining its lost province and resuming its place among the powers of Europe. Scharnhorst, the minister at war, strongly supported the bolder policy, and offered to place at the disposal of the king, by his admirable system of temporary service, no

Efforts of Austria to obtain the accession of Russia to the confederacy.

Prussia resolves to remain neutral.

* Erz. John Feld., 1809, 24, 27. Pelet, i., 59, 61.

less than one hundred and twenty thousand men, instead of the forty thousand which they were alone permitted to have under arms.* But the cabinet of Berlin was restrained from giving vent to its wishes, not merely by prudential considerations, but a sense of gratitude. The visit of the king and queen to St. Petersburg, in Jan., 1809. the preceding spring, had renewed the bonds of amity by which they were united to the Emperor Alexander; they had obtained a considerable remission of tribute, and relaxation of the hardships of the treaty of Tilsit, from his intercession;† and they felt that, not indifferent spectators of the Austrian efforts, they could not with safety take a part in them until the intentions of Russia were declared. They resolved, therefore, to remain neuter; and thus had Napoleon again the extraordinary good fortune, through his own address or the jealousies or timidity of the other potentates, of engaging a *fourth* time in mortal conflict with one of the great European powers, while the other two were mere spectators of the strife.‡

But, though refused all co-operation from the European cabinets, the court of Vienna was not without hopes of obtaining powerful succours from the Germanic people. The Tugendbund or Burschenschaft, which had spread its ramifications as far as indignation at French oppression was felt in the north and east of Germany, had already formed a secret league against the oppressor, independent of the agreements of cabinets; and thousands of brave men in Westphalia, Cassel, Saxony, and the Prussian States, animated by the example of the Spanish patriots, were prepared to start in arms for the defence of the Fatherland, as soon as the imperial standards crossed the Inn. The peasants of Tyrol, whose ardent and hereditary attachment to the house of Hapsburg had been rendered still more enthusiastic by the bitter experience they had had of their treatment as aliens and enemies under the Bavarian government, longed passionately to rejoin the much-loved Austrian dominion; and the first battalion of the imperial troops which crossed the Salzbourg frontier would, it was well known, at once rouse twenty thousand brave mountaineers into desperate and formidable hostility. The cabinet of Vienna, despite its aristocratic prepossessions, was prepared to take full advantage of these favourable dispositions; and, impelled by necessity, not only maintained in secret an active correspondence with the numerous malecontents in the adjoining provinces, who panted for the moment of German deliverance, but was prepared, the moment hostilities were commenced, to call upon them by animated proclamations to repair to its standards, and determine, by a vigorous popular demonstration, the uncertainty or vacillations of their respective governments. Thus had the energy of general enthusiasm in the course of the contest already come to change sides; and while France, resting on the coalitions of cabinets and the force of disciplined armies, was sternly repressing, in every direction, the fervour of national exertion, Spain and Austria openly invoked the aid of

popular enthusiasm, and loudly proclaimed the right of mankind, when oppression had reached a certain point, to redress their own wrongs, and take the lead in the achievement of their own deliverance.*†

Meanwhile the Austrian ambassador at Paris had the difficult task to discharge Character of Metternich, the Austrian ambassador at Paris. of maintaining apparently amicable relations with the French government at the time when his cabinet were openly preparing the means of decided hostility. But the BARON METTERNICH, who then filled that exalted situation at the court of Napoleon, was a man whose abilities were equal to the task. A statesman, in the widest acceptation of the word, gifted with a sagacious intellect, a clear perception, a sound judgment; profoundly versed in the secrets of diplomacy, and the characters of the leading political men with whom he was brought in contact in the different European cabinets; persevering in his policy, far-seeing in his views, unrivalled in his discrimination, and at the same time skilful in concealing these varied qualities; a perfect master of dissimulation in public affairs, and yet honourable and candid in private life; capable of acquiring information from others, at the very moment when he was eluding all similar investigations from them; unbounded in application, richly endowed with knowledge, he also enjoyed the rare faculty of veiling these great acquirements under the cover of polished manners, and causing his superiority to be forgotten in the charms of a varied and intellectual conversation. These admirable abilities were fully appreciated at Berlin, where he had formerly been ambassador; but they excited jealousy and distrust among the diplomatists of Paris, who, seeing in the new representative of the Cæsars qualities which they were not accustomed to in his predecessors, and unable either to overcome his caution or divine his intentions, launched forth into invectives against his character, and put a forced or malevolent construction upon his most inconsiderable actions.‡

Notwithstanding all his caution and diplomatic address, however, the Austrian ambassador could not blind the French emperor to the preparations which were going forward. In a public audience of the envoys of the principal European powers at Paris, he openly charged the cabinet of Vienna with hostile designs, and Metternich, who could not deny them, had no alternative but to protest that they were defensive only, and rendered necessary by the hostile attitude of the princes of the Rhinish

Angry interchange of notes between the French and Austrian courts.

Feb. 17.

* Pelet, i., 71, 79. Feldzug von Erzherz., Jom., 52, 54.

† Napoleon loudly accused the cabinet of Vienna of insurrectionary iniquity, in thus fomenting popular efforts against the armies of imperial France. "Austria," said the *Moniteur*, "has adopted the revolutionary system: she has no right now to complain of the conduct of the convention, in proclaiming war to the palace and peace to the cottage. A plan has been organized at Vienna for a general insurrection over all Europe, the execution of which is confided to the ardent zeal of the princes of the house of Austria, propagated by the proclamations of its generals, and diffused by its detachments at the distance of two hundred leagues from its armies. The leading characteristic of that system is, the *terror* universally spread by the Austrian generals, to excite, by main force, that revolution."—*Moniteur*, No. 239, *ann'e* 1809; and *Pelet*, i., 78.

Confederacy, to whom Napoleon had recently transmitted orders to call out their contingents.* In truth, however, though loud complaints of hostile preparations were made on both sides, neither party were desirous to precipitate the commencement of active operations. Austria had need of every hour she could gain to complete her armament, and draw together her troops upon the frontier from the various quarters of her extensive dominions; and Napoleon had as much occasion for delay to concentrate his forces from the north and centre of Germany, in the valley of the Danube; and he was desirous not to unsheath the sword till advices from St. Petersburg made him certain of the concurrence of Alexander in his designs. At length the long-wished-for despatches arrived, and relieved him of all anxiety

Feb. 19. by announcing the mission of Prince Schwartzemberg to St. Petersburg, the refusal of the cabinet of Russia to accede to his proposals, and its determination to support Napoleon in the war with Austria which was approaching. Orders were immediately despatched for the French ambassador to leave Vienna,

Feb. 28. who accordingly took his departure on the last day of February, leaving only a chargé d'affaires to communicate intelligence till relations were finally broken off; and, though Metternich still remained at Paris, his departure was hourly expected; and such was the estrangement of the emperor, that he never addressed him a word, even in public and formal diplomatic intercourse.† In the course of his discussions with Champagny, the French minister for foreign affairs at this period, Metternich, with all his caution, could not disguise the deep umbrage taken by Austria at not

Deep umbrage taken by Austria at the conference of Erfurth.

having been invited to take part in the conferences of Erfurth; and he admitted that, if this had been done, the cabinet of Vienna would in all probability have recognised Joseph as King of Spain, and the rupture would have been entirely prevented. In truth, Austria had good reason to anticipate evil to herself from the ominous conjunction of two such bodies in her neighbourhood; while, at the same time, the cordiality of Alexander would

* "Well," said Napoleon, "M. Metternich! here are fine news from Vienna. What does all this mean? Have they been stung by scorpions? Who threatens you? What would you be at? As long as I had my army in Germany you conceived no disquietude for your existence; but the moment it was transferred to Spain you consider yourselves endangered! What can be the end of these things? What, but that I must arm as you arm, for at length I am seriously menaced; I am rightly punished for my former caution. Have you, sir, communicated your pretended apprehensions to your court? if you have done so, you have disturbed the peace of mine, and will probably plunge Europe into numberless calamities. I have always been the dupe of your court in diplomacy: we must now speak out; it is making too much noise for the preservation of peace, too little for the prosecution of war. Do they suppose me dead? We shall see how their projects will succeed; and they will reproach me with being the cause of hostilities, when it is their own folly which forces me to engage in them. But let them not imagine they will have war to carry on with me alone: I expect a courier from Russia; if matters turn out there as I expect, I shall give them fighting enough." How easily may Napoleon's ideas and words be always distinguished from those of all other men! At least, he always lets us understand his meaning: no inconsiderable advantage in the midst of the general studied obscurity and evasions of diplomatic language.—See THIBAUDEAU, vii., 204, 205.

† Thib., vii., 205, 206. Hard., x., 303, 304. Pelet, i., 117, 119. Stat., 14, 20.

unquestionably have been cooled if Francis or Metternich had been admitted to their deliberations. Napoleon's favour was too precious to be divided between two potentates without exciting jealousy: like a beauty surrounded by lovers, he could not show a preference to one without producing estrangement in the other. He chose for his intimate ally the power of whose strength he had had the most convincing experience, and from whose hostility he had, from its distance, least to apprehend.*

Meanwhile Napoleon was rapidly completing his arrangements: orders were despatched to Davoust early in March to concentrate his immense corps at Bamberg, and establish the headquarters of the whole army at

Measures for the concentration of the French army. March 4.

Wurtzburg; Massena, at the same time, received directions to repair to Strasburg, and press on with his corps to Ulm, and then unite with the army of the Rhine; Oudinot was moved upon Augsburg; Bernadotte despatched to Dresden to take the command of the Saxons; Bessières transported by post, in all imaginable haste, with the Imperial Guard, from Burgos across the Pyrenees and Rhine; instructions were transmitted to the French ambassador at Warsaw to hasten the formation of three Polish divisions, and co-operate with the Russians in protecting the Grand-duchy of Warsaw and menacing Galicia, while the princes of the Rhenish Confederacy were enjoined to collect their respective contingents at their different rallying-points, and converge towards the general rendezvous of this immense force on the Danube, at Ingolstadt, or Donauwerth. Thus, from all quarters of Europe, from the mountains of Asturias to the plains of Poland, armed men were converging in all directions to the valley of the Danube, where a hundred and fifty thousand soldiers would ere long be collected; while the provident care of the emperor was not less actively exerted in collecting magazines upon the projected line of operations for the stupendous multitude, and providing, in the arming and replenishing of the fortresses, both a base for offensive operations, and a refuge in the improbable events of disaster.†

On the side of the Austrians, preparations not less threatening were going rapidly forward. The regular army had been augmented to three hundred thousand infantry and above thirty thousand cavalry, besides two hundred thousand of the landwehr and Hungarian insurrection. The disposable force was divided into nine corps, besides two of reserve. Six of these, containing nominally one hundred and fifty thousand men, of whom one hundred and twenty thousand might be relied on as able to assemble round the standards, were mustered on the frontiers of Bavaria, besides a reserve in Bohemia, under the immediate command of the Archduke Charles; the Archduke John was intrusted with the direction of two others, forty-seven thousand strong, in Italy, supported by the landwehr of Carinthia, Carniola, and Istria, at least twenty-five thousand men, who, though hardly equal to a shock in the field, were of great value in garrisoning fortresses and con-

* Thib., vii., 207.

† Thib., vii., 206. Pelet, i., 119, 126. Stat., 26, 29.

ducting secondary operations; the Marquis Chastillon was prepared to enter the eastern frontier of Tyrol from the Pusterthal, with twelve thousand regular troops, where he expected to be immediately joined by twenty thousand hardy and warlike peasants; while the Archduke Ferdinand, with thirty thousand infantry and five thousand cavalry, was to invade the Grand-duchy of Warsaw, and avert the calamities of war from the Galician plains. The total number of troops, after deducting the non-effective and sick, might amount to two hundred and twenty thousand infantry and twenty-eight thousand cavalry, with eight hundred pieces of canon: a prodigious force, when their discipline and efficiency were taken into consideration, and the support which they were to receive, not only from the immense reserves of landwehr in all the provinces, but the general spirit and unanimity of the monarchy. The commencement of hostilities at once in Bavaria, Italy, Tyrol, and Poland, might seem an imprudent dispersion of strength, especially when the tremendous blows to be anticipated from Napoleon in the valley of the Danube are duly weighed; but these, in appearance offensive, were in reality strictly defensive operations. It was well known that the moment war was declared, the French emperor, according to his usual policy, would direct all his forces at the centre of the enemy's power; invasion from Italy, Bavaria, and Poland was immediately to be anticipated; and in maintaining the struggle in the hostile provinces adjoining the frontier, the war was in reality averted from their own vitals.*†

The utmost efforts were at the same time made to rouse the patriotic ardour of all classes, and government in that important duty were nobly seconded by the nobles and people throughout the empire. Never, indeed, since the foundation of the monarchy, had unanimity so universal prevailed through all the varied provinces of the imperial dominions, and never had so enthusiastic a spirit animated all ranks of the people. The nobles, the clergy, the peasants, the burghers, all felt the sacred flame, and vied with each other in devotion to the common cause. The requisitions of government were instantly agreed to; the supplies of men and money cheerfully voted; the levies for the regular army anticipated by voluntary enrolment; the landwehr rapidly filled up with brave and hardy peasants. At Vienna, in particular, the patriotic ardour was unbounded; and when the Archduke Charles, on the 6th of April, marched into the city at the head of his regiment, one swell of rapture seemed to animate the whole population. That accomplished prince added the general ardour by an address to his soldiers on the day of his entry, which deserves to be recorded for the generous sentiments which it contains, as well as the light which it throws on the general reasons for the war.‡§

While these immense military preparations were going on on both sides, the semblance of

diplomatic relations was still kept up at Paris. Metternich, who remained there to the last, rather as a legitimate spy than in any other character, presented a note to the cabinet of the Tuileries on the 10th of March. He there represented it as an undoubted fact, that, since the treaty which followed the evacuation of Braunau, there was no longer any subject of difference between the two powers; and that, although the Emperor of Austria might well conceive disquietude at the numerous movements which had taken place since January, he had no desire but to see Europe in peace. The French cabinet replied, that as unquestionably no subject of difference remained between the two powers; and that, this being the case, the emperor could not conceive, either what the Austrians would be at, or what occasioned their pretended disquietudes. Here terminated this diplomatic farce: it deceived neither party; but both had objects to gain by postponing, for a short time, the commencement of hostilities.*

The original plan of the Austrians was to invade at once Franconia, Lombardy, Austrian plan Tyrol, and the Grand-duchy of War- of the cam- saw. In all these districts they had paign. numerous and active partisans, and they confidently expected a powerful co-operation from their exertions. For this purpose they had accumulated enormous masses of troops, above a hundred thousand strong, in Bohemia, from whence, as a central point, they were in a situation to issue in any direction which might seem advisable. They were, in March, grouped around Prague, in the northwestern extremity of that country, between the Elbe, the Eger, the Moldava, and the Wittawa. The object of this extraordinary concentration of troops was to advance suddenly into the country of Bareuth, lend a helping hand to the numerous ardent spirits and malecontents of that quarter of Germany, fall upon Davoust's corps, which was assembled at Wurtzburg, before it could receive the reinforcements which were hastening to its support, or be electrified by the presence of Napoleon, and, if possible, drive it back by superior forces to the Rhine. Such an event, it was well known, would at once bring to the Austrian standards a vast body of ardent recruits, whom the enormous exactions and grinding tyranny of the French armies had filled with unbounded hatred at their dominion, and at the same time, it was hoped, would overcome the indecision of Prussia, and bring its disciplined battalions to stand by the side of the Imperialists in the great contest for European freedom. This plan was ably conceived, and, if carried into execution with the requisite alacrity and vigour, might have been attended with great results; for the French armies were very much scattered in the end of February, and, by issuing suddenly from the great salient fortress of Feb. 27. Bohemia, and pressing forward towards the Rhine, the Archduke Charles might have entirely separated Oudinot, who lay in Swabia, from Davoust, who was cantoned on the banks of the Main.†‡

Feb. 27.

Plans of Napoleon. April 1.

The Austrians had taken Napoleon, in a certain degree, at unawares: as not only was the flower of his veteran troops in Spain, but the forces which still remained in Germany, though extremely formidable, if once assembled together, were scattered from the Alps to the Baltic, at a great distance from each other. His plan, therefore, contrary to his usual policy, was strictly defensive in the outset, to gain time for the concentration of his troops; and, as he deemed it unfitting that he himself should be at the head of his army before any decisive blows were struck, and where, possibly, disasters might be incurred, Berthier was despatched, early in April, to assume the command of the whole until the arrival of the emperor: a convenient arrangement, as, if his operations proved successful, they would, of course, be ascribed to the intelligence and ability of his superior in command; if the reverse, the whole blame of a miscarriage might be laid upon himself. From the period of his arrival, the whole troops, both French and of the Confederation of the Rhine, were formed into one army, to be called the *army of Germany*. It was divided into eight corps,* commanded by the most distinguished marshals in the French service, and mustered two hundred thousand men. The emperor was indefatigable in his efforts to provide subsistence, clothing, and ammunition for this enormous multitude; among other things, twenty-five millions of ball cartridges were collected. But he enjoined that the system should be rigorously followed out of making war support war, and strictly forbade any stores or provisions being purchased in France for the use of the troops, if they could be procured by requisitions or military contributions on the other side of the Rhine. Rapid concentration of his troops was enjoined to Berthier around the Lech;† but no offensive operations were to be commenced before the arrival of the emperor, who was expected about the middle of April. To all who were acquainted with the character of his movements, it was evident that, the moment he arrived and deemed himself in sufficient

strength, he would commence a furious onset, and pour in concentrated masses down the valley of the Danube.

The cabinet of Vienna took the initiative. On the 8th of April, the Austrian troops crossed the frontiers at once on the Inn, in Bohemia, in Tyrol, and in Italy. Had the original plan of the Aulic Council been followed out, and the Archduke Charles, at the head of a hundred thousand men, debouched from Bohemia, midway between the Main and the Black Forest, and advanced towards Mannheim, this commencement of hostilities might have been attended with most important effects; for dissatisfaction with the French rule was universal in that quarter, and, had a powerful demonstration from England, on the coast of Flanders, seconded this irruption, the seat of war might have been permanently fixed on the middle and lower Rhine.* On the 17th of March, Austria had a hundred and forty thousand men on the two banks of the Danube, within eight days' march of Ratisbon; while Davoust only broke up his cantonments in the north of Germany, on the Oder and lower Elbe, on that day; Massena was still on the Rhine, and Oudinot alone at Augsburg, the Bavarians being on the Iser. Thus the complete separation of the French corps was a matter of perfect certainty, by a rapid advance towards Mannheim at that period. But the successful execution of this well-conceived design required a vigour of determination and alacrity of execution to which the Austrians were as yet strangers; and, by hesitating till the period for striking the blow was past, and the French troops were concentrated on the Danube, Austria lost all the immense advantages of her central threatening position in Bohemia. When it was resolved to attack the French in Bavaria, the Aulic Council committed a second error, still greater than the former: for, instead of permitting the Archduke Charles, from his central position in Bohemia, to fall perpendicularly on the French corps, scattered to the south along the valley of the Danube, at the distance of only six or eight days' march, they ordered him to countermarch the great body of his forces, and open the campaign on the Inn: a gratuitous fault, which gave his troops triple the distance to march, and the enemy triple the time to complete their preparations and concentrate their forces. At length, however, the toilsome and unnecessary countermarch was completed: the Austrian col-

and Tyrol were to concentrate both corps, under the command of the Archduke John, between Villach and Klagenfurth, and then advance in two columns: one by the Pusterthal into the Tyrol, and over the Brenner to Trent; the other by Ponteba to Bassano, and from thence to the Adige; while the care of observing the lower Isonzo was intrusted to the landwehr of Istria. The cabinet of Vienna calculated with much reason upon the expected insurrection in Tyrol to aid and support both these movements.—*STUTTERHEIM*, 56, 57; and *PELET*, i., 196.

* Second corps.....	Marshal Lannes,	50,000 men
Third.....	Davoust,	60,000
Fourth.....	Massena,	50,000
Seventh.....	Lefebvre,	34,000
Eighth.....	Augereau,	20,000
Ninth, Saxon confederation and French.....	Bernadotte,	50,000
Tenth.....	King of Westphalia,	25,000
Imperial Guard.....		22,000
Reserve cavalry.....	Bessières,	14,000
		325,000, and

400 pieces of cannon.

But at least one hundred thousand of them had not yet arrived: the guard and reserve cavalry were on their march from Spain; Bernadotte's corps was still at a distance in the north of Germany; and the contingents of the Confederation of the Rhine were far from being complete. Still a hundred and forty thousand French troops and sixty thousand of the confederation might be relied on for active operations in the valley of the Danube.—*THIBAUDEAU*, vii., 214.

† *Thib.*, vii., 214, 223. *Jom.*, iii., 152, 153. *Stat.*, 58, 64. *Pelet*, i., 197, 209.

* The instructions of the Aulic Council in the outset of the campaign were, "to advance in large masses, and attack the French army wherever it might assemble, either on the Main, the Nab, or the Danube. Should a French corps enter Bavaria, the grand Austrian army was not to swerve from its direction, but trust to arresting the movement on Bavaria, by threatening the advancing corps on the side of Ratisbon or Donauwerth. If Marshal Davoust retired in order to avoid any engagement before the arrival of his reinforcements, the grand Austrian army was, nevertheless, to continue its advance with all possible expedition, and take up a central position between the Black Forest and the Main, and there be regulated by the forces of the enemy, and the chances of successful operations which were afforded. The issue of the war depends on this operation and on the issue of the first battle, which will, in all probability, if successful, rouse the malecontents of Baruth, overawe Saxony, and bring round to the standards of Austria great part of the troops of the Confederation of the Rhine which are now arrayed against her."—*STUTTERHEIM*, 64-69; *PELET*, i., 194.

umns, after being transported a hundred miles back towards Vienna and across the Danube, were arrayed in dense masses on the right bank of the Inn; and the archduke, crossing that river in imposing strength, prepared to carry the seat of war into the vast and level plains which stretch from the southern bank of the Danube to the foot of the Alps. At the same moment, the long-wished-for signals were given from the frontiers of Styria and Salzburg, to the provinces of Tyrol. With speechless transport, the brave mountaineers beheld the bale-fires glowing on the eastern boundaries of their romantic country; instantly a thousand beacons were kindled over all its rugged surface; the cliffs of the Brenner were reddened by the glare, the waters of the Eisach reflected its light; and long before the ascending sun had spread his rosy tint over the glaciers of the Glockner, the inhabitants of his icy steeps were warmed by the glow, which, at the voice of patriotism, called a nation of heroes to arms.*

The instructions of Napoleon to Berthier,† before leaving Paris, were clear and precise, viz., that, if the enemy commenced his attack before the 15th, by which time, it was calculated, the bulk of his forces might be assembled around Ratisbon, the army was to be concentrated on the Lech around Donauwerth; if after that date, at Ratisbon, guarding the right bank of the Danube from it to Passau. On the 12th, however, by means of the telegraph which the emperor had established in Central Germany, he was apprized at Paris of the crossing of the Inn by the archduke and the commencement of hostilities. He instantly set out; and with such precision were the movements of the immense force, which was converging from the mountains of Galicia and the banks of the Oder to the valley of the Danube, calculated, that the last arrived at the general point of rendezvous around Ratisbon at the very moment when the emperor was approaching from Paris. It was high time that he should arrive to take the command of the army; for, in the interim, Berthier had

brought it, by the confession of the French themselves, to the verge of destruction.* Instead of instantly following up the emperor's instructions, by concentrating his forces at Ratisbon or Donauwerth, he scattered them, in spite of the remonstrances of Davoust and Massena, in the dangerous view of stopping the advance of the Austrians at all points. Nothing but the tardiness of their march saved the French army from the most serious calamities. But while Berthier dispersed his troops, as if to render them the more accessible to the blows of the Imperialists, the archduke moved forward with such slowness, as apparently in order to give them time to concentrate their forces before he commenced his attack. They crossed the Inn on the 10th at Braunau and other points, and on the 16th they had only advanced as far as the Iser, a dis- April 16. tance of twenty leagues. On the latter day they attacked the bridge of Landsbut, over that river, and at the same time crossed a division at Dingelfing, farther down its course, which threatened to cut off the communications of General Dero, who commanded the Bavarians placed in garrison at that point, and obliged them to evacuate that important town. The whole line of the Iser was now abandoned by the Bavarians, who fell back in haste towards Ratisbon and Donauwerth; while the Austrians, in great strength, crossed that river at all points, and directed their steps on the great road to Nuremberg, evidently towards the bridges of Ratisbon, Neustadt, and Kellheim, in order to make themselves masters of both banks of the Danube. Yet even then, when their forces were concentrated, and greatly superior to those of the enemy as yet assembled, and everything depended on rapidity of movement, they advanced only two or three leagues a day: so inveterate were the habits of tardiness and delay in the German character.†

The approach of the formidable masses of the Austrians, however, full a hundred and twenty thousand strong, even though advancing with the pace of a tortoise, threw Berthier into an agony of indecision. It then evidently appeared how much the major-general of the army was indebted for the reputation he enjoyed to the directions of the emperor, and how different a capacious talent for the management of details is from the eagle glance which can direct the movements of the whole. Despite all his remonstrances, he compelled Davoust to concentrate his corps at Ratisbon, while, at the very same moment, he ordered Massena to defend the line of the Lech: sepa- April 16. arating thus the two principal corps of the French army by at least thirty-five leagues from each other, and exposing the former, with his magnificent corps, the flower of the army, to be overwhelmed by the archduke before any adequate re-enforcements could be brought up to his support. Orders were at the same time given to Lefebvre, Wrede, and Oudinot, placing them in three lines, one behind another across Bavaria, in so useless and absurd a position,

* Jom., i., 152, 153. Thib., vii., 221. Pel., i., 191, 205. Stat., 60, 64.

† "By the 1st of April," said Napoleon, "the corps of Marshal Davoust, which broke up from the Oder and Lower Elbe on the 17th of March, will be established between Nuremberg, Bamberg, and Bareuth: Massena will be around Ulm, Oudinot between Augsburg and Donauwerth. From the 1st to the 15th, three French corps, 130,000 strong, besides 10,000 allies, the Bavarians in advance on the Iser, and the Wirtenbergers in reserve, may be concentrated on the Danube at Ratisbon or Ingolstadt. Strong *têtes de pont* should be thrown up at Augsburg, to secure the passage of the Lech at Ingolstadt, in order to be able to debouch to the left bank of the Danube; and, above all, at Passau, which should be put into a situation to hold out two or three months. The emperor's object is to concentrate his army as soon as possible at Ratisbon: the position on the Lech is to be assumed only if it is attacked before the concentration at the former town is possible. The second corps will be at Ratisbon by the 10th, and on that day Bessières will also arrive with the reserve cavalry of the guard: Davoust will be at Nuremberg, Massena at Augsburg, Lefebvre at one or two marches from Ratisbon. Headquarters then may be safely established in that town, in the midst of 200,000 men, guarding the right banks of the Danube, from Ratisbon to Passau, by means of which stream, provisions and supplies of every sort will be procured in abundance. Should the Austrians debouch from Bohemia or Ratisbon, Davoust and Lefebvre should fall back on Ingolstadt or Donauwerth."—*NAPOLEON'S Instructions to BERTHIER, April 1, 1809.* PELET, i., 212, 213.

* "The emperor, on his road to the army," says Jomini, "felt the liveliest disquietude at the posture of affairs: Berthier had brought the army within a hair's-breadth of destruction."—JOMINI, iii., 159.

† Jom., ii., 159, 160. Pel., i., 225, 230. Stat., 64, 72.

that more than one of the marshals did not scruple to ascribe it to treachery: a charge, however, from which the whole character of Berthier, and the uninterrupted confidence he enjoyed from the emperor, are sufficient to exculpate him. As it was, however, the scattered position which he gave to the army over a line of forty leagues in extent, with numerous undefended apertures between the corps, was such, that a little more activity on the part of the archduke would have exposed it to certain destruction, and brought the Austrian columns in triumph to the Rhine.*†

Meanwhile the archduke, notwithstanding the tardiness of his movements, was inundating Bavaria with his troops. Hiller had advanced to Mosburg; Jellachich had occupied Munich, from whence the King of Bavaria hastily fled to Stuttgart to meet Napoleon; the two corps left in Bohemia had crossed the frontier, and were approaching by leisurely marches towards Ratisbon; while the archduke himself, with four corps, a hundred thousand strong, was drawing near to Abensberg, Neustadt, and Kellheim, midway between Ratisbon and Donauwerth. Berthier had gone to the former town, where Davoust was stationed with sixty thousand men; but it seemed next to impossible to extricate him from his perilous situation, as Massena was at Augsburg, thirty-five leagues to the southwest, and the centre of the archduke was interposed in appalling strength right between them. The Bavarians under Wrede, Lefebvre, and the reserve under Oudinot, were, indeed, in front of the archduke around Ingolstadt, but they could with difficulty maintain their own ground, and were in no condition to extricate Davoust, who, threatened by a hundred thousand Austrians under the archduke on the south of the Danube, and forty thousand descending from Bohemia on the north, seemed destined for no other fate than that of Mack four years before at Ulm.‡

Matters were in this critical state when Napoleon, early on the morning of the 17th, arrived at Donauwerth. Instantly he began inquiring of every one concerning the position, destination, and movements of the Austrian corps; sent out officers in all directions to acquire accurate information, and next morning despatched the most pressing orders to Massena to hasten, at least with his advanced guards and cavalry, to Pfaffenhofen, a considerable town nearly half way from Augsburg, to the seat of war around Neustadt and Kellheim.§ Davoust,

at the same time, received orders to move on the 18th in the direction of Neustadt, so as to form a junction with the Bavarians and Wirtembergers under Lefebvre, who had retired to that quarter before the Archduke Charles; so that in the next twenty-four hours these two marshals would be twenty leagues nearer each other, and, having the troops of the confederation in the interval between them, might almost be said to be in communication. At the same time, dissembling his fears, the emperor addressed to his soldiers a nervous proclamation, in which, loudly reproaching the Austrians with the commencement of hostilities, he promised to lead them to yet more glorious fields of fame.*†

Notwithstanding the pressing instance of the emperor, and their own sense of the urgency of the case, Davoust and Massena could not reach the places assigned to them so early as he had anticipated, and the former, in consequence, was exposed to the most imminent danger. The messenger ordering Davoust to draw towards the Lech had been despatched from Donauwerth at two o'clock in the morning of the 17th; and his instructions were to march forthwith on Ingolstadt, while Wrede, with his Bavarians, was stopped in his retreat at Neustadt, and ordered to concentrate with the Wirtembergers behind the Abens. Davoust received his orders at midnight of the 17th, but his divisions were dispersed in the villages around Ratisbon, as well as in that town, and could not be instantly put in motion; while the bulk of Massena's forces, being six or eight leagues behind Augsburg, could not be concentrated till the night of the 18th, even at that town, or reach Pfaffenhofen till late on the following evening. Davoust, having collected his whole force during the 18th, commenced the evacuation of that town at daybreak on the following morning; and by midday on the 19th was already approaching Neustadt, leaving only a

Movements of the two armies towards each other.

April 18.

April 19.

to reach Ascha, or at least get on as far as they can on the road from Augsburg to Ascha. One word will explain to you the urgency of affairs. Prince Charles, with 80,000 men, debouched yesterday from Landsbut on Ratisbon, the Bavarians contended the whole day with his advanced guard. Orders have been despatched to Davoust to move with 60,000 in the direction of Neustadt, where he will form a junction with the Bavarians. To-morrow (19th) all your troops who can be mustered at Pfaffenhofen, with the Wirtembergers, a division of cuirassiers, and every man you can collect, should be in a condition to fall on the rear of Prince Charles. A single glance must show you that never was more pressing occasion for diligence and activity than at present. With 60,000 good troops, Davoust may, indeed, make head against the archduke, but I consider him ruined without resource, if Oudinot and your three divisions are on his rear before daybreak on the 19th, and you inspire the soldiers with all they should feel on so momentous an occasion. In the 18th, 19th, and 20th, the whole affairs of Germany will be decided."—NAPOLEON TO MASSENA, Donauwerth, 18th April, 1809; SAVARY, iv., 51, 52.

* Sav., iv., 50, 51. Pelet, i., 263, 267. Thib., vii., 226, 227.

† "Soldiers! the territory of the Confederation of the Rhine has been violated. The Austrian general supposes that we are to fly at the sight of his eagles, and abandon our allies to his mercy. I arrive with the rapidity of lightning in the midst of you. Soldiers! I was surrounded by your bayonets when the Emperor of Austria arrived at my bivouac in Moravia; you heard him implore my clemency, and swear an eternal friendship. Conquerors in three wars, Austria has owed everything to our generosity; three times she has perjured herself! Our former successes are a sure guarantee for our future triumphs. Let us march, then, and at our aspect let the enemy recognise his conquerors."—*Moniteur*, 26th April, 1809, and THIBAUDEAU, vii., 224.

§ "It is indispensable that Oudinot, with his corps, and your three other divisions, with your cuirassiers and cavalry, should sleep at Pfaffenhofen to-morrow night; those in the rear, who are still at Landsberg, should do their utmost

single regiment, three thousand strong, to guard the important bridge of Ratisbon. On the same day the archduke divided the army which he commanded in person into two parts, and while he left the Archduke Louis with fifteen thousand men to watch the troops of the confederacy on the Abens, he himself, with twenty-five thousand, moved towards Ratisbon, in hopes of making himself master of that important passage over the Danube during the absence of Davoust's corps, and thus at once gain possession of both banks of that river, and open up a secure communication with his two corps, under Klenau, on its opposite bank. The worst was to be apprehended for Davoust, if, in the course of his march to Neustadt, he had encountered this enormous mass, moving in a direction almost perpendicular to his flank, and not more than a few leagues distant. The two armies crossed without the bulk of the forces meeting.*

Napoleon's plan was now clearly formed: it was to concentrate his whole army as rapidly as possible on the Abens, in advance of Pfaffenhofen; and, drawing back his left, to throw his right, under Massena, forward, so as to drive back the Archduke Louis; separate altogether the grand army under the Archduke Charles from Jellachich and Hiller, and force it up into the narrow space formed by the bend of the Danube at Ratisbon, and there either compel it to surrender, from the impossibility of finding an egress, if that town was still held by the French troops, or at least induce the sacrifice of its artillery and baggage in the confusion of defiling in front of a victorious army over the narrow bridge which it commanded. But the execution of this plan was exceedingly hazardous, and in presence of an enterprising enemy might have led to fatal results. Abensberg was the vital point: whoever reached it first in sufficient strength gained the means of preventing the concentration of his adversary. Davoust, to reach his destination, required to traverse the defiles of Abach and Portaál, within two leagues of Abensberg, and this defile was much nearer the camp of the Archduke Charles on the 18th at Rohr, than the point from which Davoust set out from Ratisbon. Eighty thousand Austrians might with ease have occupied the important posts of Abensberg and Portaál, which would have effectually barred the way to Davoust's corps, and thrown him back upon Ratisbon, and the *cul-de-sac* formed by the bend of the Danube, over which there was no other bridge: the very fate which Napoleon designed for the army of Prince Charles. When, therefore, instead of pushing on with an overwhelming force to this vital point, the Archduke Charles, when within a day's march of it, divided his army on the 18th, and bent his course, with the bulk of his forces, for Ratisbon, now almost destitute of defenders, Napoleon had some reason to say that his star had not yet deserted him.†

* Stut., 76, 81. Sav., iv., 50. Thib., vii., 226, 228. Pel., i., 281, 293.

† Jom., iii., 164, 165. Thib., vii., 227. Pel., i., 286, 295.

‡ Napoleon's plans at this critical juncture are clearly developed in the letter which he wrote to Massena at twelve o'clock noon on the 19th. "Prince Charles, with his whole army, was this morning a day's march from Ratisbon, having his base and communications on Landshut. Davoust has evacuated Ratisbon to move upon Neustadt, and join the

The covering troops of Davoust, however, encountered and had a rude shock with those of the archduke, near the village of Thau. St. Hilaire and Friant had arrived on the heights of Saalhaupt and Tengen, where they were stationed in order to protect the French left, and cover the march of the remainder of the corps, with its artillery and trains, through the important defile of Portaál, when the light cavalry of Hohenzollern appeared in sight, whose province in like manner was to cover the left of the Austrian army, and secure their march to Ratisbon. Fresh troops were successively brought up by either party as the day advanced, and before the evening twenty thousand men were engaged on both sides. The combat soon became extremely warm: some woods on the field were successively taken and retaken, and the greatest valour was mutually displayed. At length a violent thunder-storm, which came on at six o'clock, separated the combatants, after each had sustained a loss of three thousand men, without either being able to boast of a decisive advantage; but although both retained their positions, yet as the French, under cover of their resistance at this point, succeeded in passing unmolested through the important defile, and before nightfall reached the vital point of Abensberg, they with reason claimed the victory.*

Reassured by the junction effected by Davoust with the Bavarians under Lefebvre, at this point, as to the security of his centre, Napoleon resolved to commence a vigorous offensive, and, by advancing his right against Landshut, both threaten the archduke's communications, and throw him back into the net prepared for him by the bend of the Danube at Ratisbon. Early on the morning of the 19th, when this bloody combat was engaged on the banks of the Danube at Thau, Massena had encountered a body of five thousand infantry and cavalry at Pfaffenhofen, and defeated it in a few minutes, with the loss of several hundred killed and wounded. In the course of the day he had concentrated all his corps at that place: Oudinot was still farther in advance towards Freysing, with his light troops stretching along the Iser so as to intercept all communication between the archduke and his left wing at Munich; Davoust was grouped in the villages around Abensberg, while Lefebvre, Wrede, and Vandamme, with the troops of the confederation, were at Neustadt and Bidourg. Thus the whole French army, at length concentrated in a line of ten leagues broad, was in a condition to take part in any general battle, or in common

Positions of the two armies on the night of the 19th.

Bavarians; I look, therefore, for an affair every minute; nevertheless, it is now noon, and I have not heard the cannon. You will perceive at a glance that I am refusing my left to throw forward my right, which you form, and which to-day should enter into action. Push Oudinot forward to Neustadt. From thence I shall probably direct the 4th corps to Landshut; and then Prince Charles, attacked on his left, will find he has lost his line of operations upon the Iser. Everything will be cleared up to-day; the moments are precious; hours must be counted. Twelve or fifteen thousand of such rabble as you have defeated this morning should be easily disposed of by six thousand of our people."—NAPOLEON TO MASSENA, 19th April, 1809; *PEL.*, i., 295, 286.

* *PEL.*, i., 294, 300. *Stut.*, 84, 89. *Jom.*, iii., 165.

operations, on the following day. The Austrian army was assembled in the narrow space formed by the Iser as a base, and the bend of the Danube at Ratisbon as a curve; Lichtenstein was at Eglossheim, Hohenzollern at Hausen, Rozenberg at Dinzing, and the remainder in the villages from Mainburg on the south to the neighbourhood of Ratisbon on the north; but their principal masses were grouped around ECHMUHL. They were less prepared than the French, however, for a decisive affair on the morrow, being spread over a surface at least sixteen leagues in extent; and, what was still worse, the great mass under the archduke was separated, by an unoccupied space four leagues in breadth, from the corps of General Hiller at Mosburg; and two powerful corps under Kleinau were uselessly lost on the northern bank of the Danube, where there was not an enemy to oppose them.*

Being well aware, from the position of the respective armies, that a decisive affair was at hand, Napoleon adopted the generous, and, at the same time, prudent policy, of combating in person at the head of the troops of the confederation, leaving the native French to their inherent valour, their experienced skill, and the direction of their veteran marshals. He repaired to the headquarters of their commanders, and, according to custom, visited at daybreak the bivouacs of the troops, which he traversed from right to left along their whole extent, accompanied only by the officers and generals of the Bavarians. He was received with the loudest acclamations, and a transport rivaling that of his own veteran soldiers, so contagious is the feeling of military ardour, and so winning the confidence with which the mighty conqueror threw himself on the support of his new allies. Clapping the Prince Royal of Bavaria on the shoulder, he exclaimed, when the inspection was finished, "Well, prince royal, this is the way in which one must be King of Bavaria; when your turn comes, all the world will follow you if you do the same; but if you remain at home every one will go to sleep: adieu empire and glory." To the Wirtembergers, at the same time, he spoke of the glories they had acquired by combating the Austrians in the wars of the Great Frederic, and of the laurels which they had won in the last campaign in Silesia. These words, translated into German by their respective officers, excited great enthusiasm, which was soon raised to the very highest pitch by the proclamation read to the troops, in which the emperor declared that, without any French to aid them, he was to combat that day at their head, and announced a glorious destiny to their countries.† Per-

ceiving that the spirit of the troops was now roused to the highest point, the emperor gave the signal to engage.*

Notwithstanding, however, the deserved confidence which he placed in the Ger- Combats of Abensberg. April 20. man troops, Napoleon did not trust the result of the day exclusively to their exertions. Lannes, who the day before had joined the army from Saragossa, was intrusted with the command of two French divisions, drawn from Massena's corps, which formed the left of the centre, under Napoleon's immediate command, and was to advance on the great road from Kellheim to Landshut; the Wirtembergers, under Vandamme, were in the centre; the Bavarians on the right, directly opposite to ABENSBERG, under Wrede. Had two of the Austrian corps been concentrated, they might successively have combated this aggregate of allied troops, whose total strength did not exceed sixty-five thousand men; but, unfortunately, they were so much dispersed as to be incapable of opposing any effective resistance to the enemy. Hiller, with twenty-two thousand, was in march from Mainburg to Pfaffenhausen; the Archduke Louis, with ten thousand, guarded Siegenburg, with its bridge over the Aber; the Prince of Reuss, with fifteen thousand, lay in the rear at Kirchdorf; General Thierry, with five thousand, at Offensteller. Thus, above fifty thousand were in front of the French, but scattered over a space several leagues broad, without any centre or plan of operations. Not expecting an attack on that day, they were leisurely performing the various movements assigned to them, with a view to the concentration of their troops for the morrow, when they were simultaneously attacked by the enemy at all points, who passed at once from cautious defensive to furious offensive operations. They made, in consequence, but a feeble resistance; or, rather, they were attacked at so many different points, and so much in detail, that no one general could take upon himself the responsibility of halting to give battle; and the day was a sort of running fight, in many detached places, rather than a regular engagement. It proved, however, very disastrous to the Austrians. Thierry, whose troops had not recovered the rout of the preceding day, assailed by Lannes with greatly superior forces, was thrown back in confusion upon Hiller's troops at Rottenburg, who, coming up in haste from Mainburg, instead of stopping, increased the general disorder, and the whole were driven across the bridge of the Laber, which Lannes traversed with bayonets fixed and colours flying; the Prince of Reuss and Bianchi, attacked in front by Lefebvre and in flank by Vandamme, with the Wirtembergers, deemed themselves fortunate in being able to escape to Pfaffenhausen, without any serious loss; whither they were immediately followed by the Archduke Louis, who had been driven from the bridge of Siegenburg, closely pursued by Wrede and the Bavarians, who on this occasion emulated the vigour and rapidity of the French

partitioned your country into baronies, and divided you among her regiments. Bavarians! this war is the last which you will have to sustain against your enemies: attack them with the bayonet, and annihilate them."—THIBAUDEAU, vii., 230, 231.

† "Bavarians! I do not come among you as the Emperor of the French, but as chief of the Confederation of the Rhine and protector of your country. You combat to-day alone against the Germans; not a single Frenchman is to be seen in the first line; they are only in reserve, and the enemy are not aware of their presence. I place entire confidence in your valour. I have extended the limits of your country, but I now see that I have not done enough. Hereafter I will render you so great that, to sustain a war against Austria, you will no longer have need of my assistance. Two hundred years the Bavarian banners, protected by France, resisted Austria; now we are on the march for Vienna, where we shall punish her for the mischief which she has always done to your forefathers. Austria intended to have

troops. The Austrians were not routed at any point, and no artillery was taken; nevertheless, they had to lament the loss of eight thousand men; the line to Landshut was thrown open to the enemy; they had lost the advantage of the initiative; and, what is of incalculable importance, had been unsuccessful in the first considerable action of the campaign.*

Napoleon was not slow in following up the important blow thus struck in the outset of operations. His great object was to throw himself upon the archduke's communications; and the success thus gained against the covering corps of his brother Louis, by opening up the great road to Landshut, rendered that undertaking an easy task. To cover the movement and distract his attention, Davoust received orders to threaten the enemy on the side of Ratisbon, where the bulk of his forces were assembled; but the serious operations were conducted by the emperor in person, against the retiring columns of Hiller, Bianchi, and the Archduke Louis. Uniting their shattered troops, these generals had fallen back in the direction of Landshut, in the hopes of preserving that important passage in the rear, with the immense stores of baggage and ammunition which it contained, from the attacks of the enemy. Thither, however, they were instantly followed by Napoleon, who, putting himself on horseback at daybreak on the 21st, moved every disposable bayonet and sabre in the direction of Landshut, while Massena, on his right, still farther in advance, manœuvred in such a way, between Pfaffenhofen and Mosburg, as to render a retreat upon that town a matter of absolute necessity, to avoid the communications of the Grand Army being instantly cut off; while Davoust, on the left, was to engage the attention of the Archduke Charles so completely as to prevent him from rendering any effectual assistance.†

These movements, admirably combined, and executed with uncommon vigour and precision, proved completely successful. The rear-guard of the Archduke Louis, warmly attacked on different occasions during the night, was thrown back in disorder in the morning on Furth and Arth, by roads already choked with baggage-wagons, and all the immense *materiel* of the grand Austrian army. Their confusion became altogether inextricable when they approached the valley of the Iser and the bridges of Landshut, which are traversed only by two *chaussées*, passing for a considerable distance on the western side through low swamps, altogether impassable for artillery or chariots. To strengthen the rear-guard while the retiring columns were defiling through those perilous straits, Hiller ordered General Vincent to hold firm with the cavalry at their entrance; but at that very moment Napoleon, accompanied by a powerful train of artillery, and the cuirassiers of Nansouty, arrived on the ground; and instantly, under cover of a tremendous fire of cannon, the French horse thundered in a charge. Vincent's dragoons were unable to withstand the shock: horse, foot, and cannon were thrown together in wild

disorder on the *chaussées*, and a vast quantity of artillery and baggage abandoned by the Austrians, who crowded in utter disorder into Landshut. But, even behind its ramparts, they were no longer in safety; for, on the same morning, Massena had gained possession of the bridge of Mosburg, and was rapidly advancing, agreeably to his orders, down the right, or eastern bank of the Iser. Alarmed by his approach, the Austrians put the torch to the long wooden bridge which leads into the town, and kept up a heavy fire upon it from the neighbouring houses and churches; but General Moulon, at the head of the French grenadiers, advanced through a shower of balls, amid the flames, to the portcullis, which was speedily demolished, and the heroic assailants burst into the town. Hiller no longer fought but to gain time to draw off his artillery and chariots; but such was the rapidity of Massena's advance, whose dense columns now covered the opposite side of the river, and had reached to within a mile of the town, that a large part of them required to be sacrificed. Hiller at length, after having made a most gallant resistance, drew off towards the Inn in the direction of Oetting, where he crossed on the following day, having lost nearly six thousand men, twenty-five pieces of cannon, six hundred ammunition-wagons, a pontoon train, and an enormous quantity of baggage, in this disastrous affair.*†

The task assigned to Davoust, while Napoleon was in this manner destroying the left wing of the Imperialists, and laying bare their vital line of communications to Landshut and the Inn, was to occupy the attention of the Archduke Charles, who, with the whole centre of the army, had diverged to Ratisbon, in order to make himself master of the important bridge at that place, and open up the communications with the two corps of Klenau and Bellegarde on the opposite side of the Danube. Rightly judging that the best way to impose upon his adversary, and inspire him with a mistaken idea of his own strength, was to assume the offensive, the French marshal, early on the morning of the 21st, commenced an attack in the woody country which lies on the banks of the Laber, and, after a warm contest, drove the Austrians across that river. Though their positions were strong and forces numerous, yet Hohenzollern was so much deceived by the vivacity of the French attack, and by the idea that two divisions of their army would never have ventured, unsupported, to hazard an attack upon the dense masses of his own and Rosenberg's corps, that he never doubted that it was only a part of a general movement to pierce the imperial centre, and that he would soon have Napoleon thundering on his flank. He gave orders for them accord-

Operations of Davoust and the Archduke Charles in the centre.

His defeat by the emperor.

executed with uncommon vigour and precision, proved completely successful.

* Stat., 101, 109. Pel., ii., 35, 49. Jom., iii., 170, 171. Thib., vii., 232, 233.

† A singular trait of heroism occurred on this occasion, on the part of an Austrian grenadier, which is recorded with generous eulogy by the French historian Pelet. Two companies of Austrian grenadiers of Teuchmeister were closely pursued by the French cavalry, and on the point of being surrounded. A grenadier ran to an ammunition-wagon and set it on fire; he was instantly blown up with it, but by his death; and the admiration which it inspired in the pursuers, arrested the pursuit, and saved his comrades.—STUTTERHEIM, 108: PELET, ii., 48.

* Stat., 92, 99. Pel., ii., 12, 23. Thib., vii., 232. Jom., iii., 168, 169.

ingly, at noon, to fall back and take up a new position facing the south, on the right or eastern bank of the Laber, between that river and Dinzling. Forty thousand Austrian foot and five thousand horse were in two hours collected there, where they were soon assailed by thirty-five thousand French and Bavarians, under Davoust, Lefebvre, and Montbrun, whom the emperor, after the victory of Abensberg, had detached to assist in that quarter, while he himself followed up his decisive successes against Hiller at Landshut. The action was warmly contested till nightfall, when both parties maintained their positions; and, though each had to lament the loss of three thousand men killed and wounded, both claimed the victory; but, as the operations of Davoust were intended rather as a feint than a serious attack, and they had completely the desired effect of preventing any re-enforcements being sent from the centre to the left wing under Hiller, then in the act of being crushed by the overwhelming legions of the emperor, the French with reason claimed the advantage.*

While these important events were shaking the Austrian left wing and centre, the Archduke Charles, with the main strength of the army, was pressing the attack on Ratisbon. That town, commanding the only stone bridge over the Danube below Ulm, and opening up a direct communication with the two Austrian corps on its northern bank, was at all times a point of consequence, but it had now become, unknown to the Austrians, of incalculable importance, as forming the only line of retreat for the army now that its communication with the

April 20. Inn was cut off by the capture of Landshut and the alarming progress of the emperor on the left. Fully sensible of the value of such an acquisition, the archduke, as soon as Davoust had left the town, ordered Kollowrath to attack it on the northern, and Lichtenstein on the southern side. The former quickly obeyed his orders, and appeared on the 19th in great strength in the villages at the northern extremity of the bridge, which were carried by assault. Soon after a dense column burst open the gates, and advanced by the great street to the northern end of the bridge, but being there stopped by the palisades, and severely galled by a cross fire from the houses, it was obliged to retire after sustaining a severe loss. In the afternoon, however, Lichtenstein, with the advanced guard of the grand Austrian army, approached from the southern side, and attempts were made by the French garrison to destroy the bridge; but that solid structure, the work of the Romans, composed of large blocks of stone strongly cemented by Pozzuolo cement, was still, after having stood for seventeen hundred years, so entire that it resisted all attempts at demolition by ordinary implements; and the powder of the garrison was so much exhausted that they had not the means of blowing it up. Deeming resistance impracticable, and having nearly expended his ammunition, the French colonel surrendered at discretion. Thus were the successes in the shock of these two redoubtable antagonists in some degree bal-

anced; for, if the French had gained possession of Landshut and the communications of the grand Austrian army with Vienna, they had lost Ratisbon, the key to both banks of the Danube; and if they had five thousand prisoners to exhibit, taken in the combats of Abensberg and Landshut, the Austrians could point with exultation to the unusual spectacle of an entire regiment, nearly three thousand strong, with its eagle and standards, which had fallen into their hands.*

Matters were now evidently approaching a crisis between the archduke and Napoleon, and both these able generals concentrated their forces to engage in it with advantage. Conceiving that the French emperor was at a distance, following up his successes against Hiller, the Austrian general resumed the movement towards Neustadt, which he had so unhappily abandoned three days before, and having brought Kollowrath, with his whole corps, over to the southern bank of the Danube, concentrated eighty thousand men between Abensberg and Ratisbon; Bellegarde, with his corps, above twenty-five thousand strong, was so far removed, without any assignable reason, that he could not approach nearer on that day to the scene of action than Stadt-am-Hoff, at the northern end of the bridge of Ratisbon. The eighty thousand men, however, whom he had assembled, would, in all probability, have been able to make head against all the forces which Napoleon could bring against them, were it not that, instead of grouping them together in one field, the archduke moved Kollowrath and Lichtenstein, forty thousand strong, on the great road to Neustadt, by the defile of Abach, which Davoust had previously traversed, throwing thus the weight of his forces against the French left, and intending to menace their rear and communications in the same way as they had done with the Austrian left, by the capture of Landshut. But Napoleon was in too great strength to be disquieted by such a demonstration, and, leaving only a curtain of light troops to retard the advance of the Austrians in that direction, he concentrated all his forces to bear down upon their centre at Echmuhl and Laichling, the scene of such obstinate fighting on the preceding day. At daybreak on the 22d the emperor set out from Landshut, taking with him the whole of Lannes' and the greater part of Massena's corps, the Wirtemburgers, the reserve under Oudinot, which, coming up from the rear, received in the night that direction, and the guards and cuirassiers just arrived from Spain. Thus one half of the archduke's army, under Rosenberg and Hohenzollern, not forty thousand strong, was to be exposed to the blows of above seventy-five thousand French, flushed by victory and led on by the emperor in person.*

The Austrians, waiting for the arrival of Kollowrath's corps from the north of the Danube, were not in a condition to prosecute their offensive movement to the French left till after midday. They

* Stat., 114, 120. Pel., ii., 24, 32. Jom., ii., 169. Thib., vii., 232.

† Stat., 115, 125. Pel., ii., 59, 75. Jom., ii., 173, 174. Sav., iv., 53.

* Stat., 109, 115. Pel., ii., 49, 57. Jom., ii., 172, 173. Thib., vii., 233. Davoust's Report. Pel., ii., 416.

had arrived at the *défilé* of Abâch, however, and were driving the light troops of Davoust before them, when a loud cannonade at the extreme left announced the arrival of the emperor on that weakly-guarded part of the line. As they arrived on the top of the hills of Lintach, which separate the valley of the Iser from that of the Laber, the French, who came up from Landshut, beheld the field of battle stretched out like a map before them. From the marshy meadows which bordered the shores of the Laber rose a succession of hills, one above another, in the form of an amphitheatre, with their slopes cultivated and diversified by hamlets, and beautiful forests clothing the higher ground. The villages of Echmühl and Laichling, separated by a large copsewood, appeared in view, with the great road to Ratisbon winding up the acclivities behind them. The meadows were green with the first colours of spring: the osiers and willows which fringed the streams that intersected them were just bursting into leaf, and the trees which bordered the roadside already cast an agreeable shade upon the dusty and beaten highway which lay beneath their boughs. The French soldiers involuntarily paused as they arrived at the summit to gaze on this varied and interesting scene; but soon other emotions than those of admiration of nature swelled the breasts of the warlike multitude who thronged to the spot. In the intervals of these woods, artillery was to be seen; amid those villages, standards were visible; and long white lines, with the glancing of helmets and bayonets on the higher ground, showed the columns of Rosenberg and Hohenzollern already in battle array, in very advantageous positions, on the opposite side of the valley. Joyfully the French troops descended into the low grounds, while the emperor galloped to the front, and, hastily surveying the splendid, but intricate scene, immediately formed his plan of attack.*

The plan of Napoleon was to cut the Austrians off from their whole remaining communications with the Iser and Inn, and, by throwing them back upon Ratisbon and Bohemia, as their only line of retreat, sever them entirely from the support and protection of Vienna. With this view he began the action, advancing his right in great strength, under Lannes, who commanded the divisions Gudin and St. Hilaire, belonging to Davoust's corps, who soon commenced a furious attack upon the Austrian left, which his great superiority of force enabled him to turn and drive back. At the same time, the Wirtembergers were brought up to the attack of Echmühl in the centre; but the tremendous fire of the Austrian batteries at that point so shattered their ranks, that, though repeatedly brought again to the charge by their French officers, they were always repulsed, and sustained a very heavy loss. Finding that the village could not be carried by an attack in front, Lannes detached the division Gudin, which assailed the batteries in flank that protected it: this rendered it necessary to draw back the guns, or point them in another direction; and, aided by this diversion, the Wirtembergers at length dislodged their antagonists from this important post. At the same time, Davoust resumed the

offensive on the side of Abach, and, by a vigorous effort, made himself master of Unter Laichling and the woods which adjoin it, so as to prevent the enemy from drawing any support from that quarter to the left, which was principally menaced. The corps of Rosenberg, placed on the high grounds between Echmühl and Laichling, was now hard pressed, being assailed by the Wirtembergers under Vandamme, who issued from the former village on the one side, and the victorious troops of Davoust, who debouched with loud shouts from the latter on the other. But these brave men, fronting both ways, presented an invincible resistance to the enemy: the repeated charges of the Bavarian horse against their batteries were baffled by the valour of the Austrian cuirassiers; and the battle wore a doubtful aspect in that quarter, when intelligence arrived that Lannes had made himself master of a battery of sixteen guns on the left, after sabring the cannoniers, who gloriously fell beside their pieces.*

Rightly supposing that the archduke would suspend his attack on the right, in consequence of this check on the left, against which the constantly increasing masses of the enemy were now concentrating, and that a general retreat would take place, Napoleon conceived that the decisive moment had arrived, and therefore brought up the reserve cavalry, which hitherto had not taken a part in the action, and sent it forward, at a rapid pace, along the high road to Ratisbon, to harass their retreat, while a general advance took place along the whole line—Lannes on the right, Lefebvre and Vandamme in the centre, Davoust on the left, Massena and Oudinot with the guards in reserve. A general order to fall back was now given by the archduke, or, rather, a change of front took place, the left retiring rapidly, and the whole wheeling back to a certain degree on the point of the right, which held firm at Abach, so as to present a new front oblique to the former, but still barring the great road to Ratisbon to the enemy. His troops were disposed in echelon, from Santing to Isling, in a sort of column parallel to the highway, at the distance of a mile and a half from it; while on that *chaussée* he left only the grenadiers, who were still untouched, and in the rear of all the undaunted cuirassiers. These dispositions, though based on the abandonment of the field of battle and the victory to his antagonists, were admirably calculated to preserve the troops from disaster in the hazardous operation of retiring before a victorious enemy: the great object to which the attention of the archduke was always directed. The movements on the part of the Imperialists were at first performed with firmness and regularity;† but by degrees their infantry fell into confusion, in consequence of the frequent woods which interrupted their line of march, and the close pursuit of the enemy, which prevented the ranks, once broken, from being ever thoroughly regained.

The consequences might have been disastrous in the level and open plains which ensued when the retreating columns approached the Danube, had not the archduke placed twelve

Desperate cavalry action in front of Ratisbon.

* Pel., ii., 76, 77. Personal observation.

* Stat., 139, 145. Pel., ii., 79, 85. Jom., ii., 174. Thib., vii., 234. † Stat., 146, 148. Pel., ii., 85, 92. Jom., iii., 174.

squadrons of the emperor's cuirassiers and a large body of hussars in front of Eglofsheim, which was garrisoned by six battalions of grenadiers, and supported by several powerful batteries. As the pursuing columns approached this imposing mass of cavalry, they paused till the French horse came up in sufficient strength to hazard an engagement: a variety of charges of hussars then took place on both sides, with various success; but at length the magnificent Austrian cuirassiers bore down with apparently irresistible force upon their pursuers. The French light horse could not withstand the shock, and were quickly dispersed; but their cuirassiers came up, and then two rival bodies, equally heavily armed, equally brave, equally disciplined, engaged in mortal combat. So vehement was the onset, so nearly matched the strength of the combatants, so tremendous the conflict, that both parties, as if by mutual consent, suspended their fire to await its issue; the roar of the musketry subsided, even the heavy booming of the artillery ceased, and from the mêlée was heard only, as from the battles of the knights of old, the loud clang of the swords ringing on the helmets and cuirasses of the dauntless antagonists. The sun set while the contest was still undecided; the moon rose on the deadly strife, and amid her silvery rays fire was struck on all sides by the steel upon the armour, and dazzling sparks flew around the combatants, as if a thousand anvils were at once ringing under the blows of the forgers. Nothing could overcome the heroic courage of the Imperialists, but their equipment was not equal to that of their opponents; and in close fight, the Austrian horsemen, whose front only was covered, were not an adequate match for the cuirassiers of Napoleon, whose armour went entirely round their body. After a desperate struggle, their numbers were so reduced that they were unable any longer to make head against the enemy, and, leaving two thirds of their number on the field, they were driven in disorder along the *chaussée* towards Ratisbon. But their heroic stand, however fatal to themselves, proved the salvation of the army: during the engagement, the artillery and infantry withdrew in safety to the rear, and Napoleon, who perceived that the archduke had brought up the reserve under Lichtenstein, which had not yet been engaged, dreading a reverse like that which befell the Austrians in similar circumstances at Marengo, reluctantly, and against the earnest advice of Lannes, gave orders for the army to halt, and bivouac on the ground which they occupied.*

The situation of the archduke was now very critical: with a victorious army, headed by Napoleon, in his front, and the broad Danube, traversed only by the single bridge of Ratisbon, in his rear. By bringing up his whole forces from the opposite side of the river, and concentrating his troops from Abach and the right, he was still in a situation to compensate the losses of the day, and give battle with eighty thousand admirable troops in front of Ratisbon.† But that field

was imminently hazardous, for a serious disaster there sustained might lead to total ruin; and his army was not only extremely fatigued by the constant combats and marches of five successive days, but considerably affected in its spirit by the reverses it had experienced, and seriously weakened by the loss of the reserve parks and ammunition-train at Landshut. Five thousand men had been killed and wounded, and seven thousand made prisoners, in the battle which had just terminated, besides twelve standards and sixteen pieces of cannon, which had fallen into the enemy's hands; and though Lichtenstein's corps much more than supplied those losses, yet the French guards under Oudinot had just arrived on the field from Spain, and Massena's corps, which had not been engaged at all, was certain to bear the brunt of the next battle which might ensue. Influenced by these considerations, the archduke resolved to retire during the night, and restore the spirit and recruit the losses of his army in Bohemia, before again engaging in active operations. A bridge of boats was immediately thrown over the Danube, some miles above Ratisbon, and over it and the bridge at that town the army defiled without intermission the whole night. With such expedition and order was this critical operation conducted, that, before nine o'clock on the following morning, not only were almost all the soldiers, but all the guns, chariots, and ammunition-wagons safely on the other side; and when the French, who, from the large watchfires kept on the enemy's lines during the night, supposed a decisive battle was intended for the ensuing day, stood to their arms in the morning, they beheld with astonishment the whole plain of Ratisbon deserted,* except by a few broken wagons or gun-carriages, and saw only in the extreme distance dense masses of cavalry protecting the retreat of the last trains within the walls of Ratisbon.†

No sooner did Napoleon discover that the archduke had withdrawn the bulk of his forces during the night, than he moved forward the whole cavalry to attack the rear-guard, drawn up in front of Ratisbon. Notwithstanding all their efforts, they could not prevent great confusion occurring as the last of the carriages withdrew into the town; and nearly a thousand brave horsemen there sacrificed themselves for the safety of the rest of the army. The screen of cavalry which was drawn up around the bridge of boats, happily concealed its existence from the enemy till the troops were all over; but the pontoons them-

Operations against Ratisbon by the French, and wound of Napoleon.

bon the night after the battle: including Bellegarde's corps, which was still on the other side of the Danube, the total force was about eighty thousand. — STUTTERHEIM, 159, and GRUNE'S *Correspondence*.

* Stat., 160, 164. Pel., ii., 93, 99. Jom., iii., 174, 175. Thib., vii., 234, 235.

† The French lost in the battle of Echmühl about six thousand men. The bulletin stated the general loss from the opening of the campaign, at twelve hundred killed, and four thousand wounded; which, according to their usual proportion of admitting only a fourth part of its real amount, would make it about twenty thousand men, which was probably very near the mark. The Austrians, in the whole five days, lost in killed, wounded, and prisoners, about thirty thousand, and one hundred pieces of cannon. — See first *Bulletin*, 24th April, 1809; PELLET, ii., 99; and GRUNE'S *Correspondence*, a copy of which the author obtained from the imperial archives at Vienna, through the kindness of his valued friend, Captain Basil Hall.

* Stat., 146, 151. Pel., ii., 85, 94. Jom., iii., 174, 175. Sav., iv., 54, 55.

† He had sixty thousand men around the walls of Ratis-

The archduke retreats across the Danube, and Ratisbon is taken by the French.

selves were burned, or fell into the hands of the victors. At length the rear-guard was all withdrawn within the walls of Ratisbon, the gates closed, and the ramparts lined with infantry. Napoleon at noon arrived on the spot, and, in his anxiety to press the assault, approached so near the walls that a musket-ball struck him on the right foot, and occasioned a considerable contusion. The pain obliged him to dismount from his horse; the report spread that the emperor was wounded; and instantly the soldiers broke from their ranks, and leaving their muskets, their guns, their horses, crowded round their beloved chief. Regardless of the cannon-balls which fell in the dense group, fifteen thousand men of all arms hastened to the spot, every one forgetting his own danger in the intense anxiety concerning their general's welfare. After a few minutes the wound was found to be so inconsiderable, that the emperor again mounted his horse: a rapturous cheer from the warlike multitude announced the joyful event to the army, and soon the rolling of the drums and clang of the trumpets recalled the soldiers in all directions to their arms.*

This perilous incident retarded only for a few minutes the progress of the attack. Its assault and capture. Lannes, who directed the operations, perceiving a large house which rested against the rampart, pointed several guns against its walls, which speedily reduced them to ruins, and formed a sort of breach, by which access might be obtained to the summit. A heavy fire, however, was kept up from the rampart, which rendered the crossing of the glacis highly dangerous; and for long no soldiers could be found who would incur the hazard. Impatient of the delay, Marshal Lannes seized a scaling-ladder, and himself ran forward over the perilous space, swept in every part with the enemy's balls. Animated by this example, the troops rushed on, cleared the glacis, leaped into the ditch, and, crowding up the breach formed by the ruined house, forced their way into the place; LABEDOYERE, reserved for a melancholy fate in future times, was the first man who was seen on the summit. The troops now followed rapidly into the town; the gates, attacked in flank, were seized and opened, and the streets filled with a ferocious multitude of assailants. Still the Hungarian grenadiers maintained their resistance: slowly retiring towards the bridge, they kept up an incessant discharge upon their pursuers; the houses took fire in the conflict; the ammunition-wagons were only rescued from the flames by the united efforts of both friends and foes; and, after losing half their numbers in the desperate strife, they reached the barricades of the bridge, where the cannonade of artillery from the opposite side was so violent as to render all farther pursuit impossible. The French headquarters were established for the night in the Convent of Prull, under the walls; in the course of it the bridge was evacuated, and next day the Austrian rear-guard was discovered beyond Stadt-am-Hoff, covering the retreat of the army to the woody heights of the Bohmerwald.†

The advantages gained by these brilliant operations: to Napoleon were very great. Twelve days only had elapsed since he left Paris, and already he had reassembled the army after its imprudent dispersion by Berthier, combated the Austrians on four successive days, separated Hiller and the Archduke Louis from the Archduke Charles, thrown the two former back upon the Inn, in too inconsiderable strength to be able to cover Vienna, and driven the latter to an eccentric retreat into the Bohemian Mountains. Thirty thousand Austrians had fallen or been made prisoners in these disastrous engagements; a hundred pieces of cannon, six hundred ammunition-wagons, two pontoon trains, and an incalculable quantity of baggage taken; and the spirit of the vanquished so thoroughly broken as to render them incapable for some time of engaging in active operations. The road to Vienna lay open to the conqueror: it was a matter of mere convenience to him, when he should step forward and seize the capital of the monarchy, its magnificent arsenal, and boundless resources of every kind. Twenty thousand men were lost to the French army; but what were they among such a host, and what such a diminution, compared to the incalculable moral influence upon his own troops and those of the allies, in consequence of such a series of successes at the very outset of the campaign? If ever the words of Cæsar, *Veni, vidi, vici*, were applicable to a modern conqueror, they might have been used by Napoleon on this occasion.*

It was by indefatigable activity and the nicest calculation of time that these astonishing results had been obtained; and never had the emperor displayed in a more striking manner the indefatigable energy of his character. Unwearied by a rapid journey, night and day, for six successive days from Paris, he no sooner arrived at Donaauwerth, than he began the incessant questioning and correspondence which, with him, were the invariable preludes to great achievements. His letters to his lieutenants during the next five days would, of themselves, make a volume. His calculation of time was so exact, and the habits of precise obedience on the part of his generals so complete, that his divisions invariably arrived on the ground assigned them at the very moment on which he relied, and when their operation was required; and generally again marched and combated on the day following, without any intermediate repose. By this means, though his forces were not, upon the whole, more numerous, at least at that period, than those of the Austrians, they were almost always greatly superior at the point of attack. Nor did the emperor shun the fatigue which he thus imposed upon his soldiers: on the contrary, not one of them underwent anything like the mental and bodily labour to which he subjected himself. From the morning of the 19th, when the battle of Abensberg began, till the night of the 23d, when that of Ratisbon terminated, he was on horseback, or dictating letters, at least eighteen hours a day: he had outstripped his own saddle-horses by the rapidity of his journey, and knocked up those of the King of Bavaria, by the

Great results of these actions.

Indefatigable activity of Napoleon and his soldiers was the principal cause of these successes.

* Jom., iii., 177.

fatigue they had undergone; and, when all around him were ready to drop down with exhaustion, he began to read and dictate despatches, and sat up half the night receiving reports from the generals and marshals, and completing the directions for the succeeding day. He has himself told us that his manœuvres at this period in Bavaria were the most brilliant of his life;* and without going the length of so extraordinary an eulogium, it may safely be affirmed, that they never were excelled by the operations either of himself or any other general.†

On the day following the emperor reviewed a great part of his army at Ratisbon, and one of those imposing spectacles was exhibited which, almost as much as his military talents, contributed to his astonishing successes. As each regiment defiled before him, Napoleon demanded from the colonel who were the most deserving among the officers, non-commissioned officers, and privates, and in presence of the army conferred their honours and distinctions upon them. On these interesting occasions he decided alone, and often conferred the reward on a common soldier in preference to those of higher grade who were recommended. He recognised some of the veterans of Marengo or the Pyramids as they were presented to him, and, when conferring the cross, gave them a signal of recognition by a slight tap on the cheek or clap on the shoulder, accompanied by a kind expression, as, "I make you a baron or a chevalier." One of these veterans, on being presented, asked the emperor if he did not recognise him. "How should I?" answered Napoleon. "It was me," replied the soldier,

Impressive scene in the conferring of military honours at Ratisbon.

"The greatest military manœuvres I ever made, and those for which I give myself most credit, were performed at Ecmühl, and were infinitely superior to those at Marengo, or to any other of my actions."‡ "On this day I heard the emperor repeat what I had often previously heard him say, that the finest manœuvres of his life were those which preceded the battle of Ecmühl."—LAS CASAS, v. 168, 169.

The details of the grounds on which this striking opinion is formed are thus given by Pelet, and quoted by Las Casas: "In four days of combats and manœuvres, were completed the destinies of the Austrian army—of that army, recently so numerous and arrogant, the most formidable and perfectly equipped which Austria had ever sent forth. By his first dispositions Napoleon had organized the plan of his great battle, secured his outposts, and reconnoitred the ground for a battle in front of Augsburg, according to the direction which the enemy's columns seemed disposed to take. He had corrected the false dispositions of Berthier, and collected his forces in such masses on each wing, as to preclude the danger which he had induced. On the 18th of April he arrived on the ground and made his dispositions, and announced that in three days all would be accomplished: on the 19th it commenced, and the junction of the wings took place under the cannon of the archduke; on the 20th he broke the enemy's centre at Abensberg, and entirely separated their left wing from their centre; on the 21st he routed the left wing at Landshut, got possession of its magazines, park equipages, and communications. Quick as lightning, he returned on the 22d to Ecmühl, to deal out his final blows to the army of the archduke; the remains of which with difficulty saved themselves behind the walls of Ratisbon and the mountains of Bohemia. Had Massena, as he was ordered, attacked Landshut on the 21st, on the right bank of the Isar, at the same moment when Napoleon pressed him on the left bank, the remains of Hiller's corps would have been entirely destroyed: had Ratisbon not been delivered up to the archduke, the remains of his army, cooped up in the bend formed by the Danube at that place, would have been utterly ruined. Thus, but for these untoward incidents, the vast army of the archduke would have been cut to pieces in these four days: as it was, it was severed in two, and found salvation only in flight."—LAS CASAS, v. 196.

† Sav., iv., 53, 59. Thib., vii., 234. Pel., ii., 120, 121.

* O'Meara, ii., 206.

"who in the desert of Syria, at the moment of your utmost necessity, gave you a portion of my rations." Napoleon at once recognised him, and said, "Oh! I recollect you perfectly, and make you a knight, with an annual endowment of twelve hundred francs" (£50). These heart-thrilling scenes excited the usual transports among the French soldiers; but in the troops of the confederation, upon whom honours and bounties were prudently and profusely showered, and to whom they were perfectly new, they produced an unbounded impression; and it then appeared how strongly the German heart was capable of being moved by those appeals to honour and generous feeling, of which the allied sovereigns in after times so largely availed themselves. At the same time, forty of the most deserving of the 65th regiment, which had capitulated at Ratisbon, were admitted into the old guard, to show that the emperor entertained no displeasure at that corps for that untoward event; and a proclamation was addressed to the army, which, with just pride, though in exaggerated terms, recounted their great exploits.*†

But, though these splendid triumphs attended the arms of Napoleon where he commanded in person, the fate of the Bavar-
Hiller. April 24.

war was very different in other quarters, and already were to be seen convincing proofs, from the disasters attending them under the direction of his lieutenants, that the invincible veterans of the Republic were fast wearing out, that the conscripts of the Empire possessed no superiority over the now improved and invigorated armies by which they were opposed, and that the successes, where he in person commanded, were owing to the talent of his combinations or the terrors of his name. Hiller, who had retired to the Inn after the disaster of Landshut, finding that he was not pursued by the French troops, and having ascertained that Napoleon had diverged with the bulk of his forces in another direction, deemed it a favourable opportunity to take vengeance on the Bavarians, by whom he had been somewhat incautiously pursued, for the losses which he had experienced. Having collected some small re-enforcements on the Inn, and divided his troops, about thirty thousand strong, into three columns, he remeasured his steps, and suddenly attacked the Bavarians under Wrede, who, along with the reserve under Bessières, were advancing beyond the defile of Neumarck, and had taken post on the heights in front of St. Verti. The Bavarians made at first a stout resistance, but

* Pel., ii., 111, 112. Thib., vii., 237.

† "Soldiers! You have justified my anticipations: you have supplied by bravery for the want of numbers, and marked the difference which exists between the soldiers of Cæsar and the armed rabble of Xerxes. Within the space of a few days we have triumphed in the battles of Thau, of Abensberg, and Ecmühl, and in the combats of Peissing, Landshut, and Ratisbon: one hundred pieces of cannon, forty standards, fifty thousand prisoners, three bridge equipages, three thousand baggage-wagons with their horses, all the caissons or regiments; such are the fruits of the rapidity of your marches and of your courage. The enemy, seduced by a perjured cabinet, appeared to retain no recollection of you: his wakening has been speedy, for you have appeared more terrible than ever. Late he crossed the Inn and invaded the territory of our allies; lately he talked of nothing less than carrying the war into the bosom of our country: now defeated, dispersed, he flies in consternation. Already my advanced guard has passed the Inn: in a month we shall be at Vienna."—NAPOLEON to his Troops, April 24, 1809; PELET, ii., 115.

being outnumbered and outflanked, they were soon driven back; and, though Molitor came up to support them with some regiments of the Imperial Guard, they too were compelled to retreat, and sustained a considerable loss. Before night the French and their allies were entirely driven off the field, with the loss of fifteen hundred men killed, wounded, and prisoners; but the intelligence which Hiller received in the night of the battle of Ecmuhl and retreat of the archduke upon Ratisbon, induced him to halt in the career of victory,* and remeasure his steps to the Inn, in order to cover the approach to Vienna.

A disaster of a still more serious description was sustained about the same period by the Viceroy Eugene Beauharnois in the Italian plains. On the same day on which the Archduke Charles crossed the Inn, his brother, the Archduke John, passed the mountain frontier of the kingdom of Italy with forty-eight thousand men, and, after crossing the Isonzo at Gorizia, and passing Udina, poured down on the Italian plains, and took post in front of Passeriano, already famous in the diplomacy of Napoleon.†

The viceroy had above forty-five thousand men to oppose the invader; but they were, in great part, of Italian extraction, and could hardly be relied upon to withstand the shock of the transalpine forces. This inferiority speedily appeared in the first actions of the campaign. Eugene fell back across the Tagliamento, and established his headquarters at Sacile.‡

The Austrians, two days after, came up in great force, and surprised the 35th French regiment at Pordenone, which, with its eagle and four pieces of cannon, fell into the enemy's hands. Stung to the quick by this disgrace, and fearful of the effect of any farther retreat upon the spirit of his multifarious troops, the viceroy determined to hold firm and give battle to the enemy. Orders, accordingly, were given for the whole army to suspend its retreat, and retrace its steps on the 15th; and on the day following he made an attack on the Imperialists between Sacile and Pordenone.‡

The field of battle, which lay between Vignuova and Porcia, on the gentle slopes where the Alps of Roveredo melt into the Italian plains, was singularly favourable for the operations of cavalry, in which arm the Austrians had considerably the advantage. So little did they anticipate, however, an attack, that at the moment when it commenced, the Archduke John was engaged in hearing mass at Pordenone, and one of his corps was considerably in the rear at Palse. The best dispositions, however, which circumstances would admit, were made to repel the enemy, and, as the troops in the rear successively came up, they were passed on to the plain of Vignuova, so as to menace the communication between Eugene and the bridge of Sacile. The combat was very warm, and in the first instance, before the corps of Chastellar came up, Prince Eugene had the advantage; and at the village of Porcia in particular, and which was repeatedly taken and re-

taken, a frightful carnage took place. Gradually, however, the Austrians, who had outflanked their opponents, cooped up their line within very narrow limits, and at length it was driven into the space between Fontana, Fredda, and Porcia, which did not exceed two miles in breadth. Fearful of the consequences of any disaster upon troops restrained within such narrow limits, Eugene gave the signal to retreat, which was effected at first by squares in echelon, which arrested their pursuers by alternate volleys as on a review day; but, at the defile occasioned by the bridge of the Levinza and the marshes on either side of the stream, they fell into disorder, which was soon augmented by the intelligence that seven thousand men of the corps in reserve had passed them, and already occupied Sacile. The whole army, upon this, fell into confusion. Horse, foot, and cannon became blended together in frightful disorder, and fled towards the Adige, without either direction or farther attempt at resistance.* The approach of night alone saved them from a total overthrow; but as it was, they lost four thousand killed and wounded, and an equal number of prisoners, besides fifteen pieces of cannon; while the Austrians had not to lament the loss of half the number.

This important victory in the outset of the campaign was likely to prove decisive, as that of Magnano in 1799,† of the fate of Italy, and would have been attended with not less material results upon the general issue of the war, had its effects not been obliterated, and the career of success in the plains of Lombardy arrested by the rapid and overwhelming advance of Napoleon to Vienna. As it was, however, and even though the Archduke John was far from following up his success with the vigour which might have been expected, the results of the battle were in the highest degree important. Eugene, re-enforced by some battalions which he had left at Verona, succeeded in at length reorganizing his army, and took post behind the fortified line of the Adige, already immortalized in the campaigns of Napoleon. The archduke, though obliged to send three divisions at this period to observe Marmont in Dalmatia, and considerably weakened by the necessity of making large detachments to observe Venice and Palma-nuova, in which the enemy had large garrisons, followed his retreating adversary, and took post, with thirty thousand excellent troops, in the famous position of Caldiero, a few miles from Verona. But the spirit of the two armies was essentially changed: the Italians, depressed and weakened by defeat, felt the old superiority of the Tramontane forces, and were prepared to fall back, as in the time of Suwarrow, to the farthest verge of the Italian Peninsula;‡ while the Austrians, roused to the highest degree by their early success, confidently anticipated a repetition of the glories of Novi and the Trebbia. But the expectations of both parties were traversed by the extraordinary progress of Napoleon down the

Important effects of this victory on the Italian campaign.

valley of the Danube, which soon rendered necessary the concentration of the whole forces of the monarchy for the defence of the capital.*

Thus, though Napoleon's successes had been great on the Bavarian plains, he had by no means gained any decided advantage: his armies had been routed, or run the most imminent hazard, wherever he did not command in person; and disasters which would have been decisive in any other warfare had been experienced by his lieutenants on the Italian frontier. It was evident that the forces of the contending parties were approaching to an equality: the wonted vehemence of the Republican armies had disappeared when led by the marshals of France; the Austrians had clearly proved their superiority to the allies who swelled their columns, and it was the consummate talents, overwhelming force, and paralyzing renown of Napoleon that alone still chained victory to the standards of the Grand Army. Reversing the principles of both

Hopes which the commencement of the campaign afforded to the allies.

parties in the contest, the fortunes of France had come to depend on the genius of a single man, the pyramid rested on its apex; while, driven by necessity to a more enlarged policy, Austria was reaping the fruits of popular enthusiasm, and successfully combating the Revolution with the arms which itself had created. The aristocratic power, generally successful, failed only from the want of a leader adequate to the encounter of the popular hero; the Democratic, generally defeated, prevailed through the extraordinary abilities of one man. Such a state of matters might promise little for present success, but it was pregnant with hope for future deliverance. Great as may be the ascendancy, unbounded the activity of a single leader, they cannot, in the long run, compensate general disaster; and, in all prolonged contests, that power is ultimately destined to victory which, appealing to principles which find a responsive echo in the human heart, rests upon the organized and directed efforts of the many, rather than the abilities, how splendid soever, of the few.

CHAPTER LIV.

CAMPAIGN OF ASPERN.

ARGUMENT.

Army in the Island of Lobau on the Night of the 22d.—Council of War held in the Island, in which it is resolved to maintain the Position there.—Reflections on the Conduct of Napoleon in this Battle.—Observations on the French method of Attack in Column.—Glorious Character of the Resistance of the Austrians at Aspern.—Disastrous Effect of the Archduke John's Disobedience of his Orders.—Immense Importance of Central Fortresses on the Defence of Nations.—Infatuation of England in this Respect.

IMMEDIATELY after the battle of Echmuhl, Napoleon, clearly perceiving the expediency of striking at the heart of his enemy's power before the consternation consequent on the disasters in Bavaria had subsided, issued orders in all directions for the concentration of his forces upon the Austrian capital. Orders were despatched on the 24th to Eugene to press forward in the Italian plains; to Bernadotte, who had assumed the command of the Saxons at Dresden, without a moment's delay to enter Bohemia by the northern frontier; and to Poniatowski, who commanded the Polish army, to invade Galicia, and endeavour to excite an insurrection in that province against the Austrian dominion.* Every preparation was also made for moving the whole Grand Army, with the exception of Davoust's corps, which was left at Ratisbon to observe the archduke, down the valley of the Danube, into the interior of the monarchy; and by daybreak on the 26th a hundred thousand men were in

Measures of Napoleon for a grand concentric attack upon Vienna.

* To Eugene he wrote: "Advance in full confidence; the emperor is about to move into the interior of Austria; the enemy will not keep their ground before you any more than they have done in Bavaria. This army, defeated in its most cherished projects, is totally demoralized." To Bernadotte at Dresden: "Napoleon is about to march upon Vienna, and he expects, with the greatest impatience, your arrival in Bohemia, to co-operate with the Grand Army, which will at once render disposable the corps of Davoust, now left in observation at Ratisbon." To Poniatowski: "That he fully relied on his zeal in the common cause, and that, as the emperor was now to march upon Vienna, now was the moment for him to enter Galicia."—See the original Letters in Pelet, ii., 172, 173.

* In the order of time, the war in Tyrol should be treated of immediately after the opening of the campaign in Italy; but the vast moral importance of that contest, as well as its romantic character, require a separate chapter, and will be treated of in that which follows previous to the battle of Wagram.

full march for the Inn and Vienna. At the same time, to impose upon Prussia and overawe the numerous malecontents in the north of Germany, a corps of observation was formed, under the orders first of Kellerman, and afterward of Junot, which, though consisting only of fourteen thousand men, was pompously announced in the bulletins as numbering fifty thousand combatants.*

The situation of the Archduke Charles was now embarrassing in the highest degree. By having been driven off from the valley of the Danube, and compelled to take refuge in the mountains of Bohemia, the approach to the capital was left unguarded, save by Hiller's corps and the Archduke Louis, thirty-five thousand strong, which were wholly inadequate to arrest the march of the mighty conqueror. An ordinary general, indeed, responsible to his superiors, would hesitate to advance into the interior of the Austrian monarchy, having seventy-five thousand men on one flank in the Bohemian Mountains, and the insurgent Tyrol, secure in inaccessible alps, on the other, to menace or cut off his lines of communication. But it was not the character of Napoleon to be deterred by such obstacles. On the contrary, it was distinctly foreseen, what the event speedily proved was the case, that the French emperor, relying on the power and terror of the army under his immediate command, would hurry forward to the capital, and trust to his never-failing resources to dissipate any assemblages on his flanks or rear by which his communication might be threatened. Impressed with these ideas, Prince Charles despatched April 23. orders on the 23d to Hiller to retard, as much as possible, the advance of the enemy; to the Archduke John to retreat towards the hereditary states; while he himself, after forming a junction with Bellegarde, exerted himself to the utmost in reorganizing his army, and, with the consent of the Emperor Francis, despatched a courier with a dignified April 28. letter proposing an exchange of prisoners, and hinting at more important negotiations to Napoleon, which arrived, however, at the French headquarters after they had already been established in Upper Austria, and too late to arrest the dreaded march of the conqueror to Vienna.†

“To his brother, the emperor, the archduke observed: “Finding it impossible to keep my ground with a river such as the Danube in my rear, against a victorious army in front, I have deemed it expedient to cross to the northern bank and form a junction with Count Bellegarde. You are aware that all the operations of the campaign were based on the probability of an early success, and on the co-operation of the troops of the Rhenish Confederacy, who, in fact, declared against us. Would it not be expedient, then, to try the result of a negotiation, before the enemy has invaded Austria, and while, in Italy and Tyrol, there remain successes to counterbalance his advantages?” The emperor despatched Count Stadion with his reply, which approved of overtures by the archduke, provided they did not compromise his dignity. The latter, accordingly, wrote to Napoleon on the 30th April: “Your majesty has announced your arrival by a salvo of artillery: I had no time to reply to it; but, though hardly informed of your presence, I speedily discovered it by the losses which I experienced. You have taken many prisoners from me, and I have taken some thousands from you in quarters where you were not personally present. I propose to your majesty to exchange them, man for man, rank for rank; and, if that proposal proves agreeable with you, point out the place where it may be possible

The emperor's dispositions being all completed, the Grand Army was, to a certain extent, divided: Davoust, whose corps, exhausted by the fatiguing marches it had undergone, and seriously weakened by the losses of the campaign, stood in need alike of re-enforcements and repose, was left at Ratisbon to guard the passage of the Danube, and watch the retiring columns of the archduke; Lefebvre, with the Bavarians, was detached into the Tyrol, to make head against the insurrection in that province, which was daily assuming a more menacing aspect; while the emperor himself, at the head of the corps of Massena, Lannes, and Bessières, still, notwithstanding all the losses of the campaign, above eighty thousand strong, proceeded direct by the great road along the southern side of the Danube to Vienna. Vandamme followed at a little distance, with the troops of the confederation, eighteen thousand more; and as soon as Bernadotte, with the Saxons, who was toiling round the external frontier of the Bohemian Mountains, relieved Davoust at Ratisbon, he, too, was to follow in the same direction with his corps, still numbering forty thousand men. Every disposition being thus made to secure his rear, and station his troops in echelon, so as to ensure his communications, Napoleon left Ratisbon on the 26th, and arrived the same day at Landshut, where he found April 26. the whole guard, both horse and foot, assembled, having just come up from Spain. This veteran corps, full twenty thousand strong, proved a most important addition to his invading force; and when it is recollected that in the beginning of January it was at Astorga, at the foot of the Galician Mountains,* it must be admitted that few more rapid marches are on record in the whole annals of military achievement. Meanwhile the vanguard pressed on with ceaseless vigour, and soon the advanced posts were on the Inn. The rocky banks of that river, flanked by the ramparts of Braunau and Passau, afforded an apparently favourable situation for arresting the advance of the enemy; April 28. but the vast line, above thirty leagues in length, would have required a hundred thousand men for its defence, and the Austrian general had not above a third of that number at his disposal. For the same reason, he contented himself with breaking down the bridges over the Salza, which had the effect of retarding, by two days, the advance of the French army. Napoleon arrived at Braunau on the 1st of May, and pressed on with ceaseless activity the May 1. march of his troops; while Hiller, abandoning the woody range and unformed intrenchments of the Kirchbergwald, took post at the formidable

to carry it into effect. I feel flattered, sire, in combating the greatest captain of the age; but I should esteem myself more happy if Heaven had chosen me to be the instrument in procuring for my country a durable peace. Whatever may be the events of war, or the chances of an accommodation, I pray your majesty to believe that my desires will always outstrip your wishes, and that I am equally honoured by meeting your majesty either with the sword or the olive branch in your hand.” But all this graceful flattery was thrown away; for, before it reached Napoleon, he was far advanced in the valley of the Danube, and the terrible combat of Ebersberg had opened to him the gates of Upper Austria, when nothing remained to stay his triumphant march to Vienna.—ERZB. JOANS FELDZUG IN JAHR 1809, 55, 56; and PELET, ii., 176, 179.

* Ante, iii., 104.

position of EBERSBERG, to defend the passage of the Traun, and cover the wooden bridge, which at Mauthausen, or a little farther down the Danube, formed an important line of communication with the northern bank of the river. It was of the most vital consequence to gain possession of this post, for a few hours would suffice, with a corps such as Hiller's, to put it in a posture of defence; and if the archduke, who was following by Budweiss down the left bank, should arrive before it was forced, it might retard, or altogether defeat the projected march upon Vienna.*

Descending from the lofty summit of the Alps by lateral branches to the great valley of the Danube, several mountain streams between Munich and Vienna present scenes, the beauty of which is forever engraven on the mind of the traveller, and afford, at the same time, favourable positions to dispute the advance of an invading army. Of these, the most impetuous and savage in its character is the Traun, which, issuing from the wild cliffs of the Alter and Abersees, and descending through the wooded steepes of the Traunese, makes its way through narrow ravines and steep, pine-clad hills, to the Danube, a little below Ebersberg.† A long wooden bridge crosses the stream in front of that place, which is commanded by the precipitous heights and old castle on its right or western bank: another bridge existed some leagues higher up, at Wels; but the road over it crossed, a little farther on, another mountain torrent, the Krems Munster; and as all these bridges were of wood, which were easily destroyed, and required a considerable time for their reparation, the wing of the invader's army, which attempted the passage by that circuitous route, was liable to very serious interruption. Everything, therefore, recommended an immediate attack upon the bridge of Ebersberg; and Massena, who commanded the advanced guard, and was perfectly alive to all these considerations, resolved to pursue the enemy with such vigour that they would not have time to apply the torch to the combustible arches.‡

The prudence of this determination, considering the vital importance of anticipating the archduke at the bridge of Mauthausen, could not be disputed; but when the French arrived on the left bank of the Traun, beyond Scharlantz, in front of Ebersberg, the spectacle which presented itself was sufficient to daunt the most intrepid breasts. Right in front of them lay the bed of the impetuous Traun, nearly eight hundred yards broad, intersected by many sand-banks and islands, clothed with stunted wood, traversed only by a single *chaussée*, terminating in a bridge three hundred yards long, over the largest arm of the river, which flows in a deep and rapid torrent close to the right bank. The bridge, closed at its western extremity by the gate of Ebersberg, was enfiladed by the houses of the town, which were all filled with musketeers, and commanded along its whole extent by a plentiful array of

artillery disposed on the heights above. On the summit of the whole stood the old square castle, its walls bristling with bayonets and artillery planted on its mouldering battlements to command the bridge, at the distance of a hundred toises. The hills, or, rather, swelling eminences next the river, were covered with deep masses of infantry, interspersed with powerful batteries of cannon, who stood prepared to dispute the passage; while immediately in their rear rose a second range of heights, considerably more elevated than the former, clothed with pines, over which, equally with those in front, the road passed, and which afforded another position stronger than the first, to which, if driven from their original ground, the enemy might retire.*

It required no ordinary resolution to attack with no greater force thirty-five thousand men, supported by eighty pieces of cannon, in such a position; but Massena, who burned with desire to illustrate his name by some brilliant exploit in a campaign where hitherto he had not had an opportunity to signalize himself, and who was in hopes that, if the combat should be prolonged for any length of time, he would be aided by a flank attack from Marshal Lannes, who was to cross at Wels and force his way across the lesser streams in his front, resolved to hazard an attack. The French troops, at that period, were in such a state of exultation from their triumphs, that, under the eye of the emperor at least, nothing was impracticable to their audacity. Four battalions of Austrian grenadiers had been injudiciously left on the left bank, occupying some houses and walled enclosures, which formed a sort of *tête-du-pont* to the bridge. Upon them the attack was first made, and, being speedily overwhelmed by numbers, they were driven, at the point of the bayonet, along the *chaussée*; and, in spite of a gallant resistance, all the islands and little bridges over the branches of the torrent were wrested from the enemy. But when the pursuers reached the long bridge over the principal branch of the Traun, the fire of grape and musketry from the batteries and houses on the opposite side was so violent that the head of the column hesitated and recoiled. Instantly General Cohorn, a descendant of the illustrious engineer of the same name, is at their head, and, animated by his gallant example, the French troops return to the charge. A frightful scene, exceeding in horror even the terrible passage of the Bridge of Lodi, ensued; at the point of the bayonet, amid showers of balls, the heroic French, headed by Cohorn, pursued the retiring Austrians; while the troops on the opposite bank, seeing the enemy's colours advancing through a cloud of smoke, and in the midst of a frightful contest, closed the gate at the farther end, and fired incessantly with grape, round shot, and canister, indiscriminately on friend and foe. Numbers of the Imperialists, threatened with death on both sides, threw themselves into the water, and were swept away by the impetuous torrent; others were trampled down by the advancing columns, or sought refuge in the wooded islands,

And of the Austrian corps which occupied it.

ering the vital importance of anticipating the archduke at the bridge of Mauthausen, could not be disputed; but when the French arrived on the left bank of the Traun, beyond Scharlantz, in front of Ebersberg, the spectacle which presented itself was sufficient to daunt the most intrepid breasts. Right in front of them lay the bed of the impetuous Traun, nearly eight hundred yards broad, intersected by many sand-banks and islands, clothed with stunted wood, traversed only by a single *chaussée*, terminating in a bridge three hundred yards long, over the largest arm of the river, which flows in a deep and rapid torrent close to the right bank. and were made prisoners; several ammunition-wagons blew up in the middle of the bridge, and the dauntless foemen were scattered in the air by the tremendous explosion. But nothing could withstand the enthusiastic gallantry of the French. Side by side, Cohorn and Campy, aid-de-camp to Massena, head the column: soon the gate and palisades flanking it are levelled by the pioneers, and the assailants penetrate into the town. Here, however, they are exposed at once to a plunging fire from the castle and a flanking one from the houses, while fresh battalions assail them in front. Torn in pieces by the terrific discharge, to which in the crowded streets of an ancient village they could make no reply, they speedily fall victims to their daring valour. In a few minutes two thirds of their number are stretched upon the pavement; the survivors are driven back in confusion to the entrance of the bridge; its barricades, hastily re-established, are closed, lest it should again fall into the hands of the enemy, and the Austrians are preparing a column to clear it of the assailants and set fire to the combustibles already provided, which, in the suddenness of the former assault, had not been fired.*

Massena, however, who had now come up to the opposite bank, was well aware of the importance of following up the extraordinary advantage gained by the brilliant temerity of his advanced guard. He instantly, accordingly, despatched powerful succours to Cohorn and his handful of heroes, now cooped up between the gate at the end of the bridge and the rapidly-increasing forces of his assailants. Three fresh brigades, headed by Claparede, were soon passed over, and at length the division Le Grand having come up, it also was sent forward,† through a storm of grape and musketry, over the bridge, and lent its powerful aid to the attacking force. Strengthened by such assistance, Claparede regained his ground in the village, and gradually forced his way up the narrow lanes leading to the castle, and stormed that stronghold itself. Hiller, however, recovered from his first surprise, renewed his efforts to regain the post: two fresh divisions came up, drove the French out of the chateau, and forced them down again into the low streets adjoining the bridge. Again the French returned to the assault: Massena ordered a division to cross over farther up the river to the right, in order to attack the left of the Imperialists while engaged with their unwearied antagonists in front. Amid a frightful storm of shot, Le Grand swiftly passed over the narrow open space which separated the town from the castle; but, even in that distance of two hundred yards, the path of every regiment was marked by a long and melancholy train of slain: arrived at the gates, they were found to be closed, and the whole head of the column was swept away by the plunging fire from the battlements. Again re-enforced, Le Grand returned to the assault under cover of a tremendous fire of all arms,

which brought down every exposed limb on the castle; the sappers rushed up to the gates, which they broke through, and the heroic garrison, cut off from all external support by the columns which had got round it on the eastern side, laid down its arms.*

Hiller now, seeing the key of the position carried, gave the signal for retreat; but to troops so intermingled and closely engaged with the enemy it was no easy matter to obey this order, and the division which had crossed farther up the river already threatened their left flank; for in the hurry of this sudden attack there had not been time to break down the bridges of the Krems Munster, and other streams which discharged themselves into the Traun above Ebersberg, and which, if destroyed, would, for some hours at least, have secured that flank from attack. With great difficulty, the Austrians withdrew to the position behind the town, where another combat, not less obstinate and bloody, took place. Every road, every pathway leading up the ascent was the scene of a desperate struggle; the pastures, the corn-fields, the pine woods on the crest of the ridge, were all the theatre of mortal combat; while the flames of Ebersberg in the hollow behind, the trampling of horsemen over the dead and dying, the cries of the wounded, and the cheers of the soldiers who successively arrived on the opposite bank, formed a scene surpassing all but the field of Eylau in circumstances of horror. The combat, however, was too critical and violent to admit of any relaxation, and as the French cavalry of the guard came up to the opposite side, they were hastily hurried forward, and, trampling under foot the dead bodies and wounded of either army, forced their way through the burning houses with loud shouts, swords glittering, banners waving, and all the animation of war, to the front of the battle. Still the Austrians, with invincible resolution, made good the post on the ridge behind; but as evening approached, the masses on their left flank, which had crossed at Wels and other places in the upper part of the stream, became so threatening that Hiller drew off his troops and fell back in the night to Enns, where he burned the bridge over the river of the same name, and continued his retreat towards Amstetten. In this terrific combat few trophies were taken by the victors;‡ the French could only boast of four guns and two standards wrested from the enemy, while on each side six thousand brave men had fallen a sacrifice to their heroic sense of patriotic duty.†

This severe loss altogether disabled Hiller from making any farther resistance to the advance of the invading army to Vienna, and he accordingly fell back, as fast as the encumbrance of so many wounded would permit, to the neighbourhood

Hiller falls back towards Vienna.

Advance of the French army to Vienna.

† As Le Grand debouched from the bridge, the French general in command there rather officiously tendered his advice: "I want none of your advice," said he, "but room for the head of my column;" and instantly passed on to the attack of the castle.—PELET, ii., 211.

* Pelet, ii., 209, 213. Stat., 203, 205. Norv., iii., 209. † Pel., ii., 209, 215. Stat., 202, 207. Norv., iii., 209 Jom., ii., 182, 183.

‡ The author has been the more particular in the description of this combat, not only from its peculiar and terrible character, but because the castle and bridge of Ebersberg form well-known objects to every traveller who has visited Vienna; and it is desirable that the multitude of English who frequent that capital in quest of pleasure or amusement should be aware of the heroic deeds of which the Gothic castle, under whose walls they pass, has been the theatre.

of the capital. Napoleon arrived on the opposite side of the Traun to Ebersberg during the latter period of the combat, and passed through the town soon after it had ceased. How much soever inured to scenes of carnage, he was strongly impressed by the unwonted horrors which there presented themselves, where brave men by thousands lay weltering in their blood, amid burning rafters and smoking ruins; and the first who had fallen were thrown into the river, or crushed under the feet of the horses, or by the wheels of the artillery which had since passed over them;* and testified considerable displeasure, both at Massena for provoking so desperate a contest, where a flank movement might have rendered it unnecessary, and at Lannes, whose corps was to cross at Wels, farther up the river, for not having made his dispositions so as to be up in time to take a part in the strife by attacking the flank or rear of Hiller's corps. After passing Ebersberg, however, being uncertain of the movements of the archduke, and fearful of advancing into the interior without being aware of the position of

his principal adversary, he halted
From May 4 to May 7.

for two days at Enns, re-established the bridge there, and collected a number of boats, which he already foresaw would be required for the difficult operation of crossing the Danube in front of Vienna, while his advanced guard, under Lannes and Massena, pursued their route by the great road to the capital. Anticipating a battle on the woody ridge which lies between St. Polten and Vienna, he concentrated his troops before attempting the passage of that defile; but the precaution was unnecessary. Hiller had received orders to cross the Danube, and fall back, with all his forces, to the neighbourhood of the metropolis, and occupy the islands until the arrival

of the archduke. Meanwhile the emperor, continuing his advance along the Danube, perceived, from the Abbey of Melk, situated on a high rock, a considerable encampment of soldiers on the left bank of the river. Devoured with anxiety to know to which army they belonged, he despatched a sergeant of the old guard and six chosen men, who soon made their way across in a boat, and brought over three Austrian soldiers, who reported that they belonged to the archduke's army, and that he was advancing, by forced marches, in hopes of

arriving at the capital before the enemy. This important intelligence made the emperor redouble his activity:† orders were given to Massena to watch, with the utmost vigilance, all the points where a passage of the Danube could be effected, while Lannes and Bessières were directed to advance with increased celerity to the capital. All arms, accordingly, pressed on with the utmost

expedition; and on the 10th of May,

* During this terrible action the bridge and street immediately leading from it were so encumbered with the wounded, that Massena was driven to the cruel necessity of commanding the fresh troops which came up to throw their maimed comrades into the river; and such of them as were struck down were treated in the same manner by those who next came up to the attack. There was no alternative, for else the causeway would soon have become impassable, and the division in front been entirely cut off.—See CADET DE GRASSECOURT'S *Voyage en Autriche à la suite de l'Armée Française*, 1809, p. 137.

† Pel., ii., 220, 254. Stut., 203, 212. Jom., ii., 182, 186

being exactly a month from the time when the Austrian standards crossed the Inn, the French eagles appeared before the walls of Vienna.*

Though deprived, by the passage of Hiller to the northern bank of the Danube, of the corps on which it had chiefly relied for protection, Vienna was by no means destitute of resources. The external barriers, indeed, were not in a condition to make any defence; and the Archduke Maximilian, to whom the command was intrusted, withdrew at once from the rich and extensive suburbs into the ancient walled capital. They were constructed, however, of solid granite, well armed with artillery, and capable of being supplied to any extent from the inexhaustible resources of the arsenal; while four thousand regular troops and eight thousand landwehr and Milan volunteers were in arms in the city. Great efforts were made to electrify the inhabitants, and patriotic ardour was at its highest pitch. The people talked of their glorious resistance, one hundred and thirty years before, to the Turks, and loudly proclaimed their resolution to emulate the heroic defence of Saragossa in more recent times. But all history demonstrates that there is one stage of civilization when the inhabitants of a metropolis are capable of such a sacrifice in defence of their country, but only one; and that, when past, it is never recovered. The event has proved that the Russians were in the state of progress when such an heroic act was possible, but that the inhabitants of Vienna and Paris had passed it. Most certainly the citizens of London would never have buried themselves under the ruins of the Bank, the Treasury, or Leadenhall-street before capitulating to Napoleon. In fact, without supposing that the members of a highly-civilized and opulent community have altogether lost their patriotic spirit, it is evident that the sacrifices which are unavoidable, if obstinate resistance is attempted by a city in the later stages of society, where wealth is concentrated,

* Riding from Melk towards St. Polten, with Berthier and Lannes, the emperor's eyes were riveted on the Gothic towers of Dierstein, the scene of the captivity of Richard Cœur de Lion, which rose, in gloomy magnificence, at some distance on the other side of the Danube. He could speak for long on no other subject. "He, also," said Napoleon, "had been a warrior in Syria and Palestine. He was more fortunate than us at St. Jean Acre, but not more valiant than you, my brave Lannes. He beat the great Saladin. And yet hardly had he returned to Europe than he fell into the hands of persons who certainly were of a very different calibre. He was sold by a duke of Austria to an emperor of Germany, who has been rescued from oblivion by that act alone. The last of his court, Blondel, alone remained faithful to him; but his nation made great sacrifices for his deliverance." Still keeping his eyes riveted on the towers, he continued: "These were barbarous times, which they have the folly to represent to us as so heroic: when the father sacrificed his children, the wife her husband, the subject his sovereign, the soldier his general, and all without shame or disguise, for the mere thirst of gold or power! How much are times changed now! what progress has civilization made in our time! You have seen emperors, kings, in my power, as well as the capitals of their states, and I exacted from them neither ransom nor sacrifice of honours. And that successor of Leopold and Henry, who is already more than half in our power, will not be worse treated on this occasion than the preceding!" How deceitful is self-love! The ransom which Napoleon had exacted, on the very last occasion—on Austria £5,000,000, and on Prussia £16,000,000—exceeded all that feudal cupidity had ever extorted; and in the dark annals of Gothic crime and treachery, nothing exceeded the cruelty of the French Revolution, or the perfidy of his own seizure of the throne of the Spanish Peninsula.—See PELET, ii., 246, 247.

credit universal, and hundreds of thousands would at once be reduced to beggary by its stoppage, are so great, that no moral courage, how intrepid soever, can be equal to the responsibility of incurring them. Napoleon wisely trusted to two methods to effect the reduction of the city—the cutting off its communication with the northern bank of the river, and the terrors of a bombardment. With this view, he directed Massena to make himself master of the island of Prater, while a similar attack was made on that of Jagerhaus by Lannes, so as to reach from both sides the great bridge of Spitz and Thabor. These attacks were entirely successful, for the archduke had not forces sufficient to defend them; and such had been the confident security of the Aulic Council, that they had not taken the simple precaution of connecting the works of the place with the bridges of the Danube. At the same time, a battery of twenty mortars was established nearly on the same ground from which the Turks had, a hundred and forty years before, bombarded the city, and with such vigour were they served, that in the next ten hours they discharged three thousand projectiles into the capital; and already, in the course of the night, it was in flames in several quarters.*

At that period, there lay sick in the imperial palace, directly opposite to the French batteries, and incapable of removal to a place of safety, a young princess, daughter of the illustrious house of Hapsburg. It was by the thunders of artillery, and the flaming light of bombs across the sky, that Napoleon's first addresses to the archduchess, *MARIE LOUISE*, were made. Informed of the dangerous situation of the noble captive, he ordered the direction of the pieces to be changed, and while the midnight sky was incessantly streaked by burning projectiles, and conflagration was commencing in every direction around her, the future Empress of France remained secure and unharmed in the imperial palace. Strange result of those days, not less of royal than national revolution! that a daughter of the Cæsars should be wooed and won by a soldier of fortune from Corsica; that French arms should be exerted to place an Austrian princess on the throne of Charlemagne; that the leader of a victorious invading host should demand her for his bride; and that the first accents of tenderness should be from the deep booming of the mortars which, but for his interposition, would have consigned her father's palace to destruction!†

Aware of the danger of his situation, if cut off from all communication with the Danube and the powerful armies on the north bank of that river, the Archduke Maximilian made an attempt, at one in the morning of the following day, to regain the Lusthaus, an important point, which would have hindered the formation of the bridge the French were preparing from the southern bank to the first island; but the attack, not supported with adequate force, was speedily repulsed. Despairing,

after that check, of being able to maintain his ground in the capital, and intimidated by the sight of the flames which were bursting forth in many quarters, the archduke resolved to abandon it to its fate. The troops of the line, accordingly, with the exception of a few hundred invalids, were withdrawn to the north bank by the great bridge of Thabor, which was immediately afterward burned. They were just in time; for so rapid was the progress of the French troops between the batlements and the river, that in a few hours more their retreat would have been irrevocably cut off, and the bridge gained. General O'Reilly, who was left in command, now lost no time in signifying his readiness to capitulate; and the terms were soon agreed to, and ratified early on the following morning. They were the same as those granted in 1804, guaranteeing the security of private property of every description, but surrendering all public stores, and, in particular, the magnificent arsenal, containing four hundred pieces of cannon, and immense military stores of every description; fifty guns in addition, which were on their route for Hungary, were captured by Massena, before they had got many miles from the capital.*

The capture of Vienna was a prodigious stroke for Napoleon, affording him, as it did, a fortified post on the Danube, amply provided with military stores of every description, and which it was impossible to starve out, for fear of destroying the inhabitants of the metropolis. The French troops took possession of the gates at noon on the 13th, and at that period the positions of the different corps of their army were as follows: The corps of Lannes, with four divisions of cuirassiers of the reserve cavalry, and all the guards, were stationed at Vienna; Massena, between that capital and the Simmering, with his advanced posts occupying the Prater, and watching the banks of the Danube; Davoust, who had come up from Ratisbon, was advancing in echelon along the margin of that river, between Ebersberg and St. Polten, with his headquarters at Melk; Vandamme, with the Wirtemburgers under his orders, guarded the important bridge of Lintz; while Bernadotte, who had at length completed his circular march round Bohemia, with the Saxons† and other troops of the Confederation, about thirty thousand strong, had arrived at Passau, and was advancing to form the reserve of the Grand Army. Lefebvre, with the Bavarians, was fully engaged in a desperate strife in the Tyrol; but, independent of that corps, the emperor had a hundred thousand men concentrated between

The Archduke Maximilian abandons Vienna, which capitulates.

Positions of the different corps of the French armies in the middle of May

* Stat., 217, 224. Pel., ii., 276, 289. Jom., iii., 188. Sav., iv., 67, 68.

† Napoleon was exceedingly displeased at the tardy movements and inefficient condition of the Saxons during this period, and shortly before had addressed the following letter to their general, Bernadotte, on the subject: "The foot artillery of the Saxons is extremely defective. What I want is warlike troops, and experienced generals to direct their movements. The Saxons are incapable of acting by themselves. There is not one of their generals to whom I can venture to intrust a detached operation. With Frenchmen I can rely on energy and experience in the troops, but the Saxons can do nothing. It is indispensable that they should be strengthened and stimulated by the example of troops more warlike than themselves."—FELET, ii., 241.

* Pel., ii., 262, 278. Thib., vii., 255. Jom., iii., 187. Stat., 209, 218. Sav., iv., 65, 69.

Lintz and Vienna, besides a reserve of thirty thousand approaching to re-enforce them from the Upper Danube.*†

While these rapid successes were achieved by the Grand Army, the Archduke Charles, with a tardiness which is to this day inexplicable, was pursuing his route from Bohemia towards the capital. After his retreat from Ratisbon, on the 23d of April, he retired to Horasidowitz, in the southern parts of that province, and was followed by Davoust as far as Straubing, who so far imposed upon the prince as to make him believe that he was pursued by the whole French army. This natural, but unfounded illusion, was attended with the most unfortunate consequences. Conceiving that Hiller would be perfectly adequate to restrain any incursion of a detached corps towards the capital, he made his dispositions so as to draw upon himself the weight of the invading army, deeming that the most effectual way to ward off the danger from the capital. No sooner was he undeceived in this particular, than he despatched the most pressing orders to Hiller to defend his ground as long as possible, so as to give him time to join him by the bridges of Lintz or Mauthausen, and he himself set out by forced marches to join him at one or other of these points. It was to gain time for the effecting of this junction that Hiller, who had not force sufficient to make head at Lintz, maintained so desperate a resistance at Ebersberg. But that action took place on the May 3.

3d of May, and on the evening of the same day the archduke arrived at Budweiss with the bulk of his army, about forty leagues to the northwest of Vienna. At that place he remained for three days: a delay which was the more inexplicable, as he heard, in the course of the 4th, of the forcing of the bridge of Ebersberg, which, in effect, opened the road to the capital to the French army. In truth, he was impressed with the idea that Napoleon would never advance to Vienna while so formidable an army menaced his line of communication; and, accordingly, instead of hastening towards it, he merely pushed on Kollowrath with twenty thousand men towards the bridge of Lintz, and sent orders to the Archduke John to abandon Italy, and make for the same point: vainly hoping that the concentration of such forces in his rear would compel Napoleon to abandon his attack on the capital. Awa-

kened, at length, by the pressing representations of the Archduke Maximilian, to the necessity of instantly providing for the protection of Vienna, he ordered Hiller, who, in obedience to his orders, had passed over, after the combat at Ebersberg, by the bridge of Mauthausen to the northern bank, to advance by forced marches to the metropolis; and, breaking up from Budweiss on the morning of the 8th, he himself followed in the same direction. But it was too late: the repose of three days at that place had given his indefatigable adversary the start of him by a day. Hiller received his orders on the 10th, at two in the morning, and, marching twelve leagues that day, reached, with his advanced guard, Nussdorf, a league from Vienna, before night, but found the town already invested; while the archduke advanced by Twetel towards Krems, hoping still to be in time to throw himself between the invader and the capital. Notwithstanding all their efforts, however, May 13. they were too late. Hiller, indeed, occupied the isles of the Danube on the 11th, the day before the Archduke Maximilian withdrew from the city, but too late to prevent its complete investiture; and the advanced guard of the Archduke Charles reached the northern extremity of the bridges late on the evening of the 15th, when the enemy was already fully established in Vienna. But for the delay at Budweiss, and the order to Hiller to cross May 16. over to the northern bank, the army would have been up in time to combat for the capital; for on the 16th, the junction was fully effected with Hiller a few miles to the north of Vienna, on the left bank of the river;* and as from Budweiss to that place is just six days' march, Prince Charles, who arrived at this first town on the 4th, might have reached the capital with ease on the evening of the 11th, twenty-four hours before it actually surrendered, and long before, if garrisoned by the united forces of Hiller and Maximilian, consisting of thirty thousand good troops, it could possibly have been reduced.

The disasters in Bavaria, and the rapid advance of Napoleon to Vienna, produced an immediate change in the Archduke aspect of affairs in the Italian John in Italy. plains. Cut short in the career of victory, not less by the necessity of making considerable detachments to the right and left, to watch the progress of Marmont in Dalmatia, and aid the insurrection in Tyrol, than by the peremptory orders of the Archduke Charles to draw near to the hereditary states for the defence of the capital, the Archduke John broke up from the position of Caldiero on the Adige. In order to conceal his real intentions, he made, April 29. on the 29th, several attacks on the enemy, but without effecting his object; for Eugene was aware of the events in Bavaria, and had concentrated his troops to resume the offensive the moment that his adversary retired. Orders arrived on that day from Vienna to suspend as little as possible his offensive operations in Italy, but to open a communication with Hiller, who was to fall back to the Enns; and to be prepared to maintain himself in Styria,

* Pel., ii., 286, 288. Jom., iii., 188, 190.

† On entering Vienna, Napoleon addressed the following proclamation to his troops: "Soldiers! In a month after the enemy passed the Inn, on the same day, at the same hour, we entered Vienna. Their landwehrs, their levies *en masse*, their ramparts, created by the impotent rage of the princes of the house of Lorraine, have fallen at the first sight of you. The princes of that house have abandoned their capital, not like soldiers of honour, who yield to circumstances and the reverses of war, but as perjurers haunted by the sense of their own crimes. In flying from Vienna, their orders have been murder and conflagration: like Medea, they have, with their own hands, massacred their own offspring. Soldiers! the people of Vienna, according to the expression of a deputation of the suburbs, abandoned, widowed, shall be the object of our regard. I take its good citizens under my special protection; as to the turbulent and wicked, they shall meet with exemplary justice. Let us exhibit no marks of haughtiness or pride, but regard our triumphs as a proof of the Divine justice, which punishes by our hands the ungrateful and the perjured."—THIBAUD-BAU, vii., 256; *Moniteur*, 29th May, 1809.

* Pel., ii., 253, 258. Jom., iii., 183, 185. Stut., 230, 235.

Carinthia, and Tyrol, as a vast fortress, where he could keep his ground though detached altogether from the other imperial armies. The Archduke John, however, was of an opposite opinion, and, deeming it indispensable to concentrate all the forces of the monarchy in the centre of the hereditary states, he stated his acting differently in a despatch to the Emperor Francis on the 30th of April, and on the 1st of May commenced his retreat by Friuli. Eugene followed the enemy leisurely, and the Austrians reached the Brenta without sustaining any loss, where Prince John was distracted by new orders to the same effect, from the Archduke Charles, dated Cham, 29th April, directing him to co-operate with the intended movement of the general-in-chief, from the north bank of the Danube upon Lintz, so as to threaten the enemy's communications. But the progress of events both on the Danube and the Italian plains disconcerted all these projects, and rendered a retreat upon Vienna, in Prince John's opinion, a matter of necessity.*

Retired behind the Piave, the archduke conceived it practicable to defend the course of that torrent, and thereby both arrest the enemy's progress in that quarter, and maintain a position from which either the projected lateral movement upon Lintz, or the ultimate retreat upon Vienna, might be effected. Like all the other streams which, in the lower parts of Lombardy, descend from the summits of the Alps to the Italian plains, this river flows in the middle of an immense gravelly bed, elevated for the most part above the adjoining meadow, and fordable in all parts except after heavy rains. At that season, however, the melting of the snows in the higher Alps rendered the torrent swollen, and any attempt to cross a hazardous operation. Finding, however, that the spirits of his troops had been most powerfully elevated by the triumphs of the Grand Army, Eugene resolved to attempt the passage by main force; and hoped, by rivalling the brilliant exploit of Napoleon at the passage of the Tagliamento,† to wipe out the disgrace of his defeat at Sacile. The attempt was made on the 8th of May at two points, viz., the fords of Toreillo and St. Nichol, distant two miles from each other, in front of Lovadina. Desaix, with six battalions, crossed at the first of these points at daybreak; but he had no sooner drawn up his troops in square, on the opposite bank, than they were charged with great vigour by three thousand Austrian horse. The imperial cavalry, notwithstanding the most gallant exertions, were unable to break that solid mass of infantry. Had a body of foot-soldiers been at hand to support their attacks, or cannon to break the firm array of the enemy, without doubt their efforts would have proved successful; but the infantry, considerably behind, could not get up in time; and meanwhile, Eugene succeeded in bringing up a large body of French horse, which quickly passed over, and, by charging the imperial cavalry in their turn, relieved the grenadiers, now almost sinking under the fatigues of the continued combat, of the weight which had oppressed them. Wolfskehl, however, who commanded

the Austrian dragoons, turned fiercely on these new assailants: the imperial horsemen, the flower of their army, fought bravely; a terrible combat ensued, in which their gallant commander was slain; and it was not till half their number were stretched on the plain, and an overwhelming superiority of force had rendered farther resistance unavailing, that these intrepid cavaliers fell back upon their infantry, who were slowly advancing to the charge. The foot-soldiers were ridden over and thrown into confusion by the flying dragoons; disorder speedily spread in the columns; several cannon and large quantities of baggage were taken; and it was only by bringing up in person the reserve of grenadiers that the archduke succeeded in arresting the rout. Meanwhile, as the waters of the Piave still continued to rise from the melting of the snows in the mountains, Eugene hastily constructed a bridge of boats, by means of which Macdonald's division was crossed over, which was soon followed by that of Grenier and the rest of the army; Desaix, with his unconquerable square, still keeping his ground in front, and covering the deploying of the columns to the right and left. At two in the afternoon, Eugene, having collected thirty thousand foot and six thousand horse on the left bank, marched forward to attack the enemy; but the archduke was already in full retreat by the great road of Cornegiano, which was effected in excellent order, though not without much bloody fighting; the numerous canals, dikes, and hollow ways of the country affording every facility for arresting the progress of the enemy. In this disastrous affair, in which the Austrian commanders vainly attempted to defend seven leagues of a fordable river, and uselessly sacrificed their noble cavalry, by bringing it into action against infantry without the aid either of foot or cannon, the Archduke John lost nearly six thousand men, fifteen guns, and thirty caissons, while the French had not to deplore the fall of more than four thousand. But, what was far more important, he lost the whole moral influence of the victory of Sacile; and the *prestige* of success, with all its incalculable effects, had passed over to the enemy.*

After this check, the Archduke John retired without any farther struggle, and without being disquieted in his retreat to Villach, in Carinthia. The strong forts which he had constructed at Malborghetto, Tarwis, and Prediel, on the roads to that town, and at Prevald, on that to Laybach, gave him the means of effecting this movement without any molestation. Arrived at Villach, he received intelligence of the fall of Vienna, and, at the same time, a letter of the Archduke Charles, of the 15th of May, directing him to move with all his forces upon Lintz.† Conceiving that these

Retreat of the Austrians from Italy into Hungary. May 17.

† The orders, dated Enzersdorf, 15th of May, 1809, were quite precise: "To march from Villach by Spital and Salzburg, on the Danube; to summon to his aid the corps of Jellachich, and to lend a hand to Kollowrath, who, at the same period, was to be before Lintz, on the left bank of the river, and to act in unison on the rear and communications of Napoleon, now master of Vienna." It was eight days' march from Laybach to Lintz: Prince John, therefore, might have been there by the 24th or 25th, where no one

† *Ante, i.*

orders had now become impracticable, and that the reduction of the capital had totally extinguished the object for which they had been framed, the archduke, unfortunately, thought that he must act for himself, and take council from the disastrous circumstances in which the monarchy was placed. Impressed with these ideas, instead of turning his face towards Lintz, he directed his march to Gratz, and sent orders to Jellachich, who had been detached in the first instance to the northward, towards Salzburg, to open up a communication with Hiller and the corps which might operate towards Lintz: to retreat in the same direction, by following the romantic defiles of the Muhr. There he arrived on the 24th, without any farther engagement, and descended into the plains of Hungary; having abandoned the Tyrol with its heroic defenders, the forts on the crest of the mountains which had covered his own retreat, with their gallant garrisons, and the whole projected operations on the Upper Danube, to their fate.*

The French advanced guard crossed the frontier of the Austrian States on the 14th, on the Ponteba, and speedily, in great strength, surrounded the fort of Malborghetto. When summoned to surrender, the commander replied "that his orders were to defend himself, and not to negotiate;" and the intrepidity of the defence corresponded with such an announcement. The works consisted of a rampart of wood, surmounting a ditch, and enclosing a wooden tower three stories high, all of which were filled with musketeers; and, as the assailants had only been able to bring up guns of a light calibre, they presented, when defended by brave men, very formidable obstacles. By climbing, however, to the summit of the cliffs by which they were overhung, at the same time that several regiments assailed them on the lower side, the besiegers succeeded in entirely surrounding the enemy, and exposing them to a plunging fire, to which they could make no adequate reply, from the heads of their adversaries being only seen behind the rocks. Still, however, the brave Imperialists refused to surrender; their heroic commander, Henzel, fell desperately wounded while exclaiming, "Courage, my comrades!" Rauch, who succeeded him in the command, defended himself like a lion. But nothing could, in the end, withstand the impetuosity of the French. Irritated by the prolonged resistance and firm countenance of the enemy, they rushed headlong against the rampart, and crowding up on each other's shoulders, and mounting on the dead bodies which encumbered the ditch, at length succeeded in forcing their way in at the embrasures. Still the central tower, from its three stages, vomited forth a furious and incessant fire; but the external rampart being carried, its gates were at last forced; and it was only by the noble efforts of Eugene and his officers, who were penetrated with admiration at the

heroic defence of their antagonists, that the lives of the few survivors of this desperate conflict were spared.*

This brilliant success proved decisive of the fate of all these mountain fortifications. The Col di Tarwis, already the theatre of glorious strife in 1797, was defended by a long rampart running the whole way across the summit of the pass, from the mountain of Flitschel to that of Burgeburg, strengthened by sixteen redoubts. It was attacked at the same time as the forts of Malborghetto, and Guilay successfully defended himself for two days against very superior forces; but the fall of the forts enabled the enemy to turn this strong line and take the defenders in rear, which Eugene was already preparing to do; so that the archduke, on the 16th, sent orders to Guilay to evacuate his post, and effect his retreat in the night down the valley of the Save. This order was promptly obeyed; but at daylight discovered the evacuation, and pressed on in pursuit. They overtook the retiring Austrians in front of Weissinfels, and put them to the rout, taking eighteen guns and two thousand prisoners. Another mountain fort, on the Prediel, blocked up the road from Gorizia to Tarwis, and so arrested the march of Serras with the centre of the French army. Its garrison was only three hundred men, with eight pieces of cannon; but they were commanded by a hero, Hermann, who had inspired his handful of followers with the resolution of the defenders of Thermopylæ. When summoned to surrender, and informed of the retreat of the archduke and the fall of Malborghetto, he replied, nothing daunted, that "he was resolved to lay down his life for his country." Nor did his defence derogate from these heroic sentiments. Though assailed by forces twenty times as numerous as his own, he persevered in the most desperate resistance, made good the external rampart as long as a man was left upon it who could hold a bayonet, and, when its defenders were all maimed or slain, fell back, alone, to the blockhouse in the centre, and, when it was set on fire, sallied forth at the head of a band of devoted followers, and fell, gloriously pierced by innumerable wounds.† Macdonald, who, with the right wing, was to advance farther to the south across the Isonzo and the mountains of Prevald, encountered a less serious opposition. On the 14th he effected the passage of the swollen torrent of the Isonzo near Gorizia, and at that place made himself master of the battering-train destined for the siege of Palmanova. Two thousand men were stationed in the forts of the Prevald, constructed on the same plan of those of Malborghetto, and, like them, commanding entirely the summit of the pass. Several assaults were in the first instance repulsed by the garrison; but, when the besiegers' artillery was brought up, and the occupation of the adjacent heights exposed them

* Pel., iii., 224, 230. Erz. Joan. Feldz., 104, 111. Jom. iii., 228.

† The Archduke John was so impressed with the gallantry of the Austrian commander on this occasion, that he wrote a letter to Hermann's father, consoling him, as he best could, for the loss of so heroic a son.—ERZ. JOHANNES FELDZUG, 129.

remained but Bernadotte with the Saxons. Of what incalculable importance would such a concentration of 50,000 men have been on the direct line of Napoleon's communications immediately after his defeat at Aspern, which took place on the 22d!—See PELER, iii., 221, 222.

* Pel., iii., 214, 223. Jom., iii., 227, 229. Erz. Joan. Feldz., 124, 125.

without resource to a plunging fire, against which their fortifications were no protection, they deemed farther resistance useless, and capitulated with the whole artillery at their disposal, consisting of fifteen pieces.*

Meanwhile Trieste, which was unarmed, and incapable of resistance, fell an easy prey to General Schilt, with the light troops of Macdonald's division; and the artillery taken at Gorizia and the Prevald was forthwith forwarded to that important seaport, to place it in a posture of defence against the English cruisers, who were then blockading some Russian ships of war. Rapidly following up his advantages, Macdonald, immediately after making himself master of the Prevald, turned towards Laybach, where an entrenched camp, armed with fifty pieces of cannon, commanding the approach to the capital of Carniola, was garrisoned by five thousand landwehr. Joining conduct to vigour, the French general, at the same time that he approached the intrenchments with the bulk of his forces in front, detached Broussier with two brigades, which threatened to cut off their line of retreat towards Croatia, while several squadrons on the left bank of the Save made preparations for crossing that river, and assailing them on the other side. Alarmed at the simultaneous appearance of the enemy's forces in so many different directions, and deeming farther resistance useless, now that Vienna had surrendered, the commander of the intrenched camp laid down his arms, with nearly five thousand militia and sixty pieces of cannon. This important success ensured the submission of all Carniola, and left Macdonald at liberty to follow the forward movement of the victory towards Vienna; while the occupation of Trieste, and the passes leading to it, opened up a communication with Marmont in Dalmatia, who was already preparing to effect the junction, and concur in the operations of the Grand Army. By these successes, the whole frontier fortifications of the hereditary states were forced, with the loss to the Austrians of ten thousand men, and ninety pieces of cannon; but they were dearly purchased, for at Malborghetto, Tarwis, and Prediel, nearly half that number of French had fallen.†

These disasters, however, considerable as they proved, were not the only nor the greatest which befell the retreating army. Jellachich, who had advanced towards Salzburg, in order to prepare the way for the prescribed lateral movement of the Archduke John towards Lintz, having received counter orders from that prince to descend by the valley of the Muhr towards Gratz, in order to form a junction with the bulk of the Italian army, encountered, at the bridge of St. Michel, Serras, with his powerful division, who, after forcing the barrier of the Prevel, was descending the narrow defiles of the Muhr, on the road to Leoben. The Austrian general was following the lateral vale of Lessing, which unites at right angles with that of the Muhr at St. Michel; and

the two divisions came suddenly and unexpectedly in contact in that romantic spot. The Imperialists at first made a vigorous resistance, and Jellachich, arranging his troops on the road at the foot of the rocks on each side of the bridge, kept up so heavy a fire, that for two hours all the French columns which presented themselves were swept away. Attracted to the front by the cannonade, the viceroy came up, and immediately detached several battalions on the road to Mautern, on the other side of the Muhr, who speedily scaled the mountains in the rear of the Imperialists, and commenced a plunging fire upon them from behind. Panic-struck by this unexpected apparition, which they conceived was a second army come to complete their destruction, the Austrians broke and fled: some by the road of St. Michel, where they were pursued without mercy, and, for the most part, either cut down or made prisoners; some by the valley of Lessing, where they fell into the hands of a French brigade under General Valentin. Nearly two thousand Imperialists were killed or wounded, and above three thousand made prisoners, in this disastrous affair; and such was the terror now inspired by the French armies, and such the depression arising from the fall of their capital, and their multiplied defeats, that on the road from Salzburg to Leoben four hundred recruits, and twice that number of militia, laid down their arms to a captain, followed by a single dragoon.*

Jellachich, having lost all his baggage and cannon, with difficulty escaped at the head of two thousand men, by cross mountain paths, to Gratz, where his arrival, and the woful condition of his troops, excited such consternation, that the archduke forthwith set out in the direction of Kormond, in Hungary, abandoning all attempt to bar access to the capital to the invader. Relieved by this retreat of all farther molestation in his advance, Eugene moved on rapidly in the footsteps trod twelve years before by Napoleon, to Judenburg and Leoben; and next day, amid shouts of joy from both armies, his advanced posts fell in with the patriots of Lauriston, who belonged to the Grand Army, on the Simmering; and on the day following the junction of the two armies was fully effected, while the army of the Archduke John, driven to a circuitous and eccentric retreat into Hungary, was entirely lost for the present to the forces of the monarchy.†

The eyes of all Europe were now fixed with absorbing interest on the shores of the Danube, near Vienna, when a hundred thousand men on either shore stood prepared for mortal, and, to all appearances, decisive conflict. Defeat to either party seemed fraught with irreparable ruin; for, if the Austrians had no other army or reserves to fall back upon if the archduke's army were defeated in the heart of the monarchy, the French, on their side, had a disastrous retreat to the Rhine to anticipate if their arms should prove unsuccessful: Prussia and the north of Germany, it was well

known, would start up the moment that a serious reverse befell their eagles; and, though the contest took place under the walls of the Austrian capital, it was, in reality, one of life and death for the French Empire. Nor were the chances so unequal as they might at first sight appear; for, though the Austrian armies had been driven back, separated from each other, and repeatedly defeated, yet their physical strength was not reduced in a much greater proportion than that of their antagonists; and though their capital was taken, still this had been accomplished only by a bold irruption, which exposed the invader to nearly the same peril as the invaded. Every one felt, what Napoleon at the time admitted to be true, that a single defeat on the Danube would soon bring the Imperialists to the Rhine;* and, though the Archduke Charles could not lay claim to the transcendent military talents of his opponent, yet he was second to none of the other generals of Europe in scientific ability. And it was no small military skill which, after so desperate a shock on the plains of Bavaria, could still array a hundred thousand undiscouraged warriors for the defence of their country on the banks of the Danube.†

During the week which immediately followed the occupation of Vienna, the emperor, being well aware of the crisis which had arrived, was indefatigable in his efforts to station his troops in such a manner in echelon, along his line of communication, as to secure his rear from insult; while, at the same time, innumerable despatches in every direction provided for the supplies of the army. Titles, decorations, ribands, crosses of honour, and pensions, were liberally distributed among the soldiers; splendid reviews reanimated the spirits of the men, which the fatigues of the campaign had somewhat depressed, while confident announcements in the bulletins predicted the speedy destruction of the Austrian monarchy. He had now assembled around Vienna the whole corps of Massena and Lannes, the Imperial Guard and reserve cavalry under Bessières; and though their strength had been much diminished by the losses of the campaign, they could still, after deducting the sick and wounded, bring above eighty thousand veteran troops into the field. Davoust at St. Polten, and Bernadotte at Ebersberg and Enns, kept up his communications, while the viceroy was hourly expected with forty thousand from Italy. Supported by the battlements of Vienna, such a force was beyond the reach of attack from any force the Imperialists could bring against them; but it was neither consistent with the emperor's principles of war nor political policy to remain shut up behind walls while the enemy kept the field, and was accumulating the forces of the monarchy around him, and he resolved, therefore, to attempt, by main force, the passage of the river.‡

* In the council of war, held after the battle of Aspern, when some voices had been expressed for retreating, Napoleon said, "If we retreat, we shall admit in the face of all Europe that we have been defeated. Where shall we retire to? The Traun, the Inn, or the Lech? No! we must fly at once to the Rhine; for the allies, whom victory or fortune has given us, will all turn against our standards the moment we acknowledge a reverse."—PELET, iii., 331.

† Pel., iii., 250. Stat., 160, 162.

‡ Jom., iii., 189, 190. Pel., iii., 251, 255, 259. Thib., vii., 277.

The Danube, which, till it comes within a few leagues of Vienna, flows in a narrow channel, there swells into a wide expanse and spreads over the plain, embracing several islands in its course. Some of these are extensive and richly cultivated, but the greater part are smaller and covered with wood. The island of Prater, with its beautiful umbrageous avenues and much-loved woody recesses; and that of Lobau, at a greater distance down the river, and varied with enclosures and cultivation, are the most considerable. The latter is two miles and a half in length and a mile and three quarters in breadth, covered with rich meadows, swampy thickets, and verdant copsewoods; it has been immortalized in history from the memorable events of which it soon became the theatre. By far the most favourable point for forcing a passage from the right bank is at Nussdorf, half a league above Vienna. There the principal branch of the Danube, a hundred and eighty toises in breadth, flows in a deep and impetuous channel, separated from a smaller branch, fifty toises broad, by an island, which would serve as an advantageous support for assembling and putting under cover the first troops employed in the operation. Another point for attempting the same enterprise was in front of Ebersdorf, across the great island of Lobau. This island is separated from the right bank by another isle about a mile in length and half that distance in breadth, while several smaller islets are scattered in the principal channel of the river. Thus an army attempting the passage at that point has four branches of the Danube to cross, each of which may be considered as a separate river. There is, first, the channel separating the right bank from the lesser island, which is two hundred and forty toises broad; then the main body of the stream, flowing in a deep current a hundred and seventy toises in breadth, which separates it from Lobau, with a small island in its course dividing this main stream into two parts; finally, the northern branch, which lies between the isle of Lobau and the banks of the Marchfeld on the left of the river; it is seventy toises in breadth, and in like manner broken in its course by several smaller islands. Thus, at Ebersdorf many more bridges required to be constructed than at Nussdorf, and a military road across the islands was necessary to connect them together; but these disadvantages were more than compensated by the diminished weight and impetuosity of the stream, in consequence of being separated into so many channels, and the solidity given to the lengthened structure by having such considerable abutments to support it at different points.*

After mature deliberation, Napoleon resolved to attempt the passage at the same time at both points; Lannes was charged with the undertaking at Nussdorf, Massena at Lobau. This double set of operations, it was hoped, would distract the attention of the enemy, and enable the emperor to select, in the end, that one for the real passage where the least difficulties were to be overcome.

Napoleon's preparations to effect the passage. Failure at Nussdorf. May 13.

* Personal observation. Stat., 202, 210. Pel., ii., 259, 267. Jom., ii., 192, 194.

Description of the islands of the Danube near Vienna, and the different channels of the river.

Lannes, in the first instance, attempted to surprise a passage at Nussdorf, and pushed forward six hundred men to the island of Schwarze Lacken, which lies, as already mentioned, near the northern bank at that point; but this advanced guard was speedily beset by superior forces which General Hiller despatched from his side of the river, and, before any fresh succours could arrive from the southern shore, vigorously assailed and compelled to capitulate. This check, joined to the obvious difficulty of establishing such a force as could maintain itself in an island so near the north bank, and separated by so wide and impetuous a current from the southern,* induced the emperor to relinquish all serious intentions of effecting the passage there, and he, in consequence, bent all his attention to the island of Lobau, where Massena was charged with the enterprise.

Indefatigable were the efforts made by all ranks, from Napoleon to the humblest soldier, for the prosecution of this great work: the inexhaustible arsenal of Vienna supplied in abundance all the stores and imple-

ments necessary for its success; and the prudent foresight of the emperor had already provided a flotilla of boats, drawn from many different quarters, and transported by land carriage to the Danube, which were easily converted into the materials of a bridge. Five days were consumed in these preparations: on the sixth,

May 19. everything being in readiness, the enterprise was commenced. So anxious was the emperor for the success of this undertaking, that he stationed himself on the southern bank as the troops were embarking, minutely examined and assigned to each the place they were to occupy in the vessel, superintended the distribution of cartridges to the soldiers, and addressed a few words to almost every individual man. With such secrecy had Massena's preparations been conducted, in the narrow channel of the Danube, near Vienna, and behind the leafy screen of the Prater, that no danger was anticipated by the Austrians in that quarter; and although the posts in the island of Lobau were daily relieved, they had not been particularly strengthened on that occasion.†

At ten at night on the 19th, all things being in readiness, the first boats pulled off the river. from the shore, and, steering round the May 19. intermediate islands, made straight for that of Lobau, where the Imperialists were first apprized of their approach by the keels of the boats striking on the shore. Instantly leaping into the water, the tirailleurs rushed forward into the thickets, and, being constantly fed by re-enforcements from the rear, soon expelled the Austrians from the isle. Masses of infantry were immediately after passed over, who soon secured the lodgment, and rendered this important post safe from attack. At the same time, other detachments in like manner took possession of the intermediate isles, and the material points of the passage being thus secured, all hands were instantly set to the commencement of the bridges which were to connect them with the northern bank. The depth

and rapidity of the current at that period, when the melting of the Alpine snows had already commenced, presented very formidable difficulties, but all were overcome by the ardour and activity of the French engineers. Sixty-eight large boats had been collected, and nine huge rafts; they made the bridge of the most solid materials as far as Lobau, but from that island to the opposite shore of the Marchfeld it was necessary to construct it of pontoons. With such vigour, however, was the enterprise conducted, that by noon on the following day the whole was completed, and the leading columns of Massena's corps instantly began to defile over in great strength to the opposite bank.*

While this important operation was in progress in the neighbourhood of Vienna, the Archduke Charles, relying on the prescribed co-operation of the Archduke John, with the army of Italy, through the

Operations of the archduke on the Upper Danube, at Linz and Krems.

Tyrolean Mountains, had made a serious attack on the bridge of Linz, in the upper part of the Danube. Kollowrath, at May 17. the head of twenty-five thousand men, there commenced an attack on the Wirtembergers under Vandamme, to whom that communication was intrusted. Profiting by their superiority of force, the Imperialists, in the first instance, obtained considerable advantages, and that important post was on the point of falling into the hands of the enemy, when Bernadotte came up with the Saxons, nearly thirty thousand strong. The combat was no longer equal, and Kollowrath, finding himself greatly outnumbered, and having received no advices of the approach of the Archduke John from the direction of Salzburg, was compelled to desist from his enterprise, and sustained a loss of several hundred men and six guns in his retreat.

May 19. Two days afterward, preparations were made for crossing the river by the Austrians at Krems, which gave serious disquiet to Napoleon, who ordered up in haste the whole corps of Davoust, which was stationed in echelon at Melk, and along the road from thence by St. Polten to Vienna. But these demonstrations against his rear, so far from diverting the emperor from his original design of crossing at Lobau, and giving battle to the archduke on the northern bank, only made him more intent upon the immediate prosecution of his enterprise, by showing that the enemy's army was, in part at least, removed from the scene of action, and bringing, at the same time, vividly before his mind the dangers of his situation, with a long line of communication beset by so many dangers in his rear, and the necessity of instantly bringing the war to a conclusion by a decisive victory under the walls of Vienna. He pressed the march of his troops across the bridge of Lobau with the utmost anxiety, they defiled on the 20th, and the whole of the succeeding night, without intermission; and by daybreak all the 21st forty thousand men were already assembled in battle array on the northern side.†

Meanwhile, the Archduke Charles, with the

The archduke resolves to attack the French, who had crossed. great body of his forces, lay on the woody heights of the Bisamberg; the fires of his bivouacs illuminated at night the whole of that quarter of the heavens, and already, by revealing the magnitude of the enemy's force, inspired the French soldiers with gloomy presentiments as to the issue of the contest which was approaching. From this elevated position the plain beyond Vienna towards the Simmering appeared to be enveloped in clouds of dust; but as they at intervals cleared away, the glitter of bayonets and helmets in the sun's rays, even at that distance, all following one direction, indicated a grand movement towards Kaiser-Ebersdorf. In effect, having perceived from that lofty ridge, by means of telescopes, both the preparations made for crossing at Lobau, and the continued march of Davoust's corps along the southern bank of the river, from Melk towards the capital, the archduke conceived, with reason, that a favourable opportunity had now occurred of falling with his concentrated forces upon half the French army before the remainder crossed over, and possibly reducing it to extremities, even in sight of the other portion on the opposite bank, and while yet the columns in rear were only wending their way in toilsome march towards the capital. Impressed with these ideas, orders were sent to the advanced posts on the edge of the Marchfield towards Lobau to fall back; after a merely nominal resistance, the cavalry, which had been all advanced to the edge of the river, were recalled, while the whole strength of the army was collected on the Bisamberg, concealed from the enemy, but ready to fall with its accumulated masses upon the first corps which should be transported across. At the same time, instructions were sent to Kollowrath, Nordman, and the officers in command farther up the river, to collect a quantity of boats, to be laden with heavy materials and combustibles, and, when the proper season arrived, detached, to be borne down by the force of the swollen current against the enemy's bridges. In truth, it was evident that Napoleon's overweening confidence in his good fortune had at last brought him into a situation full of danger, and that, with fatal rashness, he had exposed himself to the most perilous chance in war, that of being attacked by greatly superior forces in an open plain, with a great river traversed by a single bridge, recently constructed and liable to destruction, in his rear.*

Anxiety for the great events which were approaching caused many a noble heart to throb during the night in the Austrian host; and already, as the morning dawned, thousands of aching eyes were turned in the direction of Lobau and the Marchfield, where, even at that early hour, a great accumulation of force was visible. The march of troops across the bridge continued incessant, and all the reports from the outposts announced that the lines in their front were rapidly widening and extending. With exulting hearts, the army received orders at sunrise to stand to arms; the advantages of

their situation were obvious even to the meanest sentinel: the noble array which was pouring across the bridges before them, into the plains at their feet, seemed a devoted host, blindly rushing upon destruction. The vast plain of the Marchfield, stretching from the foot of the Bisamberg to the margin of the Danube, lay spread like a carpet before the front of the line, and appeared, from the absence of every obstruction, to be the destined theatre of some great event. The officers around him urged the archduke to commence the attack early in the morning, and while as yet the whole of Massena's corps was not passed over; but when the enemy was making a false movement was not the moment to interrupt or warn him of his danger. Instead of acceding to their suggestions, that able commander ordered the arms to be piled and the troops to dine: following thus the maxim of the great generals of antiquity, that, even with the bravest troops, it is of the last importance to commence a battle with the strength of the men recently recruited by food. At twelve o'clock, the movement of the enemy being sufficiently pronounced, and retreat in presence of so great a host impossible, the signal to advance was given. The men received it with loud shouts and enthusiastic acclamations: joyful war-songs, accompanied by Turkish music, resounded through the air; long-continued *vinats* arose on all sides, as the Archduke Charles, the saviour of Germany, rode along the lines of the second column, at whose head he had taken his station. Every breast panted with anxious desire and deserved confidence for the decisive moment, and the finest weather favoured the awful scene. The circumstances had spread a noble ardour through every heart. Their much-loved capital, the abode of their emperor, was in sight, polluted by the eagles of the stranger; their homes were the prize of victory; before them was a splendid battle-field, where they would combat for their sovereign, their liberty, and their country, under the eyes of their wives, their parents, their children. Descending from their elevated encampment, horse, foot, and cannon rapidly and eagerly pressed forward towards the enemy;* and soon, to those who yet lingered on the Bisamberg, but a small space of clear green intervened between the volumes of dust which enveloped the extremity of the bridge of Lobau, and the moving clouds which marked the advance of the German host.

Midway between the villages of ASPERN and ESSLING, each situated at the distance of half a mile from the bank of the Danube, the French bridge opened upon the vast plain of the Marchfield. These villages, therefore, formed the bastions on either flank of Napoleon's army, which extended in line across the open space, a mile broad, which lay between them. Built of stone houses, most of them two stories in height, and surrounded by enclosures and garden-walls of the same durable materials, both offered valuable *points d'appui* to the bridges, under cover of which, it was hoped, Massena

* Archduke Charles's Official Account of Aspern, Ann. Reg., 1809. Chron., 382, 383. Stat., 220, 229. Pel., ii., 275, 277.

* Archduke Charles's Official Account of Aspern, Ann. Reg., 1809, 382. Chron. Stat., 230, 235. Pel., ii., 275, 276.

and Bessières would be able to maintain themselves till the remainder of the army could be brought over to their support. Essling had a large stone granary, three stories in height, furnished with loopholes, capable of containing several hundred men; while Aspern, a long, straggling village, above two miles in length, was strengthened, like Eylau, by a churchyard surrounded by a strong wall. A double line of trenches, intended to draw off the water, extended between these two natural bastions, and served as a wet ditch, which afforded every possible security to the troops debouching from the island of Lobau. The whole ground was perfectly level, gently sloping upward like a vast natural glacis, towards Raschdorf; white villages alone, bosomed in tufted trees, rising above the tender green of the plain, which was covered with rich crops at that early season, broke the uniformity of the expanse, among which, on the right, the glittering pinnacles of Breitenlee and the massy tower of Neusiedel were conspicuous;* while on the left, the woody heights of the Bisamberg, resplendent with watch-fires, shut in the scene. The widespread light of the bivouacs along the broad expanse of the horizon, revealed the magnitude of the force to which they were opposed, and inspired an anxious disquietude through the French army.

Uneasy at the situation of the troops which Napoleon is surprised, but resolves to give battle. had crossed over, Napoleon was on horseback by break of day, and in person rode forward to the outposts to satisfy himself as to the amount of the enemy's force by whom he was likely to be assailed. Lannes, with his usual impetuosity, maintained that there was nothing but a curtain of ten thousand men in front, and that they should be attacked without delay; but Massena, instructed by long experience, and who had surveyed the fires of the enemy from the steeple of Aspern the preceding night, gave a decided opinion that the whole Austrian army was at hand. Napoleon saw too good reason to adhere to the latter opinion, and, instantly appreciating the magnitude of the danger, rode back to the bridge to hasten the passage of the troops. Orders were despatched in every direction to assemble the forces on the right bank: the corps of Lannes was already beginning to cross over; that of Davoust, which had arrived at Vienna the evening before, was ordered up with all imaginable expedition; the cuirassiers, the guards, the reserve cavalry, the park of artillery, all received directions to hasten to the bridges. But it was too late: their narrow breadth would only permit a very limited number of soldiers to march abreast upon them; the cavalry and artillery could only be got across with considerable difficulty;† and the one over the main branch of the river was so much damaged by the rise and impetuosity of the stream, that by four o'clock in the afternoon it was almost impassable. Meanwhile the Austrian army, in great strength, eighty thousand strong, of whom fourteen thousand were magnificent cavalry, with two hun-

dred and eighty-eight pieces of cannon, was already upon them.

The Imperialists advanced in five massy columns, preceded by a strong cloud of horse, which concealed their direction and probable points of attack from the enemy. The first, under Hiller, next the Danube, moved by the meadows on the northern bank of that river direct upon Aspern; the second, under Bellegarde, with the generalissimo by his side, advanced upon Leopoldau, and also directed its steps towards the same village; the third, led by Hohenzollern, moved by Breitenlee also upon Aspern; the fourth, commanded by Rosenberg, was to advance by Raschdorf towards Essling; the fifth, also directed by Rosenberg, was to turn the right flank of the enemy by Enzersdorf, and co-operate in the attack upon Essling; the cavalry, all massed together, was to move over the open country between Raschdorf and Breitenlee, so as to assist the head of any column which might find itself assailed by the enemy's horse. No less than eleven of the Austrian batteries were of position, which, as they drew near to the enemy's lines, sent a destructive storm of roundshot through their ranks. The French were far from having an equal force at their disposal, and they were particularly inferior in the number and weight of their artillery; but, by two o'clock in the afternoon, when the opposing hosts came into collision, seven divisions* of native troops,† besides the guards of Wirtemberg, Hesse Darmstadt, and Baden, in all fifty thousand men, were in a line; and from the known character of the soldiers, as well as the firmness of their leaders, a desperate resistance was to be anticipated. Massena, with two strong divisions, was around Aspern; Lannes, with a third, was in Essling; the intermediate space was occupied by the remainder of Massena's corps, the Imperial Guard, and German auxiliaries, with the formidable cuirassiers of Bessières glittering in their front.

Aspern, into which Massena had not had time to throw an adequate garrison, was, in the first instance, carried by the advanced guard of Hiller under Guilay; but the French marshal having quickly attacked it with the whole division of Molitor, it was not only retaken, but the Imperialists pursued to a considerable distance to the northward; till the broad and deep columns of Hiller, Bellegarde, and Hohenzollern advancing to their support, warned the skilful French commander of the necessity of withdrawing all his troops to the defence of the village itself. The prospect which now presented itself was capable of daunting the most intrepid hearts. On the left, three broad and deep columns were seen con-

Desperate conflict at Aspern, which is at length carried by the Austrians.

* Archduke Charles's Account of Aspern, Ann. Reg., 1809, 384, 385. Pel., ii., 291, 295. Stat., 231, 235. Jom., iii., 208.

† Viz., Molitor's, Le Grand, Boudet, Ferrand, Nansouty, Espagne, and Lasalle. The first four were infantry, the last cavalry of the reserve and cuirassiers. Their united strength, with the German auxiliaries, must have been at least fifty thousand men, as Molitor's and Boudet's were twelve thousand each. The French, however, will only admit that they had thirty thousand native troops in action on the first day.—See ARCHDUKE CHARLES'S *Official Account of the Battle of Aspern*, Ann. Reg., 384; App. to Chron., 384; and PELET, ii., 287.

* Personal observation. Archduke Charles's Account, Ann. Reg., 1809, 383. Pel., ii., 283, 287.

† Nap. in Month., ii., 77. Archduke Charles's Account, Ann. Reg., 1809, 383, 384. Chron. Pel., ii., 283, 287. Stat., 240, 247. Jom., iii., 200.

verging towards Aspern; at a greater distance on the right, vast clouds of dust announced that other masses were threatening Essling; while along the whole front a formidable array of artillery, vomiting forth fire and smoke, steadily advanced, rendering more awful the scene by the obscurity in which it involved all behind its traces. But this suspense was of short duration, and in a few minutes the Austrian battalions of Hiller, with loud shouts, advanced to the attack. If, however, the assault was impetuous, the defence was not less heroic; and never had the experienced skill and invincible tenacity of Marshal Massena been so conspicuously displayed. Stationed in the cemetery of Aspern, under the boughs of the great trees which overshadow the church, he calmly awaited the result, directing the movements of his troops, and giving his orders to support the points which most required it, with the coolness and precision of veteran courage, while the crash of the boughs above his head, and the incessant clatter of grapeshot on the steeple, told how near the enemy's batteries had approached. Both parties were aware that the fate of the day mainly depended on the possession of this important point, and incredible efforts were made on either side to attain it. For several hours the murderous conflict continued: fresh troops were brought up on both parts to supply the place of those who had fallen, or were exhausted in the strife; the Austrian infantry, the Hungarian grenadiers, the volunteers of Vienna, rivalled each other in courage and perseverance in the assault, while the different divisions of Massena's corps nobly in succession sustained the defence. Every street, every house, every garden of the village, became the theatre of mortal combat: the shouts of transient success, the cries of despair, were heard alternately from both parties; an incessant shower of bombs and cannon-balls from the concentric batteries of the Imperialists spread death on all sides, alike among friend and foe, while great part of the village took fire, and the flames of the burning houses afforded, as night approached, a ghastly light wherewith to continue the work of destruction, and illuminated the whole field of battle. A desperate conflict at the same time continued in the marshy plain between Aspern and the river, where the wet ditches leading to the Danube athwart their front, and the thickets of alder bushes, gave the French the advantages of a natural fortification. For long the superior numbers of the Austrians impeded each other, as the position of the French centre prevented them from attacking the village on more sides than one; but at length, at eleven at night, their line having gained ground in that quarter, a combined attack was made by Hiller in front, and Vacquant, commanding part of Bellegarde's corps, which had just repulsed a formidable charge of cavalry in flank; and in spite of the most heroic efforts on the part of Massena, Molitor, and his officers, the village was carried amid deafening shouts, which were distinctly heard above the roar of the artillery along the whole line. The French marshal made a gallant effort to regain his ground, and succeeded with Le Grand's division, which had succeeded Molitor's in their tremendous strife, in wresting some of the

houses from the enemy; but the churchyard, and the greater part of this bloodstained village, remained through the night in the hands of the Imperialists.*

While this tremendous struggle was going on in Aspern, the central space between it and Essling was almost denuded of infantry; the numerous and formidable Austrian batteries in that quarter being chiefly guarded by cavalry, with Hohenzollern's infantry in their rear, while the splendid horsemen of the French Guard concealed on the opposite side the weakness of their infantry in the centre of the line. So severely, however, were his troops in both villages, and even in the most distant reserves, galled by the sustained and incessant discharge of this tremendous array of guns, that Napoleon ordered a grand charge of cavalry in his centre to wrest them from the enemy. Bessières first sent forward the light horse of the guard: they made repeated charges, but were unable to withstand the terrible discharges of grape which were vomited forth by the Austrian batteries. Upon their repulse, the French marshal ordered the cuirassiers of the guard to charge. These gallant horsemen, cased in shining armour, whose weight the English felt afterward so severely at Waterloo, advanced at the gallop, shaking their sabres above their heads, and making the air resound with cries of "*Vive l'Empereur!*" So swift was the onset, so vehement the attack, that the Imperialists, who saw at once the danger of the artillery, had barely time to withdraw the guns, and throw the foot-soldiers in their rear into squares, when the clattering tempest was upon them. In vain, however, Bessières, D'Espagne, and Lasalle, at the head of these indomitable cavaliers, swept round the now insulated foot, routed the Austrian cavalry of the reserve under Lichtenstein, which was brought up to oppose them, and enveloping the infantry formed in squares of battalions on all sides, summoned them in the pride of irresistible strength to surrender. Cut off from all other support, the brave Hungarians stood firm, back to back, in their squares, and kept up so vigorous and so sustained a fire on all sides, that, after having half their numbers, including the gallant D'Espagne, stretched on the plain,† the French cuirassiers were obliged, shattered and defeated, to retire to their own lines, and both parties at this point slept upon the field of battle.

Rosenberg's columns followed the course prescribed to them; but as the fifth corps, which was to make the circuit towards Enzersdorf and attack Essling on the extreme flank, necessarily required more time for its movement than the fourth, which advanced direct by Raschdorf upon the same point, the latter retarded their march, and the combined attack did not take place till five in the afternoon. Enzersdorf was evacuated by the enemy upon the approach of the Imperialists; and Lannes, at the head only of a single division, was threatened with an attack by forces more than double

Grand charge of the French cavalry in the centre.

Bloody attack on Essling, which proves unsuccessful.

* Archduke Charles's Account, Ann. Reg., 1809, 385, 386. Stat., 230, 239. Pel., ii., 295, 305. Jom., iii., 201, 202.

† Pel., ii., 298, 302. Archduke Charles's Account, Ann. Reg., 1809, 387. Jom., iii., 201.

his own, both in front and flank. The fourth column, which attacked the village on the western side, was vigorously charged in flank in its advance by a large body of French horse, detached by Bessières from the centre of the line; and the necessity of forming squares to resist these attacks, retarded considerably the assault on that side. At length, however, the unsuccessful charge on the Austrian central batteries having thrown back the French cuirassiers in that quarter, and the reserve dragoons of Lichtenstein having been re-formed and brought up in great strength to the support of the centre, the archduke ordered a general advance of the whole line, at the same time that a combined attack of Rosenberg's two columns, now perfectly able to co-operate, was made on Essling. In spite of the utmost efforts of Napoleon, the centre of the Austrians sensibly gained ground, and it was only by the most devoted gallantry on the part of the French cuirassiers, who again and again, though with diminished numbers, renewed the combat, that he was able to prevent that part of his line from being entirely broken through. The violence of the flanking fire of grape and musketry, however, which issued from Essling, was such as to arrest the Imperialists when they came abreast of that village; and although many assaults were made upon it by Rosenberg's columns, and it was repeatedly set on fire by the Austrians' shells, yet such was the intrepid resistance of Lannes, with his heroic division, who defended with invincible obstinacy every house and every garden, that all the assailants could do was to drive them entirely within its walls; and, when darkness suspended the combat, it was still in the hands of the French.*

The night which followed this desperate conflict was spent with very different feelings in the two armies. On both sides, indeed, the most strenuous efforts were made to repair the losses which had been sustained, and prepare for the conflict on the morrow; but it was with very different emotions that the soldiers' breasts were agitated in the opposite hosts. On the side of the French, to the proud confidence of victory had succeeded the chill of disappointment, the anticipation of disaster; the wonted shouts of the men were no longer heard; a dark feeling of anxiety oppressed every breast; the brilliant meteor of the Empire seemed about to be extinguished in blood. They could not conceal from themselves that they had been worsted in the preceding day's fight. Aspern was lost; Essling was surrounded; the line in the centre had been forced back; the enemy slept among the dead bodies of the French, while the multitude of slain, even in the farthest reserves of their own lines, showed how completely the enemy's batteries had reached every part of their position. The Austrians, on the other hand, were justly elated by their unwonted and glorious success: for the first time, Napoleon had sustained a decided defeat in the field; his best troops had been baffled in a pitched battle; his position was critical beyond example, and the well-known hazard of the bridges diffused the hope

that, on the morrow, a decisive victory would rescue this country from the oppressor, and at one blow work out the deliverance of Germany. But, though anxiety chilled the hopes, it noways daunted the courage of the French. Stretched amid the dead bodies of their comrades, they sternly resolved to combat to the last man on the morrow, for their beloved emperor and the glory of their country. Sleep, induced by extraordinary fatigue, soon closed the eyes of the soldiers: the sentinels of either host were within a few yards of each other; Napoleon lay down in his cloak on the sand of the Danube, within half a mile of the Austrian batteries. But no rest was taken by the chiefs of either army: both made the most strenuous efforts to improve their chances of success for the following day. During the night, or early in the morning, the infantry of the Imperial Guard, the corps of Lannes, and the troops of Oudinot, were, with much difficulty, got across the bridges, so as to give Napoleon, even after all the losses of the preceding day, full seventy thousand men in line; while Davoust, with thirty thousand more,* was just commencing the passage of the bridges. The archduke, on his side, brought up the reserve, consisting of the grenadier corps of the Prince of Reuss, from the Bisamberg to Breitenlee, a mile in the rear of the field of battle. "*Ejus prolii eventus utrumque ducem, diversis animi motibus, ad maturandum summæ rei discrimen exivit. Civilis instare fortunæ; Cerialis abolere ignominiam. Germani prosperis feroces; Romanos pudor excitaverat.*"†

Short as the night was at that season on the banks of the Danube, that period of rest was not allowed to the wearied soldiers. Long before sunrise, the moment that the first gray of the summer's dawn shed a doubtful light over the field of battle, the Austrian columns of Rosenberg again assailed Essling in front and flank, and Massena, with strong re-enforcements, renewed his attacks on the churchyard of Aspern. Both assaults proved successful. Essling, for the first time, was carried by the archduke's regiment of grenadiers in the early twilight, and the Imperialists, following up their success, forced the French lines on their left back towards the Danube, and straitened them considerably in that quarter; but this important success was counterbalanced by the loss of Aspern, which at the same moment was taken, with the battalion in the churchyard and four pieces of cannon, by the French division of Cara St. Cyr. Both parties made the utmost efforts to retrieve these momentous losses. St. Hilaire came up with his division of Lannes's corps to the assistance of that gallant marshal, who was now

Renewal of the action on the 22d. Aspern and Essling are again obstinately disputed.

* These numbers are ascertained in an authentic manner. Napoleon admits that "the French army on the second day, on the two banks of the Danube, was 20,000 men superior to that of the archduke, who had 100,000 men in the field." Davoust's corps was, at the utmost, not above 40,000 men after the losses it had undergone: at this rate, therefore, the French army, which was all across, excepting that marshal's corps, would have been 80,000; and, deducting 10,000 for the losses of the preceding day, 70,000 must have remained in the field on the 22d.—See NAPOLEON in MONTGOMERY, ii., 78.

† Tacit., Hist., v., 15. Archduke Charles, Ann. Reg., 1809, 389. Pel., ii., 308, 309. Sav., iv., 75, 76.

* Stat., 239, 250. Archduke Charles's Account, Ann. Reg., 1809, 388-389. Pel., ii., 296, 299. Jom., iii., 202.

driven out of all parts of Essling except the great granary, and, by a sudden effort, expelled the Austrians, who were never able again to recover their footing in that important village, though the most desperate conflict, both of foot and horse, went on the whole day in its immediate neighbourhood. The regiment of Klebeck rushed, about the same time, with fixed bayonets into the burning ruins of Aspern; the French of St. Cyr were expelled by the violence of the shock, but they returned to the charge, re-enforced by several battalions of the Imperial Guard, and, after a struggle of an hour's duration, again drove out the Imperialists and got possession of the churchyard, which by this time was literally covered with the dead. Hiller, however, was not to be outdone in this tremendous struggle. Again forming a column of attack, in conjunction with part of Bellegarde's corps, he himself led on the charge at the head of the regiment Benjossky: trampling under foot the dead and the dying, these heroic assailants advanced through burning houses and a storm of shot, and by great exertions succeeded in driving the French entirely out of the village. The Austrian commander instantly ordered the pioneers to pull down the walls of the churchyard, and burn the church and parsonage-house, so as to prevent these important points from being again rendered a shelter to the enemy. Some additional regiments were soon after brought up under General Bianchi, which enabled the Imperialists, not only to maintain themselves till the close of the battle in this obstinately-contested village, but to advance in the evening somewhat beyond its limits, and direct the fire of their artillery upon the flank of the French lines, drawn up between it and Essling, which played till nightfall with tremendous effect upon the dense masses who were there accumulated on a space of little more than a mile in extent.*

These bloody contests in the villages were not such as by any means suited the Napoleon makes a grand attack on the Austrian centre, which is at first successful. ardent and impetuous mind of Napoleon. Relieved from the necessity of remaining on the defensive, by the important accessions of force which he had obtained during the night, he was preparing a grand attack in the centre. For this purpose, instructions were sent to Massena, who had not yet been expelled from Aspern, to maintain himself in that village; Davoust was to debouch from the bridges in the direction of Essling; while Oudinot and Lannes, supported by the infantry and cavalry of the guard, were to make a united attack on the archduke's centre, which it was hoped might be thus driven back, and entirely separated from the wings engaged in the combats around the villages. From his station behind the centre of the French line, Napoleon pointed out with his finger, at seven in the morning, to Lannes, who was on horseback beside him, the direction which his corps should follow in their advance, which was where the Austrian line appeared weakest, between the left of Hohenzollern and the right of Rosenberg. The emperor soon after rode through the lines of the

troops who were to advance, and was received with enthusiastic shouts of *Vive l'Empereur*. Attracted by the sound, the enemy's cannon concentrated their fire in that direction, though the fog which still lingered on the banks of the Danube concealed him from their sight, and General Monthion was killed by his side. Instantly the necessary orders were given, and in a few minutes the whole of Lannes's corps were thrown into open column, which advanced at a rapid pace, the right in front, the cavalry in reserve, immediately behind the infantry, while two hundred pieces of cannon, arrayed in the front of the whole line, distracted the attention of the enemy by a fire of unprecedented severity. As soon as Lannes, on the right, had made some progress, the remainder of the French centre, to the left, also advanced: Oudinot's troops formed the first columns, with the cuirassiers immediately behind them, and the Imperial Guard in reserve; so that the whole French line between Essling and Aspern moved forward in echelon, the right in front, and preceded by a tremendous array of artillery. The shock was irresistible: the heads of Lannes's columns, skilfully directed against the weakest part of the Austrian line, soon forced their way through, and threw some battalions into disorder; into the opening thus formed, the cavalry rushed with appalling fury, and soon a huge gap appeared between Rosenberg and Hohenzollern, and the foremost of the squadrons penetrated even to Breitenlee, where the Austrian reserve of the Prince of Reuss was stationed, while the fugitives from the broken battalions spread in all directions the report that the battle was lost.*

The archduke now felt that the decisive moment had arrived; the battle, the Desperate resistance of the Austrian centre. monarchy were at stake. In this extremity that gallant prince displayed alike the skill of a consummate commander and the heroism of a common soldier. The reserve grenadiers, under the Prince of Reuss, were hastily thrown into square, and brought up to the menaced point; the numerous dragoons of Prince Lichtenstein advanced immediately behind them; and the archduke himself, seizing the standard of Zach's corps, which had begun to give way, addressed a few energetic words to the men, and led them back against the enemy. The generals around him emulated the noble example, but most of them were killed or wounded at this dreadful moment: General Colloredo received a ball in the head, close by the archduke's side, and the diminished numbers of his personal staff showed how desperate was the strife in which the generalissimo was engaged. But these heroic efforts restored the battle: reanimated by the heart-stirring example of their chiefs, the soldiers stood their ground; the dreadful column of Lannes was arrested in its advance, and the squares among which it had penetrated, pouring in destructive volleys on all sides, soon occasioned hesitation and anxiety through the dense array. The Austrian batteries, playing at half musket-shot, occasioned a frightful carnage in the deep masses of Napoleon's troops, which,

* Archduke's Account, Ann. Register, 1809, 390, 391. Chron. Stat., 250, 251. Jom., iii., 203, 204. Pel., ii., 310, 311. Nap. in Month., ii., 78, 79.

* Pel., ii., 310, 316. Jom., iii., 204. Stat., 241, 250. Archduke Charles's Account of Aspern, Ann. Reg., 1809, 391, 392. App. to Chron. Sav., iv., 75. Nap. in Month., ii., 78, 80.

unable either to deploy under so terrific a fire, or return it to advantage from the edges only of their columns, were swept away without making any serious resistance. From the moment that the irruption of Lannes's column was stopped, and the regiments behind were compelled to halt, the French soldiers felt that the day was lost.* In vain the cuirassiers were brought forward, who dashed, as at Waterloo, through the intervals of the squares; in vain those brave horsemen rode round the steady battalions, and charged them repeatedly to the bayonets' points;† not one square was broken, not one column gave way, and the horsemen, grievously shattered by the terrible fire, were soon after charged by the enemy's reserve cavalry, under Lichtenstein, who came up with loud shouts from the rear, and driven back in disorder to their own infantry.

At this critical moment, Hohenzollern, perceiving a considerable opening on the right of the French line, occasioned by the unequal advance of some of their regiments, seized the favourable opportunity to dash in with Troluk's regiment, and occupy the space; it sustained itself there against all the attacks of the enemy, till the archduke, who at once saw the importance of this movement, supported that gallant corps, when almost overwhelmed by fatigue and numbers, by six regiments of Hungarian grenadiers. These fresh troops pressed forward, intersecting the whole French line, overthrowing everything which opposed them, and even reached the batteries in the rear, near Essling, where they were assailed by such a destructive fire from that village, that nothing but the presence of the archduke, who hastened to the spot, enabled them to maintain their ground. At the same time, the want of ammunition began to be sensibly felt in the French army, especially by the artillery, the supplies of which were nearly exhausted by the incessant firing of two days; and accounts began to circulate, and soon spread like wildfire through the ranks, that the bridges were broken down, and all communication with the reserve posts, and two thirds of Davoust's corps, still on the southern bank, cut off. In effect, at half past eight, the alarming intelligence reached the emperor that the fire-ships and heavy barks laden with stones, sent down by the archduke, had, with the swelling of the river, produced the desired effect,‡ and that a considerable part of the bridge over

the main stream of the Danube had been swept away.

In this terrible moment Napoleon's courage did not forsake him. Grave and thoughtful, but collected, he allayed the alarm of those around him, and immediately gave the necessary orders to suspend the attacks at all points, and fall back towards the island of Lobau. Before they could reach the columns in front, however, the advance was already arrested by the violence of the enemy's fire, and several battalions, melting away under the destructive storm, had already begun to recede, or stood in a state of hesitation, unable to go on, unwilling to retire. The Austrians, perceiving those symptoms of vacillation, resumed the offensive at all points, and, forming two fresh columns of attack under Dedowich and Hohenlohe, made a sudden assault on Essling, which was carried, with the exception of the great granary, at the very moment that the French centre, slowly retiring, re-entered the narrow plain between that village and Aspern, from which they had issued in all the confidence of victory in the morning. This important success rendered the situation of Napoleon well-nigh desperate, and disorder was rapidly spreading through the ranks; for Aspern, in spite of the most heroic efforts of Massena and Le Grand, was in great part already lost, and the capture of the second village precluded almost entirely the possibility of a retreat to the river side. He made the utmost exertions, therefore, to regain it, and General Mouton, at the head of a brigade of the Imperial Guard, being intrusted with the attack, advanced in double quick time, and drove out the enemy at the point of the bayonet. Again the Austrians returned, and, pushing up to the very foot of the granary, fired, and thrust their bayonets into the loopholes from which the deadly fire issued which thinned their ranks. In the tumult, the upper part of the building took fire, but still the invincible French soldiers maintained themselves in the lower stories, amid the roar of musketry and the crash of burning rafters. Five times did the Hungarian grenadiers rush up to the flaming walls, and five times were they repulsed by the unconquerable firmness of the Old Guard. At length, Rosenberg, finding that the enemy was resolved to maintain himself in that post at all hazards, and that the combat there was constantly fed by fresh reinforcements of the flower of the French army, drew off his troops; and, desisting from all farther attack on the village, confined himself to an incessant fire of grape and round shot upon the French columns, which, now in full retreat, were massed together in such extraordinary numbers at the entrance of the bridges leading to Lobau, that every shot told with fatal effect on men or horses.*

Anxious to crown his glorious efforts by a decisive attack, the archduke now brought forward his last reserves of Hungarian grenadiers, and, putting himself at their head, advanced with an intrepid step against the re-

* "We persisted," says Savary, an eyewitness, "in penetrating into the checker of squares which formed the enemy's line, when the extreme severity of the fire of grape and musketry obliged us to halt, and begin exchanging volleys with our antagonists under very disadvantageous circumstances. Every quarter of an hour which we passed in that position rendered our disadvantage greater. Our troops were all in mass or column, and could not deploy to return the fire with which they were assailed. From that moment it was easy to foresee, not only that the day could not have a favourable issue, but even that it would probably terminate in some disaster. They tried in vain to restore these disadvantages by charges of cuirassiers, which took place in several directions, but they had hardly pierced through the openings of the enemy's squares, when they were assailed by the Austrian horse, three times more numerous, and driven back upon our infantry." This was before the rupture of the bridges, which is afterward mentioned by the Duke of Rovigo.—See SAVARY, iv., 77.

Last attack of the Austrians, and fall of Marshal Lannes.

treating French columns, while the whole artillery, rapidly advancing in front and rear, contracting into a semicircle round the diminished host, kept up an incessant and destructive fire. The most vivid disquietude seized the French generals when they beheld their weary bands assailed by fresh troops, which seemed to spring up from the earth at the conclusion of this fight of giants. But Lannes arranged his best men in the rear of the columns, and, supporting them by the infantry and cuirassiers whom Napoleon sent up to his assistance, prepared to resist the attack; while Massena, on his side, sometimes on foot, sometimes on horseback, with his sword in his hand and fire in his countenance, seemed to multiply as necessity required his presence. Reserving their fire to the last moment, the French veterans, when the Hungarians were within pistol-shot, poured in so close and destructive a volley, that the advance of the enemy was checked, and a close combat with firearms commenced. At that moment Lannes, who had dismounted from his horse to avoid the dreadful fire of the artillery, which swept off everything above the heads of the soldiers, was struck by a cannon-ball, which carried away both his legs. As Napoleon was engaged in the island of Lobau in directing the position of some batteries to protect the passage into that island from the field of battle, he saw a litter approaching, on which, when it came up, he beheld the heroic marshal, his early companion in arms in Italy, extended in the agonies of death. Lannes seized his hand, and said, with a voice tremulous only from loss of blood, "Adieu, sire! Live for the world; but bestow a few thoughts on one of your best friends, who in a few hours will be no more." On his knees, beside the rude couch of the dying hero, Napoleon wept: "Lannes, do you not know me? it is the emperor: it is Bonaparte, your friend: you will yet be preserved to us." "I would wish to live," replied Lannes, "to serve you and my country; but in an hour I will be no more." Napoleon was deeply affected; he had never before evinced such emotion. "Nothing," said he to Massena, "but so terrible a stroke could have withdrawn me for a moment from the care of the army." Shortly after, Lannes was relieved from his sufferings by a faint, which, after some days, terminated in death. St. Hilaire, at the same time, was brought in mortally wounded.* It was time that this terrible carnage should cease: the generals and superior officers were in great part

struck down; the artillery horses were almost all killed, and the guns drawn by the foot-soldiers; the infantry and cannon had exhausted almost all their ammunition; the cavalry were already all withdrawn into the island of Lobau; but still the rear-guard, with unconquerable resolution, maintained the combat. The Austrians were nearly as much exhausted as their opponents; and, desisting from all farther attacks, maintained only a tremendous fire from all the batteries till midnight, when, the last of the enemy having withdrawn from the field of battle into the island, exhausted by fatigue, the artillerymen sunk into sleep beside their guns.*

Such was the famous battle of Aspern, the most glorious in the Austrian annals—forever memorable in the annals of military fame. It was the first great action in which Napoleon had been defeated; for at Eylau, though, as the event ultimately proved, he had been worsted, yet, in the first instance, he remained master of the field of battle. The loss on both sides was enormous, but that of the French was much greater than that of their opponents, owing to their decided inferiority in numbers, and especially artillery, on the first day, and the tremendous effect of the concentric fire of three hundred pieces of cannon, on the second, upon the dense columns of attack, whom the narrow extent of the ground, the awful cannonade, and the obstinate resistance of the imperial squares, prevented from deploying into line. Eighty-seven superior officers and four thousand two hundred privates were killed, besides sixteen thousand three hundred wounded, on the side of the Imperialists: a loss which, how great soever, the archduke, with true German honesty, had the magnanimity at once to admit in his official account of the battle. The French lost above thirty thousand men, of whom seven thousand were buried by the Austrians on the field; a few guns and some hundred prisoners were taken on both sides: five thousand wounded fell into the hands of the Imperialists. For several days after the battle the Austrians were constantly occupied in burying the dead; innumerable corpses were found in the smaller channels of the Danube; the waters even of that mighty stream were for some days poisoned by the multitude of slain which encumbered its banks, and a pestilential air was wafted down the theatre of death.††

† Archduke Charles, Ann. Reg., 1809. Chron., 394. Pel., ii., 358. Thib., vii., 295.

‡ The tenth bulletin acknowledged a loss daily of fifteen hundred killed and three thousand wounded: a list of casualties so obviously disproportioned to the magnitude and obstinacy of the conflict, as to excite the ridicule of all Europe. Subsequently, Napoleon admitted he had four thousand killed, which would imply a total loss of above twenty thousand. The Austrian official account, which derives credit from the candour with which it admitted their own casualties, estimates the French loss at thirty-six thousand, on the authentic grounds that seven thousand French were buried on the field of battle, and twenty-nine thousand seven hundred and seventy-three wounded were carried to the hospitals at Vienna. The experience of the British in the Peninsular war, especially at Talavera and Albuera, warrants the assertion that two armies of from sixty thousand to eighty thousand on each side, could not combat in so obstinate a manner for two days under the fire of five hundred pieces of cannon, all crossing each other, without a loss of above twenty thousand to the victorious and superior, and thirty thousand to the vanquished and weaker party.—See 10th Bulletin; Mon-

* These officers were among the most esteemed of all Napoleon's generals: "'Lannes,' said he, 'was wise, prudent, and, withal, audacious, gifted with imperturbable sang froid in presence of the enemy. He had received little education: all his qualities were derived from Nature.' Napoleon, who witnessed, from his outset in the Italian campaigns, the extension of his understanding, often remarked it with surprise. He was superior to all the French generals on the field of battle, in directing the movements of twenty-five thousand infantry. He was still young when he had thus risen to perfection; perhaps he would have ultimately risen to the same eminence in strategy, which he did not as yet comprehend. St. Hilaire was remarkable, ever since the battle of Castiglione, in 1796, for his chivalrous character; he was a good brother and parent, and was devoted to the emperor ever since the siege of Toulon. He was called, in the army, the chevalier without fear and without reproach. Napoleon shed bitter tears at his death and that of Lannes. They would not have been wanting in constancy in misfortune, nor have been faithless to the glory of France."—NAPOLEON in MONTMOLIN, ii., 83, 84.

Driven back, with all his army, into an island in the Danube, after sustaining this frightful loss, the French emperor, at ten at night, hastily called a council of war on the margin of the river. Seated under a tree which overhung the stream, Napoleon beheld the great bridge in the central channel entirely swept away, and the lesser one of pontoons to the intermediate island of Reduit also in ruins. Retreat to the southern bank from the island of Lobau was evidently impossible; for the Danube, which had risen fourteen feet during the three preceding days from the melting of the snows in the Alps of Tyrol, was rolling impetuously in a raging flood, which had carried down every boat in the main channel, overflowed the whole low grounds in the island, and rendered even the narrow branch which separated them from the Marchfeld, usually only a few feet deep, a rapid and dangerous torrent. Never was an army assembled under more disastrous circumstances than the French on that memorable night. To the deep roar of artillery, the shouts of the combatants, and the incessant clang of musketry, had succeeded a silence yet more awful, interrupted only by the challenges of the sentinels as they paced their melancholy rounds, or the groans of the wounded, who, without covering or shelter of any kind, lay scattered on the humid surface. Above twenty thousand brave men were there, weltering in their blood, or murmuring in their last moments a prayer for their mother, their children, their country. Gloom had seized on every mind, despair had penetrated the bravest hearts. It was universally known that the artillery ammunition was exhausted and the communication with the southern bank cut off, and it was difficult to see how an attack from the enemy on the succeeding day could be resisted with any prospect of success. Nearly half the combatants had fallen: every one, even though unhurt himself, had to deplore the death of a friend, a comrade, a benefactor. Provisions there were none in the island: succour for the wounded, burial for the dead, were alike beyond the strength of the wearied survivors. A few were still buoyant with hope, and, protesting they had not been defeated, vociferously demanded a renewal of the combat on the morrow; but the great majority, in gloomy silence, mused upon their fate, and not a few openly murmured against the chief whose imprudence and obstinacy had brought them into a situation where victory was hopeless and retreat impossible.*

The influence of these gloomy feelings strongly appeared in the opinions of the chiefs who attended Napoleon at his council of war on the banks of the island of Lobau. The bravest marshals of the army, Massena, Davoust, Berthier, Oudinot, were there; but they unanimously and strongly expressed the opinion that it was necessary to retire entirely to the right bank of the river. Napoleon heard them all, and then observed, "But, gentlemen, when you advise

me to withdraw across the river, it is the same thing as desiring me to retreat to Strasburg. We can no longer cross but in boats, and that is to say it is nearly impracticable, and could not be effected without abandoning the wounded, the artillery, the horses, which would entirely disorganize the army. Shall we abandon the wounded? Shall twenty thousand brave men add to the trophies of the enemy? Shall we thus openly proclaim, in the face of Europe, that we have been vanquished? If we repossess the Danube the enemy will instantly do the same, and then we shall never find rest till we are under the cannon of Strasburg. Is it on the Traun, the Inn, or the Lech, that we can make a stand? No, we shall speedily be driven behind the Rhine, and all the allies whom victory has given us will at once pass over to the enemy. Shall we add to the losses of these two days that of the men who are now dispersed among the woods of these islands? If I retire to Vienna, the archduke will pass the Danube at Lintz, and I shall be under the necessity of marching to meet him, and sacrificing twenty thousand more in the hospitals, one half of whom, if I remain here, will rejoin their standards in a month. In a few days Eugene will descend from the Alps of Styria; the half of Lefebvre's corps will be disposable from the Tyrol; and even if the enemy, by passing at Lintz, should menace our existing retreat, we will have a clear route open into Italy, where, with eight corps assembled,* we shall speedily regain our ascendancy. We must, therefore, remain at Lobau: you, Massena, will complete what you have so gloriously begun; you can alone restrain the archduke, and prevent his advancing, during the few days which are necessary to re-establish our communications."

The marshals, struck by the justice as well as fortitude of these remarks, all assented to the emperor's opinions; and it was resolved to defend the isle of Lobau to the last extremity. The whole engineers and sappers in the island were immediately embarked for the right bank, and at midnight the emperor committed himself to a frail bark with Berthier and Savary, and was ferried across the roaring flood to Ebersdorf. He leaned on Savary's arm in passing from the bark to the village; but, though his mind laboured, he was not agitated. Exhausted by fatigue, he threw himself on some straw and took a few hours' sleep, but shortly after day-break he was again on horseback, actively organizing the transmission of provisions to the troops in the island and preparing the means of re-establishing the bridges.†

The conduct of Napoleon in provoking an engagement with inferior forces in so hazardous a situation as the Marchfeld, with a single and insecure bridge in his rear, has been the subject of keen discussion by the French military writers, and three of the most distinguished of them have undertaken its defence, and pleaded it with all their wanted

Reflections on the conduct of Napoleon in the battle of Aspern.

ability.* But there are some questions so plain that, in discussing them, the strength of a child is equal to that of a giant; and if Napoleon, Cæsar, and Hannibal were to concur in justifying that extraordinary step, they would fail in producing any impression upon the common sense of mankind. The military is not, any more than politics, at least in its leading principle, an abstruse art: whatever directs the proceedings of large masses of mankind must be founded on maxims obvious to every capacity. Napoleon himself has told us that the leading object in strategy is, with a force inferior upon the whole, to be always superior at the point of attack; and that the greatest fault a commander can commit is to fight with no other retreat than by a narrow defile. His main charge against the generalship of Wellington is founded upon the fact of his having fought at Waterloo with a single highway traversing the forest of Soignies in his rear.† Judging by these principles, which are recommended not less by the weight of his authority than their intrinsic justice and sense, what are we to say to the general who, though inferior by twenty thousand men upon the whole to his adversary, on the first day, according to his own account of the matter, exposed thirty-five thousand men to a hopeless contest with eighty thousand; and, on the second, precipitated seventy thousand, in close columns, against a semicircle of batteries containing three hundred guns, every shot from which fell with the certainty of destruction upon their crowded ranks, and that, too, when a vast river, traversed only by a tottering bridge, connected the troops in advance with the reserve of the army, and served as the only possible retreat to either in case of disaster? It is in vain that his defenders argue that eight divisions on the field of battle, with four under Davoust on the right bank, were equal to any force the Austrians could bring against them. Granted, provided always the communication between them was secure; but what is to be said to hazarding two thirds of the army on the left bank, when a narrow bridge, a mile in length, shaking under the flood, separated that portion from the remaining third on the other bank? Napoleon has himself told us that "twice, on the 21st, the bridges were carried away by the flood, and that the Austrian boats were already dashing against the pontoons. At midnight the Danube rose in the most frightful manner, and the passage was a third time interrupted, and not restored till next morning, when the guard and Oudinot's corps commenced their passage."‡ What temerity, then, in such circumstances, to hazard a decisive action on the day following with the whole Austrian army, and precipitate Lannes into the centre of their batteries early in the morning, before either the bulk of Davoust's corps, or the reserve parks of ammunition, had crossed the perilous passage!

Nor is this all: the result of the battle of

Aspern clearly demonstrates that the method of attacking in column in a narrow field, and against a brave enemy, is essentially defective; and that the prodigious loss sustained by Napoleon was owing to his persisting in it under circumstances where it had obviously become inexpedient. The observations of a distinguished French military writer on this subject are convincing and unanswerable. "The battle of Essling was lost," says General Rogniat, "in consequence of our having attacked in column the centre of the Austrian line. That centre skilfully gave ground as the French columns of Lannes and Oudinot advanced, while their wings insensibly approached our flanks. By means of that skilful manoeuvre we soon found ourselves in the centre of a semicircle of artillery and musketry, the whole fire of which converged on our unhappy columns. Cannon-balls, musket-shots, shells, grape, bombs, crossed each other in every line over our heads, and fell on our ranks like a hail-storm. Everything was struck or overturned, and our leading columns were literally destroyed: in the end we were obliged to fall back and yield to that frightful tempest till we again came abreast of Aspern and Essling, the bulwarks of our wings."* It was by a system of tactics precisely similar that Hannibal crushed the Roman centre and gained the battle of Cannæ. "Cuneus Gallorum ut pulsus æquavit frontem primum, deinde nitendo etiam sinum in medio dedit, Afri circa jam cornua fecerant, irruentibus incaute in medium Romanis, circumdedere alas. Mox cornua extendendo, clausere et ab tergo hostes."† The military art is, in its fundamental principles, the same in all ages; and it is highly interesting to see Hannibal's triumph and Napoleon's defeat arise, under the greatest possible difference of ground, arms, and contending nations, from the same simple and obvious cause.‡

The Austrians, indeed, had not yet attained to the incomparable discipline and firmness which enabled Wellington with British troops so often to repel with prodigious slaughter the French attack in column by a single line, three or four deep; but they did on this occasion, as well as at Wagram, successfully resist it by receiving the column in a checker of squares; a disposition extremely similar to that adopted by the British commander at Waterloo, and which the archduke then adopted for the first time, after having read a few weeks before the chapter on the principles of war, by General Jomini, where it was strenuously recommended.§ The dreadful carnage sustained by the French troops in subsequent battles, especially at

Observations on the French method of attacking in columns.

* Rogniat, sur l'Art Militaire, 333.

† Polyb. iii., c. 12. Liv., xcii., 47.

‡ Napoleon saw these principles clearly when judging of the conduct of other generals: "Sempronius," says he, "was conquered at the Trebia and Varro at Cannæ, though they commanded armies more numerous than Hannibal, because, in conformity with the Roman practice, they arranged their troops in a column of three lines, while Hannibal drew up his in a single line. The Carthaginian cavalry was superior in number and quality; the Roman legions were attacked in front, flank, and rear, and, in consequence, defeated. If the two consuls had adopted an order of battle more conformable to circumstances, they would probably have conquered." What a luminous commentary on his own conduct and defeat at Aspern!—See NAPOLEON in MONTH., i., 282, *Melange*. § Jom., Vie de Nap., iii., 201.

* See Nap. in Month., ii., 71, 83. Pelet, ii., 358, 364. Jom., iii., 217, 220.

† "The position of Mount St. John," said Napoleon, "was ill chosen. The first requisite of a field of battle is to have no defiles in its rear. The injudicious choice of the field of battle rendered to the English army all retreat impossible."—Ninth Book of Memoirs of NAPOLEON, 207.

‡ See note C. § Nap. in Month., ii., 77.

Albuera, Borodino, and Waterloo, were mainly owing to the same cause. Doubtless the attack in column is most formidable, and it requires great firmness in a single line to resist a mass to which weight and numbers have given so much momentum; but its success depends entirely on the courage of the leading and flanking files; its concentrated ranks present an unerring mark for the enemy's fire, if they will only stand to deliver it; confusion is apt to arise in the centre from the losses sustained or witnessed by men not warmed by the heat of action, and if it is exposed to a concentric discharge, or meets with opponents as resolute as itself, it becomes liable to a bloody reverse. The same principle applies to breaking the line at sea: that system has done admirably with the French and Spaniards, but let the British admirals consider well before they adopt it in combating the Russians or Americans.

In truth, nothing can be more apparent than that, considered merely in a military point of view, the conduct of Napoleon, in regard to the battle of Aspern, was altogether inexcusable, and that it was the peculiarity and hazard of his political situation which made him persist in so perilous an undertaking. He has told us so himself: "At Aspern, at Jena, at Austerlitz, where I have been accused of acting rashly, I had no option: I was placed in the alternative of victory or ruin."* He felt that his situation, as head of a military Republic, required continual excitement for its maintenance; that he must fascinate the minds of men by rapid and dazzling successes; and that the first pause in the career of victory was the commencement of ruin. Though in possession of the Austrian capital, military resources, and the finest provinces, he still felt that the war must not be protracted, and that, to keep up his character for invincibility, he must cross the Danube, and finish the war by a clap of thunder. Undue contempt for the Austrian troops, or ignorance of the magnitude of the host which they had at hand, led him to hazard the engagement of the 21st, with a most unequal force; and, having once engaged, however imprudently, in the contest, he felt that he must at all hazards carry it on, and, despite of an army divided by the Danube and a precarious retreat, fight for life or death in the plain of the Marchfeld. It is the invariable characteristic of revolutionary power, whether political or military, to be perpetually exposed to this necessity, from the want of any lasting support in the interest and affection of the industrious classes of the people; and it is in the experience of that necessity, not any oblivion of the rules of the military art, that the true explanation and best vindication of Napoleon's conduct, both at Aspern, Moscow, and Dresden, is to be found.

The resolute stand made by the Austrians at Aspern is one of the most glorious instances of patriotic resistance which the history of the world exhibits. Driven back by an overwhelming force into the heart of the monarchy, with their fortresses taken, their arsenals pillaged, their armies defeated, they still continued the contest; boldly fronted the

invader in the plenitude of his power; and, with unshaken resolution, advanced, alone and unsupported, to drive the conqueror of Europe from the capital he had subdued. Contrary to what has usually been experienced in similar cases, they showed the world that the fall of the metropolis did not necessarily draw after it the submission of the Empire; but that a brave and patriotic people can find their capital in the general's headquarters, and reduce the invader to the extremity of peril, in consequence of the very success which he had deemed decisive of the contest. The British historian can hardly hope that similar resolution would have been displayed by the citizens of his own country, or that a battle of Waterloo would have been fought by the English after London and Woolwich had fallen into the hands of the enemy. Contrasting the heroic battles of Aspern and Wagram, after Vienna had fallen, with the unbounded terror inspired at Paris by the advance of the Duke of Brunswick to Valmy in 1792, a hundred and twenty miles from the capital, even when the people were in the highest state of Democratic excitement, it is impossible to avoid the inference, that as much in the conduct of a nation, under such circumstances, depends on the national institutions as on the stage at which they have arrived in social advancement; and in the invincible tenacity and far-seeing sagacity of an aristocratic government is to be found the only guarantee, from the days of Cannæ to those of Aspern, of such an unshaken resolution, under calamities generally considered as utterly destructive of political independence.

Nor would this heroic constancy have failed in obtaining its appropriate reward, if the admirable directions of the Archduke Charles for the conduct of the campaign had been implicitly obeyed. It was the disobedience of his orders by the Archduke John which deprived the Austrians of all the results of the battle of Aspern, and enabled Napoleon to extricate himself with success from the most perilous situation in which he had yet been placed since ascending the consular throne. Had that prince obeyed the instructions which he received from the generalissimo on the 17th of May, and marched direct from Carinthia to Lintz, he would, in conjunction with Kollowrath, who was in that neighbourhood some days before, have formed an imposing mass, at least sixty thousand strong, even on the 23d, to which Bernadotte, with his inefficient corps of Saxons, could have opposed no sort of resistance. Can there be a doubt that the concentration of such a force, directly in his rear, and on his principal line of communication, at the very moment when he was driven with a defeated army into the island of Lobau, would have compelled Napoleon to retreat; and that the battle of Aspern would have been the commencement of a series of disasters, which would speedily have brought the imperial eagles back to the Rhine? The instantaneous effect which a similar concentration of force, from the north and the south at Borissow, produced on Napoleon at Moscow, three years afterward, affords the clearest illustration, both of the importance of this movement, and the prodigious effects which it was fitted to

Glorious character of the Austrian resistance at Aspern.

Disastrous effects of the Archduke John's disobedience of orders.

have had, if properly executed, upon the issue of the campaign. No hazard was incurred by such a direction to part of the imperial forces; for the Tyrol afforded a vast fortress, in which, aided by its gallant mountaineers, the detached corps, though separated from the main forces of the monarchy, might have long maintained themselves against all the efforts of the enemy. And it is impossible to estimate too highly the fortitude and talent of the illustrious general, who, when still reeking with the slaughter of a recent defeat, could conceive so admirable a plan for the circumvention of the enemy, and, undismayed by the fall of the capital, see in that catastrophe only the lure which was to seduce the invader to his ultimate ruin.

From the important consequences which followed the occupation of Vienna, and the seizure of its immense military resources by the French, may be derived one conclusion of lasting value to every independent state. This is the incalculable importance of every metropolis either being adequately fortified, or possessing, in its immediate vicinity, a citadel of approved strength, capable of containing twenty or thirty thousand soldiers, and of serving as a place of secure deposite for the national archives, stores, wealth, and government, till the national strength can be fairly roused for their rescue. Had Austria possessed such a fortress, either in or near adjoining to Vienna, the invasions of 1805 and 1809 would have terminated in the invaders' ruin; had the heights of Belleville and Montmartre been strongly fortified, the invasions of 1814 and 1815 would have been attended with nothing but disaster to the allied armies. Had Berlin been of as great strength as Dantzic, the French armies, after the disaster of Jena, would have been detained round its walls till the Russian hosts advanced, and six years of bondage saved to the Prussian monarchy. Had the Kremlin been a citadel capable of holding out six weeks, the terrible sacrifice of Moscow would not have been required; had Vienna not been impregnable to the Mussulman arms, the monarchy would have sunk in the dust before the standards of Sobieski gleamed on the Bisamberg; had the lines of Torres Vedras not formed an impassable barrier to Massena, the germe of pa-

triotic resistance in the Peninsula would have been extinguished in the bud; had the walls of Rome not deterred the Carthaginian hero from a siege, the fortunes of the Republic would have sunk after the disaster of Cannæ. It is by no means necessary for these important ends that the whole metropolis should be confined by fortifications: it is enough that a citadel of great strength is at hand to contain all the warlike and civil resources of the kingdom.

Let no nation imagine that the magnitude of its resources relieves it from this necessity, or that the effulgence of its glory will secure it from ultimate danger: it was after the battle of Austerlitz that Napoleon first felt the necessity of fortifying Paris;* it was in five short years afterward that the bitter consequences of the national vanity, which prevented his design from being carried into effect, were experienced by the Parisians. England now slumbers secure under the shadow of Trafalgar and Waterloo; but let not her infatuated children suppose that they are forever removed from the chances of disaster, or that the want of citadels to surround the vast arsenals of Woolwich, Chatham, and the Tower, will not, ere long, be bitterly felt either against foreign or domestic enemies. These ideas, indeed, are not popular with the present age, with whom foresight is the least cultivated of national virtues, and in which the Democratic character of the Legislature has tinged the government with that disregard of remote consequences which is the invariable characteristic of the masses of mankind; and, doubtless, if any minister were now to propose the expenditure of one or two millions on such central fortifications, it would raise such a storm as would speedily prove fatal to the administration. It does by no means, however, follow, from this circumstance, that it is not a measure which wisdom dictates and national security enjoins; and in despair of effecting, at present at least, any change on public opinion on this particular, the historian has only to bequeath this counsel, as Bacon did his reputation, to the generation after the next, and mark these words, if they should live so long, for the judgment of the world at the expiration of two centuries.

* Nap. in Month., ii., 278, 280. *Ante*, ii., 282, 283.

Immense importance of central fortresses on the defence of nations.

Infatuation of England in this respect.

CHAPTER LV.

WAR IN TYROL, NORTHERN GERMANY, AND POLAND.

ARGUMENT.

Extraordinary Interest of the Tyrolese War.—Description of Tyrol.—Opposite Character of the Northern and Southern Sides of the Mountains.—Description of the great Valleys and Rivers of the Country.—Castles of Tyrol.—Superstitions of the Country.—Their Religious Feelings and Impressions.—Omens which were observed on the Approach of the War.—Powerful Religious Feelings of the People.—Practical Utility of the Priests.—Remarkable Difference in this Respect of Ancient and Modern Times.—Influence of Religion in producing it.—National Character of the Swiss compared with that of the Tyrolese.—Love of Freedom which animates the People.—Their Character and Manners.—Practical Freedom which the People have always enjoyed under the Austrian Government.—The Peasants are all Owners of their Land.—Its great Influence on their Character.—Astonishing Industry of the People.—Discontent of the Inhabitants under the Bavarian Government.—Preparations of Austria to take Advantage of these Discontents.—Military Description of the Country.—Character of Hofer.—Of Spechbacher.—Of Joseph Haspinger.—Of Martin Teimer.—Brave Preparations of the People for the Contest.—Insurrection in Tyrol.—Its early and complete Success.—Successes in the Pusterthal.—Defeat of the Bavarians at Sterzing Moos by Hofer.—Capture of Innsbruck by the Peasants of the Upper Inntal.—Striking Incidents which occurred on its Capture.—Arrival, Defeat, and Surrender of Bisson's Division from Sterzing.—Capture of Hall by Spechbacher.—Result of these Successes.—Entire Deliverance of the Tyrol.—Measures of Napoleon and Chastellar in the Country.—Actions in the Southern Tyrol, which is evacuated by the French.—Combats of Feuer Senger and Worgl.—Innsbruck is retaken by the Bavarians.—Desperate State of Affairs in Tyrol, and Firmness of the Peasantry.—Preparations for the Battle of Innsbruck.—Battle there, and total Defeat of the Bavarians.—Bloody Actions of Spechbacher and Haspinger.—Results of these Actions, and the entire Deliverance of the Tyrol.—Rise of the Insurrection in the North of Germany.—Its first Outbreak on the Approach of the Austrian Grand Army.—Enterprise and early Success of Schill.—Fails in his Attempt on Magdebourg.—Retires to Stralsund.—His Prospects there.—He is defeated and killed.—Movement of the Duke of Brunswick.—Operations in Poland, and their Object, by the Archduke Ferdinand.—Forces of the Grand-duchy of Warsaw to oppose him.—Success of Ferdinand and Fall of Warsaw.—Skillful Measures of Poniatowsky to prolong the Contest in the Grand-duchy.—Discovery of the secret Leaning of the Russians towards Austria.—Secret Negotiation between Austria and Prussia.—Particulars of its Progress.—The exorbitant Demands of Prussia cause it to fail.—Operations in Italy, and Diversion from Sicily, and in the North of Europe.—Situation and Prospects of Napoleon after the Battle of Aspern.—Duke of Brunswick takes Dresden, and threatens all the North of Germany.

It is neither on the greatest fields of battle, nor extraordinary places where the most calamitous interest of the bloodshed has taken place, that the Tyrolese war, recollection of future ages is chiefly riveted. The vast theatres of Asiatic conflict are forgotten; the slaughtered myriads of Timour and Genghis Khan lie in undistinguished graves; hardly a pilgrim visits the scenes where, on the fields of Chalons and Tours, the destinies of civilization and Christendom were fixed by the skill of Aëtius or the valour of Charles Martel. It is moral grandeur which produces a durable impression; it is patriotic heroism which permanently attracts the admiration of mankind. The pass of Thermopylæ, the graves of Marathon, will warm the hearts of men through every succeeding age: the chapel of Tell, the field of Morgarten, still attract the generous and brave from every civilized state; the name of Wallace, the plain of Bannockburn, have rendered Scottish story immortal in the annals of the world.

The time may come when the vast and desolating wars of the French Revolution are dimmed by the obscurity of revolving years; when the great name of Napoleon is recollected only as a shadow of ancient days, and the fields of his fame are buried in the waves of succeeding change; but even then the siege of Saragossa will stand forth in undecaying lustre amid the wreck of ages; and the war in Tyrol, the strife of La Vendée, survive unshaken above the floods of time.

The country now immortalized under the name of Tyrol, the land of Hofer and Spechbacher, lies on the southern frontier of Germany, and is composed of the mountains which, stretching eastward from the Alps of Switzerland, are interposed between the Bavarian plains and the fields of Italy. Less elevated than those of the Helvetian cantons, without the awful sublimity of the Alps of the Oberland, those of Tyrol are still more romantic, from the wild and savage character which they in general bear, and the matchless beauty of the narrow valleys, or rather clefts, which are interspersed around their feet. Their summits, though sometimes little inferior to the Jungfrau or Titlis,* are more rugged than those of Switzerland, from being, in general, somewhat lower, and, in consequence, less charged with snow, and exhibiting their various strata, ravines, and peaks, in more undisguised grandeur than where a silver mantle has been forever thrown over the higher regions. The general level of the country is less elevated than the central parts of Helvetia, and hence it is often more beautiful: the pine and larch do not appear in such monotonous masses; but noble forests of beech and oak clothe the mountain sides to a greater height than any hills in Britain, and a dark zone of pine separates their brilliant hues from the gray piles of rock, or snow-bespinkled peaks, which repose in undisturbed serenity on the azure firmament.†

The northern and southern slopes of the Alps exhibit here, as elsewhere on the sides of the great stony girdle of the globe, the same remarkable difference in the productions of nature, the character of the landscape, and the disposition of the human species. To the north of the central chain of the Brenner, everything wears a frigid aspect: vast forests of pine and fir clothe the middle regions of the mountains; naked rock or masses of snow compose their highest peaks; extensive pastures afford nourishment to numerous flocks and herds; barley and oats constitute the principal food of the inhabitants, and Indian corn is cultivated only in the rich and sheltered vale of the Inn. The inhabitants, like all those of Germanic descent, are brave, impetuous, and honest; tenacious

Opposite character of the northern and southern sides of the mountains.

* The Gross Glochner is 12,400, and Orteler-Pitz 14,500 feet high: those on the frontiers of Salzburg of little less elevation.—MALTE BRUN, vii., 511, and INGLIS'S Tyrol, ii., 250.

† Personal observation. Malte Brun, vii., 510, 511. Inglis's Tyrol, i., 241.

cious of custom, fearless of danger, addicted to intemperance. But to the south of the range these rigid features insensibly melt away under the increasing warmth of a more genial climate: maize and wheat are reared with assiduous care in the few level spots which are interspersed among the rocks; walnut and cherry trees next give token of the approach of a milder atmosphere; beech and sweet chestnut succeed to the sable pine in the woody region above; the vine and the mulberry are found in the sheltered bosoms of the valleys; and at length the olive and the pomegranate nestle in the sunny nooks, where, on the margin of the Lake of Garda, the blasts of winter are averted by a leafy screen of almost perpetual verdure. But, if the gifts of nature improve as the traveller descends to the plains of Lombardy, the character of man declines: with the sweet accents of the Italian tongue, the vices of civilization, the craft of the south, have sensibly spread; the cities are more opulent, the churches more costly, the edifices more sumptuous; but the native virtues of the German population are no longer conspicuous; the love of freedom, the obligation of truth, the sanctity of an oath, are more faintly discerned; iron bars on the windows of the poor tell but too clearly that the fearless security of general virtue is no longer felt, and the multiplication of criminals and police* bespeak at once the vices and necessities of a corrupted society.†

Switzerland contains some spacious and fertile plains, and extensive lakes diversify the generally rugged aspect of the great valleys and rivers of Tyrol. The nature of the Tyrol is a country of mountains, intersected only by a few long and spacious valleys. Of these, those of the Inn, the Eisach, the Adige, and the Pusterthal, are the most considerable. The first is formed by the River Inn, which, rising on the eastern slope of the mountains of Grisons, flows nearly a hundred miles almost in a straight line, in a northeasterly direction, and under the successive names of the Engadine, the Upper and the Lower Inn. That extends from Funsterminz, on the frontiers of Switzerland, to Kufstein, at the opening of the Bavarian plains. It is at first a cold and desolate pastoral glen, gradually opening into a cultivated vale, shut in by pine-clad hills, of savage character, and for the last fifty miles expands into a spacious valley, varying from two to six miles in breadth, whose fertile bottom, perfectly flat, shut in on either side by precipitous mountains, seven or eight thousand feet in height, is adorned with numerous villages, churches, and towns, and maintains a dense and industrious population. The valley of the Eisach, formed by the confluence, at Brixen, of the torrents which descend from the snowy summits of the Brenner and the Grosse Terner on the one side, and the mountains of the Pusterthal on the other, descends beside an impetuous stream, through the narrow passes and chestnut-clad steepes between Brixen and Bolsano, and is lost, at the latter place, in the larger valley of the Adige, which, stretching out to the south in a wide expanse between piles of fir-clad mountains to Trent and Roveredo, gradually warms under the Italian sun, till, after passing the

frightful gorge of the Italian China, it opens into the smiling hills and vine-clad slopes of Verona.* The valley of the Etch, or Adige, descending from the cold and shivering Alps of Glarus, widens into the Passeyrthal, the original seat of the counts of Tyrol, still containing their venerable castle, and which has been immortalized by the birthplace of Hofer. It is distinguished by an awful rapid, which, more nearly than anything in Europe, resembles those of the great American rivers, equalling even the fall of Schaffhausen in sublimity and terror;† after descending this foaming declivity, and forcing its way through stupendous rocks, the Adige joins the vale of the Eisach at Bolsano. These are the principal valleys of Tyrol; but the upper parts of several others belong to the same country; in particular, those of the Drave, the Salza, and the Brenta, the first two of which, descending from opposite sides of the Gross Glochner, find their way into the open country through long defiles of matchless beauty; the former, after washing the battlements of Klagenfurt, to the Hungarian plains; the latter, beneath the towers of Salzburg, to the waters of the Danube; while the Brenta, after struggling through the narrow clefts and romantic peaks of the Val Susana, emerges in still serenity into the Italian fields under the mouldering walls of Bassano.‡

With the exception of the Grisons, Switzerland contains few ruined castles: the moral earthquake which, five centuries ago, overthrew the feudal power of Austria in the forest cantons, cast down, in its subsequent shocks, the authority of the barons in its simple valleys. But the case is otherwise in Tyrol. Though enjoying, practically speaking, popular privileges of the most extensive kind, and yielding in no respect to the descendants of Tell in the ardent love of freedom, the Tyrolese have never gone so far as to expel the great proprietors; and, though few of them are still resident in the country, the remains of their immense castles constitute one of its most peculiar and characteristic features. In every valley they are to be seen, rising in imposing majesty on wooded heights, perched on crags overhanging the floods, or resting on cliffs to all appear-

* This noble scene, one of the most striking gorges in the Alps, has been immortalized in the lines of Dante:

"Era lo loco ove a scinder la riva,
Venimmo, Alpestro, e per quel ch'iv'er anco
Tal ch'ogni vista a sarebbe schiva.
Qual 'e quella ruina che nel franco.
Di qua da Trento, l'Adice pereoasso,
O per tremuoto o per sostegno manco;
Che da cima del monte, onde se mosse,
Al piano e si la roccia discosse
Ch' alcuna via darebbe a che su fosse."

DANTE, *Inferno*, canto xii.

† This remarkable rapid, the only one which conveys to a European traveller an idea of this striking feature of transatlantic scenery, is thus described with graphic power and perfect fidelity by a distinguished traveller, now, unfortunately, no more: "At this spot the River Adige presents one of the most magnificent spectacles that are to be met with in Europe—a rapid, almost a cataract, nearly a mile in length—one continued sheet of foam, rushing with a deafening noise and resistless force between green pastoral banks more resembling the snores of a gentle lake than of a cataract. There is no fall of water in Switzerland that will bear a comparison with this; it is not, indeed, strictly a cataract, but a waterfall of the most stupendous and imposing kind, more striking even than the celebrated falls of Schaffhausen."—INGLIS'S *Tyrol*, ii., 240. On a miniature scale, the falls of Kilmorag, beyond Inverness, somewhat resemble those sublime rapids.—*Personal Observation*.

‡ *Personal observation*. Inglis's *Tyrol*, i., 289, 290. Make-Brun, vii., 511.

* Inglis's *Tyrol*, ii., 246, 290. *Personal observation*.

† Out of eighty prisoners in Innspruck jail in 1832, fifty-five were from the Italian Tyrol, though its population is only one hundred and sixty-three thousand, while that of the German portion is five hundred and ninety-eight thousand.—INGLIS'S *Tyrol*, i., 185, and MALTE BRUN, vii., 550.

ance inaccessible to human approach. The effect of these venerable and mouldering remains, surmounting the beautiful woods, and throwing an air of Gothic interest over the wildest ranges of the mountains, is inexpressibly charming; and they go far to compensate the absence of lakes, which are alone wanting to render the scenery of this country the most enchanting in Europe.* Almost all of these castles have their legends or romantic incidents, many of them connected with the Holy Wars, which are fondly dwelt on by the inhabitants; in several, the weapons and armour of the heroes of the crusades are still preserved; and the traveller, in treading their long-deserted halls, feels himself suddenly transported to the age of Godfrey of Bouillon, or Richard of England, and all the pomp and interest of chivalrous exploits.†

In every part of the world, mountainous regions have been the nursery of superstitious feelings. The greatest works of man there appear as nothing compared to the magnificence of nature, and the individual is left, in solitude, to receive the impressions which the sublime scenery in which he is placed is fitted to produce. Upon minds so circumstanced, the changes of external nature come to be considered as the immediate work of some invisible power: the shadows that fall on the lakes at sunrise are interpreted as the approach of hostile bands; the howl of the wind through the forests is thought to be the lamentations of the dead, who are expiating their sins; and the mists that flit over the summits of the mountains seem to be the distant skirts of vast armies, borne on the whirlwind and treading on the storm. The influence of these feelings is strongly felt in Tyrol, and the savage mountains or ruined castles with which it abounds have become peopled with the phantoms of a romantic superstition. Lights are said to have been often observed at night in towers which have been uninhabited for centuries, and bloody figures distinctly seen to flit through their deserted halls. The armour which still hangs on the walls in many of the greater castles has been observed to move, and the plumes to wave, when the Tyrolese arms were victorious in war. Groans, they affirm, are still heard in the neighbourhood of the dungeons, where the victims of feudal tyranny were formally sacrificed; and the cruel baron, who persecuted his people in his savage passion for the chase, is often heard to shriek in the forests of the Unterberg,‡ and to

howl as he flies from the dogs whom he had trained to the scent of human blood.*

Superstitions, too, of a gentler and more holy kind have arisen from the devout feelings of the people, and the associations connected with particular spots, where persons of extraordinary sanctity have dwelt. In many of the farthest recesses of the mountains, on the verge of perpetual desolation, hermits in former times had fixed their abode; and the imagination of the peasant still fancies that their spirits hover around the spots where their earthly trials were endured. Shepherds, who have passed in the gloom of the evening by the cell where the bones of a saint are laid, relate that they distinctly heard his voice as he repeated his vesper prayers, and saw his form as he knelt before the crucifix which the piety of succeeding ages had erected in his hermitage. The image of many a patron saint has been seen to shed tears when a reverse has happened to the Tyrolese arms, and the garlands which are hung round the crosses of the Virgin wither when the hand which raised them has fallen in battle. Peasants, who have been driven by a storm to take shelter in the little chapels which are scattered over the country, have seen the crucifix bow its head, and solemn music is heard at vespers in the higher places of worship of the mountains. The distant pealing of the organ, and the chant of innumerable voices, are there distinctly heard; and the peasant, when returning at night from the chase, often trembles when he beholds funeral processions clothed in white, marching in silence through the gloom of the forests, or slowly moving on the clouds that float over the summits of the mountains.†

It may easily be imagined how strongly these feelings were excited by the approach of the war of deliverance in 1809. The emissaries of Austria had long before prepared the people for revolt; foreign oppression had led them to desire it with passionate ardour; unknown to Bavaria, the whole population were impatiently expecting the signal to rise. During this period of anxious expectation, the excited minds of the people clothed the air with an unusual number of imaginary appearances. In the gloom of the evening, endless files of visionary soldiers, clad in the Austrian uniform, cavalry, infantry, and artillery, were seen to traverse the mountain tops. The creaking of the wheels, the tramp of the horses, the heavy tread of marching columns, intermingled with wild bursts of laughter and shouts of triumph, were distinctly heard; but all was hushed, and the spectres melted into mist and vapour when the anxiety of the spectators inclined them to approach too nearly. The Tyrolese, nay, the Bavarian sentinels themselves, often beheld the emperor's tower in the fortress of Kufstein surrounded with lambent fire, and the Austrian banners, wrapped in flames, were seen to wave at night over the towers of Sterzing. Withered arms were seen to stretch themselves from the rocks in the most secluded recesses of the mountains; vast armies of visionary soldiers, with banners flying, and all the splendour of military triumph, were seen at sunrise reflected in the lakes which lay on the Salzburg and Bavarian frontiers; and when the widows and

Omens which were observed on the approach of the war.

* Tyrol proper has no lakes, though the adjoining countries of Styria, Salzburg, and Bavaria have several. Two most beautiful ones, the Kochel-see and Walchen-see, adjoin the great road from Munich to Innspruck, and give token to the enraptured traveller of his approach to the mountain region. The first, which much resembles, though on a grander and more perfect scale, Loch Katrine in Scotland, is described by an author who has transferred into romance the hues and colouring of nature, Mr. JAMES IN GLIS, vol. ii., 374.

† Personal observation.

‡ Eight-and-twenty colossal bronze statues of princes and paladins of the dark ages, in armour, stand around the tomb of Maximilian I., in the Church of Holycross in Innspruck, and the effect of the group is extremely impressive, though hardly equal to that of the simple tomb of Huffer, which it also contains, whose remains were brought there from his grave at Mantua, in 1823. The Castle of Ambras, near Innspruck, formerly contained a unique collection of ancient armour, which, when the author visited it in 1816, was one of the most interesting spectacles in Europe; but the greater part of these precious remains have now been removed to the imperial museum at Vienna.—See INGLIS'S *Tyrol*, i., 200, 219, and EUSTACE'S *Italy*, i., 91.

§ A romantic mountain, six miles from Salzburg, at the entrance of the beautiful valley of Borchtolsgradden.

orphans of the fallen warriors knelt before the Virgin, the flowers and garlands placed round the image, according to the amiable custom of Catholic countries, and which had remained there till they had withered, burst forth in renovated beauty, and spread their fragrance around the altar, as if to mark the joy of the dead for the approaching deliverance of their country.*

The most remarkable feature in the national character of the Tyrolese is their uniform piety: a principle which is of the people—nowhere more universally diffused than in their sequestered valleys. The most cursory view of the country is sufficient to demonstrate the strong hold which religion has taken of the minds of the peasantry. Chapels are built almost at every half mile, on the principal roads, in which the traveller may perform his devotions, or which may awaken his thoughts to a recollection of his spiritual duties. The rude efforts of art there have been exerted to portray the events of our Saviour's life, and innumerable figures, carved in wood, attest, in every part of the country, both the barbarous taste of the people and the fervour of their religious impressions. Even in the higher parts of the mountains, where hardly any vestiges of human cultivation are to be found, in the depths of untrodden forests, or on the summit of seemingly inaccessible cliffs, the symbols of devotion are to be found, and the cross rises everywhere amid the wilderness, as if to mark the triumph of religion over the greatest obstacles of nature. Nor is it only in the solitudes or deserts that the proofs of their devotions are to be found. In the valleys and in the cities it still preserves its ancient sway over the people. On the exterior of most houses, the legend of some favourite saint, or the sufferings of some popular martyr, are delineated; and the poor inhabitant deems himself secure from the greater evils of life under the guardianship of such heavenly aid. In every valley numerous spires are to be seen rising amid the beauty of the surrounding scene, and reminding the traveller on the eastern frontier and in the Styrian fields, by the cupola form in which they are constructed, of his approach to the regions of the East. On Sunday, the whole people flock to church in their neatest and gayest attire; and so great is the number who thus frequent these places of worship, that it is not unfrequent to see the peasants kneeling on the turf in the churchyard where mass is performed, from being unable to find a place within its walls. Regularly in the evening prayers are read in every family; and the traveller who passes through the villages at the hour of twilight, often sees through their latticed windows the young and the old kneeling together round their humble fire, or is warned of his approach to human habitation by hearing their hymns stealing through the silence and solitude of the forest.†

Nor has their religion become corrupted by many of the errors which, in more advanced civilization, have dimmed the light or perverted the usefulness of the Catholic Church. Mingled, indeed, with a large intermixture of superstition, and interwoven as it is with innumerable legends and visionary tales, it yet preserves enough of the pure spirit of its divine origin to influence, in a great de-

gree, the conduct of their private lives. The Tyrolese have not yet learned that immorality in private may be absolved by ceremony in public, or that the profession of faith can win a dispensation from the rules of obedience. The purchase of absolution by money is there almost unknown: it is never conferred, unless accompanied, according to the true Catholic principle, by the profession, at least, of genuine repentance. In no part of the world are the domestic or conjugal duties more strictly or faithfully performed: "*Nec corrumpere et corrumpi, seculum vocatur.*"* In none do the parish priests exercise a stricter or more conscientious control over the conduct of their flocks. Their influence is not weakened, as in a more advanced state of society, by a discordance of religious tenets; nor is the consideration due to their sacred function lost in the homage paid to rank, opulence, or power. Placed in the midst of a people who acknowledge no superiors, and who live almost universally on the produce of their little domains; strangers alike to the arts of luxury and the seductions of fashion, the parish priests are equally removed from temptation themselves, and relieved from the necessity of guarding against the great sources of wickedness in others. Each pastor is at once the priest and the judge of his parishioners, the infallible criterion in matters of faith, and the general umpire in the occasional disputes which occur among them. Hence has arisen that remarkable veneration for their spiritual guides by which the peasantry are distinguished; and it is to this cause that we are to ascribe the fact, common to Tyrol with La Vendée, that, while their nobles were generally absent or lukewarm in the cause, the people followed with alacrity the call of their pastors to take up arms in behalf of their religion and ancient princes.†

In ancient times the Alps were inhabited by fierce and barbarous tribes, and the classical writers have exhausted their eloquence in painting the horrors of the climate and savage manners of the inhabitants of those unexplored regions. "*Nivesque celo prope immixtæ, tecta informia imposita rupibus, pecora jumentaque torrida frigore, homines intonsi et inculti, animalia inanimaque omnia rigentia gelu; cetera visu, quam dictu, fœdiora, terrorem renovarunt.*"‡ Many Roman legions were impeded in their progress, some thinned in their numbers by these cruel barbarians; and even after the mountaineers of the Rætian Alps had been reduced to subjection by the expedition of Drusus, it was still esteemed a service of the utmost danger to deviate from the highways, and even an affair of considerable peril to traverse the passes by the great roads themselves. Almost all the inscriptions on the votive offerings which have been discovered in such numbers, around the ruins of the Temple of Jupiter Penninus, on the Great St. Bernard, and which come down to the latest periods of the Empire, are filled with warm expressions of gratitude for having escaped the extraordinary perils of the passage. Hence the singular fact, almost incredible in modern times, that even in the days of Pliny, several hundred years after the first passage of the Alps by the Roman troops, the sources both of the Rhine and the Iser were un-

Remarkable difference in this respect of ancient and modern times.

‡ Liv., lib. xxi.

known; and that the naturalist of Rome was content to state, a century after the establishment of a Roman station at Sion, in the Vallais, that "the Rhine took its rise in the most hidden parts of the earth, in the region of perpetual night, amid forests forever inaccessible to human approach." Few attempts appear to have been made by any of the Romans in later times to explore the remoter recesses of the mountains, now so familiar to every traveller, none to reclaim or humanize their inhabitants: their reduction, even by the legions, is enumerated with pride, as one of the greatest exploits of the emperors.* Magnificent highways, constructed across their summits, connected Italy with the northern provinces of the Empire; but they suffered the valleys on either side to remain in their pristine state of barbarism, and the Roman colonists hastened into more distant regions to spread that cultivation of which the Alps, with their rude inhabitants, seemed to them incapable. This inability to civilize a vast amphitheatre of mountains in the heart of their empire would appear inconceivable in so great a people as the Romans, did we not perceive the counterpart of it in the present condition of the Caucasian range, the inhabitants of which maintain a savage independence, in the midst of all the civilization and power of the Russian Empire, and whose predatory habits are sufficiently evinced by their proverbial expressions, notwithstanding all the efforts of modern enthusiasm or credulity to represent them in more interesting colours.†

What is it, then, which has wrought so surprising a change in the manners and habits in Europe of the inhabitants of the great mountain girdle of the earth? What is it which has spread cultivation through wastes deemed, in ancient times, inaccessible to improvement, and humanized the manners of a people remarkable only, under the Roman sway, for the ferocity and barbarism of their customs? What but the influence of religion; of that faith which has calmed the savage passions of the human mind, and spread its beneficial influence among the remotest habitations of men, and which prompted its disciples to leave the luxuries and comforts of southern civilization to diffuse knowledge and humanity through inhospitable realms, and spread, even amid the regions of desolation, the light of knowledge and the blessings of Christianity? Impressed with these ideas, the traveller, in crossing the St. Bernard, and comparing the perfect safety with which he now can explore the most solitary parts of these mountains, with the perils of the passage attest-

ed by the votive offerings, even in the days of Adrian and the Antonines, will think with thankfulness of the religion by which this wonderful change has been effected, and with veneration of the saint whose name has for a thousand years been affixed to the pass where his influence first reclaimed the people from their barbarous life; and in crossing the defile of Mount Brenner, where the Abbey of Wilten first offered an asylum to the pilgrim, he will feel, with a late amiable and eloquent writer, "how fortunate it is that religion has penetrated these fastnesses, impervious to human power, and, where precautions are impossible and resistance useless, spread her invisible ægis over the traveller, and conducts him secure under her protection through all the dangers of his way. When in such situations he reflects upon his security, and recollects that these mountains, so savage and so well adapted to the purposes of murderers and banditti, have not in the memory of man been stained with human blood, he ought to do justice to the cause, and gratefully to acknowledge the influence of religion. Impressed with these ideas, he will behold with indulgence, perhaps even with interest, the crosses which frequently mark the brow of a precipice, and the little chapels hollowed out of the rock where the road is narrowed; he will consider them as so many pledges of security, and rest assured that, so long as the pious mountaineer continues to adore the 'good shepherd,' and to implore the prayer of the afflicted mother,* he will never cease to befriend the traveller nor to discharge the duties of hospitality.†"

Though inhabiting the same mountain range, and under the influence of the same climate as the Swiss, the Tyrolese are distinguished by a totally different national character: a striking example of the undying influence of that difference of race which appears to stamp indelible features on the remotest generations of men. Both have the usual qualities of mountaineers, a bold and intrepid character, a frame fitted to endure toil, a soul capable of despising danger: both are distinguished by their uniform and enthusiastic love of freedom, and both have been illustrated in every age by their heroic and martial exploits. But, nevertheless, the fundamental principles of their life are different. The Tyrolese is animated with an ardent and enthusiastic loyalty; attachment to the house of Austria has ever distinguished him; he mingles prayers for his beloved Kaiser with his supplications for his family and his country; the Swiss, nursed in Republican ideas, abhors the very name or emblems of royalty; the Tyrolese is ardent, impetuous, sometimes inconsiderate; the Swiss, grave, reflecting, always tenacious: the former seldom quits his native valleys, and has never sold his blood in mercenary bands; the latter is to be found in the remotest countries of Europe, and has in every age prostituted his valour for foreign gold: patriotic devotion strongly animates both; but in the Tyrolese it is dignified by disinterested attachment to

National character of the Tyrolese compared with the Swiss.

* Plin., iii., 24.

† See SPENCER'S *Circassia, passim*. The eloquent author of these interesting travels has given a glowing account of the virtues and character of the tribes who dwell in the recesses of the Caucasus; but it is evident, even from what he says, that they are nothing better than gallant robbers. The common expression which he tells us is used by a Circassian maiden to a lover whom she despises, "Him! he has never yet stole a Tchernemorsky cow," speaks volumes as to the real character of this people, and corroborates the unfavourable picture of their customs, drawn by a much more experienced and judicious observer, Clarke, who describes them as a nest of freebooters. "The Circassians are almost all robbers by profession. The descriptions given of natives in the South Seas do not represent human nature in a more savage state than its condition exhibits among the Caucasians. Instructed from their infancy to consider war and plunder not only as a necessary, but as an honourable occupation, they bear in their countenances the most striking expressions of ferocious valour and of duplicity."—See CLARKE'S *Travels*, chap. i., vol. ii., 34, 35.

* Eustace's *Travels*, i., 98.

† It is to the unceasing efforts of the clergy, during the many centuries that elapsed between the fall of the Roman Empire and the revival of knowledge, that the judicious historian of Switzerland ascribes the early civilization and humane disposition in modern times of the Helvetic tribes, and invariably the first traces of order and industry appeared in the immediate neighbourhood of the religious establishments.—See PLANTA'S *Switzerland*, i., 17, *et seq.*

† Personal observation.

the throne; in the Swiss, somewhat dimmed by its union with the thirst for individual aggrandizement.

Notwithstanding, however, the long-established and hereditary loyalty of the Tyrolese, there is no part of Europe where the love of freedom is more strongly felt, or its practical blessings have been more uninterruptedly enjoyed. In every part of the country, the bold and martial air of the peasantry, their athletic form and fearless eye, bespeak the liberty and independence which they enjoy. Often the people carry arms, universally they possess them; on Sundays or holidays they usually appear with costly weapons in their belts or slung around their shoulders, as a mark at once of their wealth and privileges. Frequent exercise of the chase, and the universal practice of firing at targets and serving in the militia or trained bands, have given them an extraordinary proficiency in the use of firearms, of which the French and Bavarians, in the course of the war, had ample experience. It was in a great degree in consequence of the extraordinary perfection of the Tyrolese marksmen, that the inhabitants of the province, with little aid from the Austrian armies, were enabled for so long a period to make head against the united force of France and Bavaria. Their dress is singularly calculated to add to this impression. That of the men consists, for the most part, of a broad-brimmed hat, sometimes ornamented by a feather; a jacket, tight to the shape, but generally worn open, and exhibiting a red or green waistcoat; a broad girdle, richly ornamented, fastened in front by a large buckle of costly workmanship; embossed braces worn over the waistcoat, and supporting tight breeches, which, with gaiters up to the knee, are invariably made of black leather. The colours of the attire, especially about the breast, are brilliant and varied, and, with the pistols or knife stuck in the girdle, bespeak a degree of opulence rarely to be met with in the actual cultivators of any other country. But everything about them indicates a general and long-established well-being, and demonstrates that the opulence which industry had won has been fearlessly and habitually displayed by the possessors. They are courteous and hospitable in their manner towards strangers; but they expect a similar treatment on their part, and in no country of Europe is an insult more likely to be avenged, or is the peasant more ready to redress with his own hands any wrong, whether real or imaginary, which he may have received. Honest, sincere, and brave, the people are yet warm in their temperament, and, acknowledging no superiors, and being but little habituated to gradation of rank, they expect to be treated on all occasions on the footing of respect and equality. But, if this is done, in no part of the world will the foreigner experience more courteous reception, or can he repose with more perfect security on the honesty and fidelity of the inhabitants.*

The two circumstances which have mainly contributed to nourish these independent and masculine feelings in the Tyrolese peasantry, are the practical freedom of their government, and the circumstance of their being, in general, proprietors of the lands which they cultivate. Though form-

practical freedom which the people have always enjoyed under the Austrian government.

ing part, ever since their acquisition by Austria, by inheritance in 1363, of a despotic monarchy, the Tyrolese have uniformly been in the practical possession of all the blessings of freedom; and from the earliest times they have enjoyed the two grand privileges of representative assemblies, and not being taxed without their own consent.* Impressed with the bold and impetuous character of these fearless mountaineers, as well as the vast importance, in a military point of view, of their country to the defence of the hereditary states, the Austrians not only never made any attempt to infringe their privileges, but treated the inhabitants with such lenity, that they knew government only by the protection and benefits which it afforded. The taxes were so light as to be almost imperceptible; civil appointments were almost all filled by natives; municipal officers were elected by the people; custom-house restraints were hardly felt; the conscription was unknown. Four battalions of light-armed troops were all that was required by government from the province, though it contained seven hundred thousand souls—a requisition rather felt as a privilege than a burden, as it afforded a vent to their numerous and warlike youth—and were always filled with volunteers. But the whole male inhabitants were enrolled in the militia, and regularly instructed in the rudiments of military art and ball practice; twenty thousand men, capable of being augmented to double that force in case of need, were at all times ready to defend their mountains, and often, by their hardihood and valour,† rendered essential service to the monarchy in the most critical periods of its history.

In the German Tyrol, the peasantry are almost all owners of the land they cultivate: a state of things of all others the most favourable to social happiness, when not brought about by the spoliation of others, and accompanied by a tolerable administration of government. It is much less so on the Italian side of the mountains: there, great proprietors, with their attendant evils of non-resident gentry and resident middlemen, are to be found. Hence, in a great degree, as well as in the original difference of race, the wide distinction between these two great divisions of the country in the character and independence of the people. Their look, their customs, their character, are essentially distinct: in the German Tyrol are to be seen a national dress, primitive usages, early hours, independent character, intrepid resolution; in the Italian, polished manners, an harmonious accent, opulent cities, selfish craft, enervating luxury. The line between the two, however, is not to be drawn merely according to the flow of the waters into the Danube or the Po: the German population has overspread the crest of the mountains,

The peasants are all owners of their land. Its great influence on their character.

* In Tyrol, as in Sweden, the four orders of nobles, clergy, burghers, and peasants, met in a general convocation at Innsbruck, where the president was chosen by the suffrages of the united body. The bishops of Trente and Brixen were usually elected alternately for that situation. In these assemblies, all matters relative to taxation, as well as the calling out the militia, were settled; and, in order to facilitate the latter, a sort of conscription was established, and the days of service, being in general forty-two, fixed upon. These days were a period of festivity and recreation to the youth upon whom the lot fell. To the latest times, previous to the cession of the province to Bavaria in 1805, these privileges had been religiously observed by the Austrian government.—MULLER'S *Gesch.*

† Malte Brun, vii., 516, 517. *Gesch. And. Hofer*, 14, 15. Barth., 64, 72.

* Malte Brun, vii., 516. Personal observation. *Ingli's Tyrol*, i., 162, 164.

and come far down towards the Italian plains; all the valleys of the Adige and the Eisach above Bolsano are inhabited by the northern brood, who, with the harsh language and fair hair, have preserved the virtues and customs of their fathers. The population of German is nearly four times that of Italian descent; and in all struggles for freedom or independence, though the latter has not been wanting in energetic characters, the weight of the contest has fallen upon the Gothic race.*

To complete the picture of this highly interesting people, it is only necessary to observe, that they are all frugal and industrious, that domestic manufactures are to be found in many of their cottages, and valuable salt-mines at Hall, on the Lower Inn, but that the great reliance of the people is on the resources of agriculture. The wonderful effect of a general diffusion of property in stimulating the efforts of individual industry, is nowhere more conspicuous: the grass which grows on the sides of declivities too steep for pasture, is carefully cut for the cattle; the atmospheric action on rocks is rendered serviceable by conveying their debris to cultivated fields, and the stranger sometimes observes with astonishment a Tyrolese peasant, with a basket in his hand, descending inaccessible rocks by means of a rope, in order that he may gain a few feet of land at the bottom, and devote it to agriculture. All the family labour at the little paternal estate; the daughters tend the cows, or bring in the grass; the sons work with the father in the field, or carry on some species of manufacture within doors. Notwithstanding this universal industry, however, the country is too sterile to maintain, from its own resources, its numerous inhabitants: a large proportion of it is covered with forest, a still larger is desert rock or snow, tenanted only by the chamois and the marmot; and a considerable portion of the people are yearly induced to seek the means of bettering their condition in the neighbouring and richer countries, from whence such of them as prosper return, after many years of absence, to purchase a little domain in their beloved valleys.†

To a people of such a character, and enjoying such advantages under the paternal government of their ancient princes, the forcible transference to the rule of Bavaria by the treaty of Presburg had been the subject of inextinguishable aversion. The cabinet of Munich, little acquainted with the character of the inhabitants, ignorant of the delicacy requisite in the management of free-born mountaineers, and relying on the powerful military aid of France and the Rhenish Confederacy, adopted the dangerous policy of coercing their discontents by force. Though all their privileges were solemnly guaranteed by Bavaria, in the treaty of Presburg in 1805, yet no sooner were the Bavarian authorities established in the country, than all these stipulations were basely violated. The court of Munich seemed intent only on making the utmost of their

new acquisition, as if under a presentiment that their tenure of it was not destined to be of very long duration. The constitution, which had subsisted for ages, was overthrown by a royal edict, the representative estates were suppressed, and the provincial funds seized. No less than eight new and oppressive taxes were imposed, and levied with the utmost rigour: the very name of the country was abolished; and, after the model of revolutionary France, Tyrol was divided into the departments of the Inn, the Etch, and the Eisach; the dramatized legends, which formed so large a part of the amusement of the people, were prohibited; all pilgrimages to chapels or places of extraordinary sanctity forbid. The convents and monasteries were confiscated, and their estates sold; the church plate and holy vessels melted down and disposed of; the royal property was all brought into the market; even the ancient castle of Tyrol in the Passeyrthal was not spared. New imposts were daily exacted without any consultation with the estates of the people; specie became scarce, from the quantity of it which was drawn off to the royal treasury; the Austrian notes were reduced to half their value, and the feelings of the people irritated, almost to madness, by the compulsory levy of men to serve in the ranks of their oppressors. It was even attempted to change the very name of the country, and incorporate it with the Bavarian provinces; and the use of their mother tongue was only to be permitted to the southern provinces for a few years.*†

The existence and wide diffusion of these discontents was well known to the Austrian government, by whom a constant correspondence with the disaffected leaders had been maintained in secret ever since that valuable province had been reft from their dominion. Sensible of the immense error committed in 1805, in stripping the country of regular troops at the very time when the advance of the French to Vienna rendered it of the last importance that this great natural fortress should be strengthened on their flank, the cabinet of Vienna resolved not to fall a second time into the same mistake, and made every preparation for turning to the best account the martial qualities and excited feelings of the people. The Archduke John, who commanded the army destined for the Italian campaign, and then stationed at Villach and Klagenfurth, had made frequent excursions, in former years, through the Tyrol; and, in the course of his rambles, had become as much attached to those spirited mountaineers as they had acquired confidence in his patriotism and ardour. An active correspondence was carried on between the archduke and the Tyrolese leaders, from the moment that war had been resolved on by the cabinet of Vienna, till it actually broke out; but although that accomplished prince was thus, in

* Müller's Gesch., 671. Gesch. A. Hofer, 17, Introduction. Barth., 24, 32.

† Beaulieu, by an order dated Moscow, September 24, 1812, only permitted to some of the southern districts the use of their mother tongue for six years longer.—*Quarterly Review*, xvii., 351. The date is singular and ominous. Napoleon afterward was well aware of how much the Tyrolese revolt was owing to the mismanagement of the Bavarians, and said to Count Bubna, "The Bavarians did not know how to govern the Tyrolese, and were unworthy to rule that noble country."—*GESCH. AND. HOFER*, 16. In truth, however, it was the magnitude and weight of his own exactions, in men and money, from that subject power, which drove the cabinet of Munich to the severe measures which had so powerful an effect in bringing about the insurrection.

§ "The above-mentioned countries (Tyrol and Vorarlberg) shall be enjoyed by his majesty the King of Bavaria in the same manner, and with the same rights and prerogatives, as the Emperor of Germany and Austria and the princes of his house enjoyed them, and no otherwise."—*Treaty of Presburg*, Dec. 26, 1805, Art. 8. MARTENS, *Sup.*, iv., 315.

a great degree, instrumental in producing that general insurrection in the province which afterward took place, yet he was fated never to return to it till the contest was over, nor to take part in a struggle in which he would willingly have pledged his fortune and his life.*

The Tyrol, notwithstanding its rugged aspect, is, in a military or strategical point of view, a very simple country. There are very few practicable roads. The great chain of mountains which forms the southern barrier of the valley of the Inn, and which, beginning with the snowy peaks of the Orteler Pitz, stretches through the Geffron to the huge mass of the Gross Glochner, is traversed only by one road, which, from time immemorial, has formed the chief communication between Germany and Italy. Setting out from Munich, it crosses the northern barrier of the Innthal by the gorge of Scharnitz, descends to Innspruck, and, after crossing the southern bulwarks of the valley by the pass of the Brenner, descends the course of the Eisach to Sterzing, Brixen, Botzen, Trent, and Roveredo, below which it emerges at Verona into the Italian plains. From Trent, branch out two lateral roads, the first, after surmounting an inconsiderable ridge, descends, by the waters of the Brenta, through the romantic defiles of the Val Sugana to Primolano, and loses itself in the plains of Verona at Bassano; the second, after crossing the high Sarea, winds down by Chiesa and the lake of Idir to the Brescian fields. From Botzen, or Bolsano, a great road ascends the whole course of the Adige, called, in its upper or German parts, the Etch, and penetrates into the cold and cheerless pastures of the Engadine, in Switzerland, at Nauders. From Brixen branches off the great road to Carinthia and Klagenfurth, through the Pusterthal and down the valley of the Drave; and the route communicates with Salzburg by a cross-road, which surmounts the great central ridge by St. Michel and Tauern, till it reaches Rastadt and the waters of the Salza. Another great road crosses Tyrol in its whole breadth, along the valley of the Inn, communicating on the west with Switzerland by Feldkirch and Bregentz; on the east by Rattenburg to Salzburg, Enns, and Vienna. The Brenner is thus by far the most important position in Tyrol, because whoever has the command of it is the master of the only communication from Germany and the northern, to Italy and the southern Tyrol, and the bridge of Ladtch, at the junction of roads leading to Innspruck, Carinthia, and Verona. Rude fortifications are erected on the principal passes leading into the province on all sides from the adjoining states; but they were of no great strength, and incapable of holding out against a numerous and enterprising enemy. The true defence of the Tyrol consisted in its rugged and inaccessible surface, which rendered it for the most part wholly impervious to cavalry;† in the number of woods and defensible positions which it contains, and, above all, the indomitable spirit of its inhabitants.

When the peasantry of Tyrol, at the summons of Austria, took up arms, they had no fixed or authorized leaders; but several persons had acquired such consideration among them as naturally placed them at the head of affairs. The

first of these was ANDREW HOFER, a native of St. Leonard, in the valley of Passeyr: a name, like that of Tell and Wallace, now become immortal in the history of the world. Like his ancestors for many generations, he carried on the business of an innkeeper, on his paternal property on the banks of the Adige: a profession which is one of the most respectable among that simple people, from the intercourse with strangers and wealth with which it is commonly attended. He was born on the 22d of November, 1767, so that he was in the forty-second year of his age when the insurrection broke out. His frame was Herculean, his shoulders broad, his strength surpassing; but, like most persons long habituated to climbing mountains, his carriage was somewhat impaired by an habitual stoop. His education and means of improvement had been superior to those of most persons in his rank of life, from his frequent intercourse with travellers, as well as the traffic which he carried on in wine and horses, in the course of which he had visited most of the principal cities on the southern side of the mountains, and become a fluent master of the Italian language, though in the low Venitian dialect. His dress was the common habit of the country, with some trifling variation: a large black hat, with a broad brim, black ribands, and a dark curling feather, a green jacket, red waistcoat, green braces, black leathern girdle, short black breeches of the same material, and red or black stockings. About his neck was always to be seen a crucifix and a silver medal of St. George, to which was afterward added a gold medal and chain, sent him by the emperor. He never, however, obtained any rank in the Austrian army, and was indebted for his influence among his countrymen to his well-known probity of character and disinterested disposition, as well as the secret connexion which he maintained with the Archduke John, with whom he had formed an acquaintance in the course of that prince's scientific rambles in the Tyrol, which led to his being chosen as a deputy from his native valley to confer with him at Brunecken, in November, 1805, and Vienna, in January, 1809. His talents and acquirements were of a superior order, as was sufficiently evinced by his having been selected by that discerning prince on occasions of such importance for the discharge of difficult duties; but his parts were solid rather than brilliant, and he evinced, in its merits equally as its defects, the true German character. Honest, sincere, and confiding, tenacious of custom, attached to antiquity, ignorant of present times, benevolent in disposition, he was at the same time pious and patriotic, and ready to lay down the last drop of his blood in defence of his religion and emperor. It was easy to excite him to severe measures; but, when their execution commenced, he was readily diverted from his purpose, and his native gentleness of disposition speedily caused the sterner mood to relent. His attachment to the Catholic faith and his patriotic ardour were unbounded; and the bare recital of a victory gained by Austria in former times, or allusion to the classical days of Tyrol, a word in favour of the sacred person of the emperor, or the Archduke John, were sufficient to fill his eyes with tears. Though slow, and sometimes vacillating in decision, he was capable, when he applied to a subject, or just discrimination; and when invested, during a few months in autumn, 1809, with the entire government of the province, his measures were

* *Gesch. A. Hofer*, 19. *Inglis's Tyrol*, ii., 163, 164. *Barth.*, 52, 54. † *Pel.*, iii., 375, 382; and personal observation.

judicious to a degree that could hardly have been expected from his limited means of information. Fond of conviviality, sometimes addicted to intemperance, he was often carousing with his friends when the troops were engaged in action; and, though repeatedly victorious, and fearless in danger, he was only once under a hot fire during the war, though then he acted with the utmost gallantry. But his energy in conduct and well-known patriotic ardour obtained for him the attachmnet of his countrymen, whom he constantly led to victory; and the intrepidity of his conduct in his last moments has secured for him a lasting mausoleum in the hearts of his countrymen.*

Inferior to Hofer in general government, and unversed in the threads of political negotiation, SPECHBACHER was greatly his superior in the energy and conduct of actual warfare. He was a substantial yeoman, having inherited from his father a farm of some value in the village of Gnadenwald, in the Lower Innthal. Born in the year 1768, he was left an orphan at the age of seven years; and, though his relations bestowed all the care upon his education which circumstances would admit, he showed little disposition for study or any sedentary pursuit. From an early age he was found from morning till night among the mountains, with his rifle over his shoulder, pursuing the roe or engaging the lammergeyer. As he advanced in years, these pursuits had such attractions for him, that, abandoning altogether his paternal estate, he associated with a band of hunters, who set the forest laws at defiance, and ranged the mountains of the Upper and Lower Innthal, the Oetzthal, and the rugged forests of the Bavarian Tyrol. By this wandering mode of life, as he afterward himself admitted, he became acquainted with every pass and glen on the frontiers of Tyrol and Bavaria, from Feldkirch to Kufstein: a species of knowledge which was of essential importance in the conduct of the partisan warfare with which he was afterward intrusted, while at the same time it nourished in his mind that inextinguishable hatred towards Bavaria which is felt more or less by every inhabitant of the northern Tyrol. His grandfather had distinguished himself in the war against the Bavarians, under Maximilian Emmanuel; "and when I was a child," said Spechbacher in after days, "and listened to him as he told us the history of those times, I longed to have an opportunity of fighting against them as he had done." He was diverted, however, from this dangerous course of life by the impression produced by seeing one of his companions shot in a rencounter with a band of chassseurs, and returning, at the age of twenty-eight, to his native village, he married a young woman with some property, entered into a contract to supply the salt-works of Hall with wood, made himself master of the elements of education, and continued for twelve years to lead a laborious, inoffensive life, till the trumpet of war from Austria roused him to danger, and glory, and immortality.*

JOSEPH HASPINGER was a Capuchin friar, and buried in the seclusion of a monastic life, till the war broke out. Though the friar, reckoned with justice one of the most formidable of the Tyrolese leaders, he carried with him into the field of battle only the spiritual

weapons which he brought from the cloister. Clothed in his brown garment and rope girdle, he bore in his hand a large ebony crucifix, with which, it is said, in close combat, he sometimes exchanged blows with the enemy; and, being endowed with prodigious strength, nearly as many wonders are recounted of his personal feats as miracles won by his faith and devotion. When a student in the faculty of theology, he had borne arms against the French, and won a silver medal, which he consecrated, on entering the order of St. Francis, to the miraculous crucifix at Eppen, near Bolsano. He was distinguished by a flowing beard of a red colour, which gave him the surname of *Rothbard*; and often the massy crucifix and animated voice of the friar restored the combat, when his countrymen were sinking under numbers or fatigue.*

MARTIN TEIMER, though a brave and active leader, was not so celebrated as the other chiefs among the peasantry; but, from his military talents, skill in negotiations, and a certain degree of aristocratic favour which it induced, he received marks of distinction from the emperor which the others never enjoyed, and was made a baron, with the cross of Maria Theresa, to which Hofer never attained. Teimer, however, was Hofer's superior in conduct and understanding, though, from not being so great a favourite with the people, he never enjoyed the same influence or celebrity. He was born on the 14th of August, 1778, at Schländers, in the Visitschgau, and had a countenance in which the prominent forehead and sparkling eye clearly indicated the ascendancy of talent. He served in the militia in the war of 1796, and raised himself, by his abilities, from the ranks to the station of major, having distinguished himself in several actions under Laudohn in that year, and Bellegarde in 1799. In 1805, he was again made captain in the militia, and subsequently kept a shop at Klagenfurth. Like Hofer, his disposition was phlegmatic, and he was fond of conviviality; but, when roused by danger and placed at the head of his troops, he displayed equal courage and capacity, and contributed with the peasants of the Upper Innthal, whom he commanded, to some of the greatest successes of the war. It was only unfortunate that the favour of the emperor occasioned a certain jealousy between him and Hofer, which in some degree dimmed the glory and impaired the usefulness of both. Baron Hormayer, one of the few nobility of the country who appeared in arms for their country, was early appointed by the Austrian cabinet governor of the province; and he showed his judgment by delegating his authority at a very early period to Hofer, by whom the movements of the peasants were practically directed till the close of the contest.†

Such were the simple leaders under whose guidance the Tyrolese engaged in the formidable contest with the united power of France and Bavaria. It was from no ignorance of the perils which awaited them, but a brave determination to disregard them, that they stood forth with such unanimous gallantry for their country's deliverance. In former wars, they had both witnessed and felt the weight of the French arms: in 1796, they had seen it roll past them in the

* Gesch. A. Hofer, 44, 52, 53. Barth., 42, 47. Inglis, ii., 165, 166. † Barth., 36, 42. Inglis, ii., 179, 180.

Italian, in 1805 on the Bavarian plains; in 1797, their valleys had been penetrated from the south by Joubert,* in 1805 invaded from the north by Marshal Ney;† and they were well aware that the probabilities were, that, if a serious reverse happened to the imperial arms, the forces of the Empire would, as on former occasions, be concentrated for the defence of the capital, and they would be left without external aid to make head against their numerous and disciplined enemies. Still they unanimously stood forth in the contest. Every man took leave of his family and his friends as those who might never meet again. They prepared themselves, after the manner of their country, for what they deemed a pious warfare, by the most solemn rites of their religion. The priest, in many parishes, assembled those who were to join the army, and animated them by his exhortations, and blessed those who might die in defence of their country. Every family assembled together, and prayed that the youths who were to leave it might support their good name in the hour of danger, and die rather than dishonour their native land. In many instances even the sacrament was administered as for the last time in life, and accompanied with the solemnities which the Catholic Church enjoins for the welfare of a departing soul. It was with such holy rites, and by such exercises of family devotion, that these brave men prepared themselves for the fearful warfare on which they were entering; and it was the spirit which they thus inhaled that supported them when they were left to their own resources, and enabled them, even amid all the depression arising from the desertion of their allies, to present an undaunted front to the hostility of combined Europe.

All things being in readiness, and the Austrian troops, under the Archduke Charles, having crossed the Inn, the signal of insurrection was given by the Archduke John, in a spirited proclamation, from his headquarters at Klagenfurth, from whence the Marquis Chastellar set out to take the command of the regular troops which were to enter the province to direct and support the operations of the peasants.‡ So unanimous, however, was the feeling with which the country was animated, that, at the first intelligence of hostilities having commenced, it burst forth at once with uncontrollable fury in all quarters. The night of the 8th of April was fixed for the event on which the destinies of the Tyrol were to depend. The signal agreed on was throwing sawdust into the Inn, which floated down, and was soon discovered and understood by the peasants. In addition to this, a plank with a little pennon affixed to it was launched in the Upper Innthal, and safely borne down the stream, amid the throbbing hearts of all who witnessed it. Bale-fires at the same time were lighted on a hundred hills, and many a ruined castle blazed with a long-unwonted glow. The peasantry of the Innthal were warned, besides, by women and children, who carried from house to house little balls of paper, upon which were written the words "*s'ist zeit*," it is time. Roused by these various methods, the inhabitants everywhere rose on the 8th of April as one man, and with their redoubted rifles on their shoulders descended every lateral glen and ravine, till their accumulated force, gaining strength at every step as it advanced,

rolled in an impetuous torrent down the great valleys of the Inn, the Eisach, and the Adige.*

Marquis Chastellar, with the regular troops under his command, about ten thousand, Successes in sand strong, but very deficient in cavalry, the Pusterthal, was on the Klagenfurth frontier, to take advantage of and support these enthusiastic movements, and crossed the frontier at daybreak on the 9th. Their march through the Pusterthal resembled rather the triumph of a victorious than the advance of an invading army: mothers brought their children out to look at them; blind old men were led out of their cottages, that they might hear and bless their gallant countrymen; all endeavoured to get near, that they might touch their clothes, or even kiss their horses. But more serious occupation awaited them. On arriving in the neighbourhood of St. Lawrence, in their way down towards Brixen, they found the peasants in considerable numbers already engaged with the enemy. The rising there had been precipitated two days before the time agreed on, by an attempt of the April 9. the Bavarians on the important bridge at that place, which commanded the communication between Brunecken and the upper part of the valley: the peasants rose to prevent its destruction, and Wrede, aware of the importance of suppressing such a revolt in the outset, immediately marched to the spot, with two thousand men and three guns, from Brixen. With these, however, he made no impression on the assembled peasants stationed in the woods and rocks; but, being joined on the day following by a re-enforcement of a thousand foot-soldiers and six hundred horse, he renewed his attacks with better success, and the Tyrolese, unable to block up the main road against such formidable odds, were beginning to give way, when the arrival of seventy light horse, and a few companies of chasseurs, the advanced guard of Chastellar, who instantly charged with loud shouts, changed the fate of the day. The Tyrolese, suspending the combat, fell on their knees to return thanks, or embraced the Austrians with tears of joy; while the Bavarians, thunder-struck at this unexpected apparition, fled in disorder down the valley, and when they arrived at the tremendous bridge of Laditch,† broke into two divisions, the first of which, under Bisson, hotly pursued by the peasants, ascended the Eisach towards Sterzing, while the second, two thousand strong, under General Lemoine, followed the course of that river down to Bolsano. Here, however, they were met by the landsturm of the valley of the Adige, which had descended to that place in great strength, from the upper part of the Etchthal; and, though some forced their way through to Trent, the greater part, with the general himself, were made prisoners.‡

While these events were going on below Brixen, the Bavarian regiments, which had ascended to Sterzing, encountered Hofer with the landsturm of the Passetthal and the Vinchtgau, on the plain of Sterzing Moos, near the town and castle of that name. The Bavarians advan-

ced in good order and with an intrepid air over the open ground which lay between them and the enemy; but as they approached the Tyrolese, who were posted on rocks and in thickets around its outer circumference, they were staggered by the close and deadly fire of the rifles, and fell back in confusion. The guns were next brought up; but they could produce little impression on the peasants scattered among, and in great part concealed in, the broken ground and woods, and the gunners were soon laid prostrate by the unerring aim of the mountain sharpshooters. Encouraged by this success the Tyrolese now burst from their covert, and rushing forward, like the La Vendée peasants, in loose array, but with desperate resolution, using their spears, halberts, and the butt ends of their muskets, fell with loud shouts upon the enemy. After a violent struggle of a few minutes' duration, the Bavarians gave way, and, being enveloped on all sides, laid down their arms to the number of three hundred and ninety, besides two hundred and forty who were killed or wounded in this sanguinary combat. The column which succeeded, however, under Bisson and Wrede, contrived to force its way, by a circuitous route, up the pass of the Brenner; but it was grievously harassed in the defile of Lueg by the peasants, who broke down bridges, and barricaded the highway, by heaps of trees thrown across the road, and only penetrated through to the neighbourhood of Innspruck, after sustaining a heavy loss. All these columns, in their retreat, committed the greatest excesses, burning houses and massacring the peasantry wherever they had it in their power; while the Austrian authorities exhibited, at the same time, the noble contrast of a proclamation, issued expressly to restrain the feelings of revenge arising in the breasts of the people.*†

On the same day, the peasantry of the Upper and Lower Inntal rose in arms; and so active were the exertions made, that, early on the morning of the 11th, twenty thousand armed men, directed by Teimer, were assembled on the heights around Innspruck. In no condition to resist so formidable an assemblage, the Bavarians, who had only fifteen hundred men and a few guns in the place, withdrew into the town; but there they were speedily assailed by a furious crowd of peasants, who carried successively the external barriers, the bridge of the Inn, the artillery, and finally penetrated into the principal square, shouting out, "Long live the Emperor Francis! Down with the Bavarians!" and made themselves masters of the place. A frightful scene ensued; the Bavarians in some places surrendered, and begged for quarter; in others, continued the combat with undaunted resolution; and

in the *mêlée* several bloody deeds were committed, which, in their cooler moments, the Tyrolese would have been the first to condemn. General Kinkel, after making a brave resistance, was slain: Colonel Dietfurth, who atoned for his former conduct by the gallantry of his last hours, desperately wounded, was made prisoner, and soon after died; and the whole garrison of Innspruck, consisting of one entire regiment, four guns, a few cavalry, and several depôts of battalions, either taken or slain.*

An event here took place which strongly marked the peculiar character of the warfare which had commenced. Dietfurth, the Bavarian colonel, had made himself peculiarly obnoxious in the province by the severity of his public and licentiousness of his private conduct, as well as the contemptuous expressions which he had used towards the people.† As he lay half fainting, from loss of blood, in the guard-house of Innspruck, he asked who had been the leader of the peasants. "No one," they replied: "we fought equally for God, the emperor, and our native country." "That is surprising," said Dietfurth, "for I saw him frequently pass me on a white horse." The report of this incident produced an extraordinary impression upon the peasants, by whom it was universally believed, thenceforth, that St. James, the patron of the town of Innspruck, and who was always represented, in the battles with the Moors, mounted on a white horse, had combated at their head. The cavalry which escaped from Innspruck took refuge in a convent near the bridge of Volders, but Spechbacher, having assembled a body of peasants from the Lower Inntal, burst open the gates on the day following by means of April 12. an immense fir-tree which was rolled up on wheels to the massy portal by fifty of his strongest peasants, and every man was made prisoner. The Tyrolese, after these brilliant successes, set no bounds to their rejoicings: the great imperial eagle was taken down from the tomb of Maximilian in the High Church of Innspruck, decorated with red ribands, and carried, amid deafening acclamations, through the streets, the peasants flocking in crowds to gaze at and kiss it; while the pictures of the Archduke John and the emperor were placed on a triumphal arch, surrounded by candles kept constantly burning, every one that passed stopping an instant, bending the knee, and exclaiming, "Long live the emperor!"‡

In the midst of these rejoicings the Tyrolese were called to more serious duties. The victorious peasants, who had fallen asleep in the streets or in the orchards around the town, were alarmed, at three o'clock in the morning of the 12th, by the intelligence that the enemy was approaching. It proved to be the division of Bisson, which, having forced its way through the pass of Lueg and over the Brenner, from Sterzing and the valley of the Eisach, had reached Mount Isel and the neighbourhood of the Abbey of Wilten, on its way to

Arrival, defeat, and surrender of Bisson's division from Sterzing. April 12.

* Gesch. A. Hofer, 81, 82. Pel., iii., 87. Barth., 98, 100.

† "Tyroleans! you have proved yourselves worthy to be free, and of that constitution which the Bavarians promised to respect, but have violated. You have proved yourselves worthy of liberty: do not, therefore, give way to your indignation, and become ungovernable, but act with unanimity and coolness, determined to die or be free. To injure the feeble is contemptible: no real Tyrolese will allow himself to be accused of such a deed. To follow the example of those who have nothing to lose, who molest and plunder the peaceful and inoffensive, would inevitably sow the seeds of dissension among us, and cause our ruin. Without discipline, order, and obedience, nothing will prosper: in the name of the emperor and the archduke, I will punish every one who disobeys his orders, and treat every one who commits excesses as an enemy to his country."—JOSEPH BARON HORWAYER. See GESCHICHTE AND. HOFER, 87, 88.

† He had publicly boasted at Munich, "that, with his regiment and two squadrons, he would disperse the ragged mob;" and had been promoted instead of reprovod for his oppressive and licentious conduct.—GESCH. A. HOFER, 90, 91.

‡ Gesch. A. Hofer, 92, 93. Inglist, ii., 169, 173. Barth., 104, 106.

the northern Tyrol and Bavaria. The gates were immediately barricaded with casks, wagons, carts, and everything that could be found for that purpose, and the approaches to the city filled with armed men, ready to give the enemy a warm reception. But the Bavarians, who were descending the Brenner, were in still greater consternation than their opponents at the circumstances of their situation. With difficulty, and constantly harassed by a cloud of peasants in their rear, they had reached the heights of Mount Isel, and now they found Innsbruck, their sole point of retreat, where they expected to find succour, rest, and security, occupied by twenty thousand peasants. General Kinkel, who perceived the hopelessness of their situation, wrote to General Bisson, urging him to send some confidential person into the town who might report the state of affairs; and, in pursuance of this advice, Wrede, with a large escort, soon made his appearance, and they were immediately taken into custody. Wrede was detained, the remainder being allowed to return to their comrades. The situation of the French and Bavarians was now almost desperate. Chastellar, with a body of armed peasants, as well as a few regular troops, was descending the Brenner, and already menaced their rear, while the rocks and thickets in their front and flanks were bristling with the peasants of the Innthal, who, in great strength, obstructed their advance. After some unsuccessful parleying, in the course of which Bisson expressed the utmost dread of the vengeance of Napoleon if he laid down his arms, the fire began, and a close discharge, admirably directed, thinned the ranks of the French grenadiers, while the shouts with which the mountains resounded on all sides were so tremendous that they were completely panic-struck, and compelled their commander to consent to an unconditional surrender. Bisson laid down his arms with all his troops, including the division at Schwartz, which was to be delivered up to the Austrians there: nearly three thousand men on this occasion fell, in all, into the hands of the enemy.*†

The only post of importance in the Tyrol now occupied by the Bavarians was Hall in the Lower Innthal, and it soon yielded to the enterprise and skill of Spechbacher. The women and children who remained on the left bank of the Inn lighted fires on all the hills bounding the valley on that side; and this stratagem induced the Bavarian garrison to believe that, if the town were attacked at all, it would be from the northern quarter. Thither, accordingly, they all crowded, carefully manning the ramparts and watching the approaches. Meanwhile, Spechbacher with his men silently advanced in ambush to the other side, and, when the drawbridge was let down and the gate opened, upon the bell ringing for matins, they rushed in, overpowered the guard, and made themselves masters of the town. The

Bavarian prisoners, about four hundred in number, were immediately marched off under an escort consisting chiefly of women. Considering this as a studied insult, the captives were exceedingly indignant; but, in truth, it was the result of necessity, the whole male population having been marched off towards Innsbruck, and, for the same reason, a similar service was often assigned to the female sex during the war.*

Thus did the Tyrolese, in one week after the insurrection broke out, by means solely of their own valour and patriotism, aided by the natural strength of the country, entirely deliver the province from the enemy, recover all the fortresses except Kufstein, which were in the hands of their oppressors, and entirely destroy above ten thousand regular troops of the enemy, of whom six thousand were made prisoners! These extraordinary successes, too, were gained almost exclusively by the unaided efforts of the people; for, though the Austrian regulars came up most opportunely in the first contest, at the bridge of San Lorenzo, yet they had no share in the subsequent triumphs, which were achieved long before their arrival at the scene of action, by the assembled peasantry: a memorable instance of what may be effected by unanimity and vigour, even in opposition to a formidable military force. The effect of the victories of the peasantry was to liberate the southern as well as northern Tyrol; for the French troops were so much discouraged by their reverses, that they evacuated both Trent and Roveredo, and fell back to the neighbourhood of Verona. The insurrection gained all the Italian Tyrol, and even spread into the valleys of the Oglio and the Mella, where the people were highly discontented with the government of the kingdom of Italy. Numerous bodies of partisans appeared to the north, in the Bavarian plains, and the Swabian hills, and on the south, in the neighbourhood of Brescia and Verona; they communicated with the Archduke John, whose victory at Sacile excited extraordinary enthusiasm, by the vale of the Piave; and symptoms of revolt were already manifesting themselves in all the southern valleys of the Alps as far as Piedmont, where the people only waited for the Austrian standards to cross the Adige to break out into open insurrection. Nor was it the least honourable circumstance in this glorious contest, that, though the population were strongly excited by a long course of previous injuries, and almost entirely destitute of military officers to restrain their impetuosity, they were as much distinguished by their humanity as their valour, and, with a few exceptions, originating in the heat of assault, conducted their hostilities with as much moderation as regular soldiers.†

Meanwhile Napoleon, who was exceedingly irritated at this unlooked-for series of disasters in the Tyrol, and, notwithstanding all in his power, was not able altogether to conceal them even from his own subjects, let his exasperation exhale in furious invectives against the Marquis Chastellar, to whom he ascribed both the exciting of the revolt in Tyrol, and the cruelties which he alleged had been committed by the peasantry. The latter charge, founded upon some isolated acts of revenge perpetrated

* Barth., 116, 120. Gesch. A. Hofer, 101, 102.

† Pel., iii., 91, 95. Gesch. A. Hofer, 100, 101, 102.

* Gesch. A. Hofer, 97, 99. Pel., iii., 90. Barth., 106, 108.
† Upon signing this capitulation, Bisson exclaimed, "This day will be my last: the grave of my honour and military reputation. Never will Napoleon believe that this disaster might not have been averted; even were I merely unfortunate, he would impute it to me as a crime." In this, however, the French general was mistaken: it was for the interest of the emperor to conceal this check, and the lustre of subsequent events enabled him to accomplish this object; Bisson was not disgraced, and, by a singular revolution of fortune, was the governor of Mantua when Hofer was shot in that fortress.—Gesch. A. Hofer, 97, 98.

in the assault of Innsbruck, was wholly unfounded as against the Tyrolese in general; and against Chastellar, in particular, was in an especial manner false, as at the time of the acts complained of on the banks of the Inn he was still at Brixen, sixty miles distant, to the south of the Brenner, and even ignorant of the whole operations to the north of that mountain. But this sentence of outlawry against Chastellar and Hormayer, both of whom were ordered to be delivered to a military commission as soon as taken, and shot within twenty-four hours, was of a piece with the invariable policy of Napoleon in such circumstances. Whenever a disaster had occurred to his arms, or an event had taken place likely to rouse an enthusiastic moral feeling against his government, he instantly propagated some falsehood against its authors, or exaggerated some trifling incident into a mighty enormity; and by the vehement abuse of the persons by whom his power had thus been assailed, often succeeded, at least with his own be-nighted subjects, in withdrawing public attention altogether from the calamities on his own part, or virtues on those of others which he sought to conceal.*

Chastellar, for a fortnight after the Tyrol was evacuated by the enemy, laboured assiduously to give something like military consistency to the tumultuary efforts of the peasantry. He succeeded in equipping a small body of cavalry, to whom he gave arms: a species of force of which these poor mountaineers stood much in need, and organized several battalions of excellent foot-soldiers; and, having put matters in a train to the north of the mountains, re-crossed the Brenner with his regular troops, and, descending the valley of the Eisach and Adige,

April 23. came up with the enemy in front of the famous defile of La Pietra, between Roveredo and Trent. The French, under Baraguay d'Hilliers, six thousand strong, were there posted, in a well-known position of uncommon strength, and held firm, to give the main body of their army under Eugene time to retreat in order to the banks of the Adige, after the disastrous battle of Sacile. The Austrians, having April 24. imprudently commenced an attack when worn out with the fatigue of a long march, were worsted and driven out of the defile with loss; but the French, notwithstanding, continued their retreat to the neighbourhood of Verona, and Chastellar took up his quarters in Roveredo. From thence, however, he was soon recalled to the north of the Brenner, by the threatened invasion of the province by the French troops after the disastrous battles in Bavaria.†

Jellachich, as already noticed,‡ after the defeat of Hiller at Landshut, had retired from Salzburg front- April 29. the 24th of April. Thither he was followed by Marshal Lefebvre with his corps, consisting chiefly of Bavarians. The Austrian general took up a strong position in front of Salzburg, where he endeavoured to arrest the advance of the French troops; but the numbers of the French were so superior that he was unable to effect his object, and was driven into the town with the loss of several hundred prisoners and three guns. The victors entered pell-

mel with the vanquished, and Jellachich, continuing his retreat in great disorder to the south, ascended the valley of the Salza, and, crossing the mountains behind Rastadt, made the best of his way towards Villach and Carinthia, abandoning the eastern districts of Tyrol to their fate. Thither Lefebvre shortly after bent his steps, having remained in Salzburg only long enough to put the town in a sufficient posture of defence, and establish the magazines necessary for the operations in that quarter. On the May 10. 10th of May he broke up and advanced to Reichenhall, a considerable burgh still in the open country, but within a mile of the mountains, which there rise in awful majesty abrupt and sheer from the plain, to all appearance impervious to human approach. On the May 11. day following, the French in great force advanced to the entrance of the passes. Notwithstanding their immense superiority of numbers, such was the natural strength of the defiles,* that it is doubtful if they would have succeeded in making good their entrance had the Tyrolese guards been all at their stations; but it was Ascension-day, and a large proportion of the peasants were absent at church, or engaged in their devotions or sports on the holiday: so that the contest fell on four hundred regular troops and a few companies of sharp-shooters, who, notwithstanding, for several hours kept at bay a whole Bavarian division. At length the barricades and formidable defences in the tremendous defile of Strub were forced, and the Tyrolese driven, combating all the way up the frightful gorges of the Achen, back to the neighbourhood of Worgl. There they stood firm, as they were re-enforced by Chastellar with a few thousand regular troops; but on the same day intelligence arrived that the passes of the Inn, at the entrance of the plain, had been forced by Deroy with another Bavarian division, the Thierseebach crossed, and that the enemy's outposts had already appeared before Kufstein.†

Finding himself thus threatened both from the side of Salzburg and Kufstein, Chas- Combats at tellar, who had only three thousand Feuer Singer regular troops at his disposal, the re- and Worgl. mainder being a body of as many Tyrolese peasants, without any other discipline than what they

* No defiles in Europe exceed in romantic interest those which lie between Reichenhall and Worgl, through which the high road passes. Winding by the side of torrents, through narrow ravines shut in by walls of rocks, which barely leave room for a carriage-way; often blown out of the mass, between precipices a thousand or fifteen hundred feet high; scaling heights to appearance almost perpendicular, by an angle of elevation unknown in any other European road; descending break-neck declivities by the side of roaring streams, in the midst of forests of matchless beauty, surmounted by romantic peaks, starting up into endless fantastic forms, six or seven thousand feet in height, they possess a degree of interest to the lover of the picturesque exceeding even the far-famed passage of the Simplon. The most ardent imagination, furnished with the widest recollection of romantic scenery, can figure nothing approaching to the sublimity of the defile of Strub, where the road, apparently blocked up by a wall of rock two thousand feet in height, is cut through a narrow passage beside the roaring stream, and then winds its devious way amid overhanging forests of dark pine, intermingled with huge crags of brilliant colours, and surmounted by bare peaks silvered with snow. The most beautiful points in the vast amphitheatre of the Alps, as the author can testify, after having visited most parts of them, are the valley of Berchtesgaden; the Königsee and defile of Strub, near Salzburg; the Via Mala in the Grisons; the defile of Gondo on the route of the Simplon; the valley of Gasteren and Oeschinen in the vale of Kandersteg, near the Gemmi; and the approach to the Grande Chartreuse in Savoy.—*Personal observation.*

had acquired in their native valleys, resolved to take the initiative, and combat Lefebvre in the first instance, before Deroy came up. With this view, he occupied the defile of Feuer Singer, which lies between the ravines of the Achen and the pass of Strub, and strengthened the gorge with some rude fieldworks; but the impetuous attack of the Bavarians, flushed with the victory of Abensberg, overcame every obstacle, and the Austrians, after a bloody struggle, were driven back at the point of the bayonet to their reserves, posted at the important position of Worgl. Stationed there behind a rivulet, in a situation which commanded the junction of the roads from Kufstein and Salzburg, and barred the only access to Innspruck, Chastellar stood firm, and, with four thousand regular troops and six thousand peasants, gave battle to the enemy. The open and desolate plain of Worgl, however, was unfavourable to the operations of the new levies, who were dispirited at finding themselves driven into the open country from the fastnesses which they had deemed impregnable; and their total want of cavalry rendered them incapable of opposing with success the numerous and powerful squadrons of Linange. The Bavarians were greatly superior in number, being eighteen thousand strong, with thirty pieces of cannon, while the united Tyrolese and Austrians did not amount to half that number. After a short combat the Austrians were entirely defeated, with the loss of all their baggage, ammunition, and guns, seven in number; which, with five hundred prisoners, fell into the hands of the enemy.*

Nothing now remained to prevent the conquest of the Lower Innthal by the Bavarians; and if they had pushed on with vigour and rapidity, they might have struck a seasonable terror into the insurgents by the capture of their principal leaders and magazines at Innspruck. But they advanced so tardily that they gave the Tyrolese time to recover from their consternation: re-enforcements poured down the Brenner, and the mountains of Scharnitz, to the fugitives from Worgl; and Chastellar, who narrowly escaped being made prisoner by the enemy, met with Hormayer at Steinach, and concerted measures for future operations. Slowly moving up the valley of the Inn, Lefebvre found the resistance of the people increase with every step he advanced: Schwartz was only carried by assault after a desperate resistance, and burned, in the struggle, to the ground. Frightful atrocities marked the steps of the invaders: the Bavarians wreaking their vengeance on the unhappy peasants, for the real or imaginary injuries they had received, by the perpetration of the most revolting military cruelties. Old men, women, and children were massacred indiscriminately, and every village from which a shot had issued committed to the flames. Meanwhile, Chastellar, who had been strongly irritated at the Tyrolese, on account of the furious conduct of some drunken peasants at Hall, who tried to pull him from his horse from indignation at his retreat, had re-passed the Brenner, and the Innthal was again reduced to its own resources. On the 19th, Lefebvre appeared before Innspruck, which submitted without resistance: the minds even of the heroic leaders of the insurrection being stunned by the misfortunes which

were now accumulating around them on all sides, and justly considering a prolonged resistance hopeless after Vienna had opened its gates to the enemy, and the Archduke John had evacuated the Carinthian Mountains.*†

Affairs in Tyrol were now wellnigh desperate; for, at the very time when these disasters were accumulating on the north of the Brenner, a strong French force of fifteen thousand men, under Baraguay d'Hilliers and Rusca, detached by Eugene after his victory on the Piave, to which the peasants, now stripped of the regular troops for the defence of the Innthal, had nothing to oppose, was rapidly advancing up the valley of the Adige, and had already occupied Roveredo and menaced Trent. Chastellar, despairing of success, had made arrangements for leaving the country; and Hormayer, who, with unshaken resolution, was still endeavouring to rouse the peasantry in the lateral valleys of the Innthal, found them in most places indignant at the retreat of the Austrians, and fast returning to their homes. General Buol, indeed, with two thousand five hundred men and six guns, still occupied the crest of the Brenner; but he was in a wretched condition, starving with cold, destitute of ammunition, and almost without provisions. In these mournful circumstances, it was the invincible tenacity of the peasantry in the Upper Innthal, and elevated parts of the Brenner and Scharnitz ranges of mountains, which restored the fortunes of the campaign. Eisensticken, aide-camp to Hofer, Spechbacher, and Friar Haspinger, vied with each other in the indefatigable ardour with which they roused the people; and even the first fell himself on his knees to General Buol, when he was preparing to abandon the Brenner, and by the vehemence of his entreaties prevailed upon him to keep his ground on that important position. Hofer, who, in the first instance, was thrown into the deepest dejection by the misfortunes impending over his country, and rendered incapable of active exertion, was roused by their example to nobler efforts, and, appearing at the head of his peasants, forced the Passeyrthal, commenced a fierce attack on the Bavarians at Presburg, near Mount Isel, which, although unsuccessful, struck no small

Desperate state of affairs in Tyrol, and firmness of the peasantry.

May 25.

* Moniteur, June 8, 1809. Pel., iii., 104, 106. Gesch. A. Hofer, 158, 165.

† The Archduke John, on occasion of his first disaster on the Piave, on the 30th of April, wrote to Hofer in these words: "Do not allow the misfortunes of Germany to make you uneasy: we have done our duty, and will defend the Tyrol, Styria, Carinthia, Carniola, and Salzburg, to the last drop of our blood. It is in that fortress, aided by our brave mountaineers, that we ought to conquer or die, for the glory of our ancestors and our arms: *I shall not retire to Hungary.*" And on the 3d of May he wrote to Chastellar: "Our misfortunes in Germany have obliged me to abandon the offensive, and to direct my attention to the provinces, which are of so much consequence to Austria. Do not be alarmed: the Tyrol shall never be forsaken; *I will defend it and the interior of Austria to the last extremity.*" It would have been well for the Archduke John and the Austrian monarchy if he had adhered to these resolutions, and thrown himself into the Tyrol when obliged to evacuate Italy by the disasters at Bavaria, as in that case he would have been in a situation to have taken part in the important and probably decisive operation projected by the Archduke Charles at Lintz on the 22d of May, and protected the interior of the monarchy as effectually as under the ramparts of Vienna. Instead of this, he at once disobeyed his brother's orders, and those of the Aulic Council, and violated his own promises by retiring into Hungary, and thereby not only caused the whole fruits of the battle of Aspern to be lost, but saved Napoleon from a disastrous retreat.*

* Gesch. A. Hofer, 157, 159. Pel., iii., 101, 102. Barth., 142, 148.

* Gesch. A. Hofer, 140, 141.

alarm into the enemy, from the gallantry with which it was conducted. This combat renewed the warlike ardour of the Tyrolese, who flocked from all quarters in great strength to the general place of gathering on Mount Isel, which ancient prophecy led them to expect was to be the theatre of great events to the Tyrol; while Lefebvre, who deemed the affairs of the provinces settled by the capture of Innspruck, and submission of the authorities in that place, had set out for Salzburg, leaving Deroy at the capital with eight thousand foot, eight hundred horse, and twenty pieces of cannon.*

The forces engaged on the 29th of May, on the heights of Mount Isel, were, in numerical strength, very unequal: the Tyrolese having nine hundred infantry, seventy horse, and five guns of the Austrian troops, besides a motley assemblage of peasants, to the number of twenty thousand men; individually brave and skilled in the use of arms, but altogether undisciplined and unaccustomed to act together in large masses; while the Bavarians had only eight thousand foot, eight hundred horse, and twenty-five guns. The numerical superiority, however, of the former was fully counterbalanced by their great inferiority in discipline, cavalry, and artillery, so that the real military strength of both sides might be considered as very nearly equal. Hofer did his best to compensate his weakness in cavalry by stationing his followers, as much as possible, in the wooded heights at the foot of Mount Isel, where horsemen could not penetrate; but the town was not to be carried by such a blockade, and the impetuous spirit of the peasantry led them to demand an immediate assault. Their spirits had been elevated to the highest degree by the intelligence of the battle of Aspern, which had been communicated with extraordinary rapidity to the most secluded valleys, and by a proclamation issued by the Emperor Francis the day after that glorious event, dated Breitenlee, 23d of May, in which he solemnly engaged "never to lay down his arms till Tyrol was reunited to the Austrian monarchy."[†]

The attack on Innspruck was combined with more military skill than could have been anticipated from the untutored character of the leaders by whom it was conducted. Spechbacher, who, in spite of the utmost vigilance of the Bavarians, had contrived to warn the peasants on both sides of the Inn of the approaching gathering,§ menaced the bridge of Hall, and the line of retreat down the valley of the Inn from the northern side, while Colonel Ressenfels co-oper-

ated in the same direction from the southern valleys, by a descent along the right bank of the Sill, and attack on the castle of Ambras; Hofer descended with all the strength of the southern and central valleys of Tyrol, from the Brenner and Mount Isel; while Teimer, with a small band of six hundred resolute followers, was sent by a circuitous route to the heights of Hottingen, on the north of the town, and in the rear of the Bavarians, to make his appearance in the middle of the action, and spread terror among the enemy, from the belief that they were beset on all sides. Thus the battle consisted of a variety of detached combats in different directions around Innspruck, contemporary with the now furious struggle at the foot of Mount Isel, between the main body of the combatants on either side. By daybreak Spechbacher was at the post assigned to him, and amid loud shouts, carried the important bridge of Hall with such vigour, that it gained for him the surname of "*Der Feuer-Teufel*," the *Fire Devil*. The castle of Ambras soon after yielded to the impetuous assault of Reissensfels, and the whole right bank of the Sill was cleared of the enemy; but they long held their ground at the bridge of Passberg, commanding the passage of that torrent by the great road on the south of the Inn. From this position, however, they were at length driven, about noon, by the more skilled attacks of Captain Dobrawa; and the left flank of the enemy being thus completely turned, and their retreat down the Inn cut off, they were thrown back in great disorder to the village and abbey of Wilten.*

While affairs were proceeding so prosperously on the east of Innspruck, a more Bloody action of Spechbacher and Haspinger. dubious conflict was raging in the centre and on the left, at the foot of Mount Isel. Haspinger, with a huge wooden cross in his hand, here led on the attack, and animated his followers not less by his example than the assurances of Divine protection which he held forth; he was followed by Colonel Ertel with the most disciplined part of the Tyrolese, two thousand strong; while Hofer, with the peasants of the Passeyrthal, descended from Mount Isel by the great road direct upon Innspruck; his brave but tumultuous array shouting aloud, "For God, and the Emperor, and our Fatherland!"[†] The outposts of the enemy were speedily driven in by the superior numbers and unerring aim of the Tyrolese riflemen; but when they advanced out of the woods and broken knolls to the open ground in front of the town, where the Bavarians were drawn up in line in admirable order, the usual superiority of discipline and organization became apparent, and the peasants were driven back. Rallying, however, among the rocks and thickets, they again poured down a destructive shower of balls on their assailants, and both sides maintained the contest with the most undaunted resolution. The ammunition of the Tyrolese, with which they were very scantily provided, at length began to fail: they were compelled to reserve their fire till it could be given with decisive effect; and balls could be obtained only by women and children, who picked up those of the enemy

* Pol., iii., 106, 107; iv., 31, 32. Gesch. A. Hofer, 217, 229. Barth., 138, 150.

‡ Hofer addressed the following characteristic letter to the inhabitants of the Upper Innthal: "Dear brethren of the Upper Innthal! For God, the Emperor, and our Fatherland! To-morrow, early in the morning, is fixed for the attack. With the help of the blessed Virgin, we will seize and destroy the Bavarians, and confide ourselves to the beloved Jesus. Come to our assistance; but, if you fancy yourselves wiser than Divine Providence, we will do without you.—ANDREW HOFER.—GESCH. A. HOFER, 238.

The proclamation of the Emperor Francis to the Tyrolese, dated the 1st of June, 1809, bore: "Operations at all points are about to recommence: I will send you a helping hand. We will combat together for our country and our religion. Your noble conduct has sunk deep into my heart: I will never abandon you. The Archduke John will speedily be among you, and put himself at your head."—ERZHER. JOHANNES Feldzug in Jahre, 1809, 162.

† "Für Gott, den Kaiser, und Vaterland."

‡ Spechbacher was attended in the battle by his little son Andrew, a boy of ten years of age. When the fire grew warm, his father ordered him to quit the field; the boy did so, but soon returned, and was again at his side. Irritated at this disobedience, Spechbacher struck him, and ordered him to withdraw. He did so; but, without retiring out of

which fell in the rear of the combatants. In this anxious moment, Teimer's bands appeared on the heights of Hottingen in the rear of the Bavarians; and though their attack was restrained by the troops which Derooy sent to oppose his progress, yet this circumstance, joined to the disastrous accounts of the progress of Spechbacher on the left, determined Derooy to retreat. At four in the afternoon, a sort of suspension of arms was agreed to by the leaders on both sides; and as soon as it was dark the Bavarians commenced their retreat by the left bank of the Inn, and, evacuating Innspruck and the great road, withdrew by mountain paths amid rocks and forests to Kufstein, from whence they continued their march to Rosenheim, in the Bavarian plains.*

In this battle the Bavarians lost four thousand men; but, what was of still more importance, they were deprived of it of the possession of the whole Tyrol. Intoxicated with joy, the peasants crowded into Innspruck in such numbers that they were an oppression, rather than a source of strength, to the Austrian commanders, who were totally destitute of ammunition or military arms for the ardent multitude. A proclamation was immediately issued, calling on all persons to bring forth their little stores of money and powder for the use of the troops, and considerable supplies were obtained in this way, though in no degree proportionate to the wants of the people. The desperate struggle in the heart of Austria required every sabre and bayonet around the walls of Vienna; the intervening country was all in the hands of the enemy, and not a dollar or a gun could be obtained from that quarter. Such, however, was the native vigour of the inhabitants, that, without any external aid or the support of regular troops, they not only cleared their territory of the enemy, but carried their incursions into the adjoining provinces of Swabia, Bavaria, and Lombardy. On May 29. the west, the peasantry of the Vorarlberg repulsed a body of French and Wirtembergers, who attempted to penetrate into Bregentz; on the east, Chastellar, who had collected four thousand regular troops, raised the blockade of Sachsenburg, and drove the enemy back to Villach; in the south, Leinenzen cleared the whole valley of Trent of the enemy, and then turning to the left, descended the defile of the Val Sugana, and made himself master of Bassano at the entrance of the plains of Treviso. Returning from thence to the banks of the Adige, he threw himself into the castle of Trent, where he was soon besieged by a division of Eugene's Italian army. June 9. The landsturm of the Upper Adige, however, flew to his relief: the Italians, overwhelmed by numbers, retired, with considerable loss, to Dolce, and the whole valley of the Adige, as far as Verona, was cleared of the enemy. The Vorarlberg followed the example of Tyrol: all the

valleys took up arms, and seven thousand well-armed marksmen, besides a landsturm of equal force, carried terror and devastation over all the adjacent provinces of Germany. Moeskirch and Memmingen were successively occupied, and laid under contribution; Constance fell into their hands; their victorious bands appeared even at the gates of Munich and Augsburg; June 29. and, in conjunction with the inhabitants of Swabia, who were highly discontented with the exactions and tyranny of the French troops, delivered no less than seventeen thousand of the prisoners taken at Echmuhl, Ebersberg, and Vienna, who found refuge in the valleys of Tyrol, and were speedily formed into fresh battalions. To the south of the Alps, Bassano, Belluno, Feltre, were repeatedly in their possession; they communicated with the Austrian regulars in Carniola; levied contributions to the gates of Verona, Brescia, and Como; and, spreading the flame of insurrection from the Black Forest to the plains of Lombardy, and from Salzburg to the Grisons, soon had twenty thousand infantry and eight hundred horse, regularly organized and equipped, under arms, besides a still greater number of brave men, undisciplined, indeed, but skilled in the use of arms, ready, in case of invasion, to defend their native valleys.*

While this heroic contest was going forward in the Tyrol and Vorarlberg, the generous flame had extended to the north of Germany, and the indignant feelings of an insulted people had well-nigh induced a general revolt against the French authority in Saxony and Westphalia.

It has been already mentioned with what ardent though inconsiderate enthusiasm the people of Prussia had rushed into the contest in 1806, and what oppressive burdens were laid upon them after its disastrous termination.† Since that time, the continued presence of the French troops, and the enormous plunder levied by their command under the name of contributions, had still farther spread the flame of discontent: dear-bought experience had dispelled all the illusion in favour of French principles, and the people were nowhere so ready to throw off the yoke as in those principalities where separate thrones had been erected in favour of members of the Bonaparte family. Such was the weight of the oppression under which they laboured, that the ramifications of a secret and most formidable insurrection were spread over all the north of Germany. The ancient Gothic blood, slow to warm, but enduring in purpose, was everywhere inflamed: the feeling of patriotism, a sense of duty, the precepts of religion, all concurred to rouse a disposition to resistance; the selfish mourned over the visible decrease of their substance under the withering contributions of Napoleon; the generous over the degradation of their country, and the slavery of the human race. Everywhere the Tugendbund was in activity: Hesse-Cassel, Hanover, and Westphalia, in an especial manner, were agitated from the enormous weight of the burdens imposed on their inhabitants by the French government. Twenty thousand disbanded soldiers were scattered over the former dominions of England in the German Empire, ready, at the first signal, to compose an army; as many ardent and discontented spirits

reach of the shot, observed where they struck the ground, and, bringing his hat full of them next morning to his father, begged that they might be used against the enemy. The wounded in this battle refused to be carried from the field, lest those who conveyed them to a place of safety should weaken the combatants; and numbers of women, throughout the day, were to be seen behind the ranks, bringing up ammunition, water, and refreshments to the wearied men.—See BARTH., *Krieg.*, 1809, 204-216; *GESCH. existed in Cassel and Westphalia, awaiting only the first success of the Austrian arms to declare openly in their behalf. From the Thuringian forest to the banks of the Vistula, from the Bohemian Mountains to the shores of the Baltic, the threads of a vast association existed, held together by the sacred bond of patriotism, to devote themselves to their fatherland. Though the court of Berlin did not venture openly to fan the flame, yet in secret they could not but wish for its success; and several of the most energetic members of the cabinet awaited only the advance of the Austrian banners to urge Frederic William to join the great confederacy for European freedom.*

It was chiefly with a view to give support and consistency to this enthusiastic spirit that the grand Austrian army, in the opening of the campaign, advanced towards Bareuth and Franconia; and it was owing to the unfortunate abandonment of that design, and the return of great part of these troops, when already on the borders of Franconia, to the banks of the Inn, that the early disasters of the campaign, as already noticed, were owing.† Two of the archduke's corps were far advanced towards the Rhine, and could not be recalled in time to share in the battles of Abensberg and Echemuhl; while the concentrated masses of Napoleon were thrown upon the imperial army, weakened in the centre by the advance of the van in one direction, and the retreat of the rear in another. But this early irruption of the Austrians towards Franconia and Saxony excited a prodigious sensation in the adjoining provinces under the immediate control of the French authorities, and early in April a spark blew up the flame

on the banks of the Elbe. Katt, a Prussian officer, had the honour of first raising the standard of independence in the north of Germany; but the effort was premature, and, having failed in an attempt upon Magdebourg, he was compelled, by the active pursuit of the Westphalian horse, to take refuge in the Prussian States. The next outbreak took place three weeks after, when Dornberg, the colonel of a regiment of Westphalian horse, was commanded by King Jerome to march against a body of insurgents. Conceiving himself discovered, he left his colours and put himself at their head. Evincing, in these critical circumstances, a spirit worthy of his family, though far beyond his ordinary character, Jerome assembled his

guards, two thousand strong, and assuring them that he confided in their honour, and threw himself upon their support, succeeded in attaching even the most disaffected, by the bond of military honour, to his cause. Eble, the minister at war, and Rewbell, governor of Cassel, displayed the greatest vigour and firmness of character; and by their energetic measures saved the kingdom when on the verge of destruction, and prevented a general insurrection breaking out in the north of Germany. Dornberg, at the head of several thousand insurgents, marched upon the capital; but having been encountered near its gates by a part of the garrison, whom he was unable to bring to a parley, his undisciplined followers were dispersed by a few discharges of cannon, and he himself fled with a few followers to the Hartz Mountains. His pa-

pers were seized at Homberg, and among them were some which compromised several persons in the service of other powers, particularly SCHILL, at that time a colonel in the Prussian army.*

This enthusiastic officer, an ardent member of the Tugendbund, and heart and soul devoted to his fatherland, was the early success first Prussian officer who had entered Berlin, at the head of a native force, after its evacuation by the French troops; and the impression made upon his mind by the universal transports which prevailed on that occasion had never been effaced. His intentions were fixed; but the ardour of his disposition was tempered by a rare prudence, and but for the accidental discovery of his name among the papers of Dornberg, his enterprise would in all probability have been delayed till the period for its successful prosecution had arrived. Almost every day he led his regiment out of Berlin, in full marching order, to reviews, marches, and mock-fights, which so completely imposed upon the ministers of Russia, France, and Westphalia, that, with all their vigilance, they never suspected him of being engaged in any sinister design, while his engaging manners and martial qualities rendered him the idol of the soldiers under his command. Denounced, at length, by the King of Westphalia to the King of Prussia, who was then at Königsberg, he was summoned by the latter to the royal presence to give an account of his conduct. Perceiving now that he was discovered, he boldly threw off the mask, marched at the head of six hun-

dred men out of Berlin, under pretence of going to manoeuvre, and at once erected the standard of war against France. He was speedily re-enforced by three hundred more, who joined him during the night; the whole inhabitants of the capital applauded his conduct; and such was the ferment in the garrison, that it was with the utmost difficulty that they could be prevented from proceeding in a body to his standard. The cabinet of Berlin, whatever may have been their secret wishes, were too much overawed by the influence of Napoleon, and the intelligence recently received of his astonishing victories in Bavaria, to sanction this hazardous proceeding. Schill was indicted for disobedience of orders, and outlawed for non-appearance; and Lestocq, Tauenzein, and Scharnhorst, who were known to be at the head of the war party, sent in their resignation. The two former were brought to trial, but acquitted, there being no evidence to connect them with Schill's enterprise.†

Meanwhile, Schill, having collected about twelve hundred men, presented himself before Wittemberg, where there was known to be a considerable magazine of arms and ammunition, but he was refused admittance by the governor. He next moved towards Magdebourg, which at that period was garrisoned only by two companies of French and three of Westphalian voltigeurs. Had he succeeded in gaining possession of that important fortress, all the north of Germany would have been in a blaze; for it contained five hundred pieces of cannon, and a hundred and twenty thousand stand of arms, besides ammunition in proportion; and the news of so vast an acquisition

Fails in his attempt on Magdebourg—retires to Stralsund.

would speedily have brought thirty thousand men to his standards, whom its impregnable ramparts would have given the means of disciplining in security. It is the more to be regretted that he did not attempt a *coup de main* against it, as the urban guards would speedily have given him the means of defending its walls, and numerous partisans within the town were already prepared to favour his entrance. Ignorant, however, of

May 7. these propitious circumstances, he turned aside upon the first appearance of resistance, at the distance of a mile from the glacis, and retired to Domitz on the other side of the Elbe, having by an equally unfortunate accident diverged from the Hartz Mountains, where he would have united with the remains of Dornberg's corps, which had taken refuge in their fastnesses, and together formed a body of disciplined men adequate to the encounter of the whole forces of Westphalia, which at that period contained hardly two thousand regular soldiers. His unfortunate direction, however, down the Elbe, deluded by the hope of obtaining succour from the English cruisers on the coast, led

May 25. him far away from all assistance; and at length, being pursued, though slowly, and at a respectful distance, by a considerable body of Dutch and Westphalian troops, he threw himself into Stralsund, of which he gained possession without much resistance, the greater part of the garrison having joined his standard.*

He was now at length in a renowned fortress, abundantly provided with provisions, and communicating with the sea: His prospects there. the isle of Rugen seemed to offer a secure asylum in case of disaster, and he had the good fortune, the day after his arrival, to capture a convoy of seven hundred barrels of powder, on its road to Denmark. But its defences had been almost entirely dismantled by order of Napoleon: only twenty rusty guns were mounted on the ramparts; the palisades were levelled with the ground; and the ditches, half choked up by luxuriant vegetation, presented hardly any obstacle to an enemy. Still Schill had considerable means of resistance at his disposal: his troops had swelled to two thousand infantry and twelve squadrons of cavalry; two companies had been formed of students from the universities, armed, as yet, only with pikes; and the landwehr of Pomerania, five thousand strong, might be expected to augment his forces, if he could hold out for a few days, in order to give them time to assemble. Where, where was England then? A single brig, with her pendant, would have inspired such spirit into the garrison as would have rendered them invincible: three thousand men and a few frigates would have rendered Stralsund the base of an insurrection which would speedily have spread over the whole of Northern Germany, determined the irresolution of Prussia, thrown eighty thousand men on Napoleon's line of communication, and driven him to a disastrous retreat from Aspern to the Rhine. But the English government, as usual, insensible to the value of time in war, had made no preparation to turn to good account this universal demonstration in their favour in the north of Germany; and, as with the Vendéans at Grand-villet in 1793, did not appear on the theatre till the standards of their allies had sunk in the conflict. In vain all eyes were turned towards the

ocean: in vain every steeple was crowded with gazers, anxiously surveying with telescopes the distant main: not a friendly sail appeared, not a pendant of England brought hope and consolation to the besieged.*

Deprived of the hoped-for succour, on which he had mainly relied in directing his steps to the seacoast, Schill did all that His defeat and death. prudence and energy could effect to strengthen his position. Palisades were hastily erected; the vicinity of the gates armed; barricades thrown up behind the breaches and in the streets; and the external defences put in some sort of order. But, before his preparations could be completed, the hand of fate was upon him. The French authorities, now everywhere thoroughly alive to the dangers of this insurrection, made the most vigorous efforts to crush it in the bud: troops marched from all sides to May 31. the neighbourhood of Stralsund; the Dutch and Danish soldiers were united to all the French who could be hastily drawn together; and on the 31st of May, General Gratien, with six thousand men, commenced the assault. The patriots made a gallant defence; but the dismantled walls presented huge breaches on all sides, through which, despite the utmost resistance, the assailants penetrated, and the interior barricades were forced. Still every street was obstinately contested. The result was yet doubtful, when Schill was killed, and his heroic band, disheartened, and without a leader after his loss, dispersed. The insurrection in the north of Germany was extinguished, and on the same day on which General Gratien had hoisted the French colours on the walls, the English cruisers approached the harbour.† Arrived a few hours sooner, the place had been secured, the insurrection spread over the whole north of Germany, and Wagram had been Leipsic! Such is the value of time in war.

The Duke of Brunswick Oels, who, at the same time that Schill left Berlin, Movement of the Duke of Brunswick. May 4. had, with a small Austrian force, advanced out of the Bohemian frontier, and made himself master of Leipsic and other considerable towns in Saxony, being unable to effect a junction, either with Schill or Dornberg, and surrounded by superior forces, was obliged to retire by Zittau May 22. into Bohemia, from whence, after the battle of Wagram, he contrived to make his way across all the north of Germany, and was ultimately taken on board the English cruisers, and conveyed, with his black legion, still two thousand strong, to the British shores. The insurrection was thus everywhere suppressed; but such was the impression which it produced upon Napoleon, that the whole corps of Kellerman, thirty thousand strong, which otherwise would have been called to the support of the Grand Army, was directed to the north of Germany.‡

This gigantic contest stained also the waters of the Vistula with blood. It has been already mentioned that the Archduke Ferdinand, at the head of a corps of the Austrian army, mustering in all thirty-two thousand infantry, five thousand cavalry, with

Operations in Poland, and their object, by the Archduke Ferdinand.

fortresses in a respectable posture of defence; and, having done so, he boldly, by the directions of Napoleon, left the enemy in possession of the capital and three fourths of the territory of the grand-duchy, and threw himself upon the right bank of the Vistula, remounting that stream, towards Galicia, whither Prince Gallitzin, at the head of twenty thousand auxiliary Russians, was slowly bending his steps. Meanwhile, the

May 13. Archduke Ferdinand more rapidly descended the left bank, and in the middle of May appeared before Thorn. In the course of this movement, Poniatowsky obtained intel-

May 14. ligence that an Austrian division had crossed over to the right bank of the Vistula, and lay unsupported at Ostrowck, in front of Gora. Rapidly concentrating a superior force, he suddenly attacked the enemy, routed him, and made fifteen hundred prisoners. Thus the opposing armies mutually passed and crossed each other: Poniatowsky, relying on the support of the Russians, menaced Galicia and the Austrian provinces, while the Austrians penetrated to the Lower Vistula, raised the standard of insurrection in the old Prussian provinces, and threatened Dantzic itself.*

An event occurred, in the course of this expedition of the Archduke Ferdinand's light troops across the Vistula, attended, in the end, with more important consequences than any other in the Polish campaign. In pursuing the Austrians on the right flank of the river, a courier was taken by the Poles with despatches from the Russian general Gortchakoff, who lay with his division at Brzysc, to the archduke, in which he congratulated him on his victory at Raszyn and capture of Warsaw, expressed hopes for his ulterior success, and breathed a wish that he might soon join his arms to the Austrian eagles. This letter was immediately forwarded to Napoleon, who received it at Schönbrunn in the end of May. He was highly indignant at the discovery, and transmitted the letter without delay to St. Petersburg, accompanied by a peremptory demand for an explanation. The Russian cabinet hastened to make every reparation in their power: Gortchakoff's letter was disavowed, and he himself recalled from his command, while CZERNICHEFF, aid-de-camp to Alexander, who was the military chargé d'affaires for the Czar at the headquarters of the French emperor, exerted all his skill to remove the unfavourable impression produced by this unlucky discovery. Napoleon, who, after the battle of Aspern, had no need of another powerful enemy on his hands, feigned to be satisfied, and the approach of the Russian troops to the theatre of war soon after, caused the affair to be hushed up; but the impression made on his mind was never effaced: he saw that the ascendant of Tilsit was at an end, and frequently repeated to those in his immediate confidence, "I see that, after all, I must make war on Alexander."[†]

The most important political effect, however, which flowed from the battle of Aspern was the commencement of a secret negotiation between Austria and Prussia, which, though, from the tardiness of England, unsuccessful at that juncture, was not without its effect in future times, and showed that the ancient jealousies which had wrought such wonders for French supremacy, were fast giving way under the pressure of common danger.

Even before that great event, a vague correspondence had been kept up between the two courts; and, in consequence of distant overtures transmitted first through the Count de Goltz, and subsequently the Prince of Orange, Colonel Steigenstesch had been sent by the cabinet of Vienna to Königsberg, where the King of Prussia then was, with a letter from the Emperor of Austria, in which he earnestly invited that monarch to declare openly for the common cause, and enter upon a concerted plan of military operations. Early in June, the Emperor of Austria, in reply to a letter of the King of Prussia, wrote to the cabinet of Berlin, announcing that "the bearer was authorized to regulate the proportions of the forces to be employed on both sides, and the other arrangements not less salutary than indispensable for the security of the two states, in conformity with the overtures made by Count de Goltz." The proposals of Colonel Steigenstesch were, that, as the war in which they were now engaged was of such a kind as to decide forever the fate of the respective monarchies, they should mutually support each other by their whole forces; that the general directions of the campaign should be intrusted to the imperial generalissimo; that they should mutually engage not to conclude a separate negotiation; and that the peace to be ultimately concluded should embrace not only their own, but the interests of the adjoining states. These propositions were warmly supported by Scharnhorst and Blucher, and the whole war or patriotic party in the Prussian dominions. The former offered in a fortnight's time to have fifty, in a month a hundred and twenty thousand disciplined soldiers under arms; he assured the king of secret intelligences which would secure for him, on the first signal of hostilities, Magdebourg and several other important fortresses; and strongly supported the justice of Count Stadion's opinion, so clearly expressed in his despatch,* that the fate of Prussia was inseparably wound up with that of Austria, and that the two monarchies must stand or fall together.

On this occasion, the cupidity and exorbitant demands of the Prussian cabinet again marred the prospect of a European alliance, and prolonged, for four years longer, the chains and

The exorbitant demands for Prussia cause it to fail.

not deceive ourselves: they have all fixed a rendezvous on my tomb, but they have not courage openly to set out thither. That the Emperor Alexander should not come to my assistance, is conceivable; but that he should permit Warsaw to be taken in presence almost of his army, is, indeed, hardly credible; it is plain that I can no longer reckon on an alliance in that quarter. Perhaps he thinks he does me a great favour by not declaring war; by my faith, if I had entertained any doubt on that subject before engaging in the affairs of Spain, I should have cared very little for the part which he took. And yet, after all, they will probably say that I am wanting to my engagements, and cannot remain at peace."[‡]—SAVARY, *ibid.*, 92, 93.

* Stadion to Wusserberg, June 9, 1809. Hard., x., 321, 325. Thib., vii., 306, 307.

* Pel., iii., 63, 71. Thib., vii., 309, 310. Jom., iv., 238.

† Sav., iv., 92, 93. Pel., iii., 71, 72. Thib., vii., 310.

‡ Conversing with Savary on this subject at Ebersdorf, who was in a peculiar manner admitted to his inmost thoughts, from having been formerly ambassador at St. Petersburg, he said, "I was perfectly in the right not to trust to such allies. What worse could have happened if I had not made peace with the Russians? What have I gained by their alliance? It is more than probable that they would have declared openly against me if a remnant of regard to the faith of treaties had not prevented them. We must

misery of their country. Still clinging to the idea that victory must be clearly pronounced before they declared themselves, and that they might turn to some good account the dangers and distresses of Austria, the Prussian government replied that they had every disposition to assist Austria, but that they were in want alike of arms, ammunition, and money; that they could not take a part in the contest till the views of Russia in regard to it were known; and that they must have the guarantee of a treaty for the intentions of Austria, in the event of success, before they took a place by her side. To the envoy of the imperial government, however, it was insinuated that "a great stroke would determine the irresolutions of the cabinet of Berlin;" but that, in that event, they would expect not merely the restoration of all the Prussian provinces of Poland, but also the *Austrians' share in the partition*, Anspach, Bareuth, a part of Saxony, and various lesser provinces, ceded at different times to France or other powers. It was, of course, beyond Colonel Steigenstesch's powers to accede to such extravagant demands: they

June 23. were referred, with the proposal for a separate treaty, to the cabinet of Vienna; and, meanwhile, the negotiation, notwithstanding all the care of those engaged in it, to a certain degree transpired;* a joint requisition was made by the ministers of France and Russia for a communication of the proposals of Austria, and, although this inconvenient demand was eluded at the moment, Steigenstesch was obliged to quit Berlin, and before diplomatic relations could be established in any other channel, of which the King of Prussia still held out the prospect, the battle of Wagram had taken place, and Austria, beset on all sides, and unsupported by any Continental power, was driven to a separate accommodation.†

Affairs wore a menacing aspect for the interests of Napoleon in more distant parts of his vast dominions. England, seeming to rise in vigour and resources as the contest advanced, was making her giant strength be felt in more than one quarter of Europe. Wellington had again landed in Portugal; the consternation produced by the Corunna retreat had passed away; and Soult, defeated on the banks of the Duoro, had with difficulty escaped from the north of Lusitania by the sacrifice of all his artillery and baggage. The Spanish armies were again assembling in the south of Castile, large forces were collecting in the plains of La Mancha, and everything indicated that, ere long, a formidable demonstration against the Spanish capital would be made by the united English and Peninsular forces. A considerable expedition was preparing in the harbours of Sicily to transport a large body of English and Sicilian troops into the south of Italy, where it was well known their presence would speedily produce a general insurrection; which was the more to be dreaded, notwithstanding the well-known imbecility of the Italians in military operations, that the recent annexation of the whole ecclesiastical states to the French Empire had aroused, as might have been expected, the most vehement hostility on the part of the Roman See and its numerous adherents in the Italian States; while General Miollis, the French governor of Rome,

had so small a force at his command, that it would be compelled, in all probability, to yield to the first summons of the Anglo-Sicilian forces. Lastly, the English, not content with their exertions in other quarters, were, it was well known, preparing an expedition of unprecedented magnitude in the harbours of the Channel; fame had magnified to a hundred thousand armed men and forty sail of the line the forces to be employed on the occasion; the Scheldt, the Elbe, the Seine itself, were alternately assigned as the probable destination of this gigantic armament; and Napoleon, with all his resources, was too clear-sighted not to perceive that he might, ere long, be overmatched by the strength of a more formidable confederacy than he had yet encountered; that the English standards would soon rouse the might of Northern Germany into mortal hostility; and that a second reverse on the shores of the Danube would at once dissolve his splendid dominion, and bring the forces of Europe in appalling strength to the banks of the Rhine.*

The impression produced over the Continent by the battle of Aspern was immense: it dissipated, in a great degree, the charm of Napoleon's invincibility, and, more even than the battle of Eylau, diffused a general hope that the miseries of foreign domination were approaching their termination, and that a second victory over the remains of the French army, now shut up in the island of Lobau, would at once restore freedom to an injured world. While the English nation abandoned themselves to transports of joy at the prospects which were thus dawning upon Europe, active endeavours were made by Austria to turn to the best account the extraordinary prosperous change which had taken place in their fortunes. Not discouraged by the failure of former attempts to rouse the north of Germany, the Duke of Brunswick Oels again advanced from Zittau, at the head of his gallant band of volunteers, towards Westphalia; while a considerable body of imperial landwehr from Bohemia, under General Amende, June 1. invaded Saxony, and another, under Radivojivich, five thousand strong, overran Franconia and penetrated to Bareuth. The forces of that kingdom, chiefly drawn under Bernadotte to the banks of the Danube, were in no condition to oppose this irruption; and the royal family, flying from their dominions, took refuge in France. Dresden and Leipsic were occupied by the Austrian troops; Bareuth and Bamberg fell into their hands; insurrections spread over all Franconia and Swabia; symptoms of disaf- June 12. fection were breaking out in Saxony and Westphalia; and a chain of Austrian posts, extending from the Elbe, by Nuremberg and Stockach, to the mountains of Tyrol, entirely cut off the communication between France and the Grand Army. Meanwhile, the most June 22. energetic appeals were everywhere made by the Austrian commanders to the people of their own, and all the adjoining countries,† to take up arms; while Napoleon, weakened by a disastrous battle on the banks of the Danube, could maintain himself only by a concentration of all his forces under the walls of Vienna.‡

CHAPTER LVI.

CAMPAIGN OF WAGRAM.

ARGUMENT.

Views and Policy of Napoleon at this Juncture.—Forces he had assembled in the Island of Lobau.—Forces and Views of the Archduke Charles at the same Period.—Napoleon's Projects for passing the River.—Prodigious Works executed in the Island of Lobau by the French Emperor.—Hidden real Designs of Napoleon as to the Point of Passage.—Defensive Preparations of the Austrians.—Measures of Napoleon to clear his Rear and Flanks.—The Austrians are checked in their Attempt to Force a Passage at Presburg.—Retreat of the Archduke John to Raab, and Position he took up there.—Battle of Raab.—Varied Success, but final Victory of the Viceroy.—Defeat and Losses of the Austrians.—Siege and Capture of Raab.—Operations of Marmont and Macdonald in Illyria, Carinthia, and Carniola.—Extraordinary Difficulties which they encountered.—Operations of Glulay in Carinthia, Carinthia, and Styria.—Attack on Broussier, near Gatz.—Junction of Eugene to the Grand Army, and Reconquest of Croatia by the Austrians.—Operations in Poland, and Successes of the Polish Detachments at Sandomir and Zamosc.—Recapture of Warsaw by the Poles, and Retreat of the Archduke Ferdinand.—Concluding Operations of the Campaign in Poland.—Extraordinary Concentration of the French Force in the Island of Lobau.—Force and Disposition of the Austrian Army.—False Preparations for a Passage in front of Aspern.—Extraordinary Passage of the Danube by Napoleon.—Vast Advantages gained by this Manœuvre to the French.—Retreat of the Austrians to the Position of Wagram.—Its Description.—Advance of the French over the Marchfeld.—Their unsuccessful Attack on the Plateau of Wagram.—Position and Plan of Napoleon for the Battle on the following Day.—The Archduke resolves to assume the Offensive.—His Plan of Attack.—Commencement of the Battle of Wagram.—Defeat of Massena in the Centre.—Napoleon's Measures to arrest the Disorder.—Splendid Progress of the Austrian Right towards Essling.—Success of Davoust against the Austrian Left Wing.—Neusiedel is taken, and the Austrian Left Wing driven back.—Grand Attack by Napoleon from the Centre.—Decisive Advance of Macdonald in that Quarter.—Measures of Napoleon to Support that Attack.—Retreat of the Archduke, and bloody Encounters in the Course of it.—Tardy Approach of the Archduke John.—Vital Importance of his Co-operation.—Results of the Battle.—Loss of the Battle was owing to the Archduke John's Neglect of Orders.—Napoleon visits the Field of Battle, and makes Macdonald a Marshal.—Appointment of Oudinot also a Marshal.—Disgrace of Bernadotte.—The Austrians retire towards Bohemia.—Retreat of the Archduke to Znaim, and his Position there.—Combat of Znaim.—Advance of Marmont, and Conclusion of the Army's Retreat to Znaim.—Motives which led the Austrians to this Step.—Arguments for and against the Amnesties at the French Headquarters.—Limits assigned to the two Armies by the Amnesties.—Hesitation of the Emperor of Austria to sign it, which is only done on the 18th.—Heavy Contribution levied on the Imperial Dominions.—Comparison of Wagram, Canne, and Waterloo.—Reflections on the Campaign, and its glorious Character to Austria.—Proof thereby afforded of the practical Goodness of the Austrian Government.—Causes of the extraordinary public Virtue exhibited by Austria at this Time.—Remarkable Contrast afterward exhibited by France.—Elevation of the Austrian Character from past Calamities.

Both the military and political position of Napoleon was now full of peril, and it was obvious to all the world that a single false step, one additional defeat, would expose him to certain ruin. But it was precisely in such circumstances that his genius shone forth with the brightest lustre, and that he was most likely by a sudden blow to reinstate his affairs, and overturn all the calculations of his enemies. No man ever saw so clearly where was the decisive point of the campaign, or so firmly made up his mind to relinquish all minor advantages, in order to accumulate his forces upon that vital quarter, where

defeat to his antagonists would prove certain ruin. In doing so, he followed the natural bent of his genius, which was never inclined to owe to combination what could be effected by audacity; but he was powerfully aided by the despotic nature of the authority which he wielded, and the irresponsible character of the command with which he was invested; for many other generals might have seen equally clearly the policy of concentrating all their strength for a blow at their adversary's heart, without possessing either the power to effect such a concentration, or the independence of others necessary to incur its responsibility. In the present instance, he saw at once that the vital point of the war was to be found under the walls of Vienna; and that, if he could succeed in defeating the Archduke Charles on the plain of the Marchfeld, he need not disquiet himself either about the victories of the Tyrolese in their Alpine valleys, the insurrection of the Germans on the banks of the Elbe, or the distant thunder of the English on the shores of the Scheldt. Fixing all his attention, therefore, upon the restoration of his bridges, the concentration of his forces, and the reanimating of his soldiers in the centre, he gave himself little disquiet about the tardy movements of the coalitions in the vast circumference of hostilities, and wrote to his lieutenants only to keep open the communications of the Grand Army with the Rhine, and he would soon find the means of dissipating the host of enemies who were accumulating round his extremities.*†

The force which remained at the disposal of the French emperor, even after the very serious losses of the battle of Aspern, was still immense. The chasms produced by that disastrous engagement had been more than supplied by the opportune arrival of Eugene's army at the imperial headquarters; while the corresponding forces of the Archduke John were, for the time at least, lost to the Austrian generals by the eccentric retreat of that prince to the Hungarian plains, instead of obeying his instructions and menacing the French communications from the Tyrolese Mountains.‡ From the confidential correspondence of Napoleon with Berthier at this period, which has since been published, it appears that, in the beginning of June, the Grand Army numbered, present with the eagles, no less than one hundred and ten thousand infantry and twenty-four thousand horse, with four hundred pieces of cannon: in all, at least a hundred and fifty thousand combatants. This was independent of the corps of Marmont in Dalmatia, of Vandamme in echelon, in the rear towards Bavaria, of Le-

* Pel., iv., 76, 77. Sav., iv., 94. Jom., iii., 246, 247.

† On the 6th of June Napoleon wrote from Schoenbrunn to Marshal Kellerman, who commanded the army of reserve in the north of Germany: "Before the enemy can have accomplished anything of essential importance in Saxony, the emperor will have passed the Danube, and be on their rear. But a corps which should approach the line of communication of the Grand Army might really prove dangerous: far more so than anything which could occur in the north of Germany."—*NAPOLEON TO KELLERMAN, 6th June, 1809; PELET, iv., 77, 78.*

‡ *Ante, iii., 202.*

febre in Tyrol, and of Macdonald in Styria. After making every deduction for the portions of these different corps which might be requisite to keep open the rear and maintain communications, at least fifty thousand men might be ordered up to support the Grand Army; and thus, after deducting for the sick and absent, a hundred and eighty thousand men could be assembled in a month's time under the walls of Vienna, of whom thirty thousand were cavalry, with six hundred pieces of cannon: a greater force, if the quality and equipment of the troops is taken into consideration, than had ever in the world before been assembled in a single battle. Nor was this all: immediately in their rear they had a fortified capital amply stored with provisions, and containing abundant supplies of all sorts for the use of the army; and the great arsenal of the Austrian monarchy, overflowing with artillery, arms, ammunition, pontoons, and every species of equipment that could be desired for the most extensive military operations.*

The inhabitants of the other countries of Europe, electrified by the intelligence of the battle of Aspern, and the retreat of the French army into the island of Lobau, entertained the most sanguine hopes that they would immediately be assailed there by the victorious Austrians, and either driven to the right bank of the Danube, and forced to evacuate the capital, or compelled to lay down their arms in that crowded and untenable position. Possibly, if the Archduke Charles had been aware of the magnitude of the losses which the French army had sustained, and the almost total exhaustion of their ammunition, he might, on the day after the battle, have made good a descent upon the island, and achieved the most glorious success. Such an enterprise, however, would at best have been attended with considerable hazard; for, although the French actually in the island the morning after the battle did not exceed forty thousand men, yet an equal force was under the command of Davoust on the right bank around Vienna, and thirty thousand more, under Vandamme and Bernadotte, were only a few marches in the rear from St. Polten to Lintz. On the other hand, the Imperialists, exhausted by the fatigues of a battle of two days' duration of unexampled severity, and weakened by the loss of nearly twenty-five thousand killed and wounded in the strife, were too happy to have escaped without destruction from so dreadful a contest, to think of immediately recommencing active operations. The force at the command of the archduke, though rapidly augmenting, was not at first, after the battle, very considerable. Fifty thousand of the warriors who had borne a part in the glorious strife alone remained unhurt; Kollowrath might soon bring up twenty thousand more from Lintz, and, when the fatal detour of the Archduke John was completed, he, it was hoped, would be able to add thirty thousand veteran troops from the Hungarian plains. Thus a hundred thousand regular troops, of which about twenty thousand were cavalry, might be reckoned on for the decisive battle which was to decide the fate of the monarchy; and, as this force would probably be swelled by fifty thousand landwehr, or reserves from the eastern and northern provinces of the monarchy before the end of June, the forces on the opposite sides were not materially different,

so far as numerical strength went; and the superior number of regular and veteran soldiers in the French ranks might be considered as compensated by the advantage which the German host derived from the homogeneous quality of its troops, the animation with which they were inspired in behalf of their country, and the enthusiasm which they generally felt at the glorious result of the late memorable battle in which they had been engaged.*

While remaining in a state of apparent inactivity at Schoenbrunn, Napoleon's Napoleon's project was chiefly directed to acts for cross- three objects: first, to convert the ing the Danube. island of Lobau into a vast fortress, rendered impregnable to attack by a plentiful array of heavy artillery, and connected with the right bank by strong bridges, from whence he might at any moment issue forth to attack the Archduke Charles, and, at the same time, find a secure refuge in case of disaster. Next, to secure and keep open his communication with the Rhine by means of a chain of posts, occupied by strong detachments, and a skilful disposition of the troops of the Rhenish Confederacy, under Lefebvre, Bernadotte, and Vandamme, all along the menaced districts in the valley of the Danube. Lastly, to clear his right flank of the enemy, drive the Archduke John still farther into the Hungarian plains, and throw back upon the left flank the corps which the Austrian generalissimo was pushing forward to endeavour to open up a communication with the Italian army. To accomplish these various objects, however, and at the same time retain a sufficient number of troops at headquarters to keep the great and rapidly-increasing army of the Archduke Charles in check, required an immense accumulation of forces. Every effort, therefore, was made to strengthen the Grand Army: Marmont received orders to hasten his march from Dalmatia with his whole corps; Macdonald, with his numerous divisions of the Italian army, was directed to advance from Styria, and the most pressing instructions were sent to the rear to order up every man and horse which could be spared from the dépôts and garrisons in the interior, to the headquarters of the Grand Army.†

The works in the island of Lobau were of the most gigantic description, and still remain an enduring monument of the great designs of the Emperor Napoleon, and the persevering energy and skill of his engineers. Never, since the days of the Romans, had works so vast been erected in the field in presence of the enemy. Three solid bridges connected the island of Lobau with the right bank of the Danube; and, in addition to this, a fourth, which ran across all the islands from shore to shore, over an extent of two hundred and forty fathoms. The most extraordinary pains were taken to render this bridge secure against the misfortune which had befallen the last: immediately above the bridge of boats was one on

Prodigious works executed in the island of Lobau by the French emperor.

* Pel., iv., 78, and Appendix, table 2d. Vict. et Conq., xix., 127. Jom., iii., 245.

† Pel., iv., 77, 78. Stut., 240, 242. Vict. et Conq., xix., 126.

‡ To such perfection were the movements of these distant and numerous bodies brought, that on each despatch was marked the hour and minute when the courier set out, with the hour when the troops were required to be at the general rendezvous in the island of Lobau; and they all arrived, many from the distance of some hundred miles, at the precise time assigned to them.—SAVARY, iv., 99.

* Pel., iv., 77, 78. Jom., ii., 246. Stut., 233, 236.

piles, which served as a barrier both against the violence of the current and the machinations of the enemy; and close adjoining to it, on the other side, one on pontoons, which also contributed to the strength of the whole, and served as an additional line of passage for the columns of infantry and light chariots. Both extremities of these bridges were fortified by strong *têtes-du-pont*: that on the northern extremity, where it was exposed to the attacks of the enemy, soon became a complete fortress, with rampart, wet ditches, ravelins, and lunettes, armed with eighty pieces of heavy cannon, drawn from the arsenal of Vienna. All the prominent points of the intermediate islands were also fortified and mounted with artillery, and boats collected and manned with marines brought from Brest by the provident foresight of the emperor, before the opening of the campaign, to be in readiness to intercept and turn aside any fire-ships or loaded barks that might be directed against it by the enemy. The emperor was indefatigable in urging forward these important operations: every day, for the first fortnight, he was to be seen in the island of Lobau, animating the men, conversing with the engineers directing the works; and such was the vigour which his presence and exertions inspired into his followers, that, in a fortnight after the battle of Aspern, the works were beyond the reach of the enemy's attack, and in a month they were entirely finished.*†

Immense as these preparations were, it was not to them that the emperor alone trusted for the grand operation of crossing the river. He was well aware that such gigantic works would speedily fix the attention of the enemy, and he daily beheld rising before his eyes vast intrenchments running through Essling and Enzersdorf, by which the Austrians hoped to bar the entrance to the Marchfeld from the bridge, and confine the enemy within the fortifications they had constructed. Like the vast armament of armed gunboats collected in 1805 on the shores of the Channel, these great operations were intended only to mask his hidden designs, and conceal from the enemy the real point of attack. While these prodigious bridges and fortifications attracted all the attention of the Austrians to the anticipated passage in front of Essling, there were secretly collected in one of the narrow channels behind the island of Lobau, in a situation entirely concealed from the enemy, the materials for three other bridges over the narrow arm of the river which separated that island from the northern bank, and which were so constructed that they could be transported and put together with extraordinary celerity. One of these bridges was composed of a single piece, sixty fathoms in length; the second, of the materials of the old bridge which had given way on the 22d of May, reconstructed with more skill;

the third, of boats and pontoons drawn from the arsenal of Vienna. The first of these bridges was justly considered so wonderful a piece of art, that a model of it is still preserved in Paris in the hall of the Conservatory of Objects of Art. The intention of the emperor was, that these bridges should be thrown across the arm of the Danube which separates Lobau from the opposite shore, considerably farther down than the great bridge in front of Essling, and in such a situation as to take all the Austrian defence in rear. Thus, the three fixed bridges from the southern bank to the island of Lobau secured the passage of the troops and artillery into that important station; the great bridge from thence to the *tête-du-pont*, on the northern bank, attracted all the attention of the enemy to that point, while the movable bridges, prepared in secret in the channels behind, were calculated to throw the troops speedily across, in a situation where they were not expected, and where they would find themselves in the rear of the whole Austrian intrenchments. To cover the latter design, and at the same time distract the attention of the enemy, preparations, as if for a passage, were made both at Nussdorf and Spitz, on the upper part of the river above the islands; while the whole semicircular shore of the island of Lobau, fronting the northern bank, was lined with heavy artillery drawn from the arsenal of Vienna, and a hundred and twenty pieces of cannon, disposed on every headland along the wide circumference, were prepared to cover the formation of the new bridges, and bewilder the Imperialists by their wide-extended fire.*

While Napoleon was engaged in these great undertakings, the Austrians, on their part, were not idle. Directly opposite to the end of the main bridge, where the attack was anticipated, the Archduke Charles erected a vast line of intrenchments, which, running from Aspern across the former field of battle, and through Essling, terminated in the banks of the Danube at Enzersdorf. These immense works, consisting of field redoubts and ravelins, united by a curtain, were strengthened by palisades all along their front, and armed with a hundred and fifty pieces of heavy artillery. The bulk of the Austrian army was stationed about a league in the rear, along the course of the little stream, the Russbach, which provided water for the prodigious multitude. Tranquil behind his formidable intrenchments, the archduke quietly awaited the course of events, while his army hourly received accessions of strength, and improved in discipline and efficiency. The veterans, recovered from their fatigues, burnished their arms, and instructed the young soldiers, who were daily flocking to the camp, in the rudiments of the military art: the chasms in the cavalry and artillery were filled up by numerous supplies from Hungary and Transylvania, where vast public establishments for the breeding of horses had been brought to the highest perfection;† the wounded in great numbers rejoined their ranks; the artillery were augmented to a degree hitherto unheard of in war; and before the end of June a hundred and

Defensive preparations of the Austrians.

* Vict. et Conq., xix., 199. Pel., iv., 79, 80. Sav., iv., 98, 99.

† During this momentous period, the care of the emperor extended, in an especial manner, to the comfort and interests of his soldiers. Walking one day with his marshals on the shores of the isle of Lobau, he passed a company of grenadiers seated at their dinner. "Well, my friends," said Napoleon, "I hope you find the wine good." "It will not make us drunk," replied one of their number; "there is our cellar," pointing to the Danube. The emperor, who had ordered a distribution of a bottle of wine to each man, was surprised, and promised an immediate inquiry. Berthier instantly set it on foot, and it turned out that forty thousand bottles, sent by the emperor, a few days before, for the army, had been purloined and sold by the commissaries. They were immediately brought to trial, and condemned to be shot.—*Victoires et Conquêtes*, xix., 200.

* Sav., iv., 99. Pel., iv., 79, 83. Stut., 240, 246.

† A very interesting account of these vast establishments is given in the first volume of Marshal Marmont's *Travels in Hungary and Turkey*: a work which proves that that veteran commander unites the eye of an experienced observer to the warmth of a philanthropist and the judgment of a practised statesman.—See MARMONT, *Voyage dans l'Orient*, i., 232, and ii., 116.

forty thousand men, of whom twenty-five thousand were splendid cavalry, with seven hundred pieces of cannon, were assembled round the Austrian standards, all animated by their recent victory with a degree of spirit and enthusiasm never before witnessed in the imperial armies.*

The situation of the respective parties required that the principal attention of the French should be turned to the preservation of their communications clear with the Rhine, and the Germans to the maintenance of their connexion with the eastern provinces of the Empire, where the forces of the monarchy were still untouched, and the great armament called the Hungarian insurrection was daily acquiring a more complete consistency. For this purpose, Napoleon issued the most pressing orders to Bourcier and Rouyer to reopen, with all the forces of the confederation which they could assemble, the great road to the Rhine, and neglecting all minor objects, to concentrate their whole troops upon that vital line of communication; while Kellerman, who was soon afterward succeeded by Junot, was directed to strain every nerve for the accumulation of an imposing force, under the denomination of the army of observation of the Elbe, at Frankfort, and drive the Imperialists from their threatening positions at Bareuth and Nuremberg. These directions were promptly obeyed: early

July 2. in July, Junot advanced into Franconia and Saxony on the one side, while Jerome, relieved by the destruction of Schill's corps from domestic danger, threatened them on the other; and the Duke of Brunswick, with the Austrian commanders, was obliged to retire into the Bohemian Mountains; while Augsburg and

July 7. Ratisbon were retaken by the national guard of Wirtemberg and Baden, and the line of communication both with Strasburg and Frankfort reopened to the Grand Army.†

More important operations followed the attempts of the Austrians to regain, by the circuitous route of Presburg and the east, their communication with the Archduke John and the Hungarian insurrection. The Archduke Charles occupied, with the corps of Bianchi, the town of Presburg, situated six leagues below Vienna, on the left bank of the river, with a *tête-du-pont* commanding the bridge at that place over the Danube. Desirous of dislodging the enemy from this important post, which gave them the means of manœuvring on both banks of the river, and of turning his right flank, Napoleon directed Davoust to march against it. He found the *tête-du-pont* unfinished, and his troops tried to carry it by a *coup de main*, but the sustained fire of the Austrian works repulsed them with loss;

June 3. while the arm of the Danube, twenty toises in breadth, which separated them from the isles occupied by the Imperialists, flowing in a rapid current, rendered it impossible for them to dislodge the enemy from his advanced posts in the river. However, by occupying in force with two strong divisions the village of Engerau, immediately opposite to the southern extremity of the bridge, he rendered the possession of it unavailing to his antagonists; and soon after the rapid succession of more important events in

other quarters deprived this point of the importance which apparently belonged to it.*

The Archduke John, in retiring from Carniola into Hungary, had taken with him part of the landwehr of that province, and detached Giulay into Croatia, where it was hoped he could maintain himself, lest these detached bodies should fall into the enemy's hands, who had now overrun those provinces. With these forces united to his own, he retired to Kormond in Hungary, which is on the right bank of the Danube, so that he was in the disadvantageous situation of being separated by that river from the main Austrian army, and exposed to any accumulations of force which Napoleon, on his side of the river, might choose to direct against him. He had the advantage, however, of having the communication open in his rear with the re-enforcements which were expected from the Hungarian insurrection, and in the middle of June he formed a junction with his brother, the Archduke Pala-

Retreat of the Archduke John to Raab, and position which he took up there.

June 13. tine, who commanded that irregular force at RAAB. Their united forces amounted to twenty-two thousand regular troops and eighteen thousand of the insurrection, and they took post in a strong position on the ridges which lie in front of that town. Their right rested on the village of Szabadhegy, and the heights of the same name; their left was covered by a morass; their centre ran through the farm of Kismeyger; numerous light horse were disposed along the front of the line, while a thousand chosen troops occupied a square stone edifice still farther in advance of the centre, which was loopholed, and strengthened by a few works, besides a deep rivulet, which formed a sort of natural fosse to the post. In this position, the Archduke John resolved to give battle to the enemy, under Eugene Beauharnois, who were now coming up in great strength from the west; although he had just received a despatch from his brother, the generalissimo, containing the sage instructions, by no means to fight in the open plain, but to throw himself into the intrenched camp in his rear, under the cannon of Raab; to blend the inexperienced levies with the veteran troops; accustom them to military discipline, before he trusted them against the enemy; to keep open his communication with the main army at Essling, and detach seven thousand men to Presburg for that purpose; and fight only in the event of the enemy forcing the passage of the Raab, and menacing the left of the intrenched camp. These wise counsels and express injunctions were alike disregarded: the officers of the Archduke John's staff being unwilling to forego the brilliant results which they anticipated from a battle, and he himself reluctant, by placing his force under the immediate direction of his brother, to lose the lustre of a special command.†

The day following, being the 14th of June, was the anniversary of the battle of Battle of Raab. Marengo: the viceroy was natural- June 14. ly anxious to combat on that auspicious occasion, and the Austrian generals made no attempt to frustrate his designs. At ten o'clock the signal for battle was given, and the French advanced with enthusiasm to the attack. Grenier commanded the centre; Baraguay d'Hilliers the left; Momburn, with the light cavalry, Grouchy,

* Stat., 252, 288. Viet. et Conq., xix., 197, 198. Pel., iv., 82, 83.

with the heavy dragoons, were on the right; Pacthod, with his numerous division in reserve, behind the centre and left. Eugene formed his troops in columns of division in echelon, the right in advance; but, before the action had become serious, that order was abandoned by the rapid advance of the centre and left, and the battle became general in parallel lines. His forces were about thirty-five thousand in number, inferior by five thousand to those of the enemy; but this disadvantage was more than compensated by the experienced quality of the men, while nearly half of those opposed to them were raw levies or volunteers who had never encountered a hostile fire. The first troops which came into action were those of Serras, which attacked the square building in advance of Reimegger; the Austrians were speedily driven within the walls, but there they made a desperate resistance, and, while numbers of the assailants fell under the fatal fire from the loopholes, others sunk in the deep marshes of the rivulet, which on three sides encircled the building. In a few minutes seven hundred men perished in this disastrous manner, without one of the defences of the place being carried by the assailants. But, while success was thus arrested around this formidable post, the village of Kismeyger in its rear was menaced by Durutte, who, with a chosen division of infantry, had advanced through the open ground between its houses and the buildings of Szabadhegy, and had already got abreast of the former. But he was there met by the fire of a battery of twelve pieces, the grapeshot from which made wide chasms in his line; and the Austrians, profiting by the hesitation occasioned by this unexpected discharge, made a vigorous onset, which drove back the whole centre in disorder, while, at the same time, Baraguay d'Hilliers, with his Italian division on the left, checked by the murderous fire which issued from the village of Szabadhegy, was also forced to give ground, and already the cries of victory were on the whole of that part of the Austrian line.*

Eugene saw that the decisive moment had arrived, and he hastened to the spot to arrest the disorder. He instantly addressed a few words to the flying Italians, exhorted them to remember their victories and their glory, and, what was still more to the purpose, brought forward the reserve, under General Pacthod, consisting almost entirely of French troops, to their support. The arrival of these veterans changed the face of the day: the Italians, reanimated by this seasonable support, returned to the charge, the centre and right of the enemy were forced, and Szabadhegy carried. Upon this, the Archduke John brought up his reserve, consisting of the flower of his army; Szabadhegy was recaptured, and the Italians driven back in confusion; again Durutte and Pacthod made good their entrance, and a third time the Imperialists expelled them at the point of the bayonet. In following up this last attack, however, the Hungarian new levies extended themselves too far, deeming victory secure, and thinking to outflank their opponents: the experienced French generals saw their error, and returned to the charge with their troops in column, carried, and finally possessed the village which had been so obstinately contested, and threw the whole centre and right of the enemy

into confusion. Meanwhile, a furious combat of horse was going on on the Austrian left, where Montbrun and Grouchy were opposed to the whole weight of the Hungarian horse. This formidable body of cavalry, seven thousand strong, in the first instance overwhelmed Montbrun with his division, who had advanced to support the brigade of Colbert, which was endeavouring to turn the square from a house in front, which still prolonged its defence; but Grouchy came up with his terrible cuirassiers, and charged the enemy, when blown by their pursuit, with such vigour, that they were driven back so far as to leave the heroic defenders of that now isolated post entirely to their own resources.*

Though thus left in the middle, as it were, of the French army, Hammel, and the heroic defenders of the farmhouse, abated nothing of their resolution. Irritated at this prolonged opposition, Serras combined a new attack: he himself, with his whole division, assailed it on one side, while Roussel, with a fresh brigade, recommenced the attack in front. Nothing could resist this last assault: surrounded on all sides, the walls of the building were carried by escalade, the doors cut down with redoubled strokes of the hatchet, and an infuriated soldiery rushed into the building. A frightful massacre commenced. In the tumult the beams took fire; the flames spread with extraordinary rapidity, and, amid the death-struggle between the French and Austrians, the roof fell in with a tremendous crash, and all within, friends and foes, perished. This decisive success established Eugene in a solid manner in the village of Kismeyger and centre of the enemy, who now fought only to secure his retreat. It was conducted with more order than could have been expected after so desperate a struggle, and the archduke took refuge under the cannon of Komorn, abandoning the intrenched camp of Raab, which was immediately evacuated by some battalions of the Hungarian insurrection, by whom it was occupied. In this disastrous contest the Archduke John lost six thousand men, of whom above three thousand were made prisoners, and two pieces of cannon. The loss of the French was not more than half that amount; for, though those who fell were nearly as numerous, they lost few prisoners.†

The battle of Raab, notwithstanding its calamitous result, was in the highest degree honourable to the troops of the Hungarian insurrection, who composed so large a portion of the imperial army, and who, though brought into fire for the first time, for hours disputed the palm of victory with veteran troops. It was attended, however, by very disastrous consequences. Not only was the moral impression of the battle of Aspern sensibly weakened by the loss of the very next serious engagement which took place between the two powers, but the force of the Hungarian insurrection was irrecoverably broken by the ill success of its first essay in arms, and the loss of the fortress and intrenched camp of Raab, which shortly after took place. The former was evacuated immediately after the battle; the latter was shortly after besieged by Lauriston with heavy cannon drawn from the arsenal of Vienna, and taken, with its garri-

* Vict. et Conq., xix., 175, 176. Pel., iv., 97, 99. Jom., iii., 248, 249. Stut., 258, 264. Monit., 23d June, 1809.

son of two thousand men, chiefly militia. June 24. The possession of this fortress, though armed only with eighteen guns, was a material advantage to the French, not only as depriving the enemy of a fortified post on the right bank of the Danube, from which they were likely to derive important advantages in the progress of the campaign, but destroying the shelter of the intrenched camp, where the Hungarian insurrection might have been farther trained in the military art, and brought to render the most valuable service as light troops to the regular forces; while it gave a solid *point d'appui* to the right flank of Napoleon, and put it in his power to call up almost the whole force of Eugene to his own standard in the decisive action which was approaching on the plains of the Marchfeld.*

While these important events were securing the right wing of the French army in the Hungarian plains, Marmont and Macdonald, after severally overcoming every obstacle, were rapidly approaching with its reserves from the Dalmatian shores and the mountains of Styria. The first of these generals, who had remained in command of the Illyrian provinces ever since the treaty of Tilsit, found himself, in the early part of the campaign, entirely isolated from the French armies by the advance of the Archduke John through Carniola and Styria to the banks of the Adige. In the end of

April 23. April, the Austrian general Stoickewich had been detached by that prince with eight thousand men to aid the insurrectionary movements which were preparing in the mountains of Dalmatia against the French authorities; and some skirmishes had taken place between the advanced posts of the opposite parties, in which he had the advantage, and the Imperialists had already descended from the hills and made themselves masters of a considerable extent of seacoast, including the fort of Lusin Picolo, which brought them into con-

May 9. tact with the English cruisers in the Adriatic, when the intelligence of the retreat of the archduke from Italy, and the near approach of Macdonald by Laybach towards their line of communication with Austria, rendered it necessary to commence a retreat. Marmont lost no time in following the retreating corps of the enemy, and a severe action took place on the 23d, on the banks of

May 23. the Lika, without any decisive advantage to either party. In obedience to the orders they had received, the Imperialists continued their retreat; and Marmont, being now summoned up with his whole corps to the support of the Grand Army, pressed on in pursuit. A few days

May 28. after he arrived at Fiume, which was abandoned without opposition, and remained there two days to rest his troops after the laborious mountain marches they had undergone. On the third of June he entered Laybach, which was evacuated on his approach; while the corps of Giulay and Chastellar, which had abandoned the Tyrol by orders from the Archduke John, in order to the concentration of the forces of the monarchy in its vitals, were painfully, and by cross roads, traversing the mountains in his front, in their march towards Gratz and the Hungarian plains.†

These retiring generals had a most perilous task to perform in their marching Extraordinary difficulties which they encountered. eastward through Styria and Carniola, where Marmont, established at Laybach, was ready to fall perpendicularly on their flank; and Macdonald, who was hastening up from Villach, in Carinthia, on the traces of Eugene, threatened their rear. It appeared almost impossible that they could escape so many dangers; but such was the skill of the imperial commanders, and the activity of their troops, that they not only extricated themselves, without any serious loss, from this hazardous situation, but very nearly inflicted an important blow upon their opponents. Chastellar, obliged to evacuate the Tyrol, had descended the valley of the Drave, and assembled his troops at Villach; from thence he made a demonstration against Klagenfurth, where the Italian general, Rusca, had collected a few battalions, and after some sharp fighting he reached the right bank of the Drave, and succeeded, by throwing that river between him and his pursuers, in extricating himself from his dangers. He would have been utterly destroyed if Marmont had been a little more expeditious in his movements; for, had that general arrived two days sooner at Nankles, where the two roads from Klagenfurth and Villach unite, he would have interrupted the only route by which the enemy could have descended the Drave; and if Chastellar had thrown himself across the mountains into the defiles of the Muhr, he would have fallen into the hands of Macdonald, who was descending the rocky banks of that romantic stream. But everything in war depends upon precision of calculation and rapidity of movement, and the most active and vigilant generals are frequently ignorant of what is passing on the enemy's part within a few leagues of their headquarters.*

Giulay, who formed part of the army of the Archduke John, had been detached by that prince with seventeen thousand regular troops into Croatia, of which he was the Ban, to raise the landwehr of that warlike province and of Carniola, and await ulterior orders. Subsequently, the disasters and continued retreat of the Italian army rendered it necessary for the archduke to recall him to his standards; and Giulay had turned to such good account the few weeks which he had spent in his province, that he was prepared now to take the field at the head of twenty thousand men, of whom eight thousand were regulars. With this imposing force he broke up in the beginning of June from Ram and Agram on the Save, and began his march northward for Marburg, with the design of joining the archduke, whom he conceived to be still at Gratz, in Styria. He moved, however, so slowly, that he did not reach Marburg till the 15th, the day after the battle of Raab, though the distance was only eighteen leagues, being not five miles a day. Had he exerted himself as his strength permitted and the crisis required, he might have been on the 14th at Radkersburg, in Hungary, which was forty-two leagues from Ram, in direct communication with that prince, and in time to share in the battle. This only required him to march ten or eleven miles a day, no great undertaking for veteran troops and hardy mountaineers; and

June 15. had he done so, the battle of Raab would either not have been fought, or been converted into a victory, and the Archduke John, with sixty thousand undiscouraged troops, would have appeared with decisive effect on the field of Wagram. The first care of a general should be to accustom his soldiers to march: Napoleon's grenadiers were perfectly right when they said it was by their legs more than their arms that he gained his victories.*

A brilliant enterprise, however, though of a subordinate character, awaited the Attack on Broussier, Austrian general. General Broussier, near Gratz, with a French brigade, had been left

June 24. to besiege the fort of Schlossberg, at Gratz, after Macdonald had left that town, and proceeded onward in the trace of the viceroy towards the Grand Army; and Giulay, having learned, as he came up from the southward, the

June 22. exposed situation of the besiegers, conceived the design of surrounding and making them prisoners. On the 24th his advanced posts were at the gates of Gratz; and Broussier, justly apprehensive of being cut off, had, two days before, raised the siege of the castle, and retired to the bridge of Weinzittel, over the Muhr, at the entrance of the valley of Bruck. Having received intelligence, however, in the course of the same day, of the real position of the main body of the enemy's forces, which he conceived to be unable to take any part in the action which was approaching, he sent

June 23. back four battalions under Colonel Gambier, who resumed his former position around the fort, and renewed the bombardment. In this situation the besiegers were attacked by a greatly superior force under Giulay, and, being entirely separated from the remainder of the troops under Broussier, their destruction appeared inevitable. The heroism of Colonels Gambier and Neagle, however, joined to the intrepidity of their troops, extricated them from their dangerous situation: the Croatian landwehr were no match, in close fight, for the French veterans; a decisive charge of the bayonet checked the Imperialists in the first

June 25. onset; when their cartridges were exhausted, the French threw themselves into a churchyard, which they defended with invincible resolution, and, though weakened by the loss of half their numbers, they were still gloriously combating round their eagles, when Broussier, with his remaining four battalions, arrived, and cut his way through to his heroic followers. In this memorable action the French lost eight, the Austrians twelve hundred men; and Napoleon, in just testimony of his sense of the conduct of the troops engaged, made Colonel Gambier a count of the Empire, and gave to his regiment, the 84th, the motto "Un contre Dix." Marmont, who had been summoned by Broussier to his assistance, arrived on the evening of the 26th before the walls of Gratz, and immediately made preparations, in concert with Giulay, for a general assault on the town and suburbs on the following day; but the Imperialists, in no

June 27. condition to withstand so formidable an attack, withdrew in the night, and the junction of the French generals was effected next day without opposition. They left merely a few battalions to continue the siege of the castle, and, pressing on with great rapidity, arrived in the

island of Lobau on the 3d of July, where the whole forces of Napoleon were now assembled for the decisive battle which was approaching.*

The French emperor, at the same time, had called Prince Eugene and the Italian army to his standards. On the 2d of July he received orders to repair without delay to the general rendezvous in the island of Lobau, whither Napoleon had transferred his headquarters from the palace of Schoenbrunn, three days before. Skilfully masking his design by a large body of heavy cavalry, pushed forward to the advanced posts before Komorn, he withdrew his artillery, stores, and infantry, unperceived by the enemy, and late on the evening of the 5th reached the

July 5. island of Lobau, where his arrival swelled the host to a hundred and eighty thousand men, with seven hundred pieces of cannon; while, by an unhappy fatality, the Archduke John, though entirely on the left bank of the Danube, still remained in presence of a deserted camp in the plains of Hungary. This general concentration of the French troops in front of Essling was attended with one secondary but important effect, in restoring the southern provinces of the empire to the dominion of Austria, and opening up a direct communication with the English cruisers in the Adriatic. In proportion as Croatia and Carniola were evacuated by the advance of Marmont to the Danube, those two important provinces were regained by Giulay's troops: several French detachments and dépôts fell into the hands of the Imperialists; Laybach, with some hundred prisoners, was taken; and the communication with the coast having been restored, a subsidy from England was disembarked in Dalmatia, and, after traversing the mountains, arrived in safety in Hungary, to the amount of three hundred and twenty thousand pounds.†

Before the decisive struggle on the Danube commenced, affairs had taken a more propitious turn for the French arms on the shores of the Vistula. The bold stroke of Poniatowsky in throwing himself into the eastern parts of Poland and menacing Galicia, after Warsaw was taken, joined to the tardy, but at length serious approach of the Russian forces, arrested the Archduke Ferdinand in his victorious career on the Southern Vistula. His advanced guard had already reached Thorn, fifty leagues below the capital, when the intelligence of the march of Poniatowsky in the direction of Cracow, joined to the alarming progress of the insurrection excited by Dombrowsky in the neighbourhood of Posen, the indisposition of Prussia to take any decisive part, and the approach of Prince Gallitzin, with thirty thousand Russians, towards Lemberg and the Galician frontiers, warned him of the necessity of retreat. Advancing to Lemberg, Poniatowsky had spread his light troops over the whole of Austrian Poland, exciting everywhere the national enthusiasm, and producing an alarming fermentation by the sight of the much-loved uniforms; his advanced posts had even crossed the Carpathian range, and carried consternation to

Junction of Eugene to the Grand Army, and reoccupation of Croatia by the Austrians.

Operations in Poland, and successes of the Polish detachments at Sandomir and Zamosc.

within a few leagues of the Hungarian frontier; while another of his divisions, under **May 19** Sokolniki, had boldly crossed the Vistula and surprised fifteen hundred Austrians (besides eighteen pieces of cannon) at Sandomir, who were all either slain or made prisoners; and General Pelletier, with a third, by a brilliant *coup de main*, made himself master, by escalade, of Lamosc, though defended by a lofty rampart and deep ditch, and captured two thousand men and an arsenal of fifty pieces of cannon.*

This succession of disasters, and still more, perhaps, the approach of the Russians, under Prince Gallitzin, to the frontiers of Galicia, determined the Archduke Ferdinand to retreat. His generals had, by a sudden attack, made themselves masters of the *tête-du-pont* at Thorn, on the right bank of the Vistula; but the garrison, retiring to the body of the place on the left, burned a part of the bridge, and the Imperialists had neither the means of crossing that ample stream, nor of commencing a siege in form of that fortress. This was the extreme point of their advance.

May 30. On the following day they commenced their retreat, severely harassed by the light troops which the indefatigable Dombrowsky had raised in the Duchy of Posen. The Austrian garrison being withdrawn from Warsaw on the 30th of May, the Polish militia, under Zayonschek, recovered possession of that capital, and Ferdinand slowly retired towards the Austrian frontier. The indecision

June 2. and procrastination of Russia were now at an end, and Alexander professed himself prepared in good earnest to adhere to his engagements at Tilsit and Erfurth. General Schaueroth commanded the advanced division of the Austrians, and Ferdinand, with reason, conceived that he might, in his retreat, avenge the check received at Sandomir, by making prisoners the Polish garrison in that town. Detaching

June 15. Schaueroth, therefore, as a corps of observation, towards Lemberg, he himself, with his main body and heavy artillery, suddenly appeared before it; and, having brought up his guns, burst open the gates, and his grenadiers penetrated into the streets. The Poles, however, under Sokolniki, rallied with admirable courage, and for eight hours kept up an obstinate resistance from street to street, and from house to house, until the Austrians, wearied out and sensible the place could not long hold out, retired, with the loss of eight hundred killed and wounded, and four hundred prisoners. Finding his ammunition exhausted, however, Sokolniki, two

June 17. days afterward, entered into a treaty with the Austrian general, in virtue of which he evacuated the place, and retired to the Polish army.†

Alarmed at the capture of a place of such importance, Poniatowsky now made the most vigorous remonstrances to Prince Gallitzin, and urged the immediate adoption of concerted measures; but, though the Russian general was now so near as materially to influence the fate of the campaign, he could not be prevailed on to take an active part, and exhibited an order of the Emperor Alexander, which forbade him to cross the Vistula. He consented, however, to occupy

the country on the right bank of that river, so as to leave the Poles at liberty to prosecute their operations on the left. Relieved to a certain degree by their presence in that quarter, Poniatowsky suddenly changed his line of operations, and descended the Vistula on the right, in order to connect himself with Zayonschek and Dombrowsky. Meanwhile, the Archduke Ferdinand received orders to direct his steps a second time towards the Grand-duchy of Warsaw, in order to support the efforts which the cabinet

of Vienna at that period were making to rouse Prussia to join the alliance. Having dismantled Sandomir, accordingly, he concentrated his forces, and, while Poniatowsky moved down the right bank of the Vistula, he descended the left, and, with twenty-five thousand men, advanced to Petrikau, on the Pilica. This offensive movement, however, was not of long duration: the Archduke Ferdinand had prepared an

intrenched camp near the sources of that river, at a point where two roads to Austria branch off, the one by Cracow, the other by Olkusz, and was slowly advancing to occupy it, when hostilities were interrupted by the intelligence of the armistice of Znaym. Meanwhile, the Russians advanced to Cracow, and their vanguard had already occupied its gates, when Poniatowsky, jealous of the acquisition of the second city of Old Poland by its most inveterate enemy, summoned all his forces to his standards, and hastened, with twenty-five thousand men, to anticipate Prince Gallitzin in that important conquest. The road was blocked up by Russian troops, who prohibited all farther passage: the Poles insisted on their right to advance; the old and ill-concealed animosity of the two nations was ready to break out, and the advanced posts were already coming to blows, when Prince Gallitzin deemed it prudent to yield, and permitted the occupation of the city by the Polish troops. There they re-

mained during the whole of the armistice, but the military ardour of the Poles was strongly excited by this brilliant termination of the campaign: hopes long smothered began to revive of the possibility of a national restoration; recruits flocked in from all quarters to the national standards, and, before the peace of Vienna, Poniatowsky had forty-eight thousand men on his muster-rolls, besides the troops who were combating under the standards of Napoleon in the Spanish Peninsula.*†

These successes, however, had only a remote and inconsiderable influence on the fate of the campaign: the decisive blows were to be dealt out from the island of Lobau. There, in the first week of July, a prodigious armament was collected, and the French officers, how much soever inured to military prodigies, were never weary of admiring the immense array which the activity and foresight of the emperor had collected for the final struggle. On the 2d of July he mounted on horseback at Schoenbrunn and rode to Lobau, where headquarters were thenceforward established, and at two o'clock on the afternoon of that day the re-enforcements began to arrive there from all quarters; and never in modern times, probably never in the history of the world, was such precision witnessed in the movements of corps converging together from such distant

Extraordinary concentration of the French forces in the island of Lobau.

quarters. Hardly had Bernadotte arrived with the Saxons from the banks of the Elbe, when Vandamme appeared with the Wirtembergers and troops of the confederation from Swabia and the Rhenish provinces; Wrede with the Bavarians from the banks of the Lech; Macdonald and Broussier next arrived over the Alpine ridges from Carinthia and Carniola: no sooner had they taken the places assigned them, than Marmont's leading columns began to appear from the Dalmatian shores; and, when they had found room in the crowded isle, the veterans of Eugene came up from the Hungarian plains and the neighbourhood of Presburg. By the evening of the 4th the whole were assembled: horse, foot, cannon, and ammunition-wagons had traversed in safety the bridges which connected the island with the southern shore; and a hundred and fifty thousand infantry, thirty thousand cavalry, with seven hundred and fifty pieces of cannon, were collected in a space not exceeding two miles and a half in length, by one and three-quarters in breadth.* This extraordinary concentration of force had inspired the troops with more than their wonted ardour: none doubted of the issue when the military strength of half of Europe was there accumulated on a single point under the guidance of Napoleon; the lines literally touched each other, and each regiment acquired fresh confidence from the animating story of its neighbour's achievements. Never since the Grand Army broke up in 1805 from the shores of the Channel had it been so collected together: many there met who had not shaken hands since they parted on the heights of Boulogne; and many more hearts then glowed with the joy of newly-awakened friendship,† which were destined, in a few hours, to be forever severed from each other in this world.‡

* The French military historians give 150,000 men and 400 pieces of cannon for the total strength of the Grand Army before the battle of Wagram; but we have the authority of Savary (iv., 100, c. 12) for the assertion that they amounted to the number stated in the text; and Napoleon said, on the evening of the 4th of July, to the Austrian general sent with a flag of truce, "Sir, I have no doubt why you have been sent here. So much the worse for your general if he does not know that to-morrow I shall pass the Danube with the whole force you see here: there are 180,000 men; the days are long: woe to the vanquished."—SAVARY, iv., 101. See also *Kausler Atlas der Schlachten*, 379.

† Pel., iv., 153, 154. Sav., iv., 100, 102. Jom., iii., 258, 259.

‡ The utmost pains had been taken by the French emperor, during the interval of hostilities at Vienna, to restore the spirit and enthusiasm of the soldiers, which had been severely weakened by the result of the battle of Aspern. Gratuities to a large extent were awarded to the soldiers' widows, under circumstances the most likely to affect the imagination of the receivers and all who witnessed it. Not only did the emperor himself frequently visit the hospitals, but he made his aids-de-camp regularly inspect them: at stated intervals, and after the recovery of the greater part was in some degree effected, he distributed with great pomp a considerable gratuity to all the soldiers who had suffered. Every private received sixty francs (£2 10s.), and every officer, in proportion to his rank, from 150 to 1500 francs (from £6 to £60). For several days the emperor and his staff were exclusively engaged in this pious duty; and it was accompanied by circumstances which increased the effect which the gratuity, already so considerable, produced upon the mind of the men. The splendid cortège proceeded to the distribution in full uniform, and traversed the long galleries of the hospitals, preceded by the records of the regiments, in which the deeds of each were minutely entered, and followed by servants in full livery, carrying large baskets, in which the money was placed. Twelve or twenty crown pieces were deposited by the bedside of each man, taken, not from the regimental funds, but the private purse of the emperor. Tears rolled down the cheeks of the mutilated veterans as they witnessed the touching scene: many wept with joy who were destined to sink under their

The Austrian army, though not equally re-enforced, had received considerable Force and disposition of the Austrian army. accessions of strength since the battle of Aspern, and was animated by a still more profound feeling. The twenty-five thousand brave men who had fallen or been disabled in that glorious strife were in part recovered, or had been compensated by the corps of Kollowrath, which had come up from the vicinity of Lintz; twenty thousand more had been drawn from the depôts in the interior; and fifty thousand landwehr were incorporated with the regular soldiers, and, from their constant exercise with veteran troops, had acquired a considerable degree of efficiency. Thus, above a hundred and forty thousand men were assembled for the decisive struggle, besides the Archduke John, who, with eighteen thousand regulars and an equal number of the Hungarian insurrection, was at Presburg, ten leagues from the field of battle. If they could all have been brought to bear upon the enemy, their numbers would have equalled even the gigantic host of Napoleon; but they were far from being equally concentrated, and the Archduke Charles was by no means prepared for the extraordinary rapidity and energy which was about to be infused into their movements. On the evening of the 4th, when the whole array of the French emperor was accumulated in Lobau, and the ranks of so many distant armies stood almost in close column on its meadows, the generalissimo had little more than half his force ready for immediate operation. The Prince of Reuss was watching the banks of the Danube, from Stockerau to Vienna, with his headquarters at Stammersdorf; Kollowrath was at Hagenbrunn, on the northwestern slope of the Bisamberg; the reserve of grenadiers were at Gerarsdorf; Klenau at Essling, and in the intrenchments opposite to the bridge of Aspern; while Nordman, with the advanced guard, lay at Enzersdorf, and guarded the course of the Danube as far as Presburg. Bellegarde, Hohenzollern, and Rosenberg were at WAGRAM, or along the course of the Russbach, while the reserve cavalry was at Breitenlee, Aderklaa, and the villages in that neighbourhood. Thus, the archduke's army was arrayed in two lines: the first stretching twenty leagues along the course of the Danube; the second, two leagues in the rear, on the plateau of Wagram and the heights of the Russbach. A courier was despatched, on the evening of the 4th, to summon up the Archduke John to the decisive point; but the distance was so great that he could not be expected to arrive at the scene of action till late on the following evening. Seven hundred pieces of cannon attended the army; but the cavalry had never recovered the fatal ravages of the preceding battles, and the equipment of the artillery was far from being in the perfect state in which it was at the commencement of the campaign, or as the French had become from the resources of the arsenal of Vienna. Never was more clearly demonstrated in war the vital importance of central fortifications: many of the enthusiastic recruits of Austria were now deficient in the most necessary equipments, while the French troops found all their losses amply supplied from the stores of the capital; had Vienna still held out, or its magnificent arsenal been secure from attack, the fate of the campaign would probably

wounds before an opportunity of expending their little treasure could arrive.—See SAVARY, iv., 88, 89.

have been different, and Wagram had been Leipzig. But the whole warlike multitude were animated by an heroic spirit: every one felt that the crisis of the monarchy was at hand, and the glorious result of the battle of Aspern had inspired them all with the most sanguine hopes as to the ultimate issue of the struggle.*

The better to conceal his real designs, Napoleon had some days before made preparations as if for forcing a passage over the great bridge, and through the intrenchments of Aspern and Essling.

On the 2d of July, five hundred voltigeurs were embarked, and transported across to the small island which lay in the middle of the northern branch of the Danube, between these two villages, the Imperialists dispossessed, and the bridge commenced. The archduke, upon the first alarm, hastened to the spot, and a violent fire was opened by the Austrian batteries on the French engineers engaged in its construction: above two hundred cannon-balls fell in the middle of the boats without arresting these brave

men. The bridge was soon completed July 2.

as far as the island from Lobau: nothing but a fordable branch, thirty yards broad, now separated the French from the northern bank. Such was the importance which Napoleon at-

tached to this demonstration, that on the following morning he came himself to the spot, and, in his anxiety to reconnoitre the opposite coast, ascended on the summit of the parapet, and remained there for some minutes, within pistol-shot of the Croatian outposts on the northern bank. He ordered a lunette to be constructed on the western part of this little island, capable of affording protection to a bridge of rafts, which was kept in readiness to be thrown over the last shallow branch of the river, under cover of the parapet.† Thus the French were masters of two bridges leading from the salient angle of the island of Lobau into the field of Aspern; and the Imperialists were so impressed with the idea that the passage was to be attempted at the same point as the former one, that, by daybreak on the morning of the 4th, their massy columns were in motion from the plateau of Wagram, and in two hours after the works, along their whole extent, were gleaming with helmets and bayonets.‡

Napoleon, however, had no intention of forcing the passage at this point, and these extraordinary preparations, so serious in appearance, were but a stratagem to conceal the real point of attack from the enemy. Nothing of importance was attempted during the remainder of the 4th; but towards evening, the troops being all collected, burning with ardour, and the preparations completed, Oudinot commenced the embarkation.

The emperor took his station himself on horseback, on the margin of the branch where the passage was to be attempted, and with indefatigable

energy urged on the movements. With such vigour were they conducted, that in a quarter of an hour the bridge destined for the passage of that corps was thrown across: all hands were immediately turned to the three bridges which had been secretly prepared in the covered channel of the Danube, and the first, composed of a single timber frame, was brought out of its place of concealment, thrown across, and made fast to the opposite shore, in the short space of ten minutes. The transporting and fastening of the other two required a little more time; but with such vigour were the operations conducted, under the immediate inspection of the emperor, who never ceased an instant during the whole night to direct and animate the men, that by three o'clock in the following morning six were completed, and the troops of all arms were in full march across them. A violent fire was, during the whole time, kept up from a hundred and nine pieces of heavy cannon, disposed along each side of the salient angle formed by the northern extremity of the island of Lobau, on the Austrian lines, which fell with unprecedented fury on the village of Enzersdorf, and induced the enemy to open from all their batteries on the bridge of Aspern, in the idea that it was there the passage was going forward. Both shores soon formed a line of flame: the heavens were illuminated by the ceaseless flight of bombs; seldom fewer than twelve of these flaming projectiles were seen at once traversing the air in opposite directions. Vehement, however, as was the contest of men, it was surpassed by the elemental strife on that awful night. A tempest arose soon after it was dark; the wind blew with terrific violence; torrents of rain fell without intermission; the thunder rolled above the loudest roar of the artillery; and the frequent glare of the lightning outshone even the flames of Enzersdorf, which, set on fire by the French bombardment, burned with inextinguishable fury from the gales of the tempest. During this terrible scene, however, the cool judgment of Napoleon never for an instant lost sight of the main object in view: for several hours he walked incessantly, amid mud and water, from one bridge to the other; the passage of the troops was pressed on with indefatigable activity; numerous boats, which incessantly plied to and fro, facilitated the transportation of the foot-soldiers; and such was the unprecedented vigour of all concerned in the operation, that by six o'clock in the following morning, not only were all the bridges firmly established, but a hundred and fifty thousand infantry, thirty thousand cavalry, and six hundred pieces of cannon, were grouped in dense array on the northern shore, between Enzersdorf and the margin of the Danube.*

Great was the surprise of the Imperialists, at daybreak on the 5th, to see not a man passed over by the bridge opposite to Aspern, but the plain farther down, opposite to Enzersdorf, covered with an enormous black mass of troops, drawn up in close column, in the finest array, in such numbers as almost to defy calculation. The tempest had ceased: the mists rolled away as day approached, the sky was serene, and the sun of Austerlitz shone forth in unclouded brilliancy. His rays revealed a matchless spectacle: the shores of the Danube were resplendent with arms; cuirasses, helmets, and bayonets glittered

* Kautzsch Schlacht von Neus Zeit, 381. Jom., iii., 258, 259. Pel., iv., 155, 157, 162. Stut., 348, 350. M. de Grunne's Corresp. Officiel.

† Masséna accompanied the emperor on this occasion, and, as he withdrew from the front, was grievously bruised by a fall of his horse. The army were fearful that they would be deprived of his powerful aid on the field of battle; but he appeared there on the following day in an open calèche. Napoleon exclaimed, when he saw him struggling with pain and exposed to the fire, "Who would fear death, when he sees how the brave are prepared to die!"—PELET, iv., 152, note.

‡ Pel., iv., 149, 163. Vict. et Conq., xix., 201. Jom., iii., 260, 261.

* Sav., iv., 102, 103. Pel., iv., 167, 173. Vict. et Conq., xix., 202, 203. Stut. 302, 309. Larrey, iii., 347

on every side; the bridges, the isle of Lobau, the southern shore, were covered with a countless array of men, drawn up in admirable order, or pressing on in ceaseless march, while long files of artillery presented on the northern bank apparently an irresistible force to the enemy. Then appeared, in the clearest manner, the vast advantage which the French emperor had gained by the unexampled manœuvre of the preceding night: the river was passed, the communications with the opposite shore secured, the left flank of the Austrian position turned, all the intrenchments intended to bar the passage taken in reverse, the labour of six weeks rendered useless, the enemy cut off from his communication with Hungary and the remaining resources of the monarchy, and thrown back, with his face to the east, towards the Bohemian Mountains. The activity and genius of Napoleon had, in a few hours, defeated all the long-meditated designs of the Austrian generals: the plateau of Wagram, chosen, with provident foresight, as the most advantageous central position from whence to fall upon the leading corps which had effected the passage, had lost much of its peculiar value by the river having been crossed in a single night by the whole army; and the rival hosts were reduced to combat on equal terms in the vast plain of the Marchfeld, under circumstances which promised but a doubtful chance of success to the imperial forces.* The French soldiers, rapid beyond any others in Europe at apprehending the chances and dangers of their situation, at once appreciated the advantage they had gained, and casting a look of admiration at the bridges, the *chaussées*, the intrenchments, by which the dangers of the passage had been surmounted, turned in joyous confidence towards the enemy; while their chief had already commenced the formation of gigantic fieldworks to protect the army upon the northern shore.†

Having lost, through the unparalleled activity of their opponents, the favourable opportunity of attacking the French army in the moment of passing the bridges, nothing remained to the Austrians but to retire to the position in the rear of Aspern and Essling, which had been selected, after mature deliberation, by the imperial generals as the most favourable ground whereon to throw the last die for the independence of the monarchy. All their outposts, accordingly, were called in, the whole intrenchments, constructed at so vast a cost of labour in front of the bridge of Aspern, were abandoned, and the army retired to its chosen and last field, on the plateau of WAGRAM. The strength of this position justified the choice of the archduke, and did credit to the prophetic anticipations of the Aulic Council. It consists of an elevated plain, in the form of a vast parallelogram,

which rises at the distance of four miles from the Danube, at the northern extremity of the plain of the Marchfeld. This plateau is bounded, along its southern front, by the stream of the Russbach, which, descending at first through the high grounds which form the northern boundary of the valley, perpendicularly to the Danube, from north to south, turns sharp round towards the east at Deutch Wagram, and flows along the whole front of the position to Neusiedel, at the foot of the heights which form its southern rampart. This stream is six or eight feet broad, and, though everywhere fordable by infantry, can be traversed by cavalry and artillery only at the bridges in the villages, which were carefully guarded. From Neusiedel, the plateau turns sharp to the northward, and has its eastern face clearly defined by a steep ridge descending to the low grounds in that direction for several miles to the north. Thus this plateau formed a great square redoubt, rising on the north of the plain, with a wet ditch running along its front, and strengthened by the villages of Wagram and Neusiedel at each angle. The village of Baumersdorf, situated half a mile to the south of the Russbach, about the centre of the southern front, formed an outwork beyond the wet ditch. Though this important plateau, however, constituted the strength, it was by no means the whole of the Austrian position. Their lines extended also to the westward far beyond Deutch Wagram, along a ridge of heights, arranged as it were by nature for the defensive position of a vast army, as far as Stammersdorf and the eastern slope of the fir-clad Bisamberg: forming, altogether, an elevated position, about fifteen miles in length, on a series of heights facing and slightly curved towards the south.* From their feet to the Danube, distant about nine miles, stretched out the vast and level plain of the Marchfeld. In the concave space included in this curve, at the foot of the heights, about their centre, is the village of Gerarsdorf; and a few miles farther, in the level surface of the Marchfeld, the villages of Aderklaa and Sussenbrunn, which thus lay about midway between the two armies, and became important points of attack, and the theatre of desperate conflict in the battle which followed.

The archduke, in consequence of the dispersed state of his army, rendered unavoidable by the uncertainty which prevailed as to the place where the passage would be attempted, had only the grenadiers and corps of Rosenberg, Bellegarde, and Hohenzollern, sixty thousand strong, on the plateau of Wagram and village of the same name: Klenau and Kollowrath being at a distance on the Bisamberg with the right wing; and the left, under the Archduke John, twenty-five miles off, stretching towards Presburg. No serious resistance, in consequence, was made to the advance of the French over the plain, the Austrian outposts retiring as the French approached towards their central position on the hills. Napoleon's army, after the passage was effected, was drawn up between Lobau and Enzersdorf, perpendicular to the river, with its left touching the water: the concentration of the troops was such, that it resembled an immense close column nearly two hundred thousand strong. Presently, however, the order to

* Pel., iv., 172, 175. Sav., iv., 103, 104. Jom., iii., 260, 261. Vict. et Conq., xix., 202, 203.

† The Austrian generals had, after long consideration, selected the plateau of Wagram as the most favourable ground whereon to throw their last stake for the independence of the monarchy. In the imperial cabinet, the French found, after the battle, a valuable military work on the environs of Vienna, in which the second camp to be taken, in the event of the river being crossed, was precisely that which the archduke occupied on the plateau of Wagram. The chances of both parties were ably calculated; but the skilful engineer had never discovered the vast military importance of the island of Lobau, nor contemplated the possibility of the enemy throwing six bridges from it to the opposite side, and crossing one hundred and eighty thousand men over in a single night.—See SAVARY, iv., 105.

* Personal observation. Pel., iv., 168, 169, 184. Kausler, 54. Jom., iii., 264.

march was given, and the different corps advanced in a semicircular direction, like the folds of a fan, to the north, east, and west, towards Enzersdorf, Essling, Breitenlee, and Raschdorf. Massena was on the left, towards Essling and Aspern; Bernadotte, with the Saxons, towards Aderklaa; Eugene and Oudinot between Wagram and Baumersdorf; Davoust and Grouchy on the right, in the direction of Glinzendorf; while the Imperial Guards, Marmont's corps, Wrede, with the Bavarians, and the heavy cavalry, were in reserve under the emperor in person. Partial combats took place as the Imperialists fell back before this enormous force both at Enzersdorf and Raschdorf, but no serious resistance was attempted, and the two corps of the Austrians which were in advance in the intrenchments on the banks of the Danube, fell back leisurely on the road to Gerarsdorf and Neusiedel. The vast fieldworks between Aspern and Essling were abandoned; the Imperialists retired to the heights in the rear, on which the main body of their forces were stationed; and the French army, spreading out like rays from a centre, overspread, as far as the margin of the Russbach, the immense plain of the Marchfield.*

At six o'clock Napoleon had come up to the plain between Raschdorf and Baumersdorf, in front of the plateau of Wagram; and he then ascertained that the Archduke John had not yet arrived, and could not appear on the field that day. He immediately resolved to profit by his great superiority and commence an attack; for he had a hundred thousand men grouped in his centre, ready for instant operations; while on the plateau beyond Russbach, between Wagram and Neusiedel, the Austrians had not more than sixty thousand under Hohenzollern, Bellegarde, and Rosenberg, to oppose them. Powerful batteries were accordingly brought up, which speedily opened a heavy fire upon the Imperialists' position, to which the archduke's guns, arrayed along the front of the plateau, replied from higher ground, and with more effect. Oudinot's corps came first into action in the centre. He attacked Baumersdorf at the foot of the plateau, which was gallantly defended by General Hardegg; but such was the obstinacy of the resistance, that he was unable either to force the village, carry the bridges, or make his way across the stream in its rear on either side. Eugene was stationed opposite to Wagram: his leading divisions commenced the attack with great spirit, and, fording the Russbach, ascended the heights in gallant style; but, when they arrived at the summit, they were staggered by a murderous discharge of grape from sixty Austrian guns, within half musket-shot, to which the French had nothing but musketry to oppose, as their guns had not been able to get across the stream. Macdonald, Dupas, and Lamarque, who commanded the divisions engaged, kept their ground, and, bringing up their reserves, the action became extremely warm; and at length the Austrian front line was broken and thrown back in confusion upon their second. It was now the Austrian turn to feel alarmed: the enemy had broken in upon their position in its strongest part, and his irruption, if promptly supported, promised to pierce the centre of their extensive line. Several Austrian regiments soon after broke, and the French divisions, continuing

their triumphant advance, took five standards and two thousand prisoners. In this extremity the Archduke Charles hastened in person to the spot, at the head of the regiments of Zach, Vongelsang, and D'Erbach, whose steadiness had stemmed a similar torrent on the field of Aspern, and succeeded, by a determined resistance in front, in arresting the advance of the column: at the same time, Hohenzollern, who had repulsed the attack of Oudinot, charged them vigorously on the right flank with a chosen body of hussars, and Bellegarde poured in destructive volleys from his grenadiers, abreast of whom the French had now arrived, on the left. The struggle was terrible for a few minutes, in the course of which the archduke was wounded; but it terminated in the repulse of the French, which was speedily converted into a rout, as they were driven headlong down the steep, and fled in wild confusion across the stream of Russbach. The Saxons under Bernadotte, who were advancing to their support, in the darkness mistook the retreating host for enemies, and fired upon it; they, in their turn, were overthrown by the torrent of fugitives; the contagious panic communicated itself to the Saxon troops, which suffered most severely both from friends and enemies: one of their battalions disappeared entirely in the confusion, and was never seen again;* and the three French divisions, which had so nearly penetrated the Austrian line, disbanded, and, flying over the plain beyond Raschdorf, spread an indescribable alarm through the French centre as far as the tents of the emperor. In the general confusion the whole prisoners escaped; the taken standards were regained; two French eagles were captured; and, had the Imperialists been aware of the disorder which prevailed, and followed up their success with fresh troops, the consequences might have been fatal to the French army. Ignorant, however, of the prodigious effect produced by this nocturnal irruption, the Austrian generals, at eleven o'clock, sounded a retreat: their troops fell back to their original positions at Baumersdorf, Wagram, and the crest of the plateau;† while the French army, wearied with the fatigues of that eventful day, lay down to rest in the vast plain around Raschdorf, and were soon buried in sleep.

So destitute was the Marchfield, at that period, both of trees and habitation, that there was hardly a fire in the whole French army, from the extreme right to the left of the line. At midnight it became intensely cold, and it was with great difficulty that a few parcels of straw and pieces of wood could be got to make a fire for the emperor. He had advanced with his guard to the front of the first line, during the panic consequent on the rout of the Saxons and Eugene's corps, and his tent for the night was pitched in the middle of the grenadiers and *vieux moustaches*. Though all around were buried in sleep, Napoleon sat up during the whole night, conversing with the marshals and generals of division, receiving reports from the different corps, and impressing upon his lieutenants the designs which he had formed. His army occupied a great right-angled triangle, of which the base rested on Aspern, Essling, and Enzersdorf: one front faced Stammersdorf, Sussenbrunn, and the slopes of

Position and plan of Napoleon for the battle on the following day.

the Bisamberg; the other the plateau of Wagram and Neusiedel; while the apex, pointing directly at the Austrian centre, was in front of Aderklaa. The project of the emperor was founded on this concentration on his side, and the scattered position of his opponents on the semicircular range of heights, above fifteen miles long, from the Bisamberg to Neusiedel. Refusing and weakening his left, he determined to throw the weight of his attack upon the centre and left of the Austrians: hoping thereby to break their line in the point where it was the weakest, by an enormous mass of assailants, and cut off the Archduke Charles from the army which, he was well aware, would speedily come up, under the Archduke John, from the neighbourhood of Presburg. With this view, a considerable dislocation of troops took place during the night: Masséna, who lay on the left around Essling and Aspern, was moved at two in the morning by his right towards Aderklaa, in front of the plateau of Wagram, leaving the single division of Boudet to guard Aspern and the bridges. Thus the whole strength of the French army was concentrated in the centre and right: Davoust being on the extreme right; Masséna next to him, in front of Aderklaa; Marmont, Oudinot, Eugene, and Bernadotte, in front of the plateau of Wagram; and Bessières, with the Imperial Guards and reserve cavalry, in the rear of the centre around Raschdorf.*

The brilliant success which had crowned the action on the night of the 5th made an important change in the dispositions of the archduke. Perceiving the determined resolution of his troops, and encouraged by the important check which they had given to the enemy, even when possessed of a considerable superiority of force, he resolved to resume the offensive, and anticipate the designs of the French emperor by a general attack with all his forces. This resolution was taken at midnight on the 5th, and at two in the following morning orders were despatched to the Archduke John to hasten up with all his disposable force to the scene of action. He was understood to be at Marchegg, thirteen miles from the right flank of the French army; but he might with ease arrive on the field by one o'clock in the afternoon, when it was hoped his appearance with thirty thousand fresh troops would be attended with the most important effects. Foreseeing, from the attack of the preceding evening, that the principal efforts of the enemy would be directed against the plateau of Wagram, where the ground was naturally strong, the archduke resolved to make his chief effort on his right against Aspern and Essling, in order to menace the bridges and communications of the French army. Success in this direction, combined with the attack of the Archduke John on the same important points from the left, promised entirely to neutralize any advantage which the enemy might gain in front of Wagram; and, in fact, threatened as he would thus be in the rear and on either flank, an imprudent advance in the centre would only augment the dangers of his situation, by withdrawing the main body of the army farther from the means of retreat. With these views, Kollowrath and Klenau were concentrated on the left, on the eastern slope of the Bisamberg, and re-enforced

to fifty thousand men the troops of Lichtenstein and Hiller; Rosenberg, on the left, received orders to descend towards Glinzendorf, in order to form a junction with, and co-operate in the decisive attack of the Archduke John on the left; Bellegarde, during the night, was pushed on to Aderklaa, which the Saxons evacuated in disorder on his approach; while Hohenzollern, and the reserve grenadiers and cavalry, occupied the line of the Russbach and the crest of the plateau, having strong parties both in Wagram and Baumersdorf. Thus the Imperialists, when the shock commenced in the morning, formed an immense semicircle, with their strength thrown into the two wings; the French, an interior convex quadrant, with their columns issuing, like the folds of a fan, from its centre.* The forces of the former were overwhelming on the right, and their left was almost impregnable, from the strength of the plateau of Wagram, so fatally experienced on the preceding evening; but their centre, towards Sussenbrunn, naturally weak, was not so strongly defended by troops as to promise an effectual resistance to the great French force which was concentrated in its front.

It was intended by the archduke that Kollowrath and Klenau, with the right wing, should first commence the attack; but the difficulty of conveying the orders in time to the extreme points of so extensive a line was such, that, before these distant generals could arrive at the scene of action, it had already commenced in the centre and left. At daybreak Napoleon was not yet on horseback, but only preparing the grand attack which he meditated on the enemy's centre, when suddenly the discharge of cannon was heard on his right; and soon after, the increasing roar and advancing smoke in that direction indicated that the Austrian right wing was seriously engaged, and making rapid progress. Immediately after, intelligence arrived that the Russbach was passed, and Glinzendorf threatened by Rosenberg on the right, and Aderklaa, abandoned by Bernadotte on the preceding night, occupied in force by Bellegarde in the centre. Notwithstanding all his activity, the French emperor was anticipated in the offensive, and the direction in which the Imperialists had commenced their attack rendered him apprehensive that the Archduke John had come up during the night, and that his right flank was about to be turned by an overwhelming force. Instantly appreciating the importance of such a combined attack, Napoleon hastened with his guards and reserves of cuirassiers, and drew up the artillery of the guard in such a position as to command the right of Rosenberg's corps, which had now advanced near to Glinzendorf; but hardly had these powerful re-enforcements arrived near that village, when the Austrian advance was arrested. In effect, Prince Charles, finding that the Archduke John had not yet arrived, and that the enemy had moved an overwhelming force in that direction, ordered Rosenberg to suspend his attack, and soon after he withdrew his troops behind the Russbach; but they sustained a considerable loss in their retreat from the charges of the French cuirassiers, and the cannonade of the artillery of the guard on their flank.†

Hardly was this alarm dispelled on his right,

Defeat of Mas- when Napoleon received still more
sena in the disquieting intelligence from his
centre. centre and left. The first rays of
the sun had glittered on the bayonets of Klenau
and Kollowrath's corps, as they descended the
verdant slopes behind Stammersdorf, and joined
Hiller and Lichtenstein near Leopoldau, and al-
ready the sound of their cannon towards Brei-
tenlee and Aspern told but too clearly the prog-
ress they were making to turn the left flank of
the French army. But the danger in the centre
was still more pressing. Massena, in executing
his prescribed movements from the left to the
right of the field of battle, had attacked Aderklaa
with his leading division under Cara St. Cyr:
the village was speedily carried by the gallantry
of the 24th regiment; but, instead of merely oc-
cupying the houses, and strengthening himself
in so important a point, St. Cyr pushed through
to the opposite side, and brought his troops with-
in range of a terrible fire of grape and musket-
ry from Bellegarde's corps, drawn up in force
on the plain between that and Wagram. The
French, breathless with their advance, were so
shattered by the discharge that they suddenly re-
coiled, and, being at the same time charged in
flank by the Austrian cavalry, were pushed back
in confusion into Aderklaa. At the same time
the Archduke Charles, who felt the full value
of this post, hastened to the spot with the grena-
diers of Aspre, and charged the assailants with
such vigour that they were driven out of the vil-
lage at the point of the bayonet, broken in the
plain beyond, and thrown back in utter disorder
upon the Saxon, Baden, and Darmstadt contin-
gents, who disbanded and fled in such confu-
sion that they overwhelmed Massena, who, al-
though severely bruised by a fall off his horse,
was in the field in his calèche, to such a degree
that he made the dragoons about his person
charge them as if they had been enemies.*
Transported by the animation of the charge, the
Archduke Charles pushed forward, at the head
of his brave grenadiers, a considerable way in
front of Aderklaa, where he found himself, al-
most alone, so near the enemy, that he heard a
French officer command his voltigeurs to make
him prisoner, and received a ball in the shoulder
before he could regain the breathless ranks of
his followers.†

Napoleon perceived from afar the disorder of
the left of his centre, and instantly
hastened to the spot to arrest it. Di-
recting Davoust to attack Neusiedel
and press the Austrian left, and order-
ing his guards to countermarch as rapidly as
possible from right to left across the whole field,
which they had so lately traversed in the oppo-
site direction, he himself set out at the gallop,
followed by the thundering squadrons of his cui-
rassiers and horse artillery of the guard, and
soon arrived at the spot where Massena, almost
alone in his chariot in the midst of the fugitives
who overspread the plain, was making brave ef-

* A young Saxon colonel, during the rout of the corps, finding his efforts, prayers, and menaces alike ineffectual to prevent his men from dispersing, advanced with his standard in his hand to a regiment of the French Imperial Guard which had just come up, and, throwing himself into their ranks, said, "Frenchmen, I trust to you this standard: you, I am sure, will defend it; my regiment is to be found wherever courageous resistance is made to the enemy." How many instances of heroism in all nations did the Revolutionary war bring forth! What elevation of soul did they occasion!—See *Victoires et Conquêtes*, xix., 218.

† Sav., iv., 109, 110. Pel., iv., 210, 212. Jom., iii., 268. Keusler, 386. Arch. Charles's Account.

forts to arrest the disorder. He instantly alighted from his horse, mounted into the chariot be-
side the marshal, conversed a few seconds with
him, and, pointing to the tower of Neusiedel, the
steeples of Wagram, Sussenbrunn, and Aspern,
made all around him comprehend that a grand
movement was in preparation to check the ene-
my. Order was in some degree restored by the
presence of the emperor and the powerful re-en-
forcement which he brought with him, and im-
mediately the prescribed alteration in the order
of battle commenced: Massena's corps, which
had almost all broken, was re-formed under
cover of the artillery and cavalry of the guard,
and commenced a countermarch by battalions
in close column towards Aspern; while the cui-
rassiers of St. Sulpice, by repeated charges, kept
at a distance the threatening columns of the ene-
my. The French infantry, restored to order by
the efforts of the emperor, executed the prescribed
movements athwart the field of battle with the
most perfect regularity, though torn in pieces all
the way by a terrible fire of artillery from the
Austrian right wing on their flank; but their de-
parture from the neighbourhood of Aderklaa,
before the infantry of the guard and the reserves
had come up from Neusiedel, weakened serious-
ly the French line, which was reduced to the de-
fensive at the most important point of the whole
field, the salient angle running into the Austrian
position, and compelled to remain stationary un-
der a tremendous cross fire of artillery from the
hostile batteries on either side of the angle. The
courage of the soldiers quivered under this dread-
ful trial, where war exhibited all its dangers
with none of its excitement, and several battal-
ions disbanded and fled; but Napoleon, calm
and collected in the midst of the general disqui-
etude, rode backward and forward for an hour
amid a storm of cannon-balls, unmoved by per-
sonal danger, but casting a frequent and anxious
look towards Neusiedel, where the prescribed
attack by Davoust was every moment expected
to appear, from the advancing cannonade and
smoke in that direction. He was mounted on a
snow-white charger called Euphrates, a present
of the King of Persia; and when the firing was
most vehement, he rode in front of the line,
which was too far distant to return a shot. His
suite expected every moment to see him struck
down by a cannon-ball; but, albeit noways in-
sensible to the disastrous consequences which
would in all likelihood attend his fall, he felt too
strongly the necessity of his presence to preserve
order at that important point, to shrink even for
a moment from the scene of danger.*

It was not surprising that Napoleon exposed
himself so much to maintain this
salient angle of his position, with-
out recalling Massena, or weaken-
ing his corps on the right; for the
danger had become so pressing from
the progress of the Austrians on the left, that the
battle appeared irrecoverably lost. At ten o'clock,
Kollowrath and Klenau, preceded by sixty pieces
of cannon, had swept the whole field of bat-
tle: after occupying Breitenlee and Neuwerthaus,
they had fallen with an overwhelming su-
periority of force on Boudet and Le Grand, who,
with eighteen thousand men, had been left to
keep their ground against such fearful odds, put
them to the rout, captured all their artillery and

Splendid progress of the Austrian right towards Essling.

* Sav., iv., 110, 111. Pel., iv., 210, 212. Jom., iii., 268. Vict. et Conq., xix., 208.

four thousand prisoners, and drove them through Aspern into the French *tête-du-pont*, on the edge of the Danube. Following up this important success, the Austrians re-entered the intrenchments in front of the island of Lobau, regained all the redoubts evacuated on the preceding day, occupied Essling, and pushed their advanced posts so near to the bridges leading to Enzersdorf, that the French heavy guns, on the shores of the island, opened their fire to protect the retreat of the army with as much vehemence as they had done forty hours before to cover the passage of the river. Driving the enemy before them, like chaff before the wind, the whole Austrian right, with loud shouts, pressed on towards Enzersdorf. Startled by the unexpected sound, which was soon heard even above the thunder of the artillery in front, the French reserve parks and baggage-trains were seized with a universal panic: fugitives on all sides overspread the rear of the army, and fled to the bridges, which were speedily choked up by the throng; cries of "All is lost! the bridges are taken!" were already heard in the ranks; while the anxious crowds who thronged the steeples of Vienna, and with beating hearts and speechless emotion watched the advancing fire of their columns, above all the roar of the artillery heard the Austrian cheers, and already the thrilling voice was heard in the capital, "The country is saved!"*

But Providence had decreed it otherwise, and four years more of bondage and misery were destined to punish the faults and unite the hearts of Germany. While this splendid success attended the efforts of the Austrian right, their left, against which Napoleon had accumulated his forces under Davoust, had undergone a serious reverse. This illustrious chief, who had fifty thousand admirable troops at his command, including three divisions of the reserve cavalry, had no sooner received Napoleon's directions to attack the Austrians on the plateau, than he despatched Friant and Morand, with the veterans who had gained the day at Auerstadt, to cross the Russbach below Glinzendorf, ascend the valley above Neusiedel, and turn the extreme left of the enemy; while he himself, with the two other divisions, attacked that village in front; and Oudinot was ordered to keep Hohenzollern in check, in the centre of the plateau behind Baumersdorf. It required some time to execute, out of the range of the enemy's cannon, this sweep round the extremity of his position; for sixty pieces of cannon, disposed along the front and eastern face of the plateau, swept the whole level ground at its feet, as far as the guns would carry. At ten o'clock, however, the two divisions of Friant and Morand had crossed the Russbach, supported by a numerous artillery and ten thousand horse, under Grouchy, Montbrun, and Arighi. Rosenberg, meanwhile, perceiving the danger with which he was threatened, had accumulated his forces in strength at Neusiedel and the angle of the plateau behind it, and, with his troops drawn up, facing outward, on the two sides of a right-angled triangle, was prepared to maintain his important position against the formidable odds which was about to assail him; while the guns on the crest of the plateau behind his lines replied to the more numerous batteries of the enemy in the plain below with vigour and effect.

Morand's division came first into action, and boldly mounted the heights, but, notwithstanding the gallantry of their attack, they were driven back in disorder by the destructive fire of the Austrian cannon, and the rapid discharges of their musketry; but Friant came up to his support, and Morand, rallying under cover of his lines, recommenced a furious assault on the enemy, and, after a desperate resistance, succeeded in ascending the plateau on its eastern front. Friant, at the same time, passing farther on, made his way to the summit. The tower of Neusiedel, however, still held out, though a powerful French battery thundered against it from an adjoining height to the eastward; and the Austrian cavalry, who were drawn up at the foot of the ascent, essayed several charges against the ponderous steel-clad cuirassiers of Arighi and Grouchy. The shock was terrible, but the French proved at first victorious, and routed Rosenberg's horse with great slaughter; Hohenzollern's cuirassiers next came up to avenge the disaster, and Grouchy, in his turn, was broken and forced back; Montbrun then charged the victorious Austrians, when blown by their rapid advance, with decisive effect; and, after desperate acts of gallantry on both sides, they were compelled to follow the retrograde movement of their infantry, and abandon the eastern front of the plateau.*

While this important advantage was gained on the extreme left, a furious combat on the right was raging around Neusiedel. Davoust in person there led on the divisions of Gaudin and Pacthod to the attack with extraordinary vigour: the resistance by the Prince of Hesse-Homburg was equally obstinate, and some re-enforcements despatched by Hohenzollern long enabled that gallant officer to maintain his ground against greatly superior forces. At length, however, the Austrians were driven by main force from the houses, and pushed back to the foot of the plateau: there they again made a stand, and for long strove with desperate resolution to make good the tower, and prevent Davoust from debouching from the village. In this terrible strife Nordman and Veczay were killed; Hesse-Homburg, Muger, Wartheachben, and almost all the Austrian generals wounded, while on the French side Gaudin received four wounds, and almost all his generals were struck down. At length the tower was carried by assault, and the enemy's infantry driven in disorder from the ground they had so long defended in its rear. Davoust, upon this, ordered the cuirassiers of Arighi to charge the retreating lines, and soon the slope of the plateau glittered with the dazzling light of their helmets; but they got entangled in broken ground among the huts of the Austrian bivouacs, and the few who reached the summit were so grievously shattered by the pointblank fire of their guns, that the whole were driven headlong down, with severe loss, into the plain. Notwithstanding this success, however, Rosenberg was unable to keep his ground on the angle of the plateau, above Neusiedel, after the tower had fallen: his left was turned by Morand and Friant, who had established themselves on the crest of the plateau; and on the other side, Oudinot, transported by the enthusiasm of the moment, had converted his feigned into a real

Neusiedel is taken, and the Austrian left driven back.

attack, and, though repeatedly repulsed, had at length made his way across the Russbach near Baumersdorf, and, despite all the efforts of Hohenzollern, who was weakened by the succours sent to Neusiedel, reached the crest of the plateau.* Threatened thus on both flanks, Rosenberg drew back in excellent order, still facing to the eastward, and, forming a junction with Hohenzollern, took up a new position towards the centre of the plateau, nearly at right angles to the line of the Russbach, and covering two thirds of its surface; while Davoust, apprehensive of being taken in rear by the Archduke John, whose approach to the field was already announced by the scouts of both armies, showed no disposition to molest him in the new line which he had occupied.

Napoleon was still riding with his suite in the perilous angle in front of Aderklaa, when these alternate disasters and successes were passing on either wing of his army. The accounts which he received from his left were every moment more alarming. Officers in breathless haste arrived every ten minutes, to announce the fearful progress of the enemy in that direction. "The cannon," said one, "which you hear in the rear, is that of the Austrians;" the emperor made no answer. "The division Boudet is driven back into the island of Lobau," said another: still no answer; but his eyes were anxiously turned to the tower of Neusiedel, which was visible from all parts of the plain, and he frequently asked if the fire was on the east or west of that building. At length Davoust's cannon were distinctly seen to pass Neusiedel, and the slopes of the plateau were enveloped with smoke. "Hasten back to Massena," said he to the aid-de-camp, "and tell him to commence his attack: the battle is gained." At the same time, he despatched orders in all directions for offensive operations: Bessières, with ten regiments of the reserve cavalry, was directed to charge the Austrian right wing, which had advanced so far into the French rear, in flank; while Massena, who had now got back to his original ground near Aspern, assailed it in front; Eugene, Marmont, and Bernadotte were to assault Wagram; Oudinot and Davoust to renew their attacks, and, if possible, drive the enemy from the plateau; while the emperor in person prepared the decisive effort, by a grand charge of infantry, cavalry, and artillery, in the centre. For this purpose, Eugene's corps, which had marched across the field from Baumersdorf, was arranged in close columns of three divisions: Macdonald in the central division, consisting of eight strong battalions; on either flank were six, drawn up in close array; behind them marched Serras's division and Wrede's Bavarians; the light horse of the guard and the cuirassiers of Nansouty covered their flanks; a hundred pieces of cannon, chiefly of the guard, under Drouet, which had now come up from Neusiedel, admirably served, preceded the whole, and spread death far and wide; while the emperor himself, with the cavalry and infantry of the Old Guard, closed the array, on the success of which he had staked his crown and his life.†

Napoleon himself gave the signal to this terrible column to advance: its instructions were to

move right upon the steeple of Sussenbrunn, leaving Aderklaa to the right. The archduke early perceived the effort which was preparing against his centre, and made every possible disposition to resist it. The lines were doubled; the reserves of cavalry and the right of Bellegarde's corps brought up to the menaced point; artillery on either side planted in great abundance, so as to open a cross fire on the advancing column, while the archduke in person hastened to the spot with his whole staff, to be in a situation to act with promptitude in the terrible crisis which was approaching. Hardly had they arrived, when Lauriston and Drouet's artillery approached: the cannoniers, regardless of the cross fire of the Austrian batteries, advanced at the trot to within half cannon-shot, and then opened a prodigious fire from their hundred pieces, which was sustained with such rapidity, that it forced back the Austrian line immediately in front, and dismounted several of their guns. Taking advantage of the confusion produced by this discharge, Macdonald advanced with his column, directly in at the opening, and pierced the imperial centre: Aderklaa and Breitenlee are soon passed; Sussenbrunn is menaced: moving steadily forward through the wreck of guns, the dead, and the dying, this undaunted column, preceded by its terrific battery incessantly firing, pushed on half a league beyond the front, in other points, of the enemy's line. In proportion as it advanced, however, it became enveloped by fire: the guns were gradually dismounted or silenced, and the infantry emerged through their wreck to the front; the Austrians drew off their front line up on their second, and, both falling back, formed a sort of wall on each side of the French column, from whence issued a dreadful fire of grape and musketry on either flank of the assailants. Still Macdonald pressed on with unconquerable resolution: in the midst of a frightful storm of bullets his ranks are unshaken; the destinies of Europe are in his hands, and he is worthy of the mission. The loss he experienced, however, was enormous: at every step huge chasms are made in his ranks, whole files are struck down by cannon-shot, and at length his eight dense battalions are reduced to fifteen hundred men! Isolated in the midst of enemies, this band of heroes is compelled to halt: the Empire rocked to its foundation: the rout of a similar body of the Old Guard at Waterloo hurled Napoleon to the rock of St. Helena.*

Following with intense anxiety the advance of this column, however, the emperor was at hand to support it. The divisions on the flank, Durutte and Pacthod, which had insensibly fallen behind during the advance of Macdonald with the central column, were ordered to move forward; Serras and Wrede were hastened up to his support, and the young guard, under Reille, detached to support their attack. This last succour, however, almost exhausted the reserves of Napoleon. "Husband your men as much as possible," said he to Reille, as he gave him the command: "I have now no other reserver but the two regiments of the Old Guard." At the same time, Nansouty, with the cuirassiers on the left, and Walther with the dragoons on the right of

Decisive advance of Macdonald in the centre.

Macdonald's column, received orders to charge the masses in front of them, and Oudinot, Eugene, and Marmont, to press the enemy as much as possible towards Aderklaa and Wagram.*

The charges of the cavalry proved most unfortunate. Hardly had Bessiéres set off to execute the orders of the emperor when he was struck down by a cannon-shot, which tore his thigh, killed his horse, and so disfigured his whole person that he was taken up for dead. Nansouty succeeded to the command, and led on the charge; but such was the severity of the fire which they immediately encountered, that in a few minutes twelve hundred horsemen were struck down by cannon-balls, and the whole were compelled to halt and retire before they even reached the enemy. The dragoons on the right, under Walther, met with the same fate, and, after sustaining a grievous loss, were driven back under cover of the foot-soldiers. But the infantry were more successful. No sooner did Macdonald perceive that the divisions of Pachtod, Durutte, Serras, and Wrede had come up to his flanks, and that Reille was advancing to his support, than he resumed his forward movement, and the archduke, despairing now of maintaining his position, gave orders for a general retreat. It was executed, however, in the most admirable order: the infantry retiring by echelon, and alternately marching and facing about to pour destructive volleys into the ranks of the pursuers. The field of battle, as seen from the steeples of Vienna, now presented a magnificent spectacle. Massena, upon the retreat of Kolowrath and Klenau, readily regained Essling and Aspern, and the Austrian army, in a line nearly perpendicular to the Danube, slowly and deliberately retired; while the French host formed a vast line of sabres and bayonets, from the banks of the river to the summit of the plateau of Wagram, on which the declining rays of the sun glanced with extraordinary splendour. Vast volumes of smoke at intervals indicated the position of the opposing batteries; a white line of curling smoke marked the advance and line of the infantry; and gleams of almost intolerable brightness were reflected from the helmets and cuirasses of the cavalry. A bloody encounter took place at Gerarsdorf, which the rear-guard of Kolowrath long held with unconquerable bravery, but it was at length carried by the chasers of the guard: Wagram yielded to the impetuous assaults of Oudinot, and two battalions were made prisoners. But, with this exception, the retreat of the Austrians was conducted with hardly any loss: the archduke, with consummate skill, availed himself of every advantage of ground to retard the enemy; and so exhausted were the French by their efforts, that they displayed very little vigour in the pursuit. Neither cannons nor prisoners were taken; the cavalry hardly charged; but for the retrograde movement of one army, and the advance of the other, it would have been impossible to have decided which had gained the advantage in the fight. Napoleon was much chagrined at this indecisive result, and suffered his ill-humour to exhale in open reproaches to the cavalry generals of the guard. "Was ever anything seen like this? Neither prisoners nor guns! This day will be attended with no results." At nightfall, the

Austrians occupied a line along the heights behind Stammersdorf, from which their right wing had descended in the morning, along the great road to Brunn, through Hebersdorf to Obersdorf; while the French bivouacked in the plain, three miles in their front, from the edge of the Danube near Florisdorf, perpendicularly up to Sauring, at the foot of the hills.*

It was towards the close of this obstinately-contested battle that the Archduke John approached the field. Between three and four o'clock his columns came up to Leobensdorf and Obersiebenbrunn, while his advanced posts reached Neusiedel, and even approached Wagram, which the French troops had passed through, not an hour before, in pursuit of the Austrian grand army! Finding, however, upon his arrival there, that his brother had abandoned the field, and was retiring at all points towards the Bisamberg, he justly conceived apprehensions concerning his own situation, left alone with forty thousand men in the rear of the Grand Army, and gave orders to retreat. He marched till after dark, and regained Marchegg before midnight. An incident occurred, however, soon after he retired, which demonstrated in the most striking manner the vital importance of his co-operation, and the decisive effect which might have arisen from it had he come up, as he had been ordered, at an earlier hour of the day. The emperor, worn out with fatigue, had lain down to rest, surrounded by his guards, in the plain between Sussenbrunn and Aderklaa, when cries of alarm were heard from the rear. The drums immediately beat at all points: the infantry hastily formed in squares, the artillerymen stood to their guns, the cavalry saddled their horses. Napoleon himself mounted his horse, and asked what was the cause of the alarm. "It is nothing, sire," replied Charles le Brun, one of his aides-de-camp: "merely a few marauders." "What do you call nothing?" replied the emperor, warmly: "know, sir, there are no trifling events in war; nothing endangers an army like an imprudent security. Return to see what is the matter, and come back quickly to render me an account." Meanwhile he prepared everything for a nocturnal combat, and the aspect of affairs in the rear of the army was such as to call forth all his solicitude. The artillery, baggage-wagons, stragglers, and camp-followers, who crowded the rear, were flying in disorder to the Danube; the plain was covered with fugitives, the entrance of the bridges blocked up with carriages, and many who even had the river between them and the supposed danger, continued their flight, and never drew bridle till they were within the ramparts of Vienna. The alarm spread like wildfire from rank to rank: the guard even was shaken; the victors for a moment doubted of the fate of the day. The ranks presented the appearance of a general rout; and yet the whole was occasioned by a single squadron of the Archduke John's cavalry, which had been far advanced towards Wagram, and seeking to regain, as he retired, the road to Presburg, had cut down some French marauders in one of the villages on the east of the field! So vital was the line of communication on which that prince was intended to act, and so important were the results which must

Tardy approach and retreat of the Archduke John. Vital importance of his co-operation.

have ensued from his co-operation, if it had taken place, as the generalissimo was entitled to expect, at an earlier period of the day.*

Such was the memorable battle of Wagram, one of the greatest and most obstinately contested of the whole war, and perhaps the most glorious in the whole Austrian annals. The loss on both sides was immense: twenty-five thousand brave men on either part were either killed or wounded, without any decisive result having been obtained. The other trophies were equally balanced: the Austrian right wing had made five thousand prisoners, and two thousand of their own wounded had fallen into the hands of the enemy in the centre of the plain. They were nowhere defeated: no panics disgraced their lines; no columns laid down their arms; slowly, at the command of their chief alone, in regular order they retired from the field, without the loss of either prisoners or cannon, and inspiring, even to the last, dread to the enemy who followed their steps.†

To have maintained such a conflict with greatly inferior forces, against Napoleon at the head of a hundred and eighty thousand men, was itself no ordinary distinction. But this is not all: if their forces had all joined in the action, and they had thereby been restored to an equality with the enemy, there can be no doubt the result would have been different. But for the failure of the Archduke John to come up at the period assigned to him, the battle would have terminated in a glorious and decisive victory. Had that prince made his appearance on the field either at six in the morning, when Rosenberg, in anticipation of his co-operation, advanced to Glinzendorf; or later, when Kollowrath and Klenau had routed the French left wing, and their leading columns were approaching the bridges of Lobau; or even when the fate of Europe hung in suspense on the advance of Macdonald's column in the centre, there can be no doubt that Napoleon would have been totally defeated, and possibly a disaster as great as that of Waterloo would have effected, six years before that memorable event, the deliverance of Europe. Experience in every age

has demonstrated that, after the protracted excitement of a great battle, the bravest soldiers become unstrung,* and, at such a moment, the attack of a few fresh troops often produces the most extraordinary results. It is this which so often has chained success to the effort of a small reserve in the close of an obstinately-disputed day; which made Kellerman's charge at Marengo snatch victory from the grasp of the victorious Austrians; and the onset of Sir Hussey Vivian's brigade on the flank of the Old Guard, at Waterloo, overthrow at once the military fabric of the French Empire. The general terror inspired in Napoleon's rear by the capture of Aspern and Essling in the morning, the marvellous panic occasioned by the charge of a squadron of hussars in their extreme right at night, demonstrated that the disaster at Aspern had inspired the French troops with a nervous disquietude about the bridges in their rear, and that any alarm in that quarter was likely to produce even greater effect than on troops of less military foresight and experience. What, then, must have been the effect of thirty thousand fresh troops suddenly thrown into the rear of the French army, where there was no reserve to oppose them, at the moment when the victorious shouts of Kollowrath's troops, and the ominous sound of the cannon of Lobau, announced that their retreat was all but cut off; or when the heroic column of Macdonald, wasted away to fifteen hundred men, had halted their advance in front of Sussenbrunn? The Archduke John is a most accomplished prince, and, as a private individual, no one has greater title to esteem; but either his jealousy of his brother, or his incapacity to perceive the object of combined operations, twice in that single campaign proved fatal to his country: once when he disobeyed the orders of the Archduke Charles to combine with Kollowrath an attack on the bridge of Linz, on the French line of communication, immediately after the battle of Aspern; and again, by his tardiness in obeying the orders of the same generalissimo to hasten to the theatre of decisive events on the field of Wagram.†

The day after the battle, Napoleon, according to his usual custom, rode over the field of battle. Without the features of horror which had imprinted so awful a character on that of Eylau, it presented some circumstances of a still more distressing description. The plain was covered with the corpses of the

* Jom., iii., 276, 277. Vict. et Conq., xix., 215. Sav., iv., 115.

† The 25th Bulletin says the French took 20,000 prisoners, forty pieces of cannon, and ten standards; and Sir Walter Scott has heedlessly transcribed that statement.* It is, however, grossly inaccurate, and proved to be so, even by the warmest partisans of Napoleon. "The enemy retired," says Savary, who was by the emperor's side through the whole battle, "at four o'clock, and abandoned to us the field of battle, but without prisoners or cannon, and after having fought in such a manner as to render every prudent man cautious of engaging in a rash enterprise: we followed without pressing him, for the truth is, he had not been at all cut up. He made head against us everywhere, and his troops were very numerous, and he had, in reality, no reason for retiring; though, fortunately for us, he did so, and thus gave to France all the moral advantages of a victory."‡ Jomini says, "The archduke retreated during the night, leaving us no other trophies but some thousand wounded or prisoners, and a few dismounted cannon. Their loss was 25,000 men; ours was about the same."§ Sir Walter's Life of Napoleon is a surprising work, considering that it was written in little more than twelve months, by an author whose life had been spent in studies of a different description; but his narrative is often little more than a transcript of the bulletins or Annual Register, and it is not surprising that in less than two years he could not, under severe anxiety and affliction, master what would have required twenty years, in Gibbon's words, "of health, leisure, and perseverance."—See LOCKHART'S Life of Scott, vii., 42.

* Scott's Nap., vi., 334.

† Sav., iv., 114, 115, 116.

‡ Jom., iii., 276.

* "The long and fearful excitement of battle once relaxed, leaves the toil-worn frame nerveless and exhausted, and the mind itself destitute of the energy requisite for any renewal of vigorous exertion. A bold onset made by a few resolute men on troops who have maintained, even successfully, a hard day's combat, is almost sure to turn the scale in favour of the new assailants."—Life of WALLENSTEIN, by LIEUT.-COLONEL MITCHELL, p. 259: a work written with the spirit of a soldier, the principles of a patriot, and the penetration of a statesman.

† "If we reflect," says General Pelet, the able historian of this campaign, himself an actor in the mighty events he commemorates, and, withal, an ardent partisan of Napoleon, "on the result of the battle of Fontenoy; if the 1500 who remained of Macdonald's corps had been surrounded and charged by fresh troops assembled from the right and the left, and those who remained on the heights of Stammersdorf, the battle might still have been gained by the Austrians. The emperor had no other reserve at his disposal but two regiments of the Old Guard; the isle of Lobau was threatened, and all around it was in the utmost disorder. The archduke had many more forces not engaged than were required to have made that attack."—Pelet, v., 248.

‡ Kausler, 389, 390. Pelet, iv., 238, 239. Jom., iii., 275, 276.

§ See note B.

slain; the march of Macdonald's column, especially, might be traced by the train of dead bodies which lay along its course. Such was the multitude of the wounded, that they far exceeded all the efforts of the French surgeons, and of the humane citizens of Vienna, for their relief; and, four days after the battle, the mutilated remains of human beings, still alive, were found in great numbers among the rich fields of wheat with which the plain was covered. Some of these unhappy wretches endured for days together the rays of a vertical sun during the dog-days, without either food or water; mutilated, and unable to remove the flies which fastened on their wounds, they literally became, while still alive, the prey of the insects which hover round carcases of animals in hot weather.* The emperor frequently dismounted, and with his own hands administered relief to some of the wounded, and drew tears of gratitude from eyes about to be closed in death.† The knowledge that the victory was their own had restored all their wonted enthusiasm to the French soldiers: the wounded exclaimed *Vive l'Empereur!* as he passed, and hoisted little white flags, formed by putting their handkerchiefs, or an arm of their shirt, on their bayonets, as well to testify their joy as to implore relief. After having traversed the field of battle, Napoleon inspected the soldiers who were about to march in pursuit of the enemy, and distributed rewards in great profusion among the most deserving. In passing, he stopped and held out his hand to Macdonald: "Touch it, Macdonald, without any farther grudge: from this day we shall be friends; and I will send you, as a pledge of my sincerity, your marshal's staff, which you have won so gloriously yesterday." "Ah! sire," replied Macdonald, with tears in his eyes, "we are now together for life and death." And well did the hero of Scottish blood redeem his word! Through every future change of his reign he adhered with unshaken fidelity to the fortunes of his master. He was to be found by his side, alike amid the disasters of Fontenoy, as the triumph of Wagram; and, when all the other objects of his bounty had deserted their benefactor and passed over to the enemy, he remained almost alone to support him: the latest object of his prosperous favour, but the most faithful follower of his adverse fortunes.‡

Oudinot, a general, as the bulletin said, "tried in a hundred battles," and Mar-mont, whose campaign in Illyria and Carniola had so powerfully contributed to the success of the Grand Army, were at the same time elevated to the rank of marshals. Very different was the destiny which awaited Bernadotte, Prince of Pontecorvo, hitherto one of

Appointment of Oudinot marshal of the Empire. Disgrace of Bernadotte.

* D'Abr., xii., 261, 262.

† "The emperor stopped his horse beside a young officer of carabineers, who had had his skull fractured by a cannon-shot; he knelt beside him, felt his pulse, and wiped with his own handkerchief the dust from his lips and brow. A little spirit made him revive; he opened his eyes and fixed them on the emperor; he recognised him, and his eyes filled with tears; but he was too weak to be able to sob, and soon after breathed his last."—SAVARY, iv., 119.

‡ A coldness had long subsisted between Napoleon and this distinguished general. He had not been employed in any considerable command since the battle of the Trebbia, in 1799. Jealousy and malevolence had widened the breach occasioned by Macdonald's original disinclination to join the herd of obsequious flatterers at the Tuileries. How often does difficulty and misfortune bring to the post they are really worthy to fill, those noble minds who disdain the arts by which, in easier times, it is generally won!—SAVARY, iv., 119. § Sav., iv., 119 120. Pelet, iv., 241, 242.

the most favoured of Napoleon's lieutenants. This chief, who had been singularly unfortunate, both in his attack on the heights of Wagram and village of Aderklaa on the evening of the 5th, and his encounter with the Austrian centre on the morning of the 6th, had, with the true spirit of Gascony, his native country, glossed over his defeat by a boasting proclamation to the Saxons on the 7th, in which he professed to convey to them the emperor's approbation for the gallantry which they had evinced on these occasions.* Napoleon, who was both irritated at Bernadotte and the Saxons for the abandonment of Aderklaa, which it required him so much time and bloodshed to regain on the following day, and jealous of any of his lieutenants assuming his own peculiar function in the distribution of praise or blame, immediately prepared and circulated, but among the marshals and ministers alone, an order of the day, reflecting, in very severe terms, both on the conduct of the Saxons and this step on the part of their chief;† and soon after a decree was published in the bulletin dissolving that corps, and incorporating its soldiers with other parts of the army. Bernadotte sought a private interview with the emperor on this painful subject, but in vain: he constantly refused to see him; and the disgraced marshal immediately set out for Paris, where he was soon after employed by the minister at war, without the concurrence of Napoleon, in a very important duty, that of commanding at Antwerp during the English invasion of the Scheldt. No sooner, however, did the emperor learn of this fresh appointment by the government at Paris, than it, too, was cancelled, and Bessières put there in his stead; even although Bernadotte's efforts, during the short period he held the command, had been eminently serviceable to the Empire. These repeated indignities made a deep impression on the mind of the French marshal: they revived that ancient jealousy at the First Consul; which all the subsequent glories of his reign had not entirely extinguished; induced a sullen discontent at the imperial service, which experience had shown was liable to such inconstancy; made him grasp eagerly at the Swedish throne, which fortune soon after proffered to his grasp; and, by investing the disgraced soldier with the power and feelings of an independent sovereign, contributed, in the end, in no inconsiderable degree, to the downfall of the French Empire.‡

Two lines of retreat were open to the arch-duke after he had determined to re- The Austrians
linquish the field: that to Olmutz retire towards
and Moravia, and that to Bohemia; Bohemia.
and so little did the French press their adversaries when the retrograde movement commenced, that the emperor was for some time ignorant which of the two routes they had adopted. There were several reasons, however, which induced him to prefer the latter. Prague July 7.
was, next to Vienna, the greatest military establishment, and contained the largest arsenal of the Empire; and it stood in a country surrounded with a range of hills, which offered favourable positions for retarding the advance of an invading army. Hopes were not wanting, also, that the great naval and military armament, which England had so long been preparing, would soon make its appearance, either in Flan-

ders or the north of Germany, and that the indecision of Prussia, notwithstanding the retreat from Wagram, might be determined by such powerful support in the north of Germany. For these reasons, the line of Bohemia was selected for the retreat of the Grand Army, leaving to the Archduke John, with the forces under his command, and the Hungarian insurrection, the care of covering Hungary and the eastern provinces of the Empire. The greater part of the army followed the high road to Znaim; Rosenberg alone, on the extreme left, took that to Brunn by Wolkersdorf. The retreat continued all the 7th without any serious molestation from the enemy; while Napoleon, who was disquieted by the presence of so large a body as the Archduke John's army, still untouched on his right flank, and by the menacing advance of Giulay with twenty-five thousand men from the side of Styria, towards Vienna, separated the immense army which had so lately been concentrated on the field of Wagram. Davoust, Marmont, Massena, with Oudinot, Bessières, and the guards, being directed to follow on the traces of the Archduke Charles; the viceroy's corps, augmented to fifty thousand men by the addition of the Saxons and Wirtembergers, being moved towards Presburg, to observe the Archduke John; while Macdonald's division remained in charge of the bridges of Vienna, and was prepared, with the garrison of the capital, to repel any insult that might be offered by the Ban of Croatia. No less circumspect than adventurous, Napoleon, at the same time, ordered a hundred pieces of heavy cannon to be mounted on the ramparts of Vienna, augmented its garrison to six thousand men, laid in provisions for six months, directed the formation of great new fortifications on the bridgeheads of the capital, especially at Florisdorf, where the road to Brunn and Znaim traversed the Danube, and ordered Passau, Linz, Raab, Melk, and Gottweig, in different directions around the capital, to be put in a state of defence.*

No considerable action took place during the retreat. Massena, however, pressed the Austrian rear-guard with all his wonted activity, and bloody encounters of inconsiderable bodies marked the track of the armies. The archduke conducted the retreat with consummate skill, and in the most admirable order: always protecting the rear-guard, composed of formidable masses of cavalry and infantry, by a numerous artillery skilfully posted on the rising grounds, with which that undulating country abounded. To accelerate his movements, and, if possible, throw him in some degree into confusion, Napoleon moved Marmont's corps, which was following Rosenberg on the road to Brunn, by a cross-road to Laa, by which means he threatened to arrive at Znaim before the main Austrian army. The archduke no sooner received intelligence of this movement, than he fell back with all his forces, and took post at that town, on the banks of the Taya. Nothing can exceed the military position which the environs of Znaim afford: the town itself, surrounded by walls, rests, towards the west, on the rugged precipices which border the river; towards the east on the slopes of the Lischen; the ground descends on all sides to the point of

Schallersdorf, where the river turns sharp by a right angle, and flows towards Tipwitz, and the junction of the Lischen and Taya. These two streams thus enclose, as it were, a vast bastion, with a great natural wet ditch in front, about a mile long, and equally broad. The archduke himself took post at Brenditz, which rendered him master both of the roads to Budweiss, and Bohemia, and Brunn; but the slopes of Znaim were filled with troops, the bridge of the Taya barricaded, and four powerful batteries erected on the heights above to dispute the passage.*

Strong as this position was, it was doubtful whether the Austrians would maintain it at themselves in it. The advanced guards of Massena, indeed, when they first approached the bridge, were arrested by the tremendous fire of grape and musketry which issued from the woods and heights on the opposite side; but the French cannon were soon placed in such a position as to rake the Austrian batteries; the bridge was disengaged by their flanking fire; fords were discovered both above and below; and soon the attacking columns were passed over, and began to ascend the slopes on the opposite side. The archduke withdrew his troops into Znaim, and arranged his artillery in such numbers around its walls, that, when the French leading columns arrived within reach of the fire, on the slope leading to the town, they were checked with so terrible a discharge as to be obliged to retire precipitately with severe loss. Upon this the Austrians issued forth, and took post around the town and in front of the bridge, in great strength, in a position admirable for defence, though cramped for manœuvring, and especially hazardous if a retreat was intended. A dreadful storm arose at noon, which darkened the air, and deluged both armies with such a torrent of rain, that for two hours the discharge of firearms was impossible, and the combat of necessity was suspended. When the atmosphere cleared, Massena renewed his attacks on the grenadiers in front of the bridge; but he was driven back, and the Austrians, pursuing the flying enemy, regained that important passage, and made prisoners a battalion, with three generals, in the village at its opposite extremity. Massena, upon this, brought up the 10th regiment, which again won the village, forced the bridge, and, being followed by a brigade of cuirassiers, who charged with uncommon resolution, drove back the enemy's column to their position in front of Znaim, with the loss of five hundred prisoners; while the French guns were brought up on the left, in great numbers, to Edlepsz, from whence they took in flank the most formidable batteries of the Austrians.†

The progress of the Austrians in front of Znaim did not escape the observation of Napoleon, who had arrived during the storm at Theswitz, and established himself at the headquarters of Marmont's corps. To relieve the pressure on Massena, who was obviously engaged with superior forces, and whose defeat would endanger the whole army, he immediately ordered the former marshal to debouch from Theswitz, to cross the Lischen, and to ascend on the northeastern side the plateau of Znaim. These orders were immediately obeyed, and Marmont crossed the stream and ascended the hill, but

* Pelet, iv., 253, 257. Jom., iii., 279, 280. Napoleon's Orders, 9th July, 1809. Pelet, iv., 408.

† Pelet, iv., 269, 273. Jom., iii., 282.

sustained a very heavy fire when he approached the town of Znaym, and came within reach of the formidable Austrian batteries arranged round its walls. Matters were thus in a very critical state; for the two corps of Massena and Marmont were alone engaged with the whole Austrian army, except Rosenberg's corps; and Davoust and Oudinot, destined to support them, could not arrive at the theatre of action till the following morning. Nevertheless, Massena, with his usual impetuosity, was urging the attack on the town, and already the rattle of musketry was heard in the suburbs, when the cry was heard, "Peace, peace; cease firing." Such, however, was the exasperation of the contending parties, that it was with great difficulty the action could be stopped; and when the officers arrived from the headquarters of the two armies to announce the armistice, they were wounded before the troops could be prevailed upon to desist from mutual slaughter.*

In effect, the Archduke Charles had, on the preceding night, sent Prince John of Lichtenstein to the emperor's headquarters to propose an armistice; but Napoleon was unwilling to accept it till he had enjoyed an opportunity of observing in person the situation of the armies. The motives which led the Austrian cabinet to take this step were sufficiently obvious. The policy of that government always has been to avoid coming to extremities: to come to an accommodation before the chances of war had become desperate; to consider the preservation of the army the grand object, and trust, by preserving it entire, to regain at some future time the advantages which might be lost at the moment by yielding to the storm. Considering another battle, therefore, fraught with the existence of the Empire, and the result of the former not so decisive as to induce the enemy to refuse reasonable terms of accommodation, they deemed it the more prudent course to propose an armistice while yet the forces of the monarchy were entire, the more especially as the retreat from Wagram was not likely to induce Prussia to adopt a decisive course, and the long-promised armament of Great Britain had not yet left the harbours of the Channel.†

It was not, however, till Napoleon had himself seen the positions of the contending armies, and was satisfied that the Austrians, at the moment, had the advantage, as well in the position as the concentration of their troops, that he resolved to accede to the suspension of arms.‡ A council of war was afterward held, attended by all the marshals, in the emperor's tent, in which the important point was debated whether the armistice should be agreed to. Opinions were much divided, and the discussion was prolonged till a very late hour. On the one side, it was contended by Berthier, and the advocates for a continuance of hostilities, that it was of the last importance to take advantage of the reinforcements which had already come up, or were likely to arrive during the night, to commence a general attack on the enemy, and finish the war on the following day at a blow; that his

position around Znaym, though strong, was not impregnable; that Austria was the irreconcilable enemy of France under the new régime; and that, unless deprived of the power of again injuring her, she would never cease to violate the most solemn treaties when it suited her own convenience, or there was a prospect of advantage from any, the most flagrant violation of the public faith. That if, by retiring in the night, as present appearances rendered probable, the archduke should succeed in regaining Bohemia, and uniting to his standards the forces of that province, the emperor could summon to his aid the corps of Lefebvre, Junot, and Jerome, and the advantage would still remain on his side. That it was indispensable to put an end to these coalitions perpetually springing up, by dividing Austria, which was the centre of them all; that this was a point of much more importance than finishing the war in Spain; and that no sooner would the emperor, for that purpose, enter the Peninsula, than a new coalition would spring up in his rear, which would embrace all the Northern powers. On the other hand, it was contended by the advocates of peace, that if Prince Charles retreated, as he unquestionably might do, during the night, and gained the Bohemian Mountains, there was every reason to fear a general conflagration in Germany, an open declaration from Prussia, and, probably, the ultimate adhesion of Russia itself; that it was evident from present appearances, not less than past events, that the real danger of France lay in the North; that an entire new system of Russian policy had been brought to light in the course of the contest; and that, in anticipation of the grand and final conflict between the South and the North, which was evidently approaching, it was of the last importance not merely to spare, but conciliate Austria, and, by terminating the war in the Peninsula, not only secure the rear of France, but liberate two hundred thousand of its best soldiers from an inglorious but murderous warfare. The emperor, after hearing, according to his usual custom, both sides patiently, more fully aware than many of his generals of the precarious footing on which he stood with Russia, inclined to the latter side, and broke up the conference with the decisive words, "Enough of blood has been shed: I accept the armistice."*

No great difficulty was experienced in fixing the line of demarcation between the districts to be occupied by the two armies: their relative position, and the principle *uti possidetis*, afforded too clear a rule for drawing the line between them. The French were permitted to retain possession of all Upper Austria as far as the borders of Bohemia, including the circles of Znaym and Brunn; the whole district included by the course of the Morava as far as its confluence with the Taya; thence by the high road to Presburg, including that town; the course of the Danube as far as Raab, the river of that name, and thence by the frontiers of Styria and Carniola to Fiume. On this principle, the citadels of Gratz and Brunn, the fort of Sassenburg, the whole districts of Tyrol and Vorarlberg, were to be surrendered to their arms. It was a third in point of extent, and more than a half in point of military strength, of the whole empire. The armies in Poland were to retain their respective positions: in Western and Northern

Limits assigned to the two armies by the armistice. July 12.

‡ Oudinot, and the reserve from Wolkersdorf, could not come up till the following morning: it was material not to allow the enemy to perceive his superiority at that moment."

—THIBAUDEAU, vii., 350.

* Pel., iv., 275, 277. Biga., viii., 310. Thib., vii., 390.

Germany, the limits between the two powers were to be those of the states composing the Confederation of the Rhine.*

The armistice was concluded by the Archduke Charles alone, in virtue of the powers reposed in him as generalissimo, but subject to the ratification of the emperor. The cabinet of Vienna, which at that period was assembled at Komorn in Hungary, had considerable difficulty in giving their consent to it. It was proposed to take advantage of the distance of the French troops to act on the right bank of the Danube; to unite the forces of Giulay and the Archduke John with those of the Hungarian insurrection, and move towards Styria and Tyrol, so as to threaten the French communications, while the Archduke Charles, by retreating towards Bohemia, drew the bulk of their forces to a distance from their only base of operations. In pursuance of these views, which, for a few days, prevailed at the imperial headquarters, directions were sent to the Archduke John to "disregard any orders regarding an armistice which were not bearing the sign-manual of the emperor, and take his instructions from him alone." In the course of the two following days, however, Prince Lichtenstein arrived from the headquarters of the Archduke Charles, and inspired more moderate views. The court, yielding to necessity, and desirous of gaining time to recruit its armies, await the progress of events in Spain, and the effect of the long-expected English armament in the north of Germany, gave a reluctant consent; the armistice was signed by the emperor on the 18th, and the flames of war were quenched in Germany, till they broke out with awful violence, three years afterward, on the banks of the Nie-men.†

The Austrian people were not long of receiving a bitter proof of the reality of their subjugation. On the very day after the armistice was concluded, a decree of Napoleon's imposed a war contribution of 237,800,000 francs (£9,500,000) on the provinces occupied by the French armies, which was not a half of the monarchy: a burden at least as great, considering the relative wealth and value of money in the two countries, as an imposition of fifty millions sterling would be on Great Britain.‡

The battle of Wagram bears a striking resemblance to two of the most memorable that have occurred in ancient or modern times—those of Cannæ and Waterloo. In all the three, the one party made a grand effort at the centre of his antagonist, and the final issue of each battle was owing to the success or failure of the measures adopted to defeat this central attack, by a united movement against the wings of the enemy. At Cannæ, as already noticed, it was the advance of the Roman centre, in column, into the middle of the Carthaginian army, followed by the turning of both their flanks by the Carthaginian cavalry, which brought about their ruin. At Aspern, the defeat of the French on the second day was owing to a similar hazardous advance of the French centre in close column into the middle of the Aus-

trian line, which skilfully receded, and brought the French columns into the centre of a converging fire of a prodigious artillery.* At Waterloo, the final defeat of the French was owing to the steadiness of the English guards, which in line arrested the advance of the old Imperial Guard in column, while the concentric fire of the British batteries, now advanced into a kind of semicircle, and the simultaneous charge of a brigade of cavalry on the one side, and a line of infantry on the other, of the attacking mass, completed the final destruction of that formidable body. At Wagram the archduke had, on a still more extended scale, prepared the means of repelling the anticipated central attack of the French in column, and converting it into the cause of total ruin. The batteries and troops in the centre were so disposed, that their awful fire at length arrested Macdonald's intrepid column: Aspern and Essling were captured on one flank; the Archduke John, with thirty thousand fresh troops, was destined to turn the other. To all appearance, the greatest defeat recorded in history awaited the French emperor: when the tardiness of that prince proved as fatal to the Austrians as a similar delay on Grouchy's part was to Napoleon himself at Waterloo, and victory was snatched from the grasp of the Austrian eagles when they seemed on the very point of seizing it.

The campaign of Aspern and Wagram is the most glorious in the Austrian annals; the most memorable example of patriotic resistance recorded in the history of the world. If we recollect that in the short space of three months were comprised the desperate contest in Bavaria, the victory of Aspern, the war in Tyrol, the doubtful fight of Wagram, we shall be at a loss whether to admire most the vital strength of a monarchy which, so soon after the disasters of Ulm and Austerlitz, was capable of such gigantic efforts, the noble spirit which prompted its people so unanimously to make such unheard-of exertions, or the firm resolution of the chiefs who, undismayed by reverses which would have crumbled any other government to dust, maintained an undaunted front to the very last. We admire the courage of Darius, who, after the loss of half his provinces, still fought with heroic resolution against the Macedonian conqueror on the field of Arbela; we exult in the firmness of the Roman Senate, which, yet bleeding with the slaughter of Cannæ, sent forth legions to Spain, and sold the ground on which Hannibal was encamped, when his standards crowded round the walls of the city; and we anticipate already the voice of ages in awarding the praise of unconquerable resolution to the Russian emperor, who, undeterred by the carnage of Borodino, resolved to burn the ancient capital of his empire rather than permit it to become the resting-place of his enemies, and, when pierced to the heart, still stretched forth his mighty arms from Finland to the Danube to envelop and crush the invader. But, without underrating these glorious examples of patriotic resistance, it may safely be affirmed that none of them will bear a comparison with that exhibited by Austria in this memorable campaign.

Other empires have almost invariably sunk upon the capture of the capital. Carthage was crushed by the storm of its metropolis under

Reflections on the campaign, and its glorious character to Austria.

* Ante, iii., 213.

Scipio Africanus; Rome sunk at once with the fall of the eternal city before the Gothic trumpet; with the conquest of Constantinople the lower empire perished; the seizure of Berlin by the allies under the Great Frederic was but a transient incursion, its lasting occupation by Napoleon proved fatal to the strength of the monarchy; France, during its Republican fervour, was nearly overthrown by the charge of fifteen hundred Prussian hussars on the plains of Champagne,* and twice saw its strength totally paralyzed by the fall of its capital in 1814 and 1815; Russia survived the capture of Moscow only by the aid of a rigorous climate and the overwhelming force of its Scythian cavalry. Austria is the only state recorded in history which, without any such advantages, fought two desperate battles in defence of its independence AFTER its capital had fallen! To this glorious and unique distinction the imperial annals may justly lay claim; and those who affect to condemn its institutions, and despise its national character, would do well to examine the annals of the world for a similar instance of patriotic resolution, and search their own hearts for the feelings and the devotion requisite for its repetition.

In truth, the invincible tenacity with which both the Austrian nobility and people maintained the conflict, under circumstances of adversity, which, in every other instance recorded in history, had subdued the minds of men, affords at once a decisive refutation of the opinion so industriously propagated and heedlessly received in this country as to the despotic and oppressive nature of the imperial rule, and the most memorable example of the capability of an aristocratic form of government to impart to the community under its direction a degree of consistency and resolution of which mankind under no other circumstances are capable. It was not general misery which caused the Tyrolese to start unanimously to arms at the call of the Austrian trumpet, and combat the invader with stone balls discharged from larch-trees bored into the form of cannon: it was no oppressive rule which called forth the sublime devotion of Aspern and Wagram. No nation ever was so often defeated as the Austrians were during the course of the Revolutionary war; but none rose with such vigour from the ground, or exhibited, in such vivid colours, the power or moral principle to withstand the shocks of fortune, to compensate, by firmness of purpose, the superior intellectual acquisitions of other states, and communicate to men that unconquerable resolution which brings them, in the end, victorious through the severest earthly trials. The aspect of Austria Proper, especially in its mountainous regions, confirms and explains this extraordinary phenomenon. In no other country, perhaps, is so uncommon a degree of well-being to be seen among the peasantry; nowhere are the fruits of the earth divided in apparently such equitable proportions between the landlord and the cultivator; nowhere does ease and contentment prevail so universally in the dwellings of the poor.† When it is recollected that this general prosperity takes place in a country where the taxation is so light as to be almost imperceptible by the great body of the people, and where the proportion of persons instructed is, on an average of the whole empire, equal

to any state of similar dimensions in Europe, and as high as the best-educated nations in some provinces,* it must be admitted that the philanthropist has much cause to linger with satisfaction on its contemplation. It is on a different class, on the middle ranks, and the aspiring children of the burghers, that the restrictions of the imperial sway are hereafter destined to hang heavy; but at this period no heart-burnings arose from the exclusions to which they are subject, and one only passion, that of ardent devotion to their country, animated all classes of the people.

But the example of Austria in 1809 has afforded another and a still more interesting lesson to mankind. That country had, at that period, no pretensions to intellectual superiority: commerce, manufactures, and the mechanical arts, had made little progress over its surface; literature was in its infancy; science flourished only in a few favoured spots under the fostering care of imperial patronage; poetry, history, philosophy, were to the great mass of the inhabitants almost unknown. It had long and painfully felt the consequences of this inferiority in the bloody contests it had been compelled to maintain with the Democratic energy and scientific ability of the French Revolution. How, then, did it happen that a state, so little qualified by intellectual superiority to contend with the gigantic powers of wickedness, should have stood forth with such unparalleled lustre in the contest; should have resisted alone, with such heroic bravery, the military force of half of Europe, guided by consummate ability and trained by unparalleled conquests; and, for the first time since the commencement of the struggle, made the scales hang even between the conservative and revolutionary principles? Simply because she possessed a pure, virtuous, and single-minded people; because, whatever the corruptions of the capital may have been, the heart of the nation was untainted; because an indulgent rule had attached the nobility to their sovereign, and experienced benefits the peasantry to their landlords; because patriotism was there established upon its only durable basis, a sense of moral obligation and the force of religious duty.

And in this respect France, in the days of her adversity, exhibited a memorable contrast to Austria in the hour of her national trial. When the evil days fell upon her, when the barrier of the Rhine was forced, and hostile standards approached the gates of Paris, the boasted virtues of Republicanism had disappeared, the brilliant energy of military courage was found unequal to the shock. Province after province sunk without performing one deed worthy of tradition; city after city surrendered without leaving one trace in the page of history; no French Saragossa proved that patriotism can supply the want of ramparts; no Revolutionary La Vendée that the civic virtues can dispense with Christian enthusiasm; no second Tyrol that even imperial strength may sink before the "might that slumbers in a peasant's arm." The

Causes of the extraordinary public virtue thus exhibited in Austria.

Remarkable contrast afterwards exhibited by France.

* One in fifteen of the population over the whole empire attend the elementary schools: in some provinces, as Upper Austria, Tyrol, and Bohemia, the proportion is as high as 1 to 11. In Switzerland, it is now 1 to 10; in Ireland, 1 to 9; in Scotland, 1 to 11; in France, 1 to 17; in Prussia, 1 to 10; in Spain, 1 to 350; in Poland, 1 to 100; in Russia, 1 to 794.—See MOREAU, *Stat. de la Grande Bretagne*, ii., 333, 334.

* *Ante*, i., 186.

† Personal observation.

strength of the Empire was in the army alone: with the fall of its capital the power of the Revolution was at an end; the marshals and generals, true to the real idol of worldly adoration, ranged themselves on the side of success.* The conqueror of a hundred fights was left almost alone by the creatures of his bounty; and, like the sorcerers who crowded round the statue of Eblis when the idol was pierced to the heart by the son of Hodeirah, "the ocean vault fell in, and all were crushed."

These considerations, in a certain degree, lift up the veil which conceals from mortal eyes the ultimate designs of Providence in the wars which so often desolate the world. If we compare Austria as she was in 1793 with Austria in 1809, we seem not merely to be dealing with a different people, but a different age of

Elevation of the Austrian character from past calamities.

* "The galleries and saloons," says Caulaincourt, "which adjoined the apartment of the emperor at Fontainebleau (in April, 1814), were deserted. The marshals had carried with them their brilliant staffs: the wind of adversity had blown, the glittering crowd had vanished. That solitude thrilled the heart. The redoubted chief, who so lately had never moved but surrounded by a magnificent cortège, the great monarch, who had seen kings at his feet, is now only a simple individual, disinherited even of the interest and care of his friends! All was desolate, all was solitary in that splendid palace. I felt the necessity of withdrawing the emperor from so fearful a torture. 'Have you got everything ready for my departure?' 'Yes, sire!' 'My poor Caulaincourt, you discharge here the functions of grand-marshal: could you have conceived it? Berthier has gone off without even bidding me adieu!' 'What, sire?' exclaimed I, 'Berthier also, the creature of your bounty?' 'Berthier,' replied the emperor, 'was born a courtier: you will see soon my vice-constable mendicant employment from the Bourbons. I feel humiliated, that the men whom I have raised so high in the eyes of Europe, should have sunk so low! What have they made of that atmosphere of glory in which they appeared enveloped in the eyes of the stranger! What must the sovereigns think of all these men illustrated by my reign!' Such was the fidelity and gratitude of the Revolution: its genius, its intellect, its glory! Contrast this with Austria after Aspern—with the devotion of Wagram, and the shepherds of Tyrol.—See CAULAINCOURT'S *Mémoires*, ii., 109, 111.

the world. In the first era is to be seen nothing but selfishness and vacillation in the national councils, lukewarmness and indifference in the public feeling, irresolution and disgrace in military events. But it is well for nations, not less than individuals, to be in affliction. Turn to the same nation in 1809, and behold her undaunted in the cabinet, unconquered in the field; glowing in every quarter with patriotism, teeming in every direction with energy; firm in her faith, generous in her resolutions; maintaining unshaken constancy to her principles amid unheard-of disasters, fidelity to her sovereign amid unbounded temptations. This is, indeed, regeneration, this is true national glory, purchased in the only school of real improvement, the paths of suffering. How many centuries of national existence did Austria go through before this mighty change was effected; how many national sins did she expiate; what a spot of glory, not merely in imperial, but in human annals, has she left! She is to reappear in the contest for European freedom; but she is to reappear as a conqueror, invested with irresistible strength, arrayed in impenetrable panoply: but she shared the glories of Leipsic with Russia and Prussia; the heroism of Aspern, the constancy of Wagram, are her own. Mankind have little concern with the mere conquest of one nation by another: it is the triumph of virtue over misfortune, of duty over selfishness, of religion over infidelity, which is the real patrimony of the human race. The heroic constancy, the generous fidelity of all classes in Austria at the close of the contest was placed by Providence in bright contrast to the treachery and selfishness of the French Revolutionists, as if to demonstrate the inability of the greatest intellectual acquisitions to communicate that elevation to the character which springs from the prevalence of moral feeling, and to show that even the conquerors of the world were unequal to a crisis which religion had rendered of easy endurance to the shepherds of the Alps.

CHAPTER LVII.

WALCHEREN EXPEDITION—PEACE OF VIENNA—SECOND WAR IN TYROL—DETHRONEMENT OF THE POPE.

ARGUMENT.

NATURE has formed the Scheldt to be the rival of the Thames. Of equal magnitude and depth with its renowned competitor, flowing through a country excelling even the midland counties of England in wealth and resources, adjoining cities long superior to any in Europe in arts and commerce; the artery at once of Flanders and Holland, of Brabant and Luxemburg, it is

fitted to be the great organ of communication between the fertile fields and rich manufacturing towns of the Low Countries and the other maritime states of the world. If it is not equally celebrated as the Thames in history or romance; if all the vessels of the ocean do not crowd its quays, and its merchants are not sought by the princes of the earth; if it does not give law to all the quarters of the globe, and boast a colonial empire on which the sun never sets, it is not because nature has denied it the physical advantages conducive to such exalted destinies, but because the jealousies and perverseness of man have in great part marred her choicest gifts. Flanders was a great and highly civilized manufacturing state, when England was still struggling between the coarse plenty of Anglo-Saxon rudeness and the insulting oppression of Norman chivalry; even in the days of Edward III. and the Black Prince, the Brewer of Ghent was the esteemed ally of princes, and the political passions of our times had been warmed into being by the long-established prosperity of a commercial community; their territory was the richest, the most peopled, the most adorned by cities in Christendom; and the fine arts, arising in the wane of ancient opulence, had already produced the immortal works of Teniers, Rubens, and Vandyke, when the school of England was as yet hardly emerged from the obscurity of infant years.

ANTWERP, the key of this great estuary, gradually rose with the increasing commerce of the Low Countries, until, at the period of the Reformation, it numbered two hundred thousand inhabitants within its walls, and engrossed the whole trade of those beautiful provinces. Its noble harbour, capable of containing a thousand vessels; its extensive ramparts and citadel, among the strongest in Europe; its splendid cathedral, exceeding even St. Paul's in elevation;* its magnificent quays, bordering a river five hundred yards in breadth, which a seventy-four gun ship might navigate with safety, all conspired to render this city one of the most renowned in Europe. If the seventeen provinces had remained united under one government, and the Scheldt had continued to be the artery of communication between their admirable territory, their noble cities, and the rest of the world, it must, by this time, have been one of the greatest emporiums in existence, and possibly would have borne away the palm from London itself in wealth and grandeur. But religious persecution first rent asunder that beautiful dominion,

* It is 451 feet high; the roof of the cathedral is 360 feet from the pavement; but, more even than for these gigantic proportions, is it fitted to arrest the traveller's admiration by the master-pieces of Rubens, the Taking Down and Elevating on the Cross, which it contains. Sir Joshua Reynolds justly observed, that whoever had not seen the master-pieces of Rubens at Antwerp, could form no adequate idea either of the genius of that great artist or the power of art. The paintings in the museum, especially by Rubens and Vandyke, are inimitable.—MALTE BRUN, viii., 618; REYNOLDS'S *Tour in Flanders*, Works, ii., 264, 300; and *personal observation*.

and political jealousy next completed the bars which Catholic oppression had erected against its advancement. The revolt of Holland was the natural consequence of the atrocities of the Duke of Alva, and the massacre of fifty thousand Protestants, on the scaffold and at the stake, by the Spanish government; the closing of the mouth of the Scheldt, by the political and commercial jealousy of the Dutch, was the inevitable result and deserved punishment of the abominable cruelty which converted their most industrious and valuable subjects into successful rivals and inveterate enemies.*

Amid all its degradation, however, and when its population had sunk to sixty thousand inhabitants, the eagle glance of Napoleon at once discerned the vast natural advantages and incalculable political importance of this city. No sooner had it attracted his attention, than he resolved to make it one of the greatest bulwarks of his dominions: the grand naval and military arsenal of Northern Europe; the advanced post from which he might launch the thunders of his arms against the independence and existence of England. Under his vigorous administration, everything soon assumed a new aspect: the subjection of Holland to the imperial sway had already extinguished, if not the commercial jealousy of the Dutch, at least their power of interfering with the prosperity of their Flemish rival; the vessels which they had sunk at the mouth of the Scheldt, to impede its navigation, were raised; the sandbanks which had accumulated for centuries cleared away; new bulwarks annexed to the works, already formidable, of the citadel; vast wet docks added to the harbour, capable of containing forty ships of the line; and an arsenal adequate to the equipment of half the navy of France constructed. Vast as are these works, however, and durably as they will forever remain, monuments of the grandeur of conception and prophetic spirit of the French emperor, they were but a small part of what he had intended for this favoured bulwark of the Empire. "The works hitherto erected," said Napoleon, at St. Helena, "were nothing to what I intended at Antwerp. The whole sandy plain, which now stretches for miles behind the *Tête de Flandre*, on the left bank of the river, was to have been enclosed by fortifications, and formed into a vast city; the imperial dockyards and basins, the arsenal and magazines, were to have been constructed there; those on the right bank were to have been abandoned to private merchants. Antwerp was to me a province in itself. It is one of the great causes of my exile to St. Helena; for the required cession of that fortress was my principal reason for refusing peace at Chatillon. If they would have left it to me, peace would have been concluded. France without the frontiers of the Rhine and Antwerp is nothing."[†]

Antwerp is the point from which, in every age, the independence of these kingdoms has been seriously menaced. When the Duke of Parma prepared a land-force in the time of Queen Elizabeth to overthrow the liberties of England and the Protestant faith, it was in the Scheldt and at Ostend that all his preparations were made. It was neither from

Boulogne nor Cherbourg, from Brest nor Toulon, that Napoleon, after his profound naval combinations of 1805 had been defeated, intended to invade the British isles. The Scheldt was the point of attack: Antwerp and Flushing were the strongholds in which sixty sail of the line were to be prepared for the centre of that mighty squadron, which, by a second battle of Actium, was to strike down the mistress of the seas. A vast and skilful system of internal communication had been brought to bear upon this artery, and enabled the French to collect their naval stores and seamen without incurring the hazard of a coastwise navigation. Sensible of her danger, it had been the fixed policy of Great Britain for centuries to prevent this formidable outwork against her independence from falling into the hands of her enemies; and the best days of her history are chiefly occupied with the struggle to ward off such a disaster. It was for this that William fought and that Marlborough conquered; that Nelson died and Wellington triumphed; that Chatham lighted a conflagration in every quarter of the globe, and Pitt braved all the dangers of the Revolutionary war.

It is one of the most singular facts in the history of mankind, that the English government, after having for a hundred and fifty years contended for the attainment of this object, and at length secured it, by the restoration, under the guarantee of the European powers, of the seventeen provinces into one united dominion, should have voluntarily, within twenty years afterward, undone the work of its own hands; aided in the partition of the Netherlands into two separate states, alike incapable of maintaining their independence, one of which necessarily fell under the dominion of her enemies; and at length actually joined her fleets to the Gallic revolutionary armies to restore Antwerp, the great stronghold prepared by Napoleon for our subjugation, to the son-in-law of France, and the sway of the tricolour flag! Such a proceeding would be unparalleled in history, if it were not equalled, perhaps exceeded, by the refusal at the same time to lend any assistance to the grand signor, then reduced to the last straits by the defeat of Koniah, and consequent abandonment of him to the arms of Russia, who failed not, as the price of protection, to exact the humiliating treaty of Unkiar-Skelessi, and the exclusion of the British flag from the Dardanelles and the Black Sea. Thus, in our anxiety to restore Antwerp, the fulcrum from which our independence is to be assailed in Western Europe, to France, we have surrendered Constantinople, the bulwark of the East, the key of our Eastern dominions, to Russia! The simultaneous occurrence of two such acts on the part of government, without any mark of disapprobation, save from the reflecting few in the country, proves that there are occasions in which, under the influence of faction and in the heat of political contest, a nation may not only lose its reason, but become insensible to the strongest even of all animal instincts, that of self-preservation.

At the commencement of the contest in Germany, the cabinet of Vienna made the most urgent representations to the British government on the subject of a powerful diversion by an English land-force in the north of Germany, whither the imperial Grand Army was originally destined, and where so many ardent spirits,

Extraordinary infatuation which has led to its abandonment in later times.

Proposals of Austria for a British diversion.

* Malte Brun, viii., 618, 619.

† Las Casas, vii., 43, 44, 56, 57.

Efforts always made by England to keep this great stronghold from France.

smarting under humiliation and oppression, were awaiting only the appearance of an external armed force to raise the standard of general insurrection. She proposed that a diversion should be made by an expedition of Anglo-Sicilian troops on the coasts of Italy; that the military operations in the Peninsula should be continued; and that a strong effort should be made towards the mouth of the Elbe. There can be no question that the disposable forces of England, at this juncture, were equal to these operations, how extensive soever; for she had a hundred thousand regular troops, which could be ordered on foreign service, in the British islands; forty thousand of whom, in Spain, under Wellington, forty thousand in the north of Germany, and twenty thousand in the Mediterranean, might have occasioned no small embarrassment to the French emperor, especially after he was obliged to concentrate all his forces from the extremities of his dominions, for the decisive struggle on the banks of the Danube. Domestic danger could not be alleged as a reason for declining to make such an effort, for the British islands, encircled by their invincible fleet, garrisoned by eighty thousand admirable regular, and three hundred thousand local militia, and animated with an enthusiastic military spirit, were beyond the reach of attack. Nor was time wanting, for the British government was, in November, 1808, in full possession of the resolution of the cabinet of Vienna to declare war: it was communicated to the world in the king's speech on the 15th of December of that year; and hostilities were not commenced on the Inn till the 9th of April following, before which time the grand expedition for the north of the vast theatre of operations might have been ready to sail from the British harbours.*

In this momentous crisis, the cabinet of St. James was not wanting to itself, or to the noble post assigned to it in the contest of nations. Undiscouraged by the disastrous issue of Sir John Moore's expedition, they resolved not only to resume the contest with increased vigour in the Spanish Peninsula, but to aid the common cause by a powerful demonstration in the north of Europe. Many reasons concurred, however, in dissuading them from adopting the proposed plan of landing in the north of Germany. Matters were entirely changed since the year 1807, when such a direction of our force was attempted, and, if brought to the scene of action some months earlier, might have been attended with important, perhaps decisive effects. Prussia was then in arms against France; Denmark was neutral; Russia engrossed the attention of their principal army on the Vistula or the Alle; and Austria, collecting her strength in Bohemia, was prepared, on the first serious reverse, to fall with overwhelming force on Napoleon's line of communications. Now everything was changed. The north of Germany, strewn with the wrecks of independent states, with its principal strongholds in the hands of the enemy, could no longer be relied on for efficient co-operation with a regular army; Russia, instead of being the enemy of France, was now her obsequious ally; Denmark was animated by a more than ordinary spirit of hostility to Great Britain; and though the inclination of Prussia to extricate herself from her fetters could not be doubted, yet

her military resources were severely crippled, her strongest fortresses were in the possession of the conqueror, and her government had suffered so severely from their recent ill-advised effort, that there was every reason to fear that they would now adhere to their old system of selfish indecision. A powerful army, if landed at St. Sebastians, might, indeed, paralyze all the imperial forces in Spain, and occasion the evacuation of the whole Peninsula by the troops of Napoleon; but the effect of such remote success would be inconsiderable on the vital line of operations in the valley of the Danube; and, if the French emperor were there successful, he would soon regain his lost footing beyond the Pyrenees, and securely complete, with undiminished strength, from Gibraltar to Hamburg, his vast naval preparations for our subjugation.*

On the other hand, a variety of considerations, equally powerful, concurred to recommend Antwerp as the grand point of attack. Its formidable strength and increasing importance as a great naval station and arsenal; its close proximity to the British shores; the anxiety which Napoleon had evinced for its extension, pointed it out as the quarter from which, more than any other, serious danger was to be apprehended. Its fortifications, though extensive and formidable if in good condition, were in a state hardly susceptible of defence; there was scarce any water in the ditches; the rampart, unarmed with cannon, was in many places dilapidated and tottering; and the garrison, of little more than two thousand invalids and coast-guards, altogether unequal to the defence of its extensive works. The regular army of France was so completely absorbed by the war on the Danube and in the Peninsula, that no considerable force could be assembled for its relief; and although, if operations in form were to be attempted, an immense body of national guards would doubtless converge to the threatened point, yet there was a fair prospect of carrying the town at once by escalade, almost before the intelligence of its danger could reach the government at Paris. Immense would be the effect, moral as well as material, of such a victory. It would demonstrate that even the territory of the great nation, and its strongest fortresses, were not beyond the reach of attack; roll back on France the terrors of invasion; destroy at once the principal naval resources and fleets of the enemy; animate all the north of Germany by the prospect of a powerful army having gained a firm footing on their own shores, and intercept, by pressing dangers at home, a large portion of the re-enforcements destined for the Grand Army. Even if Austria were finally to succumb, still the object gained would be immense: the darling naval establishment of the enemy would be destroyed, the centre of his maritime operations ruined, and his projected naval crusade against Great Britain thrown back for several years, if not altogether rendered abortive. Sound policy, therefore, recommended such a direction of our hostility as, while it powerfully aided our allies, was conducive also to our own safety; and which, increasing the chance of a successful combination against France on the Danube, provided, at the same time, for the case of the imperial eagles returning as heretofore, loaded with the spoils

* Mr. Canning's Speech, *Parl. Deb.*, xvi., 352; and *Ante*, iii. 45.

* Mr. Canning's Speech, *Parl. Deb.*, xvi., 333, 336. Lord Castlereagh's, *ibid.*, 99, 103.

of Germany, to their menacing position on the heights of Boulogne.*

But, though the cabinet of St. James thus judged rightly in selecting Antwerp as the point of attack, and magnanimously in resolving to put forth the whole strength of the British Empire, without sharing in the general panic produced by the calamitous termination of Sir John Moore's expedition, yet in one vital point they still proved themselves novices in combination, uninstructed by the military experience even of sixteen years. Although the Austrians crossed the Inn on the 9th of March, and the battle of Ecmuhl was fought on the 21st of April, and that of Aspern on the 22d of May, it was not till the end of the latter month that any serious preparations began to be made by ministers for an expedition to lighten the load which had for two months fallen on the imperial forces. They were deterred by a communication received from the commander-in-chief, Sir D. Dundas, on the 22d of March preceding, shortly after the broken bands of Sir John Moore's army had returned from Spain, stating that fifteen thousand men could not be spared from the home service for any foreign expedition. That veteran officer, in making, and government in acting on such a statement, proved themselves alike unequal to the station which they occupied in the grand struggle. To accomplish the vital object of beginning the campaign *simultaneously* with the Austrians, and distracting the enemy with a descent on the Scheldt, at the same time that the Archduke Charles entered Bavaria, no sacrifices could have been too great. Even if not a man could be got from the regular army, every man of the guards should have been sent, half of the militia invited to volunteer; and in this way fifty thousand admirable soldiers might with ease have been collected. It was not by never diminishing the usual domestic garrisons, and reckoning none disposable but those who had no home service to perform, that Napoleon carried the French standards to Vienna and the Kremlin.†

No serious steps were taken, after this abortive inquiry as to the disposable British force, to resume the expedition till the 8th of June, when the muster-rolls of all the regiments in the British islands having been obtained, and shown a disposable force of forty thousand men, preparations in good earnest were commenced. It was still possible to bring them to bear with great effect on the vital operations on the Danube; for the news of the battle of Aspern had just reached this country, and, at the same time, it was ascertained, by authentic evidence, that Antwerp was in the most defenceless state; that the garrison consisted only of two thousand four hundred men, of whom only fifteen hundred were soldiers, the remainder being invalids or artificers; that there were two small breaches on the ramparts, and the bastions in general not armed; the wet ditch fordable in some places, and only ten thousand soldiers in Holland, and hardly any in Flanders. But the inherent vice of procrastination still paralyzed the British councils. Though every day and hour was precious, when the Scheldt was defenceless and Napoleon defeated on the Danube,

no orders were given to the ordnance department to prepare battering-trains till the 19th of June; and though their preparations were complete, and the navy in readiness by the end of that month, the expedition did not sail till the 28th of July, upward of a week after the result of the battle of Wagram had been known in the British islands. When it is considered that the sea voyage from the Downs to the Scheldt is not above thirty hours; that the British had thirty-five sail of the line, and transports innumerable at hand for the embarkation; that Marshal Ney embarked twenty-five thousand men, with all their artillery, in ten minutes and a half; that Napoleon, who gave his orders to the Grand Army to break up from Boulogne on the 1st of September, 1805, beheld them on the Rhine on the 23d of the same month, and Mack defile before him as a prisoner, with all his army, on the 20th of October,* it must be admitted that, notwithstanding all they had suffered from this defect,† the British government were still rather influenced by the slowness of the Anglo-Saxon than the fire of the Norman character.

When the expedition, however, even at the eleventh hour, did sail from the British islands, it was on a scale worthy of one of the greatest military powers in Europe. The armament, consisting of thirty-seven ships of the line, twenty-three frigates, thirty-three sloops, eighty-two gunboats, besides transports innumerable; and having on board thirty-nine thousand sabres and bayonets, equivalent to above forty-one thousand of all arms, with two battering-trains and all their stores complete, contained above a hundred thousand combatants, and was the largest and best equipped that ever put to sea in modern times. What might it not have accomplished if conducted with vigour and directed by skill! With a British force of no greater amount Wellington struck down the empire of France on the field of Waterloo.‡

This stupendous armament, which whitened the ocean with its sails, arrived on the coasts of Holland on the 29th of July. On the following day twenty thousand men were disembarked in the isle of Walcheren, and speedily took possession of Middleburg, its chief town, besides driving the French troops into the walls of Flushing. At the same time, another division landed in Cadsand, and, expelling the enemy from that island, opened the way for the passage of the fleet up the western or principal branch of the Scheldt. Some days afterward, Sir Richard Strachan, who commanded the naval force, disregarding the distant and ineffectual fire of the Flushing batteries, passed the straits with eighteen ships of the line, and soon both branches of the Scheldt were crowded with the British pendants. Nor was the progress of the land-forces less rapid. Ter Vere, a fortress commanding the Veergat, a narrow entrance leading into the

Landing in Holland, and great early success of the expedition. July 30.

channel which separated South Beveland, was taken, with its garrison of a thousand men : Goes, the capital of the latter island, opened its gates; and SIR JOHN HOPE, an officer destined to future celebrity in the Peninsular wars, with seven thousand men, Aug. 1. pushing rapidly on, appeared before the gates of Bahtz on the evening of the 2d. Such was the consternation produced by the sudden advance and formidable forces, both naval and military, of the invaders, that this important fort, situated at the point of separation of the East and West Scheldt, and the key to both channels, was evacuated in the night by the garrison, and next morning occupied the British troops. The success of the expedition appeared certain : more than two thirds of the distance to Antwerp had been got over in three days; both divisions of the Scheldt were full of British vessels; the British standards were only five leagues from that fortress, and in four days more thirty thousand men might be assembled around its walls.*

It is agreed by all the French military writers, that such was the weakness of Antwerp at that moment, that, if the English general had taken advantage of the first moment of consternation consequent on the rapid advance of his leading column, and pushed across the narrow channel which separates South Beveland from the mainland, and marched up the right bank of the river, he would, in a few hours, have arrived at the gates of the fortress, and, by a *coup de main*, carried it without the possibility of resistance.† By crossing over to the left bank of

* Lord Chatham's Desp., Aug. 2, 1809, Ann. Reg., 474, 479. Appendix to Chron. Vict. et Cong., xix., 247, 254.

† "Had the English advanced rapidly, either by South Beveland to Lillo and Antwerp, or, with their squadron, vigorously pursued ours as it withdrew up the Scheldt, they would have taken by surprise all the forts and defences of the Scheldt. Everything induces the belief that they would have succeeded in burning our arsenals and destroying our fleet. Antwerp, like other places on the frontier, was garrisoned only by the weak depôts of regiments who were combating on the Danube. Not one of them was armed. Monnet had six battalions in Flushing. Rousseau, who commanded on the left bank of the Scheldt, had only three or four thousand recruits under his orders, whom he kept at Ghent on account of the insalubrity of the country. Battalions of grenadiers and chasseurs of the national guards alone were intrusted with the defence of the coasts."—PELET, iv., 319.

"The fortress of Antwerp, ill defended and paralyzed in the first moment of terror, would have easily yielded to a brisk attack."—Vict. et Cong., xix., 254.

"The coast was denuded to such a degree that nothing could have hindered the English to disembark 30,000 men on the left bank of the Scheldt, and in three days arrive, with their numerous artillery, before Antwerp. Meanwhile, the remainder might have entered the Scheldt, to fix our attention on Flushing and the isle of Cadzand. Antwerp had hardly a garrison; our fleet would have been taken by surprise, and its retreat rendered impossible; inasmuch that, by merely occupying the fort of Tête de Flandre, opposite Antwerp, on the left bank of the Scheldt, the success of the enterprise would have been certain."—JOMINI, *Vie de Napoléon*, iii., 299, 300.

Napoleon has left a highly important observation on this subject. "The fleet," says he, "when the expedition arrived on the coast of Holland, was moored off Flushing. The great object of Chatham should have been to cut off the fleet from Antwerp, which would necessarily have drawn after it the destruction of both, for Antwerp had only a garrison of 3000 men. This might have been done by pushing on a corps of 6000 men through South Beveland to Bahtz the day the expedition landed; the fleet would thus have been cut off from Antwerp, and both it and that fortress must have surrendered. But, from the moment that the fleet got up to Antwerp, which it did soon after the siege of Flushing began, the failure of the expedition was certain."—NAPOLEON in MONTMOLON, ii., 261; and i., 219. "I am of opinion," said he to O'Meara, "that, if you had landed a

the Scheldt, and occupying the fort of Tête de Flandre, opposite Antwerp, which could hardly have made any resistance, success was certain; for the city has no defences whatever on the left bank of the river, and the fleet could neither have got up above the Tête de Flandre, nor escaped destruction even in the dockyards themselves, from a bombardment from the opposite side, not half a mile distant. The instructions of the commander-in-chief, Lord Chatham, were precise; and they bore, that the main object of the expedition was the destruction of the ships building or afloat in the Scheldt, and of the arsenals and dockyards in Antwerp, Terneuse, and Flushing; and an ulterior or subordinate object only, the reduction of the island of Walcheren.* But England had not at that period two Wellingtons in her service. Lord Chatham, to whom the expedition was intrusted, neither inherited the energy of his father, the great Earl of Chatham, nor shared the capacity of his immortal brother, William Pitt. A respectable veteran, not without merit in the routine of official duty at home, he was totally destitute of the activity and decision requisite in an enterprise in which success was to be won rather by rapidity of movement than deliberation of conduct; destitute of experience, unknown to fame, of indolent habits, he owed his appointment to court favour, which ministers were chiefly culpable for not resisting to the uttermost of their power. Reversing, in consequence, alike the tenour of his instructions and the dictates of common sense on the subject, he directed his force, in the first instance, to the last object with which he was intrusted; and, instead of pushing on in the outset by forced marches, to seize Antwerp and the forts of the river before the enemy could collect a force for their defence, lost the precious hours, big with the fate of the campaign, in reducing Flushing, valueless as a post in advance after the fleet had entered the Scheldt, incapable of defence after Antwerp had fallen, if required as a support in case of retreat.†

Having adopted this unhappy resolution, Lord Chatham prosecuted the subordinate Siege and object of reducing Flushing with great vigour and success. The garrison were Flushing hotly driven into the works, with considerable loss, on the first approach of the besiegers; several sallies, afterward undertaken, repulsed, and the artillery having been quickly landed, the trenches were armed, approaches commenced and pushed on with great rapidity. On Aug. 13. the 13th the breaching batteries opened their fire on the land side, from fifty-two heavy guns, while seven ships of the line, and a large flotilla of bomb vessels, kept up a cannonade with uncommon vigour from the sea. It was then found, what subsequent experience has since abundantly verified, that there are no land-batteries, how strong soever, which can withstand, along an equal space in front, the well-supported fire of several ships of the line. The sea defences were speedily ruined, and every gun bearing on the water silenced; the town took fire in several places, and the inhabitants, beset with a flaming tempest both from the north and

few thousand men at first at Williamstadt, and marched direct to Antwerp, you might, between consternation, want of preparation, and the uncertainty of the number of assailants, have taken it by a *coup de main*. But, after the fleet got up, it was impossible."—O'MEARA, i., 255.

* See note A.

† Lord Chatham's Instructions, Parl. Deb., xv., App. No. 1. Jom., *Vie de Nap.* iii., 300.

south, besought the governor, as the only means of avoiding total ruin, to surrender. Such was the consternation produced by the bombardment, that, after it had continued three days, and the English troops had effected a lodgment within musket-shot of the rampart, the French general proposed a suspension of arms, and the town was surrendered on the 16th, with five thousand eight hundred prisoners and two hundred pieces of cannon. The total prisoners taken since the landing of the expedition exceeded seven thousand.*

Hitherto fortune seemed to have smiled on all the efforts of the expedition; but she soon showed that, like others of her sex, she reserved her favours only for the daring and the enterprising. The time lost in besieging Flushing proved fatal to all the other objects of the expedition. Indefatigable were the efforts of the French and Dutch governments, during that precious breathing-time, to direct troops to the menaced point; and in a fortnight it was beyond the reach of attack. On the 12th, the King of Holland

Aug. 12. arrived at the head of his guards and five thousand troops of the line; the generals commanding in Flanders and Picardy despatched an equal number, who arrived from the 14th to the 20th. Meanwhile the fleet was removed above the town, the batteries armed, the ditches cleared out and filled with water, and the national guards of all the surrounding departments poured into the fortress. While these active preparations were going on, twenty thousand admirable troops were kept inactive in South Beveland, almost within sight of the steeples of Antwerp; and so dilatory were the proceedings of the English general, that, though Flushing surrendered on the

Aug. 26. 16th, it was not till the 26th that he advanced the headquarters to Bahtz, a distance not exceeding thirty miles. By that time thirty thousand of the enemy were assembled on the Scheldt; Bernadotte, who had been despatched by the government at Paris to take the command, had put Antwerp in a respectable state of defence; the squadron was in safety; ulterior success impossible; while three thousand of the British troops were already in the hospital, and the pestilential marshes in that unhealthy district were fast exercising their malignant influence on the health of the soldiers. In these circumstances it was rightly judged by Lord Chatham and a council of war, whose opinion was unanimous on the subject, that farther advance was impossible, and orders were given in the beginning of September to withdraw the whole troops into the island of Walcheren.†

It was at first thought that it would have been practicable to have retained possession of this important conquest, and, doubtless, if it had been so, the acquisition would have been of the last consequence, as hermetically closing the Scheldt, and rendering useless all the vast naval preparations of the enemy in that quarter. At that particular moment, it was of the more consequence to retain possession of that island, as the negotiations with Austria were not only not yet brought to a conclusion, but it was sometimes more than doubt-

ful, during their continuance, whether war would not again break out. In that event it would, of course, have been of the greatest importance to keep thirty thousand of the enemy grouped under the walls of Antwerp. Fifteen thousand men, accordingly, were left as a garrison in the island, and the remainder of the troops returned to England. But the malaria distemper of the country, since so well known under the name of the Walcheren fever, proved so fatal in its ravages, that it was deemed impolitic to retain it permanently, especially after the conclusion of peace between the Austrians and French had removed the principal motive for keeping the troops in that unhealthy station. Towards the middle of September, the average number of deaths was from two to three hundred a week, and nearly half the garrison was in hospital. Orders were therefore given to abandon the island: in the middle of November the works and naval Nov. 23 basins of Flushing were destroyed, and before Christmas the whole was evacuated by the British troops; but it appeared, from a Parliamentary return, that seven thousand men were lost in the enterprise, and that nearly half the troops engaged in it brought home with them the seeds of a distemper which few were able entirely to shake off during the remainder of their lives.*†

It is observed by Mr. Hallam, that the state trials of England exhibit the most appalling accumulation of judicial iniquity which is to be found in any age or country of the world, and far exceeding in atrocity anything recorded of legal injustice in the annals even of Eastern despotism.

Blind injustice which frequently characterizes the proceedings of the British Parliament.

The reason, he justly adds, is, that the monarch could not wreak his vengeance, or the contending nobles or parties destroy each other, as in other states, by open outrage or undisguised violence; and that the courts of law were the theatre, and state prosecutions the engines, by which this oppression was perpetrated, and these contests of faction conducted. If the purification of the legal tribunals, which took place at the Revolution, has freed, as it undoubtedly has, the judicial ermine of England from this hideous imputation, it has only, in many cases, transferred it to another quarter; and Parliament is the arena in which, from henceforth, as the contests of party were conducted, the historian is to find the traces of the indelible corruption and weakness of humanity. On no other principle, indeed, can the occasional gross injustice, and frequent political insanity of the English Legislature and people, during the last hundred and fifty years, be explained; and those who hope, by rendering our institutions more Democratical, to remedy these evils, would do well to become still more radical in their cure, and apply their reform to the human heart. It is a common remark in Parliament, that, in party questions, the real motive of the speaker is never divulged in debate; and that the considerations and objects which both sides have most at heart, are those which are with the greatest care withdrawn from the view. All parties have, in this way, come to reduce to perfection, in a practical form, the celebrated saying of Talleyrand, that the "great object of speech is to conceal the thought." The truth of these principles was signally illus-

trated, in the two great objects of party contention, during the session of 1809—the accusations against the Duke of York and the Walcheren expedition.

That the spring of 1809 was the grand crisis of the war; that Austria and Spain were then, for the first time, brought to act together in real earnest, and hurl their strength, animated by the highest degree of patriotic enthusiasm, against the enemy; that the military power of Britain had then risen to an unparalleled degree of efficiency, and was prepared, under renowned leaders, to follow up the career of victory recently opened to their arms, was universally known and acknowledged. Every man in the Empire felt that the moment had arrived when Europe was to be disenthralled by one convulsive effort, or their fetters riveted for a time to which no end could be seen, on the enchained nations. What, then, at such a moment, was the grand object of consideration in the House of Commons? Was it to cement the alliance, to pour forth the treasures of England with a profusion worthy of the greatness of the occasion, and increase, by every means in their power, the efficiency of the army upon which such mighty destinies depended? Quite the reverse. The popular party in the House of Commons appeared to value the crisis only in proportion to the means which it afforded them of directing, with additional effect, their attacks upon the government, and augmenting the difficulties experienced in the discharge of its vital duties by the executive. And at the moment when Austria was straining every nerve for the conflict, and Napoleon was preparing the forces which dealt out the thunderbolts of Echmuhl and Wagram, the British House of Commons was, for months together, occupied with no other subject but the secret springs of a few promotions in the army, and the details of the commander-in-chief's intrigue with his artful mistress, Mrs. Clarke!

The attack on the Duke of York's administration of the army was founded upon the allegation of his having disposed of part of the patronage with which he was intrusted, as commander-in-chief, for corrupt or unworthy considerations. The debates and examinations on the subject began in the end of January, and continued, almost without the intermission of a day, till the 17th of March: absorbing thus nearly the whole time both of government and of the country, at the very moment when a concentration of all the national thought and energies were required for the prosecution of the gigantic campaign in progress on the Continent. But this was not all: the time thus spent was not only wasted, but it led to the most pernicious results. Nothing whatever came out against the commander-in-chief but that he had occasionally admitted a designing and artful mistress to a certain share in the disposal of commissions; and that she made use of, and exaggerated this influence to obtain bribes, unknown to him, from the applicants for promotion. If the moralist must ever see much to condemn in the indulgence of habits which never fail, in any rank, to degrade the character of such as become slaves to them, the statesman must admit that a more deplorable waste of time and national interest never occurred than when such details were for months together, at such a crisis, made the subject of le-

gislative investigation. Mr. Wardle, the mover of the inquiry, rose for a short time into a blaze of popularity, and then sunk at once to rise no more. After a fatiguing investigation and debate, which occupies above fifteen hundred pages of the Parliamentary Debates, the charges were negatived by a majority of 241, the numbers being 364 to 123. No man of sense, who reads the proceedings, can now doubt that this decision was well founded in the evidence, and that the Duke of York at that period was the victim of factious injustice; but, meanwhile, the public mind became violently excited; the fury of popular obloquy was irresistible; and government, deeming it necessary to yield to the torrent, the duke sent in his resignation. This took place just four days before the commander-in-chief was officially called upon to report upon the vital point of the force which could be spared for the projected expedition to the Scheldt; and thus, at the very time when the most important military operations ever engaged in by England were under consideration, the ambition of selfish faction, and the fury of misguided zeal, combined to introduce new and wholly inexperienced persons to the direction of the army, and chase from its command the public-spirited prince whose judicious reforms and practical improvements had brought it from an unworthy state of depression to its present state of efficiency and glory. The deplorable postponement of the Walcheren expedition till it was too late to serve as a relief to the heroism of Austria, its calamitous issue when it was undertaken, and the abortive result of the triumphs in Spain, are thus indissolubly connected with this act of national absurdity and injustice.*†

Much in the same spirit were the debates which took place on the Walcheren expedition. No fault, indeed, could here be found with the theme of discussion: the failure of so vast an armament, fitted out at such a cost, adequate to such achievements, formed a subject worthy of the anxious investigation of the Parliament of England; and, if it had elicited either generous feelings or elevated views from those who conducted the accusation, no more useful subject of contemplation to the historian could have been presented. But this was very far indeed from being the case. Though the investigation was conducted with great industry and ability, the views taken on the side of the opposition were so overstrained and exaggerated as to lead to no useful or practical result. Their great object was to show that the whole blame of the failure of the expedition rested with ministers, and ministers alone; that success was at no period, and by no efforts, attainable; that the point of attack was ill chosen, the force ill directed, and the whole cost and blood of the armament misapplied. Nothing can be clearer than that these charges were in great part wholly groundless, as the expedition was clearly directed against the most important point of the enemy's resources; the effects of success immense,

* Parl. Deb., xii., 263, 1057; xiii., 1, 710.

† Mrs. Clarke, the leading character in this maze of scandal and intrigue, was a woman possessed of considerable personal attractions, and no small share of ready wit and repartee. When asked in a subsequent trial, by a cross-examining council, "Pray, madam, under whose protection are you just now?" she immediately answered, bowing to the court, "Under that of my lord chief-justice." The court was convulsed with laughter, in which his lordship heartily joined, and the barrister was silent.

and vital to the national independence of England; the forces employed fully adequate to the object in view; and the general instructions given such as would, if energetically acted upon, have unquestionably led to decisive success.* The real points in which government were blameable, and for which it is impossible to find any adequate excuse, were the long delay which occurred in determining upon the expedition, and not straining every nerve to send it out in April or May, instead of the end of July, and the sanctioning the appointment of an officer as commander-in-chief unknown to fame, and obviously inadequate to the direction of such an enterprise. Yet these points were hardly ever touched on in the course of the debate, so great was the anxiety to throw the whole blame upon ministers, rather than upon a commander known to have owed his appointment to royal favour. After a lengthened investigation and debate, ministers were declared not blameable upon the general policy of the expedition, by a majority, however, of only forty-eight, the numbers being 275 to 227:† a majority which, on the subordinate question of whether the protracted retention of Walcheren was blameable, fell to twenty-three; a division which clearly demonstrated how strongly the calamitous issue of the expedition had come to influence the public mind.

The untoward issue of this expedition, the obloquy which it brought upon government, and the narrow escape which they made from total shipwreck on its result, blew into a flame the ill-smothered embers of a conflagration in the cabinet, and led, at this critical moment, to a change in the most important offices of the state. Mr. Canning, who, since the formation of Mr. Perceval's administration, had held the seals of the foreign office, had long conceived that Lord Castlereagh, who was secretary at war, was unfit to be intrusted with the important and hourly-increasing duties of that department. This opinion, which subsequent events have triumphantly disproved, and which was doubtless chiefly based at that time, in the able but aspiring mind of the foreign secretary, on the illusions of ambition and the whisperings of jealousy, was strongly confirmed by the disastrous issue of the Scheldt expedition: which he ascribed, with how much justice the preceding observations will show, to the ignorance and incapacity of the secretary at war, to whom the direction of its details had been in a great measure intrusted. Early in April 4. April, he had intimated to the Duke of Portland, the nominal head of the administration, that he conceived the public service required that either he or Lord Castlereagh should resign, and offered to remove all difficulties by his own retirement. Anxious to prevent any schism in the cabinet at such a crisis, the duke consulted Lord Camden, and prevailed on Mr. Canning, meanwhile, to suspend his resignation: the king was afterward spoken to on the subject, but he also postponed any definite opinion. A long negotiation subsequently ensued, which, against Mr. Canning's strongest remonstrances, was protracted till the issue of the Scheldt expedition became known; and although some of Lord Castlereagh's friends were made acquainted with what was going on, yet they did not deem it advisable to make him privy to it. At

length, in the first week of September, his lordship was informed of the whole by his friends, farther concealment having become impossible by Mr. Canning's resignation. Lord Castlereagh, under the impression that he had been ill used by Mr. Canning in this transaction, by not having been made acquainted from the first with the steps calculated to prejudice him which he had adopted, immediately sent Mr. Canning a challenge. The parties met; and at the second fire Mr. Canning fell, having received a severe wound in the thigh. Both gentlemen had previously sent in their Sept. 22. resignations; and though a reconciliation was subsequently effected, and their joint services regained for their country, the quarrel had the effect, at the time, of excluding both from administration. After an unsuccessful attempt to effect a coalition with Lords Grey and Grenville, Lord Wellesley was recalled from the embassy of Spain to fill the situation of foreign secretary; Lord Castlereagh was, two years afterward, reinstated in office, and contributed, in an essential manner, to the triumphs and glories of the grand alliance; but Mr. Canning, who aimed at the highest destinies, for long declined offers of employment at home, and did not appear again in official situation till after the peace.*

A general change now took place in the administration. The Duke of Portland, whose health had for some time been declining, resigned his place as head of the government, and as the negotiation with Lords Grey and Grenville had failed in procuring their accession to the cabinet, the ministry was reconstructed entirely from the Tory party. Mr. Perceval filled the place of first lord of the treasury and chancellor of the exchequer; the Earl of Liverpool was transferred from the home to the war office; Mr. Ryder became home, and Marquis Wellesley foreign secretary. There can be no doubt that all these offices were filled by men of business and talent; and the cabinet, as so constructed, possessed the inestimable advantage of unity of opinion on all vital questions, and especially on the great one of the prosecution of the war: an advantage so great, that, for its want, no acquisitions, however great, no talents, however splendid, can in the long run compensate. But still the abilities of none of these statesmen, with the exception of Marquis Wellesley, were either of the highest order or the most brilliant character; and it is a remarkable circumstance, indicating the power of unity of purpose and resolution of mind, in a nation and its government, to compensate for the want of the showy qualities of the orator or the practised skill of the Parliamentary debater, that the most glorious triumphs recorded in the history of England were achieved, not only when the persons possessing in the highest degree these qualities were not in the administration, but when they were actively engaged on the side of opposition.†

GEORGE CANNING, whom this abortive intrigue excluded from office for several Youth and first years, was the most finished orator introduction to who had appeared in Parliament public life of since the days of Pitt and Fox. Mr. Canning. Born of respectable, though not opulent parents, descended from an honourable line of ancestors,

In almost every feature of his character and career, LORD CASTLEREAGH was the reverse of this accomplished statesman; and the mortal hostility which for a time prevailed between them was typical of the struggle between those antagonist principles in the British Constitution so soon destined to come into collision, and whose conflict ere long shook the Empire to its foundation. Born of a noble and powerful family, he did not, like his brilliant rival, owe his elevation to his own unaided exertions, but was wafted into office and public life with all the advantages of birth and connexions. He was early intrusted with high situations in the Irish government; and in the important and arduous matter of the union with England, gave immediate proof of that prompt determination and undaunted courage which ultimately shone forth with such lustre on the great theatre of Europe. An indefatigable man of business, thoroughly acquainted with all the details of office in the situations which he successively held, he was gifted with none of the qualities which are calculated to win the favour of a popular assembly, or captivate the imagination of the great body of mankind. His speeches, always distinguished by strong sense, unflinching energy, and lofty feeling, were generally full of matter, and often abounded with vigorous and conclusive arguments; but they wanted the charm of a poetic fancy, they were destitute of the force of condensed expression, and seldom rose to the height of impassioned oratory. Hence his influence in the house as a debater was inconsiderable; and though he long held important situations, and commanded, from his qualities as a statesman, the respect even of his enemies, he owed less than any minister of the day to the power of eloquence.

But, if the great and ennobling characteristics of a statesman are considered, none of these in English history will occupy a loftier pedestal, or be deemed worthy of more unqualified admiration. Fixed in his principles, disinterested in his patriotism, unbending in his resolutions, he possessed in the highest degree that great quality, without which, in the hour of trial, all others are but as tinkling brass—moral courage and unflinching determination; and they know little of human affairs who are not aware that this is at once the rarest, the most valuable, and the most commanding gift of nature. His courage was not simply that of a soldier who mounts the breach, though none possessed personal bravery in a higher degree: it was that of the general who greatly dares, of the statesman who nobly endures; and this invaluable quality seemed to rise with the circumstances which called for its exertion. Conspicuous in the conduct of the Irish government at the time of the union, it was doubly so

man who will stand highest in the estimation of future ages, if his reputation is rested on his Parliamentary efforts alone. The origin and frequent use of that expression in these times, and the high value attached to it in existing contests, is itself an indication of the assumption of a standard for Parliamentary force in speaking different from that commonly recognised, and not understood by the generality of men. But all such fictitious or conventional standards of excellence will be swept away by the floods of time; and our great statesmen and orators on all sides would do well, while they cultivate this talent, as cultivate it they must for present impression, to anchor their reputation for future ages on the assertion of principles, and the use of expressions of permanent application and universal sway over the human heart.

during the perils and anxieties of the Peninsular campaigns, and shone forth with the brightest lustre in the crisis of Europe during the invasion of France. By his firmness of character, and yet suavity of manner, he mainly contributed to hold together the sometimes discordant elements of the grand alliance; by his energy he brought forth the mighty resources of England, at the decisive moment, with irresistible force; and when the resolution of the bravest hearts in Europe was failing under the responsibility of the last throw of the conflict, he nobly stood forth, and, by his single efforts, mainly brought about the bold determination which hurled Napoleon from his throne. The supporter of rational freedom, he was the resolute opponent of unbridled Democracy; the real friend of the people, he was the unceasing enemy of their excesses; and, while he disdained to purchase popularity by flattering their passions, he risked in their cause the objects to which his life had been devoted, and alone, of all the statesmen of Europe, procured for Poland, amid the maledictions of the Liberals and the delirium of Alexander's victories, a national existence, institutions, and laws: blessings too soon, alas! torn from them, amid the Democratic transports and selfish ambition of later times.

Cut short in his career before these glorious days arrived, MR. PERCEVAL has yet engraven his name deep on the brightest tablets in the annals of

Career of Mr. Perceval.

England. Born of a noble family, and not merely educated for, but eminent in the practice of the bar, he brought to public affairs the acuteness and precision of legal argument, and first rose to eminence in Parliament by his spirit and perseverance in opposition, during the brief period of Mr. Fox's administration, when his party seldom mustered more than twenty or thirty members. But mere intellectual acumen seldom has weight with a mixed assembly; and in the House of Commons, unless their legal talents are merged in the force of public principle or moral feeling, lawyers have seldom risen to any lasting eminence. It was the great objects of philanthropy, for which he contended, which gave Sir Samuel Romilly his well-deserved weight in that assembly and the country; and it was to a principle of a still dearer interest to humanity that Mr. Perceval owed his elevation. He stood forth as the champion of the PROTESTANT FAITH; and, at a crisis when the national heart was violently agitated by the dangers to which, it was thought, the Protestant establishments of the Empire were exposed by the concessions then sought to be forced upon the king, he won the public confidence by the intrepidity and energy with which he appealed to the principles which had placed the house of Brunswick on the throne. Called by the favour of his sovereign to a high place in the cabinet, on the change of ministry in 1807, he conducted the lead in the House of Commons with a skill and ability which surpassed the expectations even of his friends; and when the Duke of Portland resigned, and Mr. Canning and Lord Castlereagh withdrew, public opinion ratified the royal choice, which placed him at the head of administration.

Without any of the great or commanding qualities of the orator, or the profound views which distinguish the highest class of statesmen, Mr. Perceval maintained himself successfully in this exalted sta-

His character.

tion, by the integrity of his character, the sincerity of his principles, the acuteness of his reasoning, and the spirit with which he combated the multifarious attacks of his enemies. Reversing the situation of the Roman emperor,* he would by common consent have been deemed unworthy of the lead if he had not obtained it. Contrary to what is generally the case, he steadily advanced in reputation to the close of life; and possibly his premature end alone prevented him from rising, during the eventful years which immediately followed, to the very highest place among British statesmen. His measures were decided, his spirit resolute, his heart upright. Of unimpeachable integrity in private life, a sincere Christian, a tried patriot, the nation saw without suspicion hundreds of millions pass through his hands, and he justified their confidence by dying poor. He was adverse to all the liberal doctrines of the age, and anchored his faith, perhaps with too unbending rigidity, on the existing constitution in church and state; but time has since proved that the views are not always narrow which are founded on experience, and that the most liberal doctrines are sometimes the most ephemeral. His favourite maxims were, that concession of political power to the Catholics would infallibly lead, from one step to another, to the overthrow of our Protestant institutions, and that no remedy could be found for the disorders and sufferings of Ireland but in the establishment of a well-regulated system of poor laws; and great was the ridicule thrown upon such professions by many of the most learned and all the most liberal men of his time. Subsequent events, however, have in a great degree justified his penetration, and added another to the numerous instances which history affords of the eternal truth, that the only safe foundation for anticipation of the future is experience of the past, and that those who, from adhering to this principle, are thought to be behind one age, are generally in advance of the next.

While the vast resources of England, poured forth with a profusion worthy of the occasion, were thus lost to the cause of European freedom by the tardiness with which they were brought into action, and the want of vigour with which they were directed in the field, Austria was anxiously protracting a painful negotiation, and watching every gleam in the political horizon, before she finally put the seal to her degradation. The emperor retired to Vienna, where he was soon immersed in the cares of his immense empire; while the immediate conduct of the negotiation was committed, at Altenburg, in Hungary, to Metternich on the part of Austria, and Talleyrand on that of France. The situation of Napoleon was delicate, particularly in relation to Russia, with which he had repeatedly, during the campaign, short as it was, been on terms bordering on hostility; but the battle of Wagram had, as if by magic, restored all the temporizing policy of the cabinet of St. Petersburg, and the relations of amity between the two cabinets. When the Emperor Francis, after the conclusion of the armistice, addressed a letter to Alexander, and another to Napoleon, these two sovereigns instantly mutually communicated their despatches and answers to each other. On this side, therefore, no obstacles were

to be anticipated; and although there were at first some difficulties, and no small alarm awakened by the proposal, on the part of the French minister, to unite a portion of Galicia to the Grand-duchy of Warsaw, which gave instant umbrage to the cabinet and nobles of St. Petersburg, yet in the end this difficulty, great as it was, yielded to the thirst for territorial aggrandizement. It was agreed to give Russia a share of the spoil of Galicia; the name of Poland was never again to be revived; and the Emperor Alexander suffered himself to be persuaded, or affected to believe, that, even with a considerable addition of territory, the Grand-duchy of Lithuania could never become an object of jealousy to the Czars of Muscovy.†

The cabinet of Vienna, which was stationed at Komorn in Hungary, prolonged the negotiation, from a latent hope that successes in Spain, on the Scheldt, or in the Tyrol, might enable it to resume hostilities with some prospect of success, or obtain some abatement from the rigorous terms which were demanded by the conqueror. These were the immediate suppression of the landwehr, the reduction of the regular army to one half, the expulsion of all French royalists from the Austrian monarchy, and the cession of all the provinces actually occupied by the French armies. To these extravagant demands, which amounted to a total destruction of the monarchy, Count Metternich opposed the equally extravagant proposition that everything should be restored to the *status quo ante bellum*. As the negotiation advanced, Napoleon employed menaces of the severest kind against the imperial government in the event of his being again driven to hostilities, boasted much of his perfect intelligence with the Emperor Alexander, and even dropped some significant hints of his intention, if driven to extremities, to separate the three crowns which now centered on the imperial brows, and bestow two of them on the Archdukes Charles and John. Meanwhile, the utmost care was taken to improve the military position of the army, and make everything ready for a resumption of hostilities: magnificent reviews daily took place at Vienna; troops were incessantly forwarded from the rear to the corps in front; a grand distribution of honours and benefactions to the soldiers was made on the anniversary of the emperor's birthday on the 15th of August,

* Bign., viii., 349, 357. Hard., x., 469, 479.

† "My interests," said Alexander to Napoleon, "are entirely in the hands of your majesty. You may give me a certain pledge of your friendship, in repeating what you said at Tilsit and Erfurth, on the interests of Russia in connexion with the late kingdom of Poland, and which I have since charged my ambassador to confirm." "Poland," said Napoleon to M. Gorgoli, the officer who bore the despatches to St. Petersburg, "may give rise to some embarrassment between us, but the world is large enough to afford us room to arrange ourselves." "If the re-establishment of Poland is to be brought on the tapis," replied Alexander, "the world is not large enough, for I desire nothing farther in it." The ferment was prodigious at St. Petersburg; and it was openly said in some circles that it would be better to die sword in hand, or assassinate the emperor, if he was disposed to yield, than to permit the reunion of Poland to the grand-duchy. Napoleon was not ignorant of these alarming symptoms; and it was at length agreed that France should guaranty to Russia its new possessions, that the name of Poland and the Poles should be avoided, and three fourths of the spoils of Galicia given to Lithuania, and one fourth to Russia. Under a new name, and the sway of the King of Saxony, this was thought not likely to awaken any dangerous ideas as to the re-establishment of Poland.—See BIGNON, viii. 351, 354.

* "Omnium consensu, dignus imperio, si non regnasset." —TACITUS.

accompanied by a decree for the erection of a column of granite of Cherburg, on the Pont Neuf at Paris, a hundred and eighty feet high, with the inscription, "Napoleon to the French people;" a vast fortress was commenced at Spitz, opposite to Vienna, and another at Raab, to serve as impregnable têtes-du-pont for the passage of the Danube; while, by a decree equally agreeable to the French as grievous to the German people, it was declared that, till the 11th of April following, the whole expenses of the Grand Army should be laid upon the conquered territories.*

But, in the midst of all his magnificent preparations and dazzling announcements, the emperor had several causes for disquietude, and was far from feeling that confidence in his position which he declared to the world, and held forth in his conferences with Metternich. The Walcheren expedition held all the Flemish provinces for some weeks in a state of suspense; and there was good reason to believe that, if Antwerp had fallen, the fermentation in the north of Germany would have drawn Prussia into an open declaration of war, which would at once have revived a desperate and doubtful contest on the Danube. The Tyrol was still in arms, and had a third time totally defeated the French invaders, and made the greater part of their number prisoners. Nor were the accounts from Spain of a more encouraging description. The disaster of Soult at Oporto, to be immediately noticed, had been followed by the invasion of Estremadura and the defeat of Talavera; while, at the same time, accounts were daily received of the discord among the generals employed in the Peninsula, and the details of an alarming conspiracy in Soult's army revealed the alarming truth that the Republican generals, like the Roman consuls, dazzled by the thrones which had been won by so many of their number, were not altogether beyond the reach of intrigues which might elevate them from a marshal's baton to a king's sceptre. "It is necessary," said Napoleon, "to hasten at any price to make peace, in order that the enemy may not gain time to profit by his machinations."†

The emperor's desire to bring the long-protracted negotiations to a conclusion was increased by a singular attempt at assassination, which was at this period made upon his person. At the daily parades at Schœnbrunn, the attention of the guards and officers of his household had been more than once attracted by a young man, who threw himself in the way, and importunately demanded to be allowed to speak to the emperor. On the third occasion, one of the gendarmes seized him rudely by the neck to move him back, and, in doing so, perceived that he had something concealed in his bosom. He was searched, and it proved to be a large knife, sheathed in a number of sheets of paper. Being immediately apprehended and brought before Savary, the chief of the gendarmerie, for examination, he at once avowed that his intention was to have taken the emperor's life; alleging, as a reason, that he had been assured that the sovereigns would never make peace with him, and that, as he was the stronger, the grand object of universal pacification could never be attained till he were removed. It turned out that he was the son

of a Protestant minister at Erfurth, and only eighteen years old. He had seen the emperor when he was at that town the year before; and he admitted that he had borrowed his father's horse, without his knowledge, and come to Vienna to execute his purpose. "I had chiefly studied history," said he, "and often envied Joan of Arc, because she had delivered France from the yoke of its enemies, and I wished to follow her example." "The guards who surrounded me," said the emperor, "would have cut you in pieces before you could have struck me!" "I was well aware of that," replied he, "but I was not afraid to die." "If I set you at liberty," said Napoleon, "would you return to your parents, and abandon your purpose?" "Yes," replied he, "if we had peace; but if war continued, I would still put it in execution." Struck with these answers, the emperor, with a magnanimity which formed at times a remarkable feature in his character, was desirous to save his life, and directed Dr. Corvessart, who was in attendance, to feel his pulse, to see if he was in his sound senses. The physician reported that his pulse was slightly agitated, but that he was in perfect health. The young fanatic was sent to prison at Vienna; and though the emperor for some time entertained thoughts of pardoning him, he was forgotten in the pressure of more important events; and after his departure for Paris, he was brought before a military council, condemned, and executed. He evinced in his last moments the same intrepidity which had distinguished his conduct when examined before Napoleon, and his last words were, "For God and the fatherland!"‡

This singular event contributed as much, on the French side, to the conclusion of the negotiations, as the failure of the Walcheren expedition did on that of the Austrian cabinet. There might be more characters in Germany like Stabs: in a country so profoundly agitated, and containing, especially in its northern provinces, so many enthusiastic spirits, it was impossible to measure the personal danger which the emperor might run if hostilities were resumed. These considerations weighed powerfully with the cabinet of Schœnbrunn. Napoleon gradually fell in his demands; and though the orders given were abundantly warlike, and the marshals were all at their posts, yet it was evident to those in the secret of the negotiations that matters were approaching to an accommodation. The demand, on the part of France, of the line from the Danube to the Lake Aller, as the frontier towards Bavaria, gave rise to fresh difficulties, at the very moment when all seemed concluded; for it deprived Austria, on that side, of the mountain ridge which formed its true frontier, and gave the court of Munich the crest of the Hansruck, and part of the slope towards the eastward. But matters had gone too far to recede: the cabinet of Vienna was true to its principle of yielding

* Sav., iv., 141, 145. Pel., iv., 371. Bign., viii., 371, 373.

† An adventure of a different character befell Napoleon at Schœnbrunn during this period. A young Austrian lady, of attractive person and noble family, fell so desperately in love with the *removal* of the emperor, that she became willing to sacrifice to him her person, and was, by her own desire, introduced at night into his apartment. Though abundantly warm in his temperament, so far as physical enjoyments were concerned, and noways disquieted, in the general case, by any lingering qualms of conscience about Josephine, Napoleon was so much struck with the artless simplicity of this poor girl's mind, and the devoted character of her passion, that, after some conversation, he had her reconducted untouched to her own house.

* Pel., iv., 344, 357. Sav., iv., 140, 148. Bign., viii., 355, 361.
† Pel., iv., 345, 346. Hard., x., 470, 471.

when it could no longer resist;* and Prince Lichtenstein, with tears in his eyes, signed the treaty, on the part of the Austrian government, at Vienna, on the 14th of October.

By the peace of Vienna, Austria lost territories containing three millions and a half of inhabitants. She ceded to Bavaria the Inn-Viertel and the Hansruck-Viertel, as well as Salzburg, with its adjacent territory, and the valley of Berchtholsgraden: districts, the importance of which was not to be measured by their extent and inhabitants, but by the importance of their situation, lying on the ridge of mountains which separated the two monarchies, and taking a strong frontier from the one to bestow it upon the other. Portions of Galicia, to the extent of fifteen hundred thousand souls, were ceded to the Grand-duchy of Warsaw, and of four hundred thousand to Russia; and besides this, the grand-duchy acquired the fortress and whole circle of Zamosc, in the eastern part of the same province. To the kingdom of Italy, Austria ceded Carniola, the circle of Villach, in Carinthia, six districts of Croatia, Fiume, and its territory on the seashore, Trieste, the county of Gorici, Montefalcone, Austrian Istria, Cartua, and its dependant isles, the Thalgeweg of the Save, and the lordship of Radzuns in the Grisons. In addition to these immense sacrifices, the Emperor of Austria renounced, on the part of his brother, the Archduke Antony, the office of grand-master of the Teutonic Order, with all the rights and territories. Tyrol remained to its Bavarian masters, but the Emperor Francis stipulated for his brave and devoted children in that province an absolute and unconditional amnesty, as well in their persons as effects.†

In addition to these public articles, various secret ones were annexed to the treaty, of a still more humiliating kind to the house of Hapsburg. The treaty was, in the first place, declared common to Russia; next, the Emperor of Austria engaged to reduce his army, so that it should not exceed a hundred and fifty thousand men during the continuance of the maritime war; all persons born in France, Belgium, Piedmont, or the Venitian States, were to be dismissed from the Austrian service; and a contribution of 85,000,000 francs (£3,400,000) was imposed on the provinces occupied by the French troops. By a letter of Napoleon to M. Daru, the intendant-general of the army and conquered provinces, it was specially enjoined that, "from the 1st of April to the first of October, every farthing expended on the army should be drawn from the conquered provinces, and all the advances between these periods made from France restored to the public treasury."‡

The treaty of Vienna was received with marked disapprobation by the cabinet of St. Petersburg, and it was attended with a most important effect in widening the breach which was already formed between the two mighty rulers of Continental Europe. In vain Napoleon assured Alexander that he had watched over his interests as he would have done over his own: the Russian autocrat

could perceive no traces of that consideration in the dangerous augmentation of the territory and population of the Grand-duchy of Lithuania, and he openly testified to Caulaincourt his displeasure, referring to the date of his dismissal of General Gortchakoff for decisive evidence of the sincerity of his alliance.* In the midst of all his indignation, however, he made no scruples in accepting the moderate portion of the spoils of Austria allotted to his share; and M. de St. Julian, who was despatched from Vienna to persuade him to renounce that acquisition, found it impossible to induce the cabinet of St. Petersburg to accept the sterile honours of disinterestedness. Napoleon, however, spared no efforts to appease the Czar; and, being well aware that it was the secret dread of the restoration of Poland which was the spring of all their uneasiness, he engaged not only to concur with Alexander in everything which should tend to efface ancient recollections, but even declared that he "was desirous that the name of Poland and of the Poles should disappear, not merely from every political transaction, but even from history." How fortunate that the eternal records of history are beyond the reach of the potentates who for a time oppress mankind!†

Napoleon afterward reproached himself at St. Helena with not having, at the treaty of Vienna, divided the three crowns, secret views in of the Austrian Empire, and there- this treaty. by forever prostrated its power and independence; and it is certain that, at one period of the negotiation, he not only threatened to adopt this extreme measure, but entertained serious thoughts of carrying it into execution. His secret thoughts seem to have been divulged in a despatch to his minister for foreign affairs, of 15th of September, in which he openly avows that his desire is either to separate the three crowns, or to form a sincere and durable alliance with the Austrian Empire. Provided he could obtain a sufficient guarantee for that alliance, he was willing to leave the monarchy entire, but he thought there could be no security for it unless the throne were ceded to the Grand-duke of Wurtzburg.‡ The Emperor Francis magnanimously agreed to the sacrifice, if it could have

† Champagny to Alexander, 20th Oct., 1809. Bign., viii., 390.

‡ "I desire nothing from Austria," said Napoleon. "Galicia is beyond my limits: Trieste is good for nothing but to be destroyed, since I have Venice. It is a matter of indifference to me whether Bavaria has a million more or less: my true interest is either to separate the three crowns, or to contract an intimate alliance with the reigning family. The separation of the three crowns is only to be obtained by resuming hostilities: an intimate alliance with the existing emperor is difficult, because I have not an entire confidence in his resolution. I said to Prince Lichtenstein, the other day, 'Let the emperor cede the crown to the Grand-duke of Wurtzburg. I will restore everything to Austria without exacting anything.' M. de Bubna took me at my word, and said the emperor was far from having any repugnance to such a sacrifice: I said I would accept it; that the base put forward at Altenberg was far from being unsuspicious of modifications. Insinuate to Count Metternich, that if the emperor is, on any account, inclined to cede the throne (report says he is weary of royalty), I will leave the monarchy entire. With the grand-duke I will contract such an alliance as will speedily enable me to settle the affairs of the Continent: I have confidence in the character and good disposition of the grand-duke; I would consider the repose of the world as secured by that event. You may say I can rely on the moral probity of the emperor, but then he is always of the opinion of the last person who speaks; such men as Stadion and Baldacci will continue to exercise influence over him. That way of arranging matters would suit me well."—NAPOLÉON TO CHAMPAGNY, 15th Sept., 1809; BIGNON, viii., 365, 368.

§ See note C.

the effect of preserving the integrity of the monarchy; but it was not afterward insisted on by Napoleon, who began, in the course of this negotiation, to conceive the idea of connecting himself with the Cæsars in a way still more personally flattering, and likely to be more politically enduring. In truth, he foresaw that a rupture with Russia was inevitable at some future period: it was with the Czar that the real battle for supreme dominion was to be fought, and he clearly perceived the policy of not weakening too far the power which would be his right wing in the conflict.*

No sooner was the treaty of Vienna ratified than Napoleon set out for Paris, and the ramparts of Vienna arrived at Fontainebleau on the 26th of October. Before leaving the Austrian capital, however, in the interval between the signature and ratification of the treaty, he gave orders for the barbarous and unnecessary act of blowing up its fortifications. Mines had previously been constructed under the principal bastions, and the successive explosion of one after another presented one of the most sublime and moving spectacles of the whole Revolutionary war. The ramparts, slowly raised in the air, suddenly swelled, and bursting like so many volcanoes, scattered volumes of flame and smoke into the air; showers of stones and fragments of masonry fell on all sides; the subterranean fire ran along the mines with a smothered roar, which froze every heart with terror; one after another, the bastions were heaved up and exploded, till the city was enveloped on all sides by ruins, and the rattle of the falling masses broke the awful stillness of the capital. This cruel devastation produced the most profound impression at Vienna: it exasperated the people more than could have been done by the loss of half the monarchy. These ramparts were the glory of the citizens: shaded by trees, they formed delightful public walks; they were associated with the most heart-stirring eras of their history; they had withstood all the assaults of the Turks, and been witness to the heroism of Maria Theresa. To destroy these venerable monuments of former glory, not in the fury of assault, not under the pressure of necessity, but in cold blood, after peace had been signed, and when the invaders were preparing to withdraw, was justly felt as a wanton and unjustifiable act of military oppression. It brought the bitterness of conquest home to every man's breast: the iron had pierced into the soul of the nation. As a measure of military precaution it seemed unnecessary, when these walls had twice proved unable to arrest the invader: as a preliminary to the cordial alliance which Napoleon desired, it was in the highest degree impolitic; and its effects were felt by Napoleon, in the hour of his adversity, with terrible bitterness. The important lesson which it has left to the world, is the clear proof which it affords of that great general's opinion of the vital importance of central fortifications: he has told us himself, that, if Vienna could have held out three days longer, the fate of the campaign would have been changed; but, while this truth is, perhaps, the lesson of all others most strongly illustrated by the events of the war, it is the last which the vanity of kings and the thoughtlessness of the people will permit to be read to any useful effect.†

While the cabinet of Vienna was thus yielding in the strife, and the last flames of this terrible conflagration were extinguishing on the banks of the Danube, the Tyrol after the armistice of Znaym continued the theatre of a desperate conflict, and the shepherds of the Alps, with mournful heroism, maintained their independence against a power which the Austrian monarchy had been unable to withstand. Having completely delivered their country, after the battle of Aspern, from the invaders, and spread themselves over the adjoining provinces of Bavaria, Vorarlberg, and Italy,* the brave mountaineers flattered themselves that their perils were over, and that a second victory on the Danube would speedily reunite them, by indissoluble bonds, to their beloved emperor. Kufstein was besieged and on the point of surrendering, July 12. when the news of the battle of Wagram and the armistice of Znaym fell like a thunderbolt on their minds. Many of the insurgents, as was natural in such circumstances, gave up the cause as lost, and retired in deep dejection to their homes, while others, more resolute or desperate, redoubled in ardour, and seemed determined to spill the last drop of their blood rather than submit to the hated yoke of Bavaria. The chiefs of the insurrection and the Austrian generals, who had again entered the country, were at first in a state of great perplexity, from uncertainty whether to yield to the summons of the French generals, who required them to evacuate the country, or the prayers of the inhabitants, who besought them to stand by them and defend it. The uncertainty of the soldiers, however, was removed by an order which arrived after the armistice of Znaym, for them to evacuate both the Tyrol and Vorarlberg, which they immediately prepared to obey; but the insurgents refused to acknowledge the convention, and declared that they would submit to nothing but direct orders from the Emperor of Austria, who, they were confident, would never issue such commands, as he had promised to conclude no peace which did not secure to him the possession of the Tyrol. Such was the fury of the people, that some of the most violent proposed to seize and disarm all the Austrian troops and put all the prisoners to death; and although Hormayer, Martin, and the real chiefs, did their utmost to calm the general effervescence and direct it to some useful object, yet they could not prevent many of the prisoners from falling victims to the ungovernable rage of the peasantry. In the midst of this heroic yet savage bewilderment, the general voice turned to Hofer; and his announcement, at a crowded assembly, that he would stand by them to the last drop of his blood, though it were only as chief of the peasants of Passeyr valley, was answered by a general shout,† which proclaimed him "commander-in-chief of the province so long as it pleased God."

Dangers, however, of the most formidable kind were fast accumulating round the devoted province. The armistice of Znaym enabled the emperor to detach overwhelming forces against the Tyrol, and he immediately set about the final reduction of the country. Marshal Lefebvre, at the head of twenty thousand men, renewed his invasion of the Innthal by the route of Salzburg, while Beaumont, with ten thousand, crossed the

July 20. ridge of Scharnitz, and threatened Innsbruck from the northern side. Both interruptions proved successful. In the confusion produced by the withdrawing of the Austrian authorities, and uncertain whether or not the war was to be continued, the frontier defiles were left unguarded, and both columns of the enemy appeared without opposition before the steeples

July 21. of Innsbruck. The Archduke John and General Buol, who commanded the Austrian troops, successively issued proclamations to the

July 29. people, announcing to them the conclusion of the armistice and stipulated evacuation of the Tyrol, and recommending to them to lay down their arms and trust to the clemency of the Duke of Dantzie. Finding the people little inclined to follow their directions, Hormayer and Buol evacuated Innsbruck with all the regular troops and cannon, taking the route over the Brenner, leaving the Tyrol to its fate. Innsbruck, destitute of defenders, immediately submitted, and the spectacle of thirty thousand French and Bavarians in possession of its capital, naturally spread the belief that the war in the Tyrol was terminated.*

July 30. This, however, was very far from being the case; and Europe, amid the consternation produced by the battle of Wagram, was speedily roused to the highest pitch of enthusiasm by the unconquerable resolution and astonishing victories of its gallant mountaineers.

General Hormayer, who was well aware of the influence of Hofer over his countrymen, and despaired, with reason, of any farther success in the contest, had used the utmost efforts to induce that renowned chief to follow him in his retreat, but all his efforts were ineffectual. Many of the chiefs, including even the renowned Spechbacher, had resolved to withdraw with the Austrian generals; but, when he went to take leave of Hofer, the power of patriotic eloquence proved victorious, and he was prevailed on to remain and stand by his country to the last. Even after this acquisition, however, Hofer was still the victim of contending feelings: patriotic ardour impelling him one way, and the obvious hopelessness of the attempt another; and, in the ag-

July 29. ony of indecision, he retired to a hermitage in the valley of Passeyr, where, amid pines and rocks, he spent several days in solitude and prayer. Haspinger was equally undecided; and, meanwhile, the peasants, who were full of ardour and ready on all sides to take up arms, remained inactive for want of a leader to direct them. At length, however, the latter courageous chief had a meeting at Brixen with Martin Schenck, Peter Kemmater, and Peter

Aug. 2. Mayer, at which Schenck, who was the friend and confidant of Hofer, produced a letter from him, in which he implored them to make "one more effort in behalf of their beloved country." These rural heroes mutually pledged themselves to sacrifice their lives rather than abandon the holy cause; and, having concerted measures, Haspinger took the command of the peasants,† while Hofer, who was summoned by the Duke of Dantzie to appear at Innsbruck on the 11th of August, returned for answer, "He would come, but it should be attended by ten thousand sharp-shooters."

Hostilities commenced on the 4th of August

by an attack on the advanced guard of the French and Bavarians, who were descending the southern declivity of the Brenner, on the banks of the Eisach, between Sterzing and Brixen. The Tyrolese, under Haspinger, occupied the overhanging woods and cliffs which surrounded the bridge of Laditch, a little below Mittenwald, where the high road from Bolsano to Innsbruck crosses the Eisach. The French and Bavarians, little suspecting their danger, advanced incautiously down the defile. The woods were silent: no muskets or armed men appeared on the cliffs; but no sooner was a considerable body of the enemy, under General Rouyer, engaged in the defile, than a heavy fire burst forth on all sides, and from amid the leafy screen the deadly bullets of the sharp-shooters brought death with every discharge into the allied ranks. The column halted, fearful to advance, yet unwilling to recede; upon which the Tyrolese, with deafening shouts, burst forth from their concealment, and, mingling with the enemy, a frightful slaughter took place. Fresh troops, however, came up from the rear: courageous discipline prevailed over unskilled valour, and the Bavarian column pushed on towards the bridge. Suddenly a crackling sound was heard: a rattle of falling stones startled the horsemen in advance, and immediately after several gigantic firs, which had been cut, and supported huge masses of rock and heaps of rubbish on the heights above, came thundering down, and crushed whole squadrons and companies at a single blow. So awful was the crash, so complete the devastation, that both parties, for a time, suspended the conflict, and, amid the deathlike silence which ensued, the roar of the Eisach was distinctly heard. Undeterred, however, by this frightful catastrophe, the French again advanced, through a murderous fire, and, surmounting the ruins which obstructed the road and covered the bodies of their comrades, forced their way on to the bridge. Already, however, it was on fire: a Bavarian horseman attempted, with dauntless intrepidity, to cross the arch amid the flames, but the burning rafters gave way, and he was precipitated into the torrent. Separated by the yawning gulf over which there was no other passage, both parties desisted from the combat. Haspinger returned to Brixen to collect his scattered forces, and Rouyer, weakened by the loss of twelve hundred men, re-measured his steps to Mittenwald and Sterzing, at the foot of the Brenner.*†

The successful issue of this extraordinary conflict produced, as might have been expected, a general outbreak in Tyrol. Hofer descended the valley of the Passeyr at the head of several thousand men, and joined Spechbacher on the Gauen, the mountain ridge which overhangs, on the

* Gesch. A. Hofer, 560, 561. Barth., 304, 312

† The scene of this memorable conflict is on the high road from Brixen to Sterzing, about a mile below Mittenwald, shortly before it crosses the bridge of Laditch. Every traveller from Italy to Germany, by Tyrol, passes through it; but how few are aware of the heart-stirring deeds of which the wood-clad precipices, beneath which they roll in their carriages, have been the theatre! Sir Walter Scott places the action in the Upper Innthal, but this is a mistake.—See GESCHICHTE ANDREAS HOFER, 560. The author visited the scene in 1816, and he yet recollects, in all its vividness, the thrilling interest which it excited: the long black furrow, produced by the falling masses, like the track of an avalanche, was even then, after the lapse of seven years, imperfectly obliterated by the bursting vegetation which the warmth of the Italian sun had awakened on these beautiful steeps.

Desperate action at the bridge of Laditch. Aug. 4.

Defeat of Marshal Lefebvre on the Brenner. Aug. 4.

west and north, the northern slope of the Brenner, and ten thousand men soon flocked to their standard. The Bavarians, under General Stein-
 Aug. 5 and 6. gel, made several attempts to dis-
 lodge them from this threatening po-
 sition, which menaced the great road by Brixen
 to Italy, but they were constantly repulsed.
 COUNT WITTGENSTEIN, an officer destined to im-
 mortal celebrity in a more glorious war, suc-
 ceeded, however, in again clearing the road up
 the northern slope of the Brenner of the enemy;
 and Marshal Lefebvre, encouraged by this suc-
 cess, put himself at the head of his whole corps,
 with the intention of forcing his way over that
 elevated ridge to the Italian Tyrol. He had not
 advanced far, however, before his column, while
 winding in straggling files up the steep ascent,
 twenty miles in length, which leads to the sum-
 mit of the pass, and when the vanguard had
 reached Steinach, was attacked in numberless

Aug. 10. points at once by the peasantry; and, af-
 ter an obstinate conflict, the whole, twenty
 thousand strong, were routed and driven back
 with immense loss to the bottom of the mountain.
 Such was the disorder, that the marshal himself
 Aug. 11. arrived there disguised as a common
 trooper, on the evening of the 11th, and
 his followers, horse, foot, and cannon, mingled
 together, were rolled down in utter confusion into
 Innsbruck. Twenty-five pieces of cannon and
 the whole ammunition of the army fell into the
 hands of the victors, who, gathering strength like
 a mountain torrent, with every tributary stream
 which crossed their course, soon appeared in
 great force on Mount Isel and the heights which
 overhang the capital.*

Similar successes in other quarters attended the
 efforts of the Tyrolese patriots. A
 Successes in
 other quarters. body of seventeen hundred men, who
 advanced from Landeck through the

Vintchgau, with the intention of falling on the
 rear of Hofer's people at Sterzing, was met at
 Aug. 8. Prutz by a body of Tyrolese sharp-shoot-
 ers, and, after a protracted contest of two
 days, were totally defeated, with the loss of three
 hundred killed and nine hundred prisoners. At
 the same time, General Rusca advanced in the
 Pusterthal from Carinthia to Lienz, with six
 thousand men, where he gave way to the most
 revolting atrocities, massacring every human be-
 ing, of whatever age or sex, that fell in

Aug. 9. his way; until at length a stop was put
 to his career by a body of armed peasants, who
 met him at the Lienzerclause, and, after a bloody
 conflict, drove him back, with the loss of twelve
 hundred men, to Sachsenburg; from which, hotly
 pursued by the increasing fury of the peasantry,
 he retreated across the frontier into Carinthia, so
 that the whole of the Pusterthal was delivered
 from the enemy. At the same time, a body of

Aug. 10. Italian troops, which had advanced from
 the neighbourhood of Verona, with the
 design of co-operating with the corps of Lefebvre
 in its descent from the Brenner, alarmed at the
 general insurrection of the valley of the Adige,
 fell back, harassed by a cloud of peasants, to the
 Italian frontier, and the whole of the Southern
 Tyrol was restored to the arms of the Tyrolese.†

Animated by these unlooked-for successes, the
 patriots no longer stood on the defen-
 sive, but, flocking from all quarters
 to the standard of Hofer, assembled
 Total defeat
 of Lefebvre at
 Innsbruck.
 August 12. in great multitudes on Mount Isel,

the scene of their former triumphs, and destined
 to be immortalized by a still more extraordinary
 victory. Lefebvre had collected his whole force,
 consisting of twenty-five thousand men, of whom
 two thousand were horse, with forty pieces of
 cannon, on the little plain which lies between
 Innsbruck and the foot of the mountains on the
 southern side of the Inn. They were far from
 being animated, however, by their wonted spirit:
 the repeated defeats they had experienced had in-
 spired them with that mysterious dread of the
 mountaineers with which regular troops are so
 often seized, when, contrary to expectation, they
 have been worsted by undisciplined bodies of
 men; and a secret feeling of the injustice of their
 cause, and the heroism with which they had been
 resisted, paralyzed many an arm which had never
 trembled before a regular army. The Tyrolese
 consisted of eighteen thousand men, three hun-
 dred of whom were Austrian soldiers who had
 refused to follow their officers, and remained to
 share the fate of the inhabitants: they were tol-
 erably supplied with ammunition, but had little
 provisions, in consequence of which several hun-
 dred peasants had already gone back to their
 homes. Spechbacher commanded the right wing,
 whose line extended from the heights of Passberg
 to the bridges of Halle and Volders; Hofer was
 with the centre and had his headquarters
 at the inn of Spade, on the Schonberg; Aug. 12
 Haspinger directed the left, and advanced by
 Mutters. At four in the morning, this brave
 Capuchin roused Hofer from sleep, and, having
 first united with him in fervent prayer, hurried
 out to communicate his orders to the outposts.
 The battle commenced at six, and continued
 without intermission till midnight: the Bavarians
 constantly endeavouring to drive the Tyrolese
 from their position on Mount Isel, and they, in
 their turn, to force the enemy back into the town
 of Innsbruck. For long the contest was unde-
 cided, the superior discipline and admirable ar-
 tillery of the enemy prevailing over the impetu-
 ous but disorderly assaults and deadly aim of the
 mountaineers; but towards nightfall the bridge
 of the Sill was carried after a desperate struggle,
 and their left flank being thus turned, the French
 and Bavarians gave way on all sides, and were
 pursued with great slaughter into the town. The
 Bavarians lost six thousand men, of whom sev-
 enteen hundred wounded fell into the hands of the
 Tyrolese, while on the side of the latter not more
 than nine hundred had fallen.*

This great victory was immediately followed
 by the liberation of the whole Tyrol. Lefebvre
 fell back across the Inn on the day after the battle, and, evacu-
 ating Innsbruck, retreated rapidly to
 Kuistein, and from thence to Salz-
 burg, where his whole army was collected on the
 20th. Spechbacher followed them with a large
 body of peasants, and destroyed a considerable
 part of the rear-guard at Schwartz, while Hofer
 made his triumphant entry into Innsbruck, and
 took up his residence in the imperial castle,
 where his presence was very necessary to check
 the disorders consequent on the irruption of so
 large a body of tumultuous patriots into an opu-
 lent city. The entire command of the country
 was now assumed by this chief; proclamations
 were issued and coins struck in his name, as
 commander-in-chief of the Tyrol; and the whole

Hofer's deliv-
 erance and
 government of
 Tyrol.

 iv., 358.

civil and military preparations submitted to his directions. While exercising these exalted functions, however, he still retained the simplicity of his rustic dress and manners: he wore nothing but his country jerkin and clouted shoes; his long beard was retained, but his broad-brimmed hat was exchanged for one with a plume and inscription to him as the commander-in-chief of Tyrol, the gift of the holy sisterhood of Innsbruck. It soon appeared, however, that their renowned chief was not qualified for the duties of government: he interfered in an irregular and capricious way, though from pure motives, with the administration of justice, and was more occupied with terminating the private quarrels of his countrymen than warding off their public dangers. Among other attempts, he spent much time in endeavouring to reconcile the disputes of married persons, an undertaking which gave him ample employment. Meanwhile, Ersenstecken and Sieberer, who had both distinguished themselves in the commencement of the war, but subsequently retired with the Austrian troops, returned to their countrymen to share at all hazards their fate: the former bore a gold medal and chain, which were presented to Hofer by the Emperor of Austria, with which he was formally invested in the great Church of Innsbruck, at the foot of the tomb of Maximilian, by the Abbot of Wilten, amid the tears and acclamations of a vast concourse of spectators; while two deputies, Müller and Schonecher, who contrived to elude the vigilance of the French sentinels who surrounded the country, and made their way to England to implore the aid of the British government, were received with heartfelt kindness by all classes, and filled the nation, and through it the world, with unbounded admiration for their heroic exploits.*

But darker days were approaching, and the Tyrolese war was destined to add another to the numerous proofs which history affords, that no amount, how great soever, of patriotism, and no prodigies, how marvellous soever, of valour, not even when aided by the enthusiasm of religion and the strength of mountains, can successfully maintain a protracted resistance against a numerous and well-conducted enemy, if destitute of the organization and support of a regular government. Popular enthusiasm, often irresistible in the outset, and while the general effervescence lasts, is incapable of the steady and enduring efforts necessary in combating the forces of an established monarchy. Like the French Vendéans, or the Scotch Highlanders in 1745, the Tyrolese for the most part returned home after the victory of Innsbruck: in their simplicity they thought the contest was over, now that the invaders were again chased from the valley of the Inn; and thus the frontier passes were left guarded only by a few hundred men wholly inadequate to protect them from the incursions of the enemy. Meanwhile, Napoleon, now thoroughly roused, and justly apprehensive of the fatal blow which the continued independence of this mountainous district, in the midst of his dominions, would inflict on his power, was preparing such immense forces for a renewed attack on the country as rendered its subjugation a matter of certainty. In the south, General Peyri, at the head of ten thousand men, received orders to advance from Verona, and make himself master of

Trent at all hazards; Rusca was intrusted with the command of three divisions, eighteen thousand strong, who were to enter the Pusterthal from Villach and Carinthia; while three Bavarian divisions, under Drouet, mustering twenty thousand veterans, were to break in by the pass of Strubs and the Salzburg frontier. These immense forces were the more to be dreaded from their arriving simultaneously in the country at the very moment when all hearts were frozen by the intelligence of the conclusion of a treaty of peace by Austria, in which the Tyrol was abandoned,* and when the first appearance of winter snows was driving the peasants and their herds from the elevated pastures in the mountains to the lower valleys, in which they might be easily reached by the invading columns.

Under such difficult and disheartening circumstances, it was hardly to be expected, and certainly not wished, that the resistance of the Tyrolese should be farther protracted; but such was the unconquerable spirit of the people, that for three months longer they continued obstinately to contend for their independence. Their frontiers were, in the first instance, forced on all sides: Peyri defeated a body of Tyrolese and Austrians at Ampezzo on the Adige, and, after making himself master of Trent and Roveredo, advanced to the celebrated positions of Lavis, from whence the peasants were driven with great loss. On the northern and eastern frontiers affairs were equally discouraging. Spechbacher, who occupied the important pass of Strubs, the only entrance from the Salzburg territory, with a few hundred peasants, was unexpectedly attacked at daybreak on the 18th of October, and defeated with considerable loss; and, what to him was a heart-rending misfortune, his little son Andrew, a boy of eleven years of age, who had escaped from his place of seclusion in the mountains to join his father in the field, was made prisoner, fighting by his side.† Spechbacher himself was struck down, desperately wounded, and only made his escape by the assistance of his brave friends, who, fighting the whole way, carried him up the almost inaccessible cliffs on the side of the pass, where the Bavarian soldiers could not follow them. The invaders now inundated the valley of the Inn: Hofer, almost deserted by his followers, was unable to maintain himself at Innsbruck, but retiring to Mount Isel, the scene of his former victories, still maintained, with mournful resolution, the standard of independence.‡

* Gesch. A. Hofer, 405, 408. Thib., vii., 410. Pel., iv., 480.

† Spechbacher was struck down by repeated blows with the butt-end of a musket, and, when he regained his feet, he found his little son had been carried off from his side. Wounded and bleeding as he was, he no sooner discovered his loss than he called on his followers to return to the rescue; but, for the first time in the war, they refused to follow him. Little Andrew was told his father was dead, and, to convince him that he was so, the Bavarian soldiers produced his sabre and some part of his dress, all bloody, which had been lost in the struggle. On seeing them, he wept bitterly, but soon regained his composure, and marched in sullen silence with his fellow-prisoners. At Munich, he was presented to the king, who treated him with much kindness, and placed him in the royal seminary. In after times, and under happier auspices, this heroic family were reunited, under their much-loved emperor's sway.—See BARTHOLDY *der Krieg der Tyroler Landleute im Jahre, 1809, Berlin, 1814*, p. 378, 379.

‡ Gesch. A. Hofer, 409, 416. Barth., 374, 380.

* Gesch. A. Hofer, 376, 405. Barth., 346, 360.

Eugene Beauharnois, who was intrusted with the direction of all the invading columns, now issued a proclamation from Villach, in which, after announcing the conclusion of peace between France and Austria, he called on the people to submit, and offered them, on that condition, an unconditional amnesty for the past. At the same time, the Arch-
 Oct. 25. duke John, in a proclamation, strongly counselled them to relinquish the contest, and with a heavy heart announced that no farther aid or countenance could be given by the Aus-
 Oct. 21. trian government. In these circumstan-ces, Hofer had no course left but that of submission: he withdrew to Steinach, from whence he wrote to General Drouet, offering to make
 Oct. 29. peace; and a few days after issued a proclamation, in which he counselled the people, as peace had been concluded, to lay down
 Nov. 8. their arms, and trust "to the greatness of soul of Napoleon for pardon and oblivion of the past, whose footsteps were guided by a power of a superior order, which it was no longer per-
 Nov. 15. mitted them to resist." But in a few days after, finding that the inhabitants of his beloved valley were still in arms, and that farther resistance was resolved on, he issued another proclamation, in which he ascribed his former intention to the advice of evil counsellors, and called on the people "still to fight in defence of your native country: I shall fight with you, and for you, as a father for his children." War was then resumed at all points, but the forces brought from all sides against the Tyrol were so immense, that no hope remained to the inhabitants but to throw, by deeds of glory, a last radiance around their fall.*

Rusca and Baraguay d'Hilliers entered the Pusterthal from Carinthia with twenty thousand men in the beginning
 Last invasion of Tyrol, and by desperate resistance.
 Nov. 8. overwhelming a force, the Tyrolese fell back, fighting all the way, to the Mulbach-clause, which they made good for two days with the most determined bravery, and were
 Nov. 9. only compelled to evacuate on the third, from their position being turned by a circuitous path through the mountains. All the principal valleys were now inundated by French troops; Brixen was occupied: and the
 Nov. 6. Bavarians from Innspruck having surmounted the Brenner with little opposition, the victorious columns united at Sterzing, and, with fifteen thousand men, threatened the Passeyrthal from the eastward; while an equal force, under Peyri, followed the banks of the Adige and approached the only remaining district in arms by the southern side. Thus the insurrection was at last cooped up within very narrow limits, and, in fact, confined to Hofer's native valley. But, though assailed by forces so immense, and driven by the snow in the higher grounds down to the banks of the Adige, the peasants still showed an undaunted front; and Rusca, having incau-
 Nov. 14. tiously advanced to the old castle of Tyrol, and dispersed part of his forces to obtain the delivery of arms from the inhabitants, he was attacked by Haspinger, aided by Thalgueter and Torggler, two rustic leaders, and totally defeated, with the loss of six hundred killed and wounded, and seventeen hundred prisoners. Thalgueter fell

in this action, in the very moment he was taking an eagle from the enemy.*

This unexpected success again set the whole neighbouring valleys in a flame; but the storms of winter having set in, and the mountains become covered with their snowy mantle, want of provisions compelled the inhabitants to submit. The natives of those elevated regions, who maintain themselves by the produce of the dairy or the sale of their manufactures, were ruined by the exactions of the contending armies, and beheld with despair their families threatened with famine by the burning of their houses by the French soldiers, and stoppage of the wanted supplies of grain from the Italian plains. Before the middle of December, almost all the chiefs had taken advantage of an amnesty, pressed with generous earnestness upon the people by Eugene Beauharnois and Baraguay d'Hilliers, and joined a large party of Tyrolese emigrants at Waradein, while the peasants, in sullen grief, returned to their homes.†

Moved with the respect of true soldiers for a gallant adversary, both these brave generals were unwearied in their efforts to induce Hofer to submit, and they would have done anything to extricate him from his perilous situation. But, though grievously depressed and perplexed, he refused to accompany his friends in their flight, or humble himself by submission to the conquerors. Retiring to his native valley, he long eluded the search of the victors. His place of concealment was a solitary alpine hut, four leagues distant from his home, in general inaccessible from the snow which surrounded it. In that deep solitude he was furnished, by stealth, with provisions by a few faithful followers, and more than once visited by secret messengers from the Emperor of Austria, who in vain used every entreaty to induce him to abandon the Tyrol, and accept an asylum in the imperial dominions. But Hofer steadily refused all their offers, declaring his resolution to be fixed never to abandon his country or family. He even resisted all their entreaties to shave his beard, or use any disguise which might prevent his person from being known to the enemy. At length he was seized by a French force of sixteen hundred men, led by Donay, once his intimate friend, whom the magnitude of the reward induced to betray his benefactor. Two thousand more were in readiness to support them; the column set out at midnight, and, after marching four leagues over ice and snow, surrounded the hut at five in the morning on the 5th of January. No sooner did Hofer hear the voice of the officer inquiring for him than he quietly came to the door and delivered himself up. He was immediately bound, and marched down his beloved valley, amid the tears of the inhabitants and the shouts of the French soldiers, to Bolsano, and thence by Trent to Mantua.‡

On his journey, he was treated by the French officers, and particularly General Baraguay d'Hilliers, with the kindness which true valour ever pays to misfortune, and which, in his case, was well deserved by the efforts he had uniformly made to protect the French prisoners who fell into his

hands. On his arrival at Mantua, a court-martial was immediately summoned, with General Bison, the governor of the fortress, whom he had formerly vanquished, at its head, to try him for combating against the French after the last proclamation of Eugene Beauharnois offering a general amnesty. The proceedings were very short, as the facts charged were at once admitted by the accused; but, notwithstanding this, a very great difference of opinion prevailed as to the punishment to be inflicted. A majority were for confinement: two had the courage to vote for his entire deliverance; but a telegraphic despatch from Milan decided the question by ordering his death within twenty-four hours, thus putting it out of the power of Austria to interfere. He received his sentence with unshaken firmness, though he had no idea previously that his life was endangered; and only requested that he might be attended by a confessor, which was immediately complied with. By this priest, Manifesti, who never quitted him till his death, he transmitted his last adieus to his family, and everything he possessed to be delivered to his countrymen, consisting of five hundred florins in Austrian bank-notes, his silver snuff-box, and beautiful rosary, which he had constantly carried about with him. In the intervals of religious duty, he conversed eagerly about the Tyrolese war, expressing always his firm conviction that, sooner or later, his countrymen would be reunited to the Austrian government.*

On the following morning he was led out to execution. As he passed by the barracks on the Porta Molina, where the Tyrolese prisoners were confined, they fell on their knees and wept aloud; those who were near enough to approach his escort, threw themselves on the ground and implored his blessing. This he freely gave them, requesting their forgiveness for the misfortunes in which he had involved their country, and assuring them that he felt confident they would ere long return under the dominion of their beloved emperor, to whom he cried out the last "Vivat!" with a clear and steady voice. On the broad bastion, a little distance from the Porta Ceresa, the grenadiers formed a square, open in the rear, while twelve men and a corporal stood forth with loaded pieces. A drummer offered Hofer a white handkerchief to bandage his eyes, and requested him to kneel; but this he refused, saying "that he was used to stand upright before his Creator, and in that posture he would deliver up his spirit to him." Having then presented the corporal who commanded the detachment with his whole remaining property, consisting of twenty kreutzers, and uttered a few words expressive of attachment to his sovereign and country, he faced the guard, and with a loud voice pronounced the word "Fire!" On the first discharge he sunk only on one knee: a merciful shot, however, at length despatched him.†

No event in the history of Napoleon has cast a darker stain on his memory than this ungenerous slaughter of a brave and heroic antagonist. Admitting that the unutterable miseries of civil war sometimes render it indispensable for the laws of all countries to punish even the most elevated virtue, when enlisted on the side which ultimately is vanquished, with death, it can hardly be said

that the resistance of the Tyrolese to the Bavarian yoke partook of that character. It was truly a national contest: the object in view was not to rise up in rebellion against a constituted government, but to restore a long-lost province to the Austrian monarchy. The people had been forcibly transferred, only a few years before, against their will, from the paternal sway of their beloved emperor to the rude oppression of a foreign throne; the dominion of four years could not obliterate the recollections of four centuries. In that very war, Napoleon had himself issued a proclamation calling upon the Hungarians to throw off their allegiance to Austria, and reassert, after its extinction for centuries, their national independence.* Hofer had never sworn allegiance to the French emperor; he had never held office under his government, nor tasted of his bounty; yet what invectives have Napoleon and his panegyrists heaped upon the Bourbons in 1815, for visiting with severity the defection of the leaders of the French army, during the hundred days, who had done both! If Ney was murdered because, after swearing to bring back Napoleon in an iron cage, vanquished by old recollections, he gave the example, himself a marshal at the head of an army, of deserting the sovereign who had elevated him to its command; what are we to say of Hofer, a simple mountaineer, who, without employment or command under Bavaria, merely strove to restore his country to the recollections and the ties of four centuries? Even if his life had been clearly forfeited by the laws of war, a generous foe, won by his bravery, penetrated with his devotion, would only have seen in that circumstance an additional reason for sealing the glories of Wagram by an act of mercy, which would have won every noble bosom to his cause. But, though not destitute of humane emotions, Napoleon was steel-ed against every sentiment which had the semblance even of militating against reasons of state policy; and such was the force of his selfish feelings, that he was actuated by an indelible rancour towards all who in any degree thwarted his ambition. The execution of Hofer was the work of the same spirit which, carrying its hostility beyond the grave, bequeathed a legacy to the assassin who had attempted the life of Wellington.

Peter Mayer, having been tried at Botzen, was also shot, and behaved with equal heroism in his last moments. Haspinger and pinger, who put no faith either in the promises of pardon held out by Eugene or the visions of celestial succour declared by Kolb, a fanatic, who was mainly instrumental in exciting the last unhappy insurrection, succeeded, after a very long time, in escaping into Switzerland, by the way of St. Gall and Einsiedlen, in the dress of a monk, from whence he succeeded, by cross paths through Friuli and Carinthia, in reaching Vienna, where he received protection from the emperor. Spechbacher, after the unfor-

* "Hungarians! the moment has arrived to claim your independence. I offer you peace, the integrity of your territory, of your liberty, and constitutions. Your alliance with Austria has been the cause of all your misfortunes: you form the largest portion of its empire, and yet your dearest interests have always been sacrificed to the interests of the hereditary states. Resume, then, your rank as an independent nation; choose a king who may permanently reside among you, who may be surrounded only by your citizens and soldiers. Hungarians! this is what Europe demands, what I offer you."—*NAPOLEON'S Proclamation to the Hungarians, Vienna, 13th of May, 1809; SCHÖELL, Hist. des Trait., ix., 245.*

* Gesch. A. Hofer, 446, 451. Barth., 396.

† Gesch. A. Hofer, 453, 456. Inglis's Tyrol, ii., 223, 224.

fortunate action at the pass of Strubs, where his son Andrew was made prisoner, was actively pursued by the Bavarians, who set a large price upon his head, and he was frequently obliged to shift his place of concealment to avoid discovery. He was at one time surrounded in a house by a party of Bavarian soldiers, who had been led to his retreat by a faithless wretch; but he escaped upon the roof, and, leaping thence, made his way into an adjoining forest, where he was secreted nearly a month, and endured the utmost pangs of hunger. Wandering in this manner, he by accident met his wife and infant children, like him flying from persecution and death, and perishing of want and cold. They at length obtained a refuge in the house of a generous peasant, in the village of Volderberg, where they were concealed together several weeks; but his retreat having been discovered, Spechbacher was obliged to fly to the higher mountains, where, on one of the summits of the Eisgletscherr, in a cavern discovered by him in former times when pursuing the chamois, he lay for several weeks in the depth of winter, supported by salt provisions, eaten raw, lest the smoke of a fire should betray his place of concealment to his pursuers.*

Happening one day, in the beginning of March, to walk to the entrance for a few minutes to enjoy the ascending sun, an avalanche, descending from the summit of the mountain above, swept him along with it down to the distance of half a mile on the slope beneath, and dislocated his hipbone in the fall. Unable now to stand, surrounded only by ice and snow, tracked on every side by ruthless pursuers, his situation was, to all appearance, desperate; but even then the unconquerable energy of his mind and incorruptible fidelity of his friends saved him from destruction. Summoning up all his courage, he contrived to drag himself along the snow for several leagues, during the night, to the village of Volderberg, where, to avoid discovery, he crept into the stable. His faithful friend gave him a kind reception, and carried him on his back to Rinn, where his wife and children were, and where his devoted domestic, George Zoppel, concealed him in a hole in the cowhouse beneath where the cattle stood, though beyond the reach of their feet, where he was covered up with cow-dung and fodder, and remained for two months, till his leg was set and he was able to walk. The town was full of Bavarian troops; but this extraordinary place of concealment was never discovered, even when the Bavarian dragoons, as was frequently the case, were in the stable looking after their horses. Zoppel did not even inform Spechbacher's wife of her husband's return, lest her emotion or visits to the place might betray his place of concealment. At length, in the beginning of May, the Bavarian soldiers having left the house, Spechbacher was lifted from his living grave and restored to his wife and children. As soon as he was able to walk, he set out; and, journeying chiefly in the night, through the wildest and most secluded Alps, by Dux and the sources of the Salza, he passed the Styrian Alps, where he crossed the frontier and reached Vienna in safety. There he was soon afterwards joined by his wife and children; and the emperor's bounty provided both for them and Hofer's orphan family, with not undeserved munificence, till, on the restoration of the Tyrol to the house

of Hapsburg, they returned to their native valleys, and Spechbacher died at Hall, in 1830, of a weakness in the chest, brought on by these unparalleled hardships. Little Andrew, then a man, who had been kindly treated at the court of Munich, was promoted to an official situation in Tyrol, under the Austrian government; but the widow and children of Hofer remained under their father's roof in the valley of Passeyr.*

Touching as is this record of simple virtue in the mountaineers of Tyrol, another event of still more surpassing interest, of yet more momentous consequences, occurred in this eventful year. This was the dethronement and imprisonment of the pope, and the annexation of the patrimony of St. Peter and of the eternal city to the French Empire.

When Pius VI., contrary to the usage of his predecessors, agreed to leave the Quirinal Hill and cross the Alps in the depth of winter to place the crown on the brows of the French emperor, he naturally expected that some great and durable benefit would accrue to himself and his successors from the unwonted act of condescension. The flattering reception which he met with at Paris, the delicate attentions of all the functionaries of the imperial palace, and the marked regard of the emperor himself, confirmed these flattering illusions; and the papal suite returned into Italy charmed with their visit, and never doubting that, at the very least, the restoration of the three legations in Romagna, torn from the Holy See by the treaty of Tolentino in 1797, might with confidence be relied on.† M. Fontanes, the orator of government, had enlarged, in eloquent and touching terms, on the magnificent spectacle afforded by the reconversion of the first of European states to the Christian and Catholic faith. "When the conqueror of Marengo," said he, "conceived on the field of battle the design of re-establishing the unity of religion, and restoring to the French their ancient worship, he rescued civilization from impending ruin. Day forever memorable! dear alike to the wisdom of the statesman and the faith of the Christian. It was then that France, abjuring the greatest errors, gave the most useful lesson to the world. She recognised the eternal truth that irreligious ideas are impolitic, and that every attempt against Christianity is a stroke levelled at the best interests of humanity. Universal homage is due to the august pontiff, who, renewing the virtues of the apostolic age, has consecrated the new destinies of the French Empire, and clothed it with the lustre of the days of Clovis and Pepin. Everything has changed around the Catholic faith, but it remains the same! It beholds the rise and fall of empires, but amid their ruins, equally as their grandeur, it sees the working out of the Divine administration. Never did the universe witness such a spectacle as is now exhibited: the days are past when the Empire and the papacy were rival powers: cordially united, they now go hand in hand to arrest the fatal doctrines which have menaced Europe with a total subversion: may they yield to the combined influence of religion and wisdom!"‡

It is not surprising that such a reception from

Affairs of the Holy See.

Original causes of discontent on the part of the pope at Napoleon.

Dazzling reception of the pope at Paris in 1805.

the conqueror who had filled the world with his renown, and such a prospect of reconverting to its pristine faith the first of the European monarchies, should have dazzled the eyes not only of the pope, but of the whole conclave; but amid the universal illusion it did not escape, even at that time, the observation of some of the able statesmen who directed the cabinet of Rome, that, flattering as these attentions and expressions were, they were all general, and bore reference only to the *spiritual* extension of the papal sway. Ardently as some temporal advantages were desired, both the emperor and his diplomatists had carefully avoided holding out any distinct pledge, even the most indirect, of such concessions. Of this a painful proof was soon afforded.*

Shortly after his return, however, Pius VII. transmitted a memorial to Napoleon, in which he enumerated the losses which the Holy See had sustained from the French government during the progress of the war, and strongly urged him

The pope's request for the restitution of the three Marches is refused, Feb. 21, 1805. March 11.

to imitate the example of Charlemagne, and restore all their possessions. "It was no part of the system of Napoleon to permit the imperial eagles to recede from any territory which they had once occupied, and in a careful answer drawn by the emperor himself, while he expressed boundless anxiety for the spiritual exaltation of the Holy See, and even admitted a desire, if "the occasion should offer," to augment his temporal advantages; yet he distinctly announced "that this must not be expected from any interference with existing arrangements, or diminution of the territory of the kingdom of Italy, to which these acquisitions had been annexed." Repeated attempts were afterward made by the papal government to obtain some relaxation or concession in this particular, but they were always either eluded or met by a direct refusal.†

Still more decisive events speedily demonstrated that, amid all Napoleon's professions of regard, which he really felt, for the spiritual authority of the successors of St. Peter, he had no intention of adding to their territorial influence, or of treating them in any other way than as his own vassals, who, in every part of their temporal administration, were to take the law from the cabinet of the Tuileries. In October, 1805, during the course of the Austrian war, the French troops seized upon Ancona, the most important fortress in the ecclesiastical dominions; and the remonstrances of the pope against this violent invasion were not only entirely disregarded, but Napoleon, in reply, openly asserted the principle that he was Emperor of Rome, and the pope was only his viceroy.‡ The haughty and disdainful terms of this letter, and the open announcement of an undisguised sovereignty over the Roman States, first opened the eyes of the benevolent pontiff to the real intentions of

Farther encroachments of France on the Holy See.

† Pope Pius VII. to Nap., Feb. 21, and Nap. to Pius VII., March 11, 1805. Artaud, ii., 25, 33.

‡ "All Italy must be subjected to my law: your situation requires that you should pay me the same respect in temporal which I do you in spiritual matters. Your holiness must cease to have any delicacy towards my enemies and those of the Church. You are sovereign of Rome, but I am its emperor: all my enemies must be its enemies; no Sardinian, English, Russian, or Swedish envoy can be permitted to reside at your capital."—NAPOLEON TO PIUS VII., 13th Feb., 1806; ARTAUD, ii., 113-118; BIGNON, vii., 137.

the French emperor: he returned an intrepid answer to the conqueror of Austerlitz, that he recognised no earthly potentate as his superior, and from that hour may be dated the hostility which grew up between them.* Napoleon, so far from relaxing in any of his demands, was only the more aroused, by this unexpected opposition, to increased exactions from the Holy See: his troops spread over the whole papal territory; Rome itself was surrounded by his battalions; and, within half a mile of the Quirinal palace, preparations were openly made for the siege of Gaeta.†

Pius VII., however, was unshaken in his determination. "If they choose," said he to M. Alquier, the French envoy, "to seize upon Rome, we shall make no resistance, but we shall refuse them the entry to the castle of St. Angelo. All the important points of our territory have been successively occupied by their troops, and the collectors of our taxes can no longer levy any imposts in the greater part of our territory to provide for the contributions which have been imposed. We will make no resistance, but your soldiers will require to break open the gates with cannon-shot. Europe shall see how we are treated, and we shall at least prove that we have acted in conformity to our honour and our conscience. If they take away our life, the tomb will do us honour, and we shall be justified in the eyes of God and man."‡

The French minister soon after intimated that, if the pope continued on any terms with the enemies of France, the emperor would be under the necessity of detaching the Duchy of Urbino, the March of Ancona, and the seacoast of Civita Vecchia, from the ecclesiastical territories; but that he would greatly prefer remaining on amicable terms with his holiness; and with that view he proposed, as the basis of a definitive arrangement between the two governments: 1. "That the ports of his holiness should be closed to the British flag on all occasions when England was at war with France: 2. That the papal fortresses should be occupied by the French troops on all occasions when a foreign land-force is debarked on, or menaces the coasts of Italy." To these proposals, which amounted to a complete surrender of the shadow even of independence, the pope returned a respectful but firm refusal, which concluded with these words: "His majesty may, whenever he pleases, execute his menaces, and take from us whatever we possess. We are resigned to everything, and shall never be so rash as to attempt resistance. Should he desire it, we shall instantly retire to a convent, or the catacombs of Rome, like the first successors of St. Peter; but think not, as long as we are intrusted with the responsibility of power, to make us, by menaces, violate its duties."

* "Your majesty," said Pius VII., "lays it down as a fundamental principle, that you are sovereign of Rome: the supreme pontiff recognises no such authority, nor any power superior in temporal matters to his own. There is no Emperor of Rome: it was not thus that Charlemagne treated our predecessors. The demand to dismiss the envoys of Russia, England, and Sweden, is positively refused; the father of the faithful is bound to remain at peace with all, without distinction of Catholics or heretics."—PIUS VII. TO NAPOLEON, 12th March, 1806; ARTAUD, ii., 121, 128.

† Artaud, ii., 141. Bign., vii., 137.

‡ M. Alquier's Letter, June 13, 1806. Artaud, ii., 141; 142, and Bign., vii., 137, 148.

§ Artaud, ii., 147, 151. Bign., vii., 151.

The overwhelming interest of the campaign of Jena and Eylau for a time suspended the attention of Napoleon from the affairs of Italy; but no sooner was he relieved, by the peace of Tilsit, from the weight of the Russian war, than he renewed his attempts to break down the resistance of the ecclesiastical government, and was peculiarly indignant at some hints which he had heard that the pope, if driven to extremities, might possibly launch against his head the thunders of the Vatican. A fresh negotiation was, nevertheless, opened: Napoleon insisting that the court of Rome should rigidly enforce the

Berlin and Milan decrees in its dominions, shut the ports against the English flag, permit and maintain a permanent French garrison at Ancona, and allow the march of French columns through their territories. The pope expressed his readiness to accede to these propositions, and submit to their immediate execution, except the actual declaration of war against England. But the emperor had other designs, and mere adherence to the Continental system was far from being now sufficient. On the 2d of February a large body of

French troops entered Rome, which ever after continued to be occupied by their battalions. The formidable military force with which he was surrounded had no effect in subduing the courage of the intrepid pontiff. Calling in M. Alquier on the day of their arrival, he thus addressed him: "The emperor insists on everything or nothing: you know to what articles proposed I will consent: I cannot subscribe the others. There shall be no military resistance: I will retire into the castle of St. Angelo; * not a shot shall be fired; but the emperor will find it necessary to break its gates. I will place myself at the entry; the troops will require to pass over my body; and the universe will know that he has trampled under foot him whom the Almighty has anointed. God will do the rest."†

Insults and injuries continued to be heaped upon the head of the devoted pontiff. The French troops did not, indeed, blow open the gates of the Quirinal palace, but the entire government of his dominions was taken from him. Soon after, the papal government of Rome, an intrepid man, Signor Cavalcini, was seized and carried off by the French troops, and the military government of the capital was confided to the imperial General Miollis; the papal troops were informed, in a letter from Eugene Beauharnois, that he "congratulated them upon their emancipation from the rule of priests; that the Italian soldiers are now com-

manded by men who can lead them into fire; and that they are no longer obliged to receive the commands of women or monks." Champagne officially intimated to the papal government "that the French troops would remain at Rome until the holy father had consented to join the general league, offensive and defensive, with Napoleon and the King of Naples;" while, by an imperial decree shortly after, the provinces of Urbino, Ancona, Macerata, and Camerino, about a third of the ecclesiastical territories, were declared to be irrevocably united to the kingdom of Italy.*

Violent as these aggressions were, they were but the prelude to others still more serious. The pope was confined a prisoner to his own palace. French guards occupied all parts of the capital; the administration of posts, the control of the press, were assumed by their authorities; the taxes were levied for their behoof, and those imposed by the papal government of its own authority annulled; the papal troops were incorporated with the French, and the Roman officers dismissed. The pontiff continued, under these multiplied injuries, to evince the same patience and resignation: firmly protesting, both to Napoleon and the other European powers, against these usurpations, but making no attempt to resist them, and sedulously enjoining both his clergy and people to obey the intruded authority without opposition. CARDINAL PACCA, who was appointed secretary of state on the 18th of June, was a prelate of powerful abilities, and that intrepid but discerning character, which, disdaining all minor methods of resistance, aimed at bringing the great contest between the throne and the tiara at once to an issue on the most advantageous ground. He became, on this account, in an especial manner obnoxious to the emperor; and, an attempt having been made by the French officers to carry him off and banish him from Rome, to detach the pope from his energetic and manly councils, his holiness, with great expressions of indignation, took him into his own apartments. They were more successful, however, in their attempt on Cardinal Antonelli, who was on the same day arrested by a sergeant and eight grenadiers, and instantly sent out of the ecclesiastical territories; while a cordon of sentinels was stationed round the Quirinal, and no one allowed to pass out or in without being strictly examined. The head of the faithful was no longer anything but a prisoner in his own palace; but all Napoleon's efforts to overcome his constancy were unavailing. More courageous and better advised than the Bourbon princes of Spain, the venerable pontiff remained proof alike against the menaces and the wiles of the imperial authorities: no resignation could be extorted from him; and, without ever crossing the threshold of his apartments, he calmly awaited the decree which was to consign him to destruction.†

The last act of violence at length arrived. On the 17th of May, a decree was issued from the French camp at Schoenbrunn, which declared "that the states of the pope are united to the French Empire; the city of Rome, so interesting from its recollections, Napoleon.

Entire assumption of the government by the French. April 2. March 16.

* Letter of M. Alquier, Jan. 29, 1808. Bign., vii., 176. Artaud, ii., 178, 180.

† "What," said Napoleon, in a confidential letter to Eugene Beauharnois at that period, "does Pius VII. mean by his threats of denouncing me to Christendom? Does he mean to excommunicate me? Does he suppose the arms will fall from the hands of my soldiers? Would he put a poniard in the hands of my people to murder me? The pope has taken the trouble to come to Paris to crown me: in that step I recognise the spirit of a true prelate; but he expected, in return, to get the three legations from the kingdom of Italy; but that I would not consent to. The pope at present is too powerful: priests are not made to govern. The rights of the tiara consist only in humiliation and prayer. I hold my crown from God and my people; I will always be Charlemagne to the court of Rome, and never Louis the Debonnaire. Jesus Christ has not instituted a pilgrimage to Rome as Mohammed has to Mecca."—Confidential Letter, NAPOLEON to EUGENE, 22d July, 1807; ARTAUD, ii., 166, 167; and BIGNON, vii., 159, 160.

* Bign., vii., 179, 179. Artaud, ii., 179, 182.

† Cardinal Pacca, i., 347, 351. Artaud ii., 196, 202. Bign., vii., 183, 189.

and the first seat of Christianity, is declared an imperial and free city;" and that these changes should take effect on the 1st of June following.

On the 10th of June these decrees were announced by the discharge of artillery from the castle of St. Angelo, and the hoisting of the tricolour flag on its walls instead of the venerable pontifical standard. "Consummatus est!" exclaimed Cardinal Pacca and the pope at the same instant; and immediately, having obtained a copy of the decree, which the dethroned pontiff read with calmness, he authorized the publication of a BULL of EXCOMMUNICATION against Napoleon and all concerned in that spoliation, which, in anticipation of such an event, had been some time before prepared by the secret council of the Vatican. Early on the following morning this bull was affixed on all the usual places, particularly on the churches of St. Peter's, Santa Maria Maggiore, and St. John, with such secrecy as to be without the knowledge or suspicion of the police. It was torn down as soon as discovered and taken to General Miollis, who forthwith forwarded it to the emperor at his camp at Vienna. The pope expressed great anxiety that care should be taken to conceal the persons engaged in printing and affixing on the churches this bull, as certain death awaited them if they were discovered by the French authorities; but he had no fears whatever for himself. On the contrary, he not only signed it with his name, but had transcribed the whole document, which was of great length, with his own hand, lest any other person should be involved, by the handwriting, in the vengeance of the French emperor.*

Napoleon was not prepared for so vigorous an act on the part of the council of the Vatican. He received accounts of it at Vienna, shortly before the battle of Wagram, and immediately resolved on the most decisive measures. For long he had meditated the transference of the seat of the popedom to Paris, and the acquisition to his authority of the immense influence to be derived from a personal control over the head of the Church. He had been much struck by an expression of the Emperor Alexander at Erfurth: "I experience no difficulty in affairs of religion: I am the head of my own church."† Deeming it impossible, however, in modern Europe, to accomplish such a union directly, or place the pontifical tiara openly on the same brows as the emperor's crown, he conceived the design of accomplishing the object indirectly by procuring the transference of the residence of the pope to Paris, and the incorporation of all his possessions with the imperial dominions; so that, both by reason of local position and entire dependance for income, he should be under the influence of the French emperor. By this policy, which, in his view, was truly a master-stroke, he hoped to do more than could have been accomplished by the entire extinction of the papal authority. He did not intend the destruction of a rival power, but the addition of its influence to himself; while the

annexation of the ecclesiastical states to the French Empire, in effect, rendered its sway irresistible over all parts of the Italian Peninsula.*

Accidental circumstances, however, precipitated matters more quickly than Napoleon intended, and gave him possession of the person of the pope. July 5. within a few days after the publication of the bull of excommunication. Measures of the last severity had been taken in vain: the palace of the Quirinal was surrounded with soldiers, a battery of forty pieces of cannon was established directly opposite its gates; but still the spirit of the illustrious captives was unsubdued, and no indication of a disposition to recall the fulminating decree had appeared. Miollis deemed the state of matters so alarming in the beginning of July, that he entered into communication with Murat at Naples, and their united opinion was, that it was indispensable to get immediate possession of the pope's person, and remove him into France. In pursuance of this determination, which, though not expressly known to or authorized by the emperor, was doubtless in conformity with his prior instructions, and known to be agreeable to his wishes, Miollis sent for General Radet on the 4th of July, and communicated to him his design of carrying off the pope, and intrusting the execution of the delicate task to him. Radet, albeit horror-struck with the task thus imposed on him, knew his duty too well to hesitate in obeying his instructions: a strong battalion of troops arrived on the following day from Naples, and the military dispositions were quickly completed. At ten at night on the 5th, the Quirinal was surrounded by three regiments; thirty men ascended the walls of the garden in profound silence, and took post under the windows of the palace; fifty more succeeded in effecting an entrance by the window of an uninhabited room, and, having dispersed some groups of domestics, who, on the first alarm, hastily assembled together, the gates were thrown open, and Radet entered at the head of his troops, who were ordered "to arrest the pope and Cardinal Pacca, and conduct them immediately out of Rome."†

Though the assembly of the troops took place on the preceding night, it was not till six o'clock on the following morning that the entry of the palace itself took place. The pope and Cardinal Pacca were awakened by the strokes of the hatchets which broke down the interior doors, and both instantly rising, perceived, from the tumult in the court, glitter of arms, and troops in all quarters, that the French had effected an entrance into the palace. The holy father expected immediate death: he called for the ring which his predecessor Pius VI. had worn when dying, the gift

of his person. Paris would have become the capital of the Christian world; I would have directed the religious world as well as the political. It was an additional means of uniting all the parts of the Empire, and keeping in peace whatever was beyond it. I would have had my religious sessions as well as legislative; my council would have been the assembly of the representatives of Christianity; the popes would have been nothing but its presidents: I would have opened and closed these assemblies, approved and published their decisions, as Constantine and Charlemagne did. That emancipation of the Church from the court of Rome, that union of the spiritual and temporal powers in the hands of one sovereign, had been long the object of my meditations and wishes.—LAS CASAS, v., 262, 264.

* Cardinal Pacca, ii., 14, 15. Nap. in Las Casas, v., 202. Bot., ii., 347, 348.

* Artaud, ii., 202, 209. See Bull., in Pacca, i., 355, 372. Bign., viii., 279.

† Artaud, ii., 170. "By keeping the pope at Paris," said Napoleon, "and annexing the Roman States to my dominions, I had obtained the important object of separating his temporal from his spiritual authority; and, having done so, I would have elevated him beyond measure: I would have surrounded him with pomp and honours; I would have caused him no longer to regret his temporal authority; I would have rendered him an idol: he should have had his residence near

of Queen Clotilda, and, putting it on his finger, looked at it with calm satisfaction. To prevent farther violence, the doors were thrown open, and Radet, with his officers and gendarmes, entered the apartment, where the pope stood between Cardinal Pacca, Cardinal Despuig, and a few other faithful prelates. Radet then, in a respectful manner, pale and trembling with emotion, announced to his holiness that he was charged with a painful duty, but that he was obliged to declare to him that he must renounce the temporal sovereignty of Rome and the ecclesiastical states, and that, if he refused, he must conduct him to General Miollis, who would assign him his ulterior place of destination. The pope, without agitation, replied that, if the obligations of a soldier required of him such a duty, those of a pontiff imposed on him others still more sacred; but that the emperor might "cut him in pieces, but would never extract from him such a resignation, which he neither could, nor ought, nor would subscribe." Radet then ordered him to prepare for immediate departure, intimating that Cardinal Pacca might accompany him on the journey. The pontiff immediately complied; and the French general having assured him that nothing in his palace should be violated, he said, with a smile, "He who makes light of his own life is not likely to be disquieted for the loss of his effects." Their preparations having been quickly made, the pontiff took his place in the carriage with Cardinal Pacca by his side, and, escorted by a powerful body of French cavalry, soon passed the Porta del Popolo, and emerged into the open and desert Campagna. "Cardinal," said the pope, "we did well to publish the bull of excommunication on the 10th, or how could it have been done now?" At the first posthouse he wished to give some charity to a poor person; but, upon inquiry of Cardinal Pacca, he found that between them they had only a papetto, or tenpence. He showed it, smilingly, to Radet, saying, "Behold, general, all that we possess of our principality!"*

The pope was conducted with all possible expedition by Radicofani and Sienna to Florence. During the journey, as nothing was prepared, the illustrious prisoners underwent great privations; and, after nineteen hours of uninterrupted travelling, in the hottest weather, they reached the first of those towns, where a frugal repast and miserable bed awaited them; and at midnight following they arrived at the Chartreuse of Florence. From thence their journey was continued more leisurely to Alexandria, which they reached on the 15th. More than once, in the course of the journey, the pope and Cardinal Doria were obliged to exert their influence with the peasants to prevent a forcible attempt at rescue, which the rural crowds, indignant at this scandalous treatment of the head of the Church, were preparing to make. Before leaving Rome, a well-conceived project had been secretly communicated to Pius VII. for delivering him from his oppressors, and securing his escape on board an English frigate, which was cruising for that purpose off Civita Vecchia; but he refused on any account to leave his post. At Florence he was separated from Cardinal Pacca, who was Aug. 3. conducted by a separate route to Grenoble, and soon after, by a special order

from Napoleon, transferred to the state prison of Fenestrelles in Savoy, where, amid Alpine snows, he was confined to a dungeon a close prisoner till the beginning of 1813, Jan. 30, 1813. when the emperor, after the disasters of the Moscow campaign, finding it for his interest to conciliate the pope, the cardinal was liberated, and joined his captive master at Fontainebleau. The pope himself was hurried across the Alps by Mont Cenis; but, as he approached France, the enthusiasm of the people redoubled; insomuch that, when he reached Grenoble, his *cortège* had rather the appearance of a beloved sovereign who was returning to his dominions, than of a captive pontiff who was on his way to confinement in a foreign land. By a singular coincidence, the enfeebled remnant of the heroic garrison of Saragossa were at that period in Grenoble; they hastened in crowds to meet their distressed father, and, when his carriage appeared in sight, fell on their knees as one man, and received his earnest benediction. A captive pope inspired to these captive heroes a respect which they would never have felt for the mighty conqueror who had enthralled them both! Such, in generous and uncorrupted minds, is the superiority which religion bestows to all the calamities of life.*

Napoleon has protested at St. Helena, and apparently with truth, that he was not ^{Napoleon} Napo- leon ap- privy to the actual seizure of the pope's seizure of the pope; and that, when he first re- ceived the intelligence, he was at a loss what to do with his august captive.† But it required no argument to show that neither Miollis nor Radet would have ventured on such a step unless they had been well assured that it would be conformable, if not to the formal instructions, at least to the secret wishes of the emperor; and he soon gave convincing proof of that, "for as soon as he received advices of the event," says Savary, "he approved of what had been done, and stationed the pope at Savona, revoking, at the same time, the gift of Charlemagne, and annexing the papal states to the French Empire."‡ His holiness remained at Savona for above three years, always under restraint and guarded, though not in prison; but Napoleon, after the Moscow campaign, having received intelligence that a squadron of English frigates was cruising in the Gulf of Lyons, with the design of facilitating his escape, had him removed to Fontainebleau, where he was detained a pris- June 9, 1813: oner till the return of the emperor from the disaster of Leipsic, when his necessities gave rise to important negotiations with the aged prisoner, which will form the subject of future consideration. Canova, who had been sent for to Paris by Napoleon to model the colossal statue which is now to be seen on the staircase of Apsley House, interceded energetically in his behalf; but he could obtain no remission of the severe sentence, the emperor alleging, as insurmountable charges against him, that "he was a German at heart, and had refused to banish the Russians and Eng-

‡ "It is of little moment," says Thibaudeau, "whether Napoleon ordered the seizure of the pope: he did not disapprove of it; he profited by it, and took upon himself its whole responsibility. His alleged discontent at Schoenbrunn, when he received intelligence of the event, proves nothing: it might be part of his views to make it be believed it was done without his authority, and that he only undertook the scandal of the transaction because it was irreparable."—THIBAudeau, vii., 507.

* Pacca, i., 123, 129. Radet, 12, 42. Artaud, ii., 218, 229.

lish.* So tenaciously did he hold by his prey, that not even the horrors of the Russian retreat could make him relax it; he kept it firm during the campaign of Leipsic, and nothing but the crossing of the Rhine by the allied armies in spring, 1814, procured the liberation of the captive pontiff.

The situation of the city of Rome was unquestionably improved by its transference from the drowsy sway of the Church to the energetic administration of Napoleon. Shortly after the annexation of the Roman States to the French Empire, it was declared the second city in the Empire. To a deputation from Rome, shortly after its incorporation with the French Empire, Napoleon replied, "My mind is full of the recollections of your ancestors. The first time that I pass the Alps I desire to remain some time among you. The French emperors, my predecessors, had detached you from the territory of the Empire, but the good of my people no longer permits such a partition: France and Italy must be governed by the same system. You have need of a powerful hand to direct you. I shall have a singular pleasure in being your benefactor. Your bishop is the spiritual head of the Church, as I am its emperor: I 'render unto God the things that are God's, and unto Cæsar the things which are Cæsar's.'" The official exposition of the state of

the Empire at the close of the year portrayed in vivid colours the advantages which would arise from the government of all Italy under one system, and proclaimed the fixed determination of the emperor never to infringe upon the spiritual authority, nor ever to permit again the temporal sovereignty of the Church. In pursuance of these views, the Roman territory incorporated with the Empire was speedily subjected to the whole regulations of the imperial régime; the code Napoleon, the conscription, the Continental system, were introduced in their full vigour; préfets and sous préfets were established, and the taxes, levied according to French principles, carried to the credit of the imperial budget.†

Bossuet has assigned the reason, with his usual elevation of thought, why this spoliation of all the possessions of the supreme pontiff, by a secular power, ever must be prejudicial to the best interests of religion. "God had chosen," says he, "that the Church, the common mother of all nations, should be independent of all in its temporal affairs, and that the common centre to which all the faithful should look for the unity of their faith, should be placed in a situation above the partialities which the different interests and jealousies of states might occasion. The Church, independent in its head of all temporal powers, finds itself in a situation to exercise more freely, for the common good and protection of Christian kings, its celestial power of ruling the mind, when it holds in the right hand the balance, even amid so many empires, often in a state of hostility; it maintains unity in all its parts, sometimes by inflexible decrees, sometimes by sage concessions." The principle which calls for the independence of the head of the Church from all temporal sovereignties, is the same which requires the emancipation of its

subordinate ministers from the contributions of their flocks. Human nature in every rank is the same; the thralldom of vice and passion is felt alike in the cottage as on the throne; the subjection of the supreme pontiff to the direct control of France or Austria is as fatal to his character and respectability, as the control of the rural congregations is to the utility of the village pastor. Admitting that the court of Rome has not always shown itself free from tramontane influence, it has, at least, been less swayed than if it had had its residence at Vienna or Paris; supposing that the conclave of the cardinals has often been swayed by selfish or ambitious views, it has been much less exposed to their effects than if it had been wholly dependant on external potentates for support. Equity in judgment, whether in temporal or spiritual matters, can never be attained but by those who are independent of those to whom the judgment is to be applied; coercion of vice, whether in exalted or humble stations, can never be effected by those who depend upon that vice for their support; the due direction of thought can never be given but by those who are not constrained to bend to the thoughts of others. It will ever be the great object of tyranny, whether regal or Democratic, to beat down this central independent authority; to render the censors of morals subservient to the dominant power; and, under the specious pretence of emancipating mankind from spiritual shackles, in effect to subject them to a far more grievous temporal oppression.

But, whatever effects the dethronement and captivity of the pope were likely to have produced, if they had continued long, on the independence and usefulness of the Church, the immediate effects of the change were in the highest degree beneficial on the city of Rome. Vast was the difference between the slumber of the cardinals and the energetic measures of Napoleon. Improvements, interesting alike to the antiquary and the citizen, were undertaken in every direction. The majestic monuments of ancient Rome, half concealed by the ruins and accumulations of fourteen hundred years, stood forth in renovated splendour; the stately columns of the Temple of Jupiter Tonans, relieved of the load of their displaced architrave, were restored to the perpendicular, from which they had swerved during their long decay; the beautiful pillars of that of Jupiter Stator, half covered up with fragments of marbles, revealed their exquisite and now fully discovered proportions; the huge interior of the Coliseum, cleared of the rubbish which obstructed its base, again exhibited its wonders to the light; the channels which conducted the water for the aquatic exhibitions, the iron gates which were opened to admit the hundreds of lions to the amphitheatre, the dens where their natural ferocity was augmented by artificial stimulants, the bronze rings to which the Christian martyrs were chained, again appeared to the wondering populace; the houses which

Vast and admirable works undertaken by the French at Rome.

Prejudicial effect of this measure on the independence of the Church.

* The interior of the Coliseum has been again filled up by the papal government, in order to facilitate access to the numerous chapels with which it is encircled; but the highly curious and interesting structures which were brought to light by the French excavations, may be seen faithfully portrayed in several views of Rome, particularly one very interesting plate in Rossini's "Antichità Romane;" a work which, without the inimitable force and grandeur of Piranesi's, is incomparably more accurate, and gives the best idea of the Roman ruins which is anywhere to be met with. —Personal observation.

deformed the centre of the Forum were cleared away; and, piercing through a covering of eighteen feet in thickness, the labours of the workmen at length revealed the pavement of the ancient Forum, the venerable blocks of the Via Sacra, still furrowed by the chariot-wheel marks of a hundred triumphs. Similar excavations at the foot of the Pillar of Trajan disclosed the graceful peristyle of columns with which it had been surrounded, and again exhibited fresh, after an interment of a thousand years, the delicate tints of its giallo antico pillars and pavement. Nor were more distant quarters or modern interests neglected. The Temple of Vesta, near the Tiber, was cleared out; a hundred workmen, under the direction of Canova, prosecuted their searches in the baths of Titus, where the Laocoon had been discovered; large sums were expended on the Quirinal palace, destined for the residence of the imperial family when at Rome. Severe laws, and an impartial execution of them, speedily repressed the hideous practice of private assassination, so long the disgrace of the papal states; a double row of shady trees led from the Arch of Constantine to the Appian Way, and thence to the Forum; surveys were made with a view to the completion of the long-neglected drainage of the Pontine Marshes; and preparations commenced for turning aside, for a season, the course of the Tiber, and discovering in its bed the inestimable treasures of art which were thrown into it during the terrors of the Gothic invasion.*

"What does the pope mean," said Napoleon to Eugene, in July, 1807, "by the threat of excommunicating me? Does he think the world has gone back a thousand years? *Does he suppose the arms will fall from the hands of my soldiers?*"† Within two years after these remarkable words were written, the pope did excommunicate him, in return for the confiscation of his whole dominions; and in less than four years more, the arms *did fall from the hands of his soldiers*;‡ and the hosts, ap-

parently invincible, which he had collected, were dispersed and ruined by the blasts of winter: he extorted from the supreme pontiff at Fontainebleau, in 1813, by the terrors and exhaustion of a long captivity, a renunciation of the rights of the Church over the Roman States; and within a year after, he himself was compelled, at Fontainebleau, to sign the abdication of all his dominions: he consigned Cardinal Pacca and several other prelates, the courageous counsellors of the bull of excommunication, to a dreary imprisonment of four years amid the snows of the Alps; and he himself was shortly after doomed to a painful exile of six on the rock of St. Helena! There is something in these marvellous coincidences beyond the operations of chance, and which even a Protestant historian feels himself bound to mark for the observation of future ages. The world had not gone back a thousand years, but that Being existed with whom a thousand years are as one day, and one day as a thousand years. And, without ascribing any deviation from ordinary laws to these events, or supposing that the common Father, "who sees with equal eye, as Lord of all," the varied modes of worship of his different creatures, had interposed in a peculiar manner in favour of any particular church, we may, without presumption, rest in the humble belief that the laws of the moral world are of universal application; that there are limits to the oppression of virtue even in this scene of trial; and that when a power, elevated on the ascendancy of passion and crime, has gone such a length as to outrage alike the principles of justice and the religious feelings of a whole quarter of the globe, the period is not far distant when the aroused indignation of mankind will bring about its punishment.

they fell from their hands; and, destitute of the power of raising them from the ground, they were left in the snow. They did not throw them away: *famine and cold tore them from their grasp.* The fingers of many were frozen on the muskets which they yet carried, and their hands deprived of the circulation necessary to sustain the weight."—SEGUR, ii., 182.

"The soldiers could no longer hold their weapons: they fell from the hands even of the bravest and most robust. The muskets dropped from the frozen arms of those who bore them."—SALGUES, *Mémoires pour Generale Histoire de France sous NAPOLEON*, vol. xx., c. 5.

Bloody Action on the 27th of July.—Desperate Battle on the 28th.—Imminent Danger of the British, and their heroic Valour.—Final Victory.—Reflections on this Event.—March of Soult, Ney, and Mortier into Sir Arthur's Rear.—His Plan to resist the Attack.—Cuesta abandons Talavera and the English Wounded.—Imminent Hazard and skilful Retreat of the English.—Losses sustained by them in this Campaign.—They retire into Portugal.—Advance of Vanegas in La Mancha.—His total Defeat at Ocaña.—Cuesta's Measures in Estremadura.—His Overthrow at Medellin.—Disastrous State of the Spanish Affairs at this Period.—Reflections on the Campaign.—Immense Forces developed by England in different Parts of the World during its Continuance.—Comparison with what it was at the Commencement of the War, and what it has since become.—Causes of the remarkable Diminution of the National Force in later Times.—Its probable Effect on the future Fate of England.

ALTHOUGH the military power of England and France had never been fairly brought into collision since the commencement of the contest, and both the government and the nation were, to a degree which is now almost inconceivable, ignorant alike of the principles of war with land troops, and the magnitude of the resources for such a conflict which were at their disposal, yet the forces of the contending parties, when a battle-field was at last found, were, in reality, much more equally balanced than was commonly imagined. France, indeed, had conquered all the states of Continental Europe, and her armies were surrounded with a halo of success which rendered them invincible to the hostility of present power; but England and she were ancient rivals, and the lustre of former renown shone, dimly, indeed, but perceptibly, through the blaze of present victory. It was in vain that the conquest of all the armies, and the capture of almost all the capitals of Europe, was referred to by their old antagonists; the English rested on the battles of Cressy and Azincourt, and calmly pointed to the imperishable inheritance of historic glory. Their soldiers, their citizens, were alike penetrated with these recollections; the belief of the natural superiority of the English to the French, in a fair field, was impressed on the humblest sentinel of the army; the exploits of the Edwards and the Henrys of ancient times burned in the hearts of the officers, and animated the spirit of the people. The universal arming of all classes, under the danger of Napoleon's invasion, had spread, to an extent of which the Continental nations were wholly unaware, the military spirit throughout the realm; while the recent campaigns of the army in India had trained a number of officers to daring exploits, habituated them to the difficulties of actual service, and roused again, in the ranks of the privates, that confidence in themselves which is the surest forerunner of victory. The French journals spoke contemptuously of the British conquests in the East, and anxiously invoked the time when "this general of sepoys" should measure his strength with the marshals of the Empire; but this feeling of security, as is generally the case when not derived from experience, was founded on ignorance; the chief who had fronted the dangers of Assaye was not likely to quail before the terrors of more equal encounter,

Comparative military power of France and England at this period.

and the men who had mounted the breach of Seringapatam or faced the cannonade of Laswaree, had no reason to distrust themselves in the most perilous fields of European warfare.

If the occasional faulty direction of the national resources when the land contest began, and, above all, the total ignorance of the value of time in war which universally prevailed, frequently led the British forces into disaster, and rendered abortive their greatest enterprises, the firmness with which the contest was still persevered in by the government and people, the noble spirit which dictated their national engagements, are worthy of the very highest admiration. Shortly after the Peninsular contest broke out, and when it was still rather a tumultuary insurrection than a regular warfare, proposals of peace were addressed by Alexander and Napoleon, from the place of conference at Erfurth. The basis of this proposition was the principle of *uti possidetis*, and it received additional lustre from being signed by both these illustrious potentates, and acknowledging the very principles for which Great Britain herself had formerly contended. In answer to this communication, Mr. Canning, the British minister for

foreign affairs, stated, "he would hasten Oct. 22. to communicate to his allies, the King of Sweden and the existing government of Spain, the proposals which have been made to him. Your excellency will perceive that it is absolutely necessary that his majesty should receive an immediate assurance that France acknowledges the government of Spain as party to any negotiation. With Portugal and Sweden, Great Britain has long had the closest ties; the interests of Sicily are confided to his care; and though he is not as yet bound to Spain by any formal instrument, he has, in the face of the world, contracted engagements not less binding and sacred than the most solemn treaties." To this it was replied by Russia and France, that "they had no difficulty in at once admitting the sovereigns in alliance with England to a congress, but that they could not admit the Spanish insurgents. The Russian Empire has always acted on this principle; and its emperor is now, in an especial manner, called to adhere to it, as he has already acknowledged Joseph Bonaparte king of Spain.*" This answer broke off the negotiation, and the King of

England soon after issued a declaration, in which he announced the rupture of the correspondence, and lamented the adherence of the allied sovereigns to the determination not to treat with the Spanish nation, as the cause of its failure.†

The gallant determination thus expressed by the British government, to admit of no conferences to which the Spanish nation was not admitted as a party, was soon after put to a still more serious trial. Negotiations had for some time been pending for the conclusion of a treaty of alliance between England and the Spanish government, which had been commenced as soon as the formation of the Central Junta offered any responsible party with whom such an engagement could be formed; and they were persisted in with unshaken constancy by the British cabinet, notwithstanding all the disasters which, in the close of the campaign,

had befallen the Spanish armies, and the capture of their capital by the forces of Napoleon. At length, on the 14th of January, Mr. Canning had the satisfaction of signing a treaty of peace and alliance between the two states, by which it was stipulated that the "King of England shall assist to the utmost of his power the Spanish nation in their struggle against the tyranny and usurpation of France, and promises not to acknowledge any other King of Spain and the Indies than Ferdinand VII., his heirs, or such lawful successors as the Spanish nation shall acknowledge; and the Spanish government engages never, in any case, to cede to France any part of the territories or possessions of the Spanish monarchy in any part of the world; and both the high contracting parties agree to make common cause against France, and not to make peace but by common consent." When it is recollected that this treaty was concluded after the Spanish armies had been utterly routed and dispersed by the overwhelming forces of Napoleon, when their capital was taken, more than half their provinces overrun, and on the very day when the British forces embarked at Corunna, after their disastrous retreat from Leon, it must be admitted that the annals of the world do not afford a more sublime example of constancy in adversity and heroic fidelity to engagements on the part of both the contracting powers.*

Faithful alike to its least as its most considerable allies, the British government at this period concluded a new treaty of alliance, offensive and defensive, with the Swedish nation, now exposed to the most serious peril from the invasion of their formidable neighbour, and threatened alike in Finland and on the Baltic by an overwhelming force. Shortly after the treaty of Tilsit, and when this danger from Russia was foreseen, a convention was concluded with the court of Stockholm, by which Great Britain and Sweden mutually engaged to conclude no separate peace, and the former power was to pay an annual subsidy of £1,200,000 to the latter; and this agreement was confirmed by an additional convention concluded at Stockholm a year after, by which it was agreed that the subsidy should be paid quarterly, and in advance.† But the pressure of external events prevented the latter treaty from being long carried into execution, and produced a change of dynasty in the Scandinavian Peninsula, fraught with important consequences upon the general interests of Europe, which will be the subject of interesting narrative in a future chapter.‡

Another treaty, attended with important consequences, both present and future, was about the same time contracted between Great Britain and the Ottoman Porte. Since the conclusion of the peace of Tilsit, which delivered over Napoleon's ally, Turkey, to the tender mercies of Russia, only stipulating the lion's share for the French Empire, and the consequent commencement of a bloody war on the Danube, between the two powers, which will hereafter be considered,§ there was, in reality, no cause of hostility between England and the court of Constantinople. They were both at war with Russia, and both the objects of spoliation to France: they were naturally, therefore, friends to each

Treaty between Great Britain and Turkey. January 5, 1809.

other. Impressed with these ideas, the British cabinet made advances to the Divan, representing the mutual advantage of an immediate cessation of hostilities; and so completely had the desertion of France at Tilsit obliterated the irritation produced by Sir John Duckworth's expedition, and undermined the influence of Sebastiani at Constantinople, that they met with the most favourable reception. A treaty of peace was, in consequence, concluded between England and Turkey, in the beginning of January, at Constantinople, which, relieving the grand signor from all apprehension in his rear, or of the maritime power of Russia, enabled the Turks to direct their whole force to the desperate contest on the Danube. Nor was this treaty of less importance eventually to Great Britain. By re-establishing the relations of amity and commerce with a vast empire, adjoining, along so extensive a frontier, the Eastern states of Christendom, it opened a huge inlet for British manufactures and colonial produce, which was immediately and largely taken advantage of. Bales of goods, infinitely beyond the wants or consumption of the Ottoman Empire, were shipped for Turkey, transported up the Danube, across the barrier of Hungary and the Albanian Hills, and finding their way, carried on mules and men's heads, over the mountain frontier of Transylvania, penetrated through all Hungary and the Austrian Empire. Thus, while Napoleon, intent on the Continental system, which absolutely required for its success the formation of all Europe into one league for the exclusion of British merchandise, flattered himself that by his victory at Tilsit he had effectually attained that object, he had already, in the consequences of that very triumph, awakened a resistance which in a great degree defeated it; and in the aroused hostility of the Spanish Peninsula and Turkey, severally delivered up to his own and Alexander's ambition by that pacification, amply compensated Great Britain for the commercial intercourse she had lost in Northern Europe.*

But, although the constancy and resolution of the British government at this crisis were worthy of the noble cause which they were called upon to support, it was not without great difficulty that they succeeded in prevailing upon Parliament and the people to second their efforts. The dispersion of the Spanish armies, the fall of Madrid, and the calamitous issue of Sir John Moore's retreat, had conspired in an extraordinary degree to agitate and distract the public mind. To the unanimous burst of enthusiasm which had followed the outbreak of the Spanish insurrection, and the extraordinary successes with which it was at first attended, had succeeded a depression proportionably unreasonable; and the populace, incapable of steady perseverance, and ever ready to rush from one extreme to another, now condemned government, in no measured strains, for pursuing that very line of conduct which, a few months before, had been the object of their warmest eulogy and most strenuous support. The insanity of attempting to resist the French power at land; the madness of expecting anything like durable support from popular insurrection; the impossibility of opposing any effectual barrier to Napoleon's Continental dominion; his vast abilities, daring ener-

gy, and unbounded resources, were loudly proclaimed by the opposition party: a large portion of the press adopted the same views, and augmented the general consternation by the most gloomy predictions. To such a height did the ferment arise, that it required all the firmness of ministers, supported by the constancy of the aristocratic party, to stem the torrent, and prevent the British troops from being entirely withdrawn from the Peninsula, and the Spanish war entirely extinguished by its first serious reverses.*

The debates in Parliament on this, as on every other occasion, exhibited a faithful picture of the sentiments entertained by the people, and are interesting, not merely as indicating the views adopted by the leaders of the opposite parties, but affording a true image of the opinions by which the nation itself was divided. On the side of the opposition, it was strongly argued by Lord Grenville, Lord Grey, Mr. Ponsonby, and Mr. Whitbread, "That experience had now proved, what might from the first have been anticipated, that the Peninsula was not a theatre on which the British forces could ever be employed with advantage; with the Pyrenees unblocked, and the road between Paris and Madrid as open as between Paris and Antwerp, nothing could justify our sending thirty or forty thousand men into the interior of Spain to combat two hundred thousand. Such a measure can only be compared to the far-famed march to Paris, to which it is fully equal in wildness and absurdity.† It is clear it must rest with the Spaniards themselves to work out their own independence, and that without that spirit no army that we can send can be of any avail. The cautious defensive system of warfare which the Spanish juntas originally recommended has been abandoned, from the delusive hopes inspired by the regular armies we chose to send them, and defeat and ruin has been the consequence. As if to make a mockery of our assistance, we have sent our succours to the farthest possible point from the scene of action, and made our depôt at Lisbon, where the French must have been cut off and surrendered, if we had not kindly furnished them with the means of transport to France, from whence they might be moved by the enemy to the quarter most serviceable for his projects.

"When the Spanish insurrection broke out, and the world looked in anxious suspense on that great event, ministers took none of the steps necessary to enable Parliament to judge of the measures which should be pursued. In the generous enthusiasm, the confidence and prodigality

* Ann. Reg., 1809, 26, 29. South., Pen. War, ii., 328, 331.

† Lord Grenville here alluded to an expression of Lord Liverpool, then Mr. Jenkinson, in 1793, that the allied army, after the fall of Valenciennes, should march direct to Paris. This saying was, for twenty years afterward, the subject of constant ridicule by the opposition party, and it was set down, by general consent, as one of the most absurd ebullitions that ever came from the mouth of man. Yet it is now admitted by Napoleon, and all the French military historians, that the observation was perfectly just, and that, if the allies had held together and pressed on after that event, they would have taken the French capital and terminated the war in the same campaign. A parallel case, in domestic transactions, is to be found in Lord Castlereagh's celebrated saying regarding "the ignorant impatience of taxation," which, nevertheless, it is now plain, was entirely well founded, as but for it the national debt would now have been entirely paid off, or reduced to a mere trifle. So fallacious a guide is public opinion, when not formed at a distance from the event, and with the benefit of the light which subsequent experience, calm discussion, and superior intellects have thrown on the question.—See *Ante*, i., 247; and ii., 391–397.

* See the treaty in Martens, Sup., v., 160. Ann. Reg., 1809, 134. State Papers.

of the nation outstripped even their most sanguine hopes: men, money, transports, stores, all were put, with boundless profusion, at their disposal. How have they justified that confidence? Is it not clear that it has been misplaced? It was evident to every one that our whole disposable military force could not hope to cope single-handed against the immense armies of Napoleon; and, therefore, it was their bounden duty, before they hazarded any portion of our troops in the cause, to be well assured that the materials of an efficient and lasting hostility existed in the country. It was not sufficient to know that monks could excite some of the poorer classes to insurrection, and that, when so excited, they evinced, for a time, great enthusiasm. The real question was, Were they animated with that general resolution from which alone national efforts could flow, and was it guided and directed by those influential classes, from whose exertion alone anything like steadiness and perseverance could be anticipated? No proper inquiry was made into these subjects. From the agents whom ministers sent out they got nothing but false or exaggerated information, more likely to mislead than to enlighten; and the consequence has been, that immense stores were thrown away or fell into the enemy's hands, vast subsidies were squandered or embezzled, and the entire fabric of delusion and misrepresentation fell before the first shock of the imperial forces.

"In the direction of our own troops, mismanagement was, if possible, still more flagrant. Mr. Frere was obviously not a proper person to be sent to Madrid to report as to the prudence or chances of success of Sir John Moore's advance into Spain; a military man should have been there, qualified to judge of the real state of the Spanish armies, and not expose the flower of the British troops to destruction, from crediting the rodomontade of proclamations, and the representations of interested supporters. When Sir John did arrive in Spain, in the middle of December, he came in time only to be the last devoured; all the Spanish armies had been dissipated before the British fired a shot. After Napoleon had arrived at Madrid, the retreat previously and wisely ordered by the English general was suspended, and a forward movement, fraught with the most calamitous results, commenced. By what influence or representations was that most disastrous change of measures brought about? That was the point into which it behoved Parliament to inquire, for there was the root of all the subsequent misfortunes. Mr. Frere's despatches at that time urged him to advance, representing the great strength of the insurrection in the south of Spain, and that, if he would attack the enemy in the north, the Spanish cause, then almost desperate, would have time to revive. Incalculable were the calamities consequent on that most absurd advice; for such were the dangers into which it led the British army, that within a few days afterward Sir John Moore was obliged to resume its retreat; and if he had not done so, in twenty-four hours more it would have been surrounded and destroyed. What has been the result of all this imbecility? A shameful and disastrous retreat, which will influence the character of England long after all of us shall have ceased to live. We never can expect to be able to meet the four or five hundred thousand men whom Bonaparte can pour into Spain: when the opportunity was lost of seizing the passes of the Pyrenees, and the

Peninsula was inundated with his troops, success had become hopeless, and the struggle should never have been attempted.*

On the other hand, it was contended by Lord Liverpool, Lord Castlereagh, and Mr. Canning, "The question now is, whether we are to record a public avowal of a determination not to desert the cause and the government which we have espoused, and profess ourselves undismayed by the reverses we have sustained, which those very reverses had rendered it a more sacred duty to support. Those who inferred that the cause was desperate on account of these reverses, were little acquainted with history, and least of all with Spanish history. There it would be found that nations, overrun just as completely as the Spaniards had been, had continued the contest for ten or twenty years, and, though constantly worsted in regular battles, had still, by perseverance and resolution, in the end proved triumphant. The cause in which they were engaged was the most interesting to humanity: it was a struggle for their liberty, their independence, and their religion; for the homes of their fathers and the cradles of their descendants. Is nothing to be risked in support of so generous an ally? Is England, so renowned in history for her valour and perseverance, to be disheartened by the first reverse, and yield the palm to her ancient rivals, whom she has so often conquered even in their own territory, merely because she was unable to withstand forces quadruple of her own arms?

"It is a mistake, however, to assert that we have sustained nothing but disasters in the campaign. Was the conquest of Portugal; the capture of all its fortresses, arsenals, and resources; the defeat and capitulation of one of the best armies and ablest marshals of France, nothing for our first essay in Continental warfare? When we advanced into Spain, it was to act only as an auxiliary force: such was the express and earnest request of the Spaniards themselves, and it was the part which befitted the allies of so considerable and renowned a nation to take. Spain had made an energetic effort: she had combated with a spirit and constancy which had not distinguished greater empires and more extensive resources; she had gained triumphs which might put Northern Europe to the blush; and, if she had been unable to stand the first brunt of a power before which all the military monarchies of the Continent had sunk, it was ungenerous to reproach her with her reverses in the hour of her misfortune, unmanly to be discouraged because important victories have been followed by what may yet prove only passing clouds. It is in vain to attempt to disparage the efforts of the Spanish army and nation: those are not despicable victories which, for the first time since the French Revolution broke out, had arrested the course of its champion's triumphs, and made the conquerors of Northern Europe pass under the Caudine Forks; those were not contemptible national exertions which drove a French army of a hundred thousand men behind the Ebro, and brought Napoleon with two hundred thousand more from the other side of the Rhine.

"Nothing can be more erroneous than the opinion which has become general since the late reverses, that the Spaniards cannot, under any circumstances, require our assistance; that,

* *Parl. Deb.*, xii., 12, 21, and 1053, 1073.

if they are in earnest in the great object of their deliverance, they must work it out for themselves, and have the means of doing so without the aid of British soldiers; and that, if they are indifferent to their salvation, no succour of ours can achieve it for them. Such a proposition sounds well, and might perhaps be founded in truth, if the Spaniards had a regular army to support and form a nucleus for the efforts of their enthusiastic peasantry; but all history demonstrates that the resistance of no people, how resolute soever, is to be relied on for success in a protracted warfare, if entirely deprived of the support and example of regular armies. It is the combination of the two which makes a nation invincible. Spain has the one, but not the other; it is for England, so far as her resources will go, to supply the deficiency, and ingraft on the energetic efforts of newly-raised forces the coolness and intrepidity of her incomparable soldiers. Unless such a nucleus of resistance remains in the Peninsula, to occupy the French armies in one quarter, while organization is going on in another, no efficient resistance can be expected, because the patriot armies will be reached and dispersed in every province before they have acquired any degree of efficiency. How has every English patriot mourned the neglect of the fairest opportunity that ever occurred of combating the forces of the Revolution, by leaving the heroic Vendéans to perish under the merciless sword of the Republic! Taught by past error, let us not repeat it, now that resistance of the same description has arisen on a much greater scale, and under circumstances promising a much fairer prospect of success.

"The advance of Sir John Moore to Sahagun was neither undertaken solely on his own responsibility, nor solely on the advice of Mr. Frere: he had previously, from intercepted despatches from Berthier to Soult, ascertained that he would be on the Carrion on a certain day, and knew from thence that an opportunity was afforded of striking an important blow against that general when unsupported by the other French corps. About the same time advices arrived from Mr. Frere, painting in the warmest colours the resolution of the people of Madrid to emulate the example of Saragossa, and bury themselves under the ruins of the capital rather than surrender it to the French arms. Such were the concurring reasons which prompted the forward movement of the British general; and would not that general be unworthy of commanding British soldiers who would hesitate, under such circumstances, to advance to the support of his allies? On this occasion, the inestimable importance of our regular troops in the war was distinctly shown; this well-conceived invasion, though effected only by twenty-five thousand men, by menacing the enemy's line of communication, paralyzed the whole hostile armies of Spain; stopped at once the progress of the French corps both towards Andalusia and Portugal; gave the troops and inhabitants of these countries time to prepare for their defence, and drew Napoleon himself, with seventy thousand of his best men, into a remote corner of Spain. But for this seasonable advance, but for our assistance, the war would have been terminated in the first consternation consequent on the fall of Madrid. The sending out transports and bringing the troops home was not the work of government: it was the consequence of a distinct requisition from Sir David Baird that he

required them; thirteen thousand men were re-landed, after being shipped, in consequence of that demand, and the transports, to the infinite grief of government, sent out empty. But the cause of Spain was not yet desperate, and it was neither just to that country nor our own army, which it was to be hoped, would yet prove the stay of Europe, to assert that its honour was gone forever. All the energy of liberty, all the sacredness of loyalty, still survived; and the Spanish Revolution might yet be destined by Providence to stand between prosperity and French despotism, and to show to the world that, amid the paroxysms of freedom, a monarch might still be loved. If we had been obliged to leave Spain, we had left it with fresh laurels blooming upon our brows, more honourable in the sight of God and man, because more purely won, than if gained in the richest field of self aggrandizement, or amid the securest triumphs of selfish ambition."*

These generous sentiments, addressed to an assembly, in a large proportion of whom the chivalrous feelings yet Result of the debate. glowed, and who had recently caught the flame of patriotic ardour from the early glories of the Spanish war, proved triumphant with a great majority of the house, and Mr. Ponsonby's motion for a committee to inquire into the conduct of the campaign in Spain was negatived by a majority of 93, the numbers being 127 to 220.

These debates, though they by no means assuaged the public mind after the calamitous issue of the campaign, had Light which these debates threw on the real errors of the campaign. at least one good effect, that of demonstrating where it was that the real fault lay, and what should now be done to repair it. Nothing could be clearer, when the question was sifted to the bottom, than that the advance of Sir John Moore had been an able and well-judged step; that his subsequent retreat was alike necessary and expedient; that the withdrawing Napoleon's guards from Madrid, and leading Ney and Soult to Corunna, had saved the southern provinces and the cause of Spanish independence; and that, if there was any fault in its direction, it was in the unnecessary haste with which it had been conducted—a venial error, the result of inexperienced troops and a long-established despondency, on military affairs, of the public mind. The real error lay in abandoning the Peninsula, if Corunna was no longer tenable, and steering with the transports for England, instead of making for Lisbon or Cadiz. Disorganized as the army was by the sufferings of the retreat, it would soon have recovered its efficiency in the quiet of the Portuguese capital; the immense stores sent out by England would have speedily replaced its equipment and restored its *matériel*; a sense of security, the arrival of re-enforcements from home, would, ere long, have reanimated its spirit; and the French marshals would have had little to boast of, if, after the whole Peninsular war had been paralyzed for its destruction, and two of their corps been drawn to the extremity of Galicia in its pursuit, the English army had reappeared, a few days after, at the rock of Lisbon; and, from a still more formidable central position, threatened in flank their wearied and harassed troops, scattered from the Austrian mountains to the Sierra Morena.

* Parl. Deb., xii., 22, 23, and 1075, 1104

Impressed with these ideas, the English government, after a temporary hesitation till the decision of Parliament on the subject was known, took the magnanimous and fortunate resolution still to persevere in a land contest in the Peninsula, and to send out considerable re-enforcements to Portugal. The troops which had been prepared to re-enforce Sir John Moore, accordingly, were retained in the seaports to which they had been directed, and in the beginning of April sailed for Lisbon. The command of the expedition was given to Sir Arthur Wellesley, whom his great achievements in India, as well as recent unclouded triumph in Portugal, clearly pointed out for that arduous duty. So shaken were the minds of all, however, by the recent Peninsular disasters, and so uncertain was even government of the state of Portugal, that his instructions directed him, if, on his arrival at Lisbon, he found that capital evacuated by the British troops, to make for Cadiz. This calamitous event, fortunately, did not take place; the standard of independence still waved on the Tagus; courageous efforts had been made during the winter in Portugal, and on the 22d of April Sir Arthur landed, amid the acclamations of the inhabitants, at Lisbon, and commenced that career which has rendered his own name and that of his country immortal. He never re-embarked there again to steer for Britain: the days were past when the English looked for safety to their ships;* when next he set sail for England, it was from Calais, with his cavalry, which had marched thither in triumph from Bayonne.

To provide for the war on the gigantic scale on which, during this year, it was to be conducted, at once in Flanders, land-forces. Austria, and Portugal, large supplies of men and money were requisite, and the attention of government was early and anxiously directed to these vital objects. It had long been perceived that the true nursery for the British army was the militia, which, being raised by ballot for home service only, did not excite the jealousy of a people too much attached to their liberties to submit, save in the last necessity, to conscription for the regular army. A bill, accordingly, was brought in by Lord

Castlereagh, which soon received the assent of the Legislature, which provided for raising twenty-four thousand men for the militia, by bounties of ten guineas each, paid by the public; and, if it proved insufficient, by ballot, in order to replace an equal number who had volunteered from that service into the line. This measure proved entirely unsuccessful: the bounty for enlisting into the regular army was at the same time raised to twelve guineas; and from that time till the close of the war no difficulty was experienced in raising the requisite number of men, without any forced levy, for both services—even to supply the vast consumption of the Peninsular war—so strongly was the spirit of the nation now roused against the usurpations of France, and so widely had the military spirit spread with the general arming of the people which followed the threats of Napoleon's invasion.†

The raising of supplies for a year, when operations were contemplated on a scale of such

magnitude, presented difficulties of no ordinary kind, but they were surmounted without any extraordinary addition to the burdens of the people. The war expenditure amounted to £53,000,000; the ways and means, including a loan of £11,000,000, being somewhat more. The total expenditure of this year, including the interest of the debt and sinking fund, was £89,522,000, while the total income was £90,525,000. The regular army amounted to 210,000 men, besides 80,000 militia, of whom 100,000 were disposable in the British islands; and the navy, manned by 130,000 seamen, numbered no less than 1061 ships of war, of which 698 were in commission, 242 were of the line, besides 42 building, and 113 of that class actually at sea.* These numbers deserve to be noted, as marking the highest point to which the British navy had yet reached in that or any other war; and indicate an amount of naval force far superior to that of all other nations put together, and to which the world never had, and perhaps never will, see a parallel.†

The first great success which occurred to elevate the hopes of the British after the disasters of the Peninsular campaign, occurred at sea. A squadron of eight sail of the line and two frigates, under Admiral Villameuz, had for some time been watching for an opportunity to elude the vigilance of the British cruisers, and escape from Brest, in order to gain a general rendezvous assigned them by the French government in BASQUE ROADS. The object of this movement was to chase the British blockading squadron from before L'Orient, liberate the ships there, which consisted of three ships of the line and five frigates, and, with the united force of eleven line-of-battle ships and seven frigates, make for Martinique, now threatened by a British expedition, and for the relief of which it had several thousand land-troops on board. On the 21st of February they effected Feb. 21. their object of sailing from Brest, and immediately steered for the south, and after some difficulty, owing to the narrow channel and shoal waters round the Isle d'Aix, the desired junction was effected, and Villameuz found himself at the head of eleven ships of the line and seven frigates in Basque Roads. Thither he was immediately followed by the British squadron, under Lord Gambier, which, being joined to the blockading squadron off L'Orient, amounted to eleven sail of the line. Alarmed by the approach of so formidable a force, the French-March 26. squadron weighed anchor, and stood for the inner and more protected roads of Isle d'Aix. In performing this operation, one of their line-of-battle ships, the Jean Bart, went ashore and was lost. The British admiral immediately followed, and anchored in Basque Roads, directly opposite to the enemy, with his frigates and smaller vessels in advance; and as the close proximity of the hostile fleets, and their confined anchorage, rendered them in a peculiar manner exposed to the danger of fire-ships, extraordinary precautions were adopted on both sides against that much-dreaded mode of attack.‡

The French fleet was now anchored in a very

French expedition sails from Brest for Basque Roads.

Position of the French in Basque Roads. An attack with fireships is resolved on.

strong position. On one side they were covered by the Isle d'Aix, garrisoned by two thousand men, and batteries mounting thirty long thirty-six pounders and several mortars; while, on the other side, the isle of Oleron, at the distance of three miles and a half, was fortified by several works, the guns of which nearly reached the range of those of the citadel of Aix. Shoals also abounded in all directions, and the French fleet, drawn up in two close lines, between the protecting forts near the shore, in a situation not unlike that of Brueys at the Nile, with this difference, that the vessels in the second line were placed opposite the openings in the first, as at Trafalgar. As any regular action with the fleet seemed hazardous in such a situation, Lord Gambier suggested an attack by means of fireships, in which the admiralty readily concurred. Twelve fireships were immediately prepared, with extraordinary expedition, in the English harbours; and, as most of the officers consulted gave it as their opinion that the undertaking would be attended with great hazard, the execution of it was intrusted to Lord COCHRANE, who considered it as attended with little difficulty, and whose cool intrepidity and inexhaustible resources, long demonstrated in a partisan warfare on the coast of France and Spain, pointed him out as peculiarly qualified for the important enterprise. He at first declined, from delicacy to the officers already in the fleet; but, being pressed by government, accepted the command, and in the beginning of April joined the fleet in Basque Roads, where he was immediately afterward joined by the Mediator frigate, and twelve other vessels armed as fireships.*

The preparations being at length completed, the different frigates and smaller vessels moved to the stations assigned to them; and, on the evening of the 11th of April, advanced to their perilous service. The enemy, being aware, from the arrival of the fireships, what was intended, had made every preparation for repelling the attack: a strong boom had been drawn across the line of their fleet, at the distance of 110 yards, composed of cables and chains twisted together, and secured by anchors at either end, of the enormous weight of five tons each; while the whole boats of the fleet, seventy-three in number, were assembled near the boom, in five divisions, for the purpose of boarding and towing away the fireships; and the line-of-battle ships lay behind, with their topmasts on deck, and every imaginable precaution taken to avert the dreadful fate which menaced them. Nothing, however, could resist the daring of the British sailors, and the admirable skill of the officers in direction of the fireships. The wind, which was strong and blew right in upon shore, was as favourable as possible; and under its blasts the fireships got under weigh, and bore down swiftly on the enemy's line, while the sailors in both fleets strained their anxious eyes to discern the dark masses as they silently glided through the gloom. Lord Cochrane directed the leading vessel, which had fifteen hundred barrels of powder and four hundred shells on board; while the Mediator, under the able direction of Captain Woolridge, filled with as many combustibles, immediately followed. The admirable directions given the latter vessel, by its he-

roic commander, brought it down direct against the boom, and the whole fireships, which rapidly followed, made direct towards the enemy's fleet, amid a heavy fire from the batteries on both sides and the line in front. Dauntless, indeed, was the intrepidity of the crews, who, during the darkness of a tempestuous night, steered vessels charged to the brim with gunpowder, and the most combustible materials, right into the middle of a concentric fire of bombs and projectiles, any one of which might, in an instant, have blown them into the air!*

During the darkness of a tempestuous night, however, it was impossible even for the greatest skill and coolness to steer the fireships precisely to the points assigned to them: the wind was lulled by the effect of the first explosions, and the consequence was, that many of them blew up at such a distance from the enemy's line as to do little or no damage. So resolute, however, were the captain and crew of the Mediator to discharge the duty assigned to them, that, after breaking the boom and setting fire to their vessel, they still held by her till she was almost in the enemy's fleet, and were blown out of the ship when she exploded, severely, though, happily, not mortally scorched. Lord Cochrane's vessel, which led the way, though directed by that gallant officer with the most consummate skill and courage, was unable to break the boom till the Mediator came up, when it gave way; and a minute thus lost caused her to explode a hundred yards too soon, and without any damage to the enemy. No sooner, however, was the boom burst than the other fireships came in, wrapped in flames, in quick succession; and this awful spectacle, joined to the tremendous explosions of the Mediator and Lord Cochrane's vessel, produced such consternation in the French fleet, that they all slipped their cables and ran ashore in wild confusion. The glare of so many prodigious fires illuminating half the heavens, the flashes of the guns from the forts and retreating ships, the frequent flight of shells and rockets from the fire-vessels, and the bright reflection of the rays of light from the sides of the French ships in the background, formed a scene at once animating and sublime. One fireship fell on board the Ocean, which carried the French admiral's flag, as she lay grounded on the shore; in an instant the flames spread over her. At this moment the Tonnerre and Patriote also got entangled in the fearful group: inevitable destruction seemed to await them all, when a sudden roll of the sea threw the Tonnerre aside, and the fireship drifted past. When the day dawned at five o'clock, half the enemy's fleet were discerned ashore; at half past seven only two were afloat; and Lord Cochrane, who had regained his own ship, the Imperieuse, repeatedly made signal to Lord Gambier, who lay twelve miles off, to advance. The last bore, "Half the fleet can destroy the enemy: eleven on shore."†

Success as splendid as that gained at the Nile or Copenhagen now awaited the British admiral, and it had been won by daring and skill not inferior to that of Nelson himself. But Nelson was not at the head of the fleet. In-

Dreadful nocturnal attack and destruction of the French fleet.

Preparations for the attack on the enemy in Basque Roads. April 14.

Attack on the ships ashore, and destruction of part of them.

* James, iv., 106, 107. Lord Gambier's Despatch, 14th April, 1809. Ann. Reg., 1809, 443. App. to Chron. Brenton, ii., 280.

ferior to none of the captains who followed that immortal flag in personal gallantry, Lord Gambier wanted the moral courage, the confidence in himself, which, in hazardous circumstances, is requisite for decisive success in a commander. At ten minutes before six Lord Cochrane had first made signal that half the fleet was ashore; and, if the admiral had instantly weighed anchor and stood in to the roads, he would, at eight o'clock, have been within reach of fire, when only two of them were afloat. Instead of this, he did nothing till half past nine, and then, instead of making the signal to move, merely called a council of war of flag-captains to come on board his ship; and it was, in consequence, not till a quarter before eleven that the fleet weighed, and, having advanced half way, anchored again six miles from the enemy, in the belief that their ships could not be got off, and that it was hazardous, till the tide had risen higher, to venture farther in amid the intricate shoals of Basque Roads. The *Atina* bomb and some frigates and lighter vessels were, however, moved on under the orders of Captain Bligh. Meanwhile, the French fleet evinced extraordinary activity in getting their vessels off the shore, and as the tide rose several were floated and warped up the Charente. Stung to the quick by seeing his noble prizes thus eluding his grasp, Lord Cochrane, with heroic gallantry, advanced himself to the attack in his frigate the *Imperieuse*. He was quickly followed by Captain Bligh with the bomb and light vessels, and a heavy cannonade was commenced on the most exposed of the enemy's ships. The *Calcutta*, of fifty guns, quickly struck her colours to the *Imperieuse*, the *Ville de Varsovie* and *Aquilon* soon after yielded to the concentric fire of the other frigates, and were burned as soon as the prisoners were removed, and the *Tonnerre* was set on fire by her own crew and blew up. So general was the consternation on the part of the enemy, that another French seventy-four, the *Tourville*, was abandoned by its crew, and might have been taken possession of by an English boat's crew, which, unaware of its condition, accidentally came very near. The *Indienne* frigate was also burned by the enemy. The other ships, however, though seriously injured, and two of them rendered unserviceable by being thrown ashore in the tempestuous gale, were, by great efforts, got afloat during the high tides which followed the strong westerly wind that prevailed during the action, and warped into safe anchorage in the upper part of the Charente.*

Lord Cochrane was deservedly made a knight of the Bath for the admirable skill which follow-
Proceedings of the Bath for the admirable skill which follow-
ed in England. this trying occasion; and there cannot be a doubt, when the French accounts are compared with the English, that, if he had had the command of the fleet, the whole enemy's ships would have been destroyed. Such as it was, the success was almost equal to that of Lord Howe in those seas fifteen years before, and it would have thrown the nation into transports of joy at the commencement of the war. But Lord Nelson had spoiled the English for anything less than complete success; and murmurs soon began to spread against Lord Gambier for not having, in a more energetic manner, supported Lord Cochrane on that occasion.

These were soon materially increased by the strong charges openly advanced against the commander-in-chief by Admiral Harvey, the second in command, one of the bravest captains of Trafalgar, who burned with desire to signalize himself against the enemy, and had expressed his opinion on the occasion, perhaps, with more frankness than discretion; and by Lord Cochrane intimating that, if the thanks of the House of Commons were moved to Lord Gambier, he would oppose it in Parliament. The result was, that Admiral Harvey was brought to a court-martial for the words he had uttered, cashiered, and dismissed the service, though he was shortly after restored for his gallantry at that memorable battle, with the general approbation of the navy; and Lord Gambier, after a protracted trial, was acquitted by his court-martial, and afterward received the thanks of both houses of Parliament, as well as Lord Cochrane and the other officers and men employed on the occasion.*

Napoleon's opinion on this matter was very decided. "Cochrane," said he, "not only could have destroyed the whole French ships, but he might, and would have taken them out, had the English admiral supported him as he ought to have done. For, in consequence of the signal made by the French admiral for every one to shift for himself, they became panic-struck, and cut their cables. The terror of the fireships was so great, that they actually threw their powder overboard, so that they could have offered very little resistance. Fear deprived the French captains of their senses. Had Cochrane been supported, he would have taken every one of the ships."† Impressed with these ideas, the French emperor brought the officers of his lost vessels to trial, and Lafond, the captain of the *Calcutta*, was condemned and executed, and two others were sentenced to imprisonment.

Lord Cochrane was, after the death of Nelson, the greatest naval commander of that age of glory. Equal to his
Character of Lord Cochrane.
great predecessor in personal gallantry, enthusiastic ardour, and devotion to his country, he was, perhaps, his superior in original genius, inventive power, and inexhaustible resources. The skill and indefatigable perseverance with which, during the Spanish war, when in command only of his own frigate, he alarmed and distracted the whole coast from Toulon to Barcelona, has never been surpassed; with the crew of a frigate, which did not exceed three hundred and fifty men, he kept ten thousand of the enemy constantly occupied. It was his misfortune to arrive at manhood and high command only towards the close of the war, when the enemy's fleets had disappeared from the ocean, and the glorious opportunities of its earlier years had passed away: more truly than Alexander the Great he might have wept that there no longer remained a world to conquer. His coolness in danger was almost unparalleled even in the English navy, and in the days of Nelson and Collingwood:‡ his men, nevertheless, had such confidence in his judgment and resources, that they would have followed wherever he led, even to the cannon's mouth. Unhappily for himself and

§ In Basque Roads, a seaman, sitting by his side in the boat, was killed by a cannon-shot from one of the French vessels, when in the act of looking through a telescope at the enemy's fleet: without saying a word, or averting his eye, he took the instrument out of the dead man's hand and completed the observation.

* James, iv., 110, 122. Brenton, ii., 281, 282. Thib., vii., 261. Lord Gambier's Account. Ann. Reg., 435. App. to Chron.

his country, he engaged, with little discretion when ashore, in party politics: he stood forth as a prominent opponent of government on various occasions, on which he unnecessarily put himself forward in contests with which he had no concern; while his strong inventive turn led him, when unemployed, to connect himself with some transactions with which his heroic qualities had no affinity. In consequence of these unhappy indiscretions and connexions, he was, towards the close of the war, brought to trial before the court of King's Bench for a hoax practised for jobbing purposes on the Stock Exchange, and, under the direction of Lord Ellenborough, convicted and sentenced to imprisonment and an ignominious punishment, the worst part of which the better feeling of government led them to remit. The result was, that the hero of Basque Roads was dismissed the navy, bereft of his honours, and driven into the service of the South American Republics, where his exploits, of the most extraordinary and romantic character, powerfully contributed to destroy the last relics of the Spanish empire in that quarter, and establish the doubtful ascendancy of Democratic fervour. But, in a free country, no deed of injustice, whether popular or ministerial, can permanently blast a noble character. With the changes of time, the power which had oppressed England's greatest existing naval hero passed away: another generation succeeded, to which his exploits were an object of admiration, his weaknesses of forgiveness, his wrongs of commiseration; one of the most deservedly popular acts of the new ministry, which succeeded to the helm after the overthrow of the Tory administration, was to restore him to the rank and the honours of which he had been deprived; and there remains now to the historian only the grateful duty of lending his humble efforts to aid in rescuing from unmerited obloquy the victim of aristocratic, as he has frequently done those of popular injustice.*

The defeat and blockade of the French squadron in Basque Roads was shortly
 Capture of Martinique and St. Domingo, in the West Indies. felt in the capture of the French West India islands, to relieve which was the object of its ill-fated sortie from Brest Harbour. A British expedition sailed from Jamaica, and appeared off Martinique in the end of January. The landing was effected without any resistance, and the enemy having been defeated in a general action some days after, they were shut up in Fort Bourbon, the principal stronghold in the island, which shortly after surrendered, Feb. 2. with three thousand men, at discretion. Feb. 18. This was followed, some months afterward, by

* Lord Cochrane was tried for alleged accession to the Stock Exchange hoax, before a most able and powerful judge, Lord Ellenborough, and, being convicted, sentenced to imprisonment and the pillory. There can be no doubt that the evidence tending to connect him with the facts charged was of a very strong kind, and the judge was constrained to exhibit the case in an unfavourable light against the accused to the jury. Yet the author, after hearing Lord Cochrane deliver his defence in the House of Commons, on July 7, 1814, has never entertained a doubt of his innocence, and, even if the facts charged had been distinctly brought home to him, it was surely a most unwarrantable stretch to sentence to the degrading punishment of the pillory so heroic a character, especially for a proceeding involving no moral turpitude, and rarely, if ever, before or since made the object of punishment. This part of the sentence was immediately and most properly remitted by government; but the result of the trial hung heavily on the hero of Basque Roads, in this country, for twenty years afterward.

a successful descent on the colony and July 2. fortress of St. Domingo, which, with two battalions of infantry, were taken by General Carmichael. Cayenne was also reduced: so that, as Cuba and the other Spanish settlements in those latitudes were now allied colonies, the French flag was entirely excluded from the West Indies.*

The Isle of France, in the Indian Ocean, was, at the same time, strictly blockaded, and it was foreseen, must ere long of Bourbon in capitulate; the isle of Bourbon surrendered on the 21st of September; the French settlement on the Senegal River, on the western coast of Africa, had fallen into the hands of the English; and preparations were making on a great scale for an attack on Batavia, and the important island of Java in the Indian Archipelago. Thus in every direction the last distant settlements of Napoleon were falling into the hands of the British; and, at the time when the triumphant conclusion of the Austrian war seemed to give him the undisputed command of Continental Europe, the maritime superiority of England was producing its natural results, in the successive acquisition of the whole colonies of the globe.†

Important success also attended the British arms, both by sea and land, in the Mediterranean. A powerful naval expedition was despatched in autumn by Lord Collingwood, with sixteen hundred land-troops on board, who, after a slight resistance, made themselves masters of the seven islands of Zante, Cephalonia, Corfu, &c., which were permanently placed under the protection and sway of Great Britain. The importance of this acquisition was not at that period perceived; but, by giving Great Britain a permanent footing in the neighbourhood of Greece, and the command of Corfu, the finest harbour and strongest fortress in the Adriatic, it powerfully contributed, in the end, to counterbalance the influence of the cabinet of St. Petersburg in that quarter, and may be regarded as the first step in a series of events, linked together by a chain of necessary though unperceived connexion—the Greek Revolution—the battle of Navarino—the prostration of Turkey—the establishment of a Christian government in Greece—the subjugation of Persia—and rapid extension of Russian influence in Khorassan—which are destined, to all human appearance, in their ultimate consequences, to roll back to the East the tide of civilized contest, array the powers of the West in fearful collision in Central Asia, and prepare, in the hostile efforts of European ambition, that general restoration of the regions of the sun which, for mysterious purposes, Providence has hitherto prevented from taking place by the desolating sway of Mohammedan power.‡

In conformity with the earnest desire expressed by the Austrian government that a diversion of considerable magnitude should be attempted on the coast of Italy, an expedition was prepared in the Sicilian harbours, in the course of this summer, to menace the coast of Naples. As usual, however, the British government were so tardy in their operations,

that not only was ample time given to the enemy to prepare for his defence at the menaced points, but it was utterly impossible that the armament could have any beneficial effect on the vital line of operations in the valley of the Danube. The fleet, having no less than fifteen thousand troops, half British and half Sicilian, on board, did not set sail from Palermo till the beginning of June; that is to say, more than a month after the Archduke John had retired from Italy, and the theatre of contest between him and Eugene Beauharnois had been transferred to the Hungarian plains. It at first met with considerable success.

The island of Ischia, which forms so conspicuous an object in the Bay of Naples, was assaulted and carried by the British troops; Pro-

cida was next taken, close to the shore, with a flotilla of forty gunboats, fifteen hundred prisoners, and a hundred pieces of cannon; while a detachment of the English forces, landing on the Straits of Messina, took possession of the Castle of Scylla and the chain of fortified posts opposite to Sicily. These advantages had, at first, the effect of spreading a great alarm along the Neapolitan coast, and occasioning the recall of a considerable body of men whom Murat had detached to the support of the viceroy, but they led to no other or more durable result. This powerful British force, nearly as large as that which gained the battle of Vimiero, and which, if landed and skilfully brought into action, would probably have overthrown the whole army of Naples, was shortly after withdrawn by the instructions of government, who intended this only as a diversion, without attempting anything farther; and the fortified posts at Scylla, after being several times taken and retaken, were at length abandoned to the enemy. This expedition, from its tardy appearance and inconsiderable exploits, could hardly be said to have contributed much to aid the common cause; but, from the alarm which it diffused through the Italian Peninsula, it had a powerful effect in accelerating the ecclesiastical revolution, which has already been noticed, and may be regarded as the immediate cause of the arrest of the pope, which, in its ultimate effects, produced such important results.*

A maritime operation, attended with more decisive consequences, took place in autumn, in the Bay of Genoa. A detachment of the Toulon fleet having put to sea, with a view to carry succours to the French troops in the Bay of Rosas, which were cut off by

the Spaniards from the direct communication with their own country, they were immediately chased by Lord Collingwood, who blockaded that port, and, after a hard pursuit, the ships of war were forced to separate from the convoy, and three ships of the line and one frigate driven ashore, where they were burned by the enemy, to prevent them from falling into the hands of the British. Meanwhile, the transports, under convoy of a frigate and some smaller-armed ships, in all eleven vessels, having taken refuge in the Bay of Rosas, under protection of the powerful castle and batteries there, deemed themselves beyond the reach of attack. In that situation, however, they were assailed by a detachment of the British fleet, under the orders of Captain Hallowell, who at once formed the daring resolution of cutting out the whole with the boats

of the ships under his command. The arrangements for this purpose, made with the judgment and foresight which might have been expected from that distinguished hero of the Nile, were carried into effect by Lieutenant Tailour with a spirit and resolution above all praise. In sight of the fleet, the boats stretched out, the crews being at the highest point of animation, filling the air with their cheers; and, rapidly advancing under a very heavy fire from the armed ships and batteries, carried the whole vessels in the most gallant style, and either burned or brought away them all.*

Brilliant as these naval operations were, they had no decisive effect on the issue of the war. The maritime contest was decided: at Trafalgar the dominion of the seas had finally passed to the British flag. It was at land that the real struggle now lay; it was for the deliverance of other nations that England now fought; it was on the soldiers of Wellington that the eyes of the world were turned.

After the retreat of the English to Corunna, and the fall of Madrid, affairs in the Peninsula appeared wellnigh desperate. In Portugal there was merely a corps of eight thousand British soldiers, chiefly in and around Lisbon,

State of affairs in Portugal, and forces of the patriots at this period.

upon whom any reliance could be placed; for, though about six thousand men, under Silveira, lay in the northern provinces, and the Lusitanian legion, of half that amount, on the northeastern frontier, yet the composition of the forces of which these detachments consisted was not such as to inspire any confidence as to their ability to contend with regular soldiers, or defend the country in the event of a fresh invasion. Their small numerical amount compelled Cradock, in the first instance, to concentrate his forces, which he did at Passa d'Arcos, close to the mouth of the Tagus, where he might be in a situation to embark with safety if a serious invasion should be attempted. These dispositions, however, naturally spread the belief that the English were going to abandon the country, as they had done Galicia, and tumults broke out in various quarters, arising from the dread of this anticipated desertion. Towards the end of February, however, the arrival of six thousand men from England, under Sherbrooke and Mackenzie, having augmented Cradock's force to fourteen thousand, he was enabled to take a position in advance, covering the capital, at Saccavino, which soon, by reviving confidence, had the effect of removing the public discontents.†

Affairs in Spain were still more unpromising. The army of Blake, which had suffered so severely at Espinosa and Reynosa, had dwindled into eight or nine thousand ragged and half-starved troops, without either stores or artillery, who with difficulty maintained themselves in the Galician Mountains: the remains of the soldiers of Arragon, about twenty thousand strong, had thrown themselves into Saragossa, where they were preparing to undergo a fresh siege; Castanos' men, who had come up from Andalusia, joined to some which had escaped from Somo-Sierre and Madrid, in all twenty-five thousand strong, were in La Mancha, and had their headquarters at Toledo; while ten or twelve thousand disorganized levies at Badajoz formed a sort of guard for the

Central Junta, who had established themselves in that city after the fall of Madrid. As to the new levies in Andalusia, Granada, and Valencia, they were, as yet, too ill disciplined and remote from the scene of action to be capable of affording any efficient support to regular troops in the earlier periods of the campaign; and though, in Catalonia, there were at least fifty thousand brave men in possession of Gerona, Rosas, Tarragona, Tortosa, Lerida, and a strong central range of mountains, yet they were fully occupied with the invaders in their own bounds, and without either seeking from, or being able to afford succour to, the neighbouring provinces, resolutely maintained on their own hills an independent hostility. In all, scarcely a hundred and twenty thousand men, scattered round the whole circumference of the Peninsula, without either any means of uniting with each other, any central authority to which they all yielded obedience, or common object to which they could simultaneously be applied. At Madrid, Joseph reigned with the apparent consent of the nation: registers having been open for the inscription of the names of those who were favourable to his government, no less than twenty-eight thousand heads of families in a few days enrolled themselves; and deputations from the municipal council, the council of the Indies, and all the incorporations, waited upon him at Valladolid to entreat that he would return to the capital and reassume the royal functions, with which he at length complied.*
